analytical tools to manage the daily health care equity program and provide needed services to advance health equity.¹²¹

Health Care Disparities Among Minority Veterans

Minority groups are at increased risk of major, life-threatening health conditions, as documented in a substantial body of research¹²² and illustrated in the table below:¹²³

Table 3. Major Health Conditions in Racial/Ethnic Minority Groups

Major Health Conditions Identified and Examined in Racial/Ethnic Minority Groups		
African Americans	Hispanics	American Indian or Alaska Natives
<ul style="list-style-type: none"> ▪ Colon Cancer ▪ HIV ▪ Chronic Kidney Disease ▪ Diabetes ▪ Stroke ▪ Venous Thromboembolism (VTE) ▪ Cancer ▪ Heart Disease 	<ul style="list-style-type: none"> ▪ Hepatitis C ▪ Cancer ▪ Heart disease 	<ul style="list-style-type: none"> ▪ Major Non-cardiac Surgery ▪ Pregnant Women with PTSD

HCV is more prominent among some racial and ethnic minority veterans and they are less likely to receive treatment for HCV. In VHA, some racial and ethnic minorities diagnosed with HCV are disproportionately more at risk for having associated liver disease (ALD). Disparities among veterans in the incidence of HCV, illustrated in the graphs below, show the important policy and resource implications for VA.¹²⁴

COMMISSION ON CARE FINAL REPORT

Figure 2. Disparities Among Veterans in the Incidence of Hepatitis C Virus

A recent review of evidence related to racial and ethnic differences in outcomes for VA patients showed moderate- and low-strength evidence suggestive of gaps in morbidity and mortality outcomes among vulnerable veteran populations with major health conditions. These data, presented in the table below, highlight targets for further research.¹²⁵

Table 4. Comparison of Health Outcomes by Race

Comparison		Worse Health Outcomes For Racial Minority Group Relative to Reference Population (usually White)
Moderate-Strength Evidence		
(based on VA data from the early 2000s)		
African American v. White	Increased end-stage renal disease among chronic kidney disease patients	
	Increased end-stage renal disease among HIV patients (with or without diabetes)	
	Decreased colon cancer survival 3 years after diagnosis	
Hispanic v. White	Increased cirrhosis and hepatocellular carcinoma among hepatitis C patients	
Low-Strength Evidence		
(each finding supported by only a single retrospective study with important methodological limitations)		
African American v. White	Increased mortality among diabetes patients	
	Increased risk of preterm birth among PTSD patients	
	Increased mortality at 2 years post-hospitalization among stroke patients	
	Decreased survival 3 years after diagnosis of rectal cancer	
American Indian or Alaskan Native v. White	Increased risk of 30-day post-op mortality after major noncardiac surgery	
	Increased risk of preterm birth among PTSD patients	
Combined other racial/ethnic minority groups v. African American	Increased injury-related death among alcohol use disorder patients	

¹²⁵ "Management Brief no. 99," Department of Veterans Affairs, accessed May 19, 2016, http://www.hsrd.research.va.gov/publications/management_briefs/default.cfm?ManagementBriefsMenu=ebrief-no99.

OHE's focus, health equity, is intended to combat health care disparities, namely, the differences in the preventive, diagnostic, or treatment services offered to veterans with similar health conditions. Health care disparities stem from a combination of complex factors occurring at the level of the health system, provider, and patient.¹²⁶ Health care disparities can result from biological differences among various racial/ethnic groups as well as from social disparities,¹²⁷ also termed social determinants, which stem from such factors as socioeconomic status, discrimination, education levels, housing, transportation, and crime and violence, and are causally linked to subsequent adult disease.¹²⁸ For example, poor-quality housing poses a risk of exposure to many conditions that can contribute to poor health, such as indoor allergens that can lead to and exacerbate asthma, injuries, and exposure to lead and other toxic substances.¹²⁹ Social determinants that drive health disparities among African Americans, Hispanics, American Indians, and Alaska Natives include race/ethnicity; gender; age; geographic location; religion; socio-economic status; sexual orientation; military era; disabilities, including cognitive, sensory, or physical; and other characteristics historically linked to discrimination or exclusion. Positioned in a department that also provides benefits that fall within the social determinants of health, OHE is in a unique position to improve veterans' health.

The Henry Ford Health System (HFHS) is an example of a health system that is committed to health equity and one VHA can emulate as it works to improve health equity. HFHS is a nonprofit, vertically integrated health care organization that serves the primary and specialty health care needs of residents in southeastern Michigan, including Detroit and its surrounding metropolitan area.¹³⁰ HFHS's comprehensive health equity staff has a health care equity campaign with a goal of increasing knowledge, awareness, and opportunities to ensure health care equity is understood and practiced by HFHS providers and other staff, the research community, and the community-at-large.¹³¹ The campaign is also intended to make health care equity a key, measurable aspect of clinical quality.¹³² A similar effort by VHA would create a system for tracking improvement of health equity over time and holding the organization accountable for ongoing efforts in this regard.

The VHA strategic plan for FY 2013–2018 states that veterans will receive timely, high quality, personalized, safe, effective, and *equitable* health care, irrespective of geography, gender, race, age, culture, or sexual orientation.¹³³ Although that statement signals a sensitivity to health equity, the level of funding support for the VHA office with the lead role in promoting health equity and reducing disparity calls into serious question the leadership priority and commitment to that strategic goal. VHA leadership must make health care equity a strategic

COMMISSION ON CARE FINAL REPORT

priority by directing and funding the implementation of VHA HEAP nationwide and designating a leader and clinical champions within each VISN and VAMC, as a designated full-time equivalent (FTE), providing OHE budgetary support in FY 2017 and beyond to fully staff the office so that it can successfully achieve its mission and goals, to include providing additional needed funding to support implementation of the VHA HEAP; and ensuring OHE reports to the chief of VHA Care System (CVCS).

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- Make health equity a strategic priority by directing the implementation of the VHA HEAP nationwide and designating a leader and health equity clinical champion within each VISN and VAMC for whom part of their respective FTE position descriptions includes focusing on health equity issues.
- Reestablish OHE staffing based on the 2011 VHA Health Care Equality Workgroup recommendations to enable OHE to fulfill VHA's vision to provide appropriate individualized health care to each veteran in a method that eliminates disparate health outcomes and assures health equity. Action required includes, but is not limited to, funding FTE staffing levels commensurate with the scope and size of other federal offices of health equity.
- Reinstate OHE within the office of the CVCS to underscore health equity as a priority and to position the office to champion successfully the advancement of health equity for all veterans.¹³⁴
- Monitor and evaluate the department's success in implementing HEAP.

Other Department and Agency Administrative Changes

- None required.

¹³⁴ Department of Veteran Affairs, Health Equity Coalition Request for VHA Commitment, February 2016. Principal Deputy Under Secretary of Health Memorandum, Health Equity Coalition, March 21, 2013.

Facility and Capital Assets

Recommendation #6: Develop and implement a robust strategy for meeting and managing VHA's facility and capital-asset needs.

Problem

Veterans who turn to VHA to meet their health care needs should expect that its facilities have been designed and equipped to provide state-of-the-art care. As health care continues to move to ever greater use of ambulatory care delivery, VHA not only lacks modern ambulatory health care facilities in many areas, but generally lacks the means to readily finance and acquire space, to realign its facilities as needed, or even to divest itself easily of unneeded buildings. Many of these barriers are statutory in nature, although VA's own internal processes compound its capital asset challenges. Establishing integrated care networks, as proposed in

Recommendation #1 holds the promise of markedly improving veterans' access to care.

That promise cannot be realized without transformative changes to VHA's capital

structure. Political resistance doomed previous attempts to better align VHA's capital assets and veterans' needs. It is critical that an objective process be established to streamline and modernize VHA facilities in the context of the build out of the VHA Care System's integrated networks to ensure the ideal balance of facilities within each network. VHA needs as much control as possible to drive the process so that all facility plans are fully integrated with the strategic vision for the VHA Care System.

The Commission Recommends That . . .

- VA leaders streamline and strengthen the facility and capital asset program management and operations.
- The VHA Care System governing board be responsible for oversight of facility and capital asset management.
- Congress provide VHA greater budgetary flexibility to meet its facility and capital asset needs and greater statutory authority to divest itself of unneeded buildings.
- Congress enact legislation to establish a VHA facility and capital asset realignment process based on the DoD Base Realignment and Closure Commission process to be implemented as soon as practicable. The Commission recommends that the VHA Care System governing board subsequently make facility decisions in alignment with system needs.
- New capital be focused on ambulatory care development to reflect health care trends.
- VHA move forward immediately with repurposing or selling facilities that have already been identified as being in need of closing.

Background

Most VHA health care centers were designed when care was focused on inpatient hospital treatment. VA acquired some of these facilities nearly a century ago from the Public Health Service; many others were transferred from the War Department shortly after World War II.¹³⁵ The average VHA building is 50 years old – five times older than the average building age of not-for-profit hospital systems in the United States.¹³⁶ Most of its facilities were designed to meet markedly different needs than today's health care facilities. Some were tuberculosis

COMMISSION ON CARE FINAL REPORT

sanatoriums, others for years primarily housed patients with mental health conditions.¹³⁷ Although many have been extensively renovated, the renovations themselves are now outdated, and the condition of buildings shows this strain. Independent assessments of infrastructure and facilities showed that VHA facilities average a *C minus* score,¹³⁸ meaning much of the total facilities portfolio is nearing the end of its useful life, and 70 percent of facility correction repairs are being made on Grade D facilities.¹³⁹

During the past 8 years, veteran inpatient bed days of care have declined nearly 10 percent as outpatient clinic workload has increased more than 40 percent.¹⁴⁰ Current facilities, whether they have been maintained adequately or not, often do not support contemporary ambulatory care needs, with outpatient care often housed in converted inpatient spaces.

Through its capital planning methodology, VA has identified more than \$51 billion in total capital needs during the next 10 years.¹⁴¹ Capital funding during the past 4 years has averaged just \$2 billion annually.¹⁴² If funding levels remain consistent during the next 10 years, anticipated funding would be \$25 billion to \$35 billion less than the \$51 billion capital requirement.¹⁴³ VA planning must also take account of demographic changes and population migration that have led to underutilized medical centers in some areas of the country, and a need for new capacity in others.¹⁴⁴

Analysis

New Planning Paradigm

As the department acknowledged, “VA’s health care delivery model must . . . change.”¹⁴⁵ Importantly, it recognizes that “No organization can excel at every capability,” and stated “[s]ervice delivery systems designed around core competencies . . . provide the highest potential value to their customers.”¹⁴⁶ The acknowledgement that VHA can best serve veterans by focusing on its core competencies and unique capabilities, while relying more heavily on purchased care holds important implications for VHA’s capital needs and capital asset management. Rather than assessing VHA’s capital needs by reference to an expectation that each VA medical center, or constellation of medical centers, must provide virtually all needed hospital and medical services, capital needs must be redefined within the framework of the VHA Care System’s high-performing integrated community health care networks. VHA must determine what services it will continue to provide directly in a given community before it can determine its respective infrastructure needs. In identifying its core competencies, unique

¹⁴⁶ *Ibid.*

capabilities, and needed ancillary services, VHA would be setting at least a general framework through which network and local planners could assess where and how needed services would be delivered, including which would be provided directly by VHA and which through purchased care. Such a mapping exercise would be a first step in developing the integrated community health care networks.

The shape of an integrated delivery network will take different forms in each service-area, and planning and developing those local networks will necessarily require assessing VHA's physical plant and capacity in a new light. That reassessment process would inform capital planning, and must take account of at least three distinct needs: capital needs associated with buildings VA would retain; meeting new or replacement space needs; and the disposal of unused, unneeded property.

Property Divestiture

VHA's principal mission is to provide health care to veterans, yet over time it has acquired an ancillary mission: caretaker of an extensive portfolio of vacant buildings. As recently as October 2015, VA reported that its inventory includes 336 buildings that are vacant or less than 50 percent occupied, requiring it to expend patient-care funds to maintain more than 10,500,000 square feet of unneeded space.¹⁴⁷ The SECVA recently testified that it costs VA an estimated \$26 million annually to maintain and operate vacant and underutilized buildings.¹⁴⁸

VA's authority to carry out property-management is circumscribed in law,¹⁴⁹ and the department at times faces insurmountable challenges in either attempting to repurpose or divest itself of underutilized or vacant property.¹⁵⁰ In contrast to more rigid property-divestiture provisions, VA has had success in using a flexible authority to enter into long-term leases of VA property for *enhanced use*.¹⁵¹ This authority allows VA to lease underutilized capital

¹⁴⁷ Ibid., 92.

¹⁴⁸ "Witness Testimony of Honorable Robert A. McDonald, Secretary, U.S. Department of Veterans Affairs, Hearing on 2/10/2016: U.S. Department of Veterans Affairs Budget Request for Fiscal Year 2017," House Committee on Veterans' Affairs, accessed June 20, 2016, <https://veterans.house.gov/witness-testimony/the-honorable-robert-a-mcdonald-2>.

¹⁴⁹ Authority for Transfer of Real Property; Department of Veterans Affairs Capital Asset Fund, 38 U.S.C. § 8118 Authority to Procure and Dispose of Property and to Negotiate for Common Services, 38 U.S.C. § 8122. For example, under section 8118, VA must receive at least full market value in transferring property, unless the property is transferred to an entity that provides services to homeless veterans, and any proposed transfer is subject to the requirement in section 8122 that VA first hold hearings, notify Congress in advance, and not proceed for a specified period. VA property can be determined to be "excess," though under 38 U.S.C. § 8122(d)(1), VA may not make such a declaration unless the property is not suitable for use for provision of services to homeless veterans and reviewed for possible disposal under the Property Act Disposal, administered by the General Services Administration (GSA) (40 U.S.C., subchapter III). GSA employs a rigorous, multistep process to assure that the asset is not needed by any other Federal agency. Under the Act, the agency disposing of the asset is responsible for funding disposal costs, including environmental remediation. GAO has testified that properties remain in an agency's possession for years and continue to accumulate maintenance and operations costs because of the legal requirements agencies must meet and the length of the process. (U.S. Government Accountability Office, *Federal Real Property: Progress Made on Planning and Data, but Unneeded Owned and Leased Facilities Remain*, GAO-11-520T (Washington, DC, 2011), 5, <http://www.gao.gov/products/GAO-11-520T>).

¹⁵⁰ With many properties under the protection of the National Historic Preservation Act (16 U.S.C. § 470h-3), VA faces obstacles and delays in efforts to divest itself of these properties; VACO staff report that stakeholder concerns have been obstacles.

¹⁵¹ Enhanced-Use Leases of Real Property, 38 U.S.C. §§ 8161-8169, as amended by Veterans Millennium Health Care and Benefits Act, Section 208, Pub. L. No. 106-117, 113 Stat. 1545 (1999), as in effect when GAO testified on this successful program (U.S. Government Accountability Office, *VA Real Property: VA Emphasizes Enhanced-Use Leases to* VA-18-0457-A-001202

COMMISSION ON CARE FINAL REPORT

assets to private-sector entities for up to 75 years to develop housing for homeless and at-risk veterans and their families. Most recently, however, Congress imposed severe limits on that leasing authority.¹⁵²

Ongoing Capital Needs

Establishing a transformative new health care delivery model that relies more on purchased care will not eliminate the need for new clinics, facility renovations, and remedying VHA space deficiencies. The scope of those needs must still be determined in light of a proposed new delivery system, but they cannot be ignored. The *Independent Assessment Report* catalogued the challenges of managing and operating VA's capital program and the need to deploy best practices to improve total performance, and clearly address the importance of more modern facilities for delivering high quality care.¹⁵³

Of particular concern is an apparent breakdown in the process of bringing new clinics online and renewing the leases of existing clinics. With current law requiring congressional approval of any lease with an average annual rental of more than \$1 million,¹⁵⁴ a Congressional Budget Office (CBO) ruling¹⁵⁵ has upended the approval process and halted the leasing program.¹⁵⁶ Indicative of the scope of the problem, VHA's then USH testified in 2013 that VA, since 2008, had opened 180 leased medical facilities, 50 of which required authorization as major leases.¹⁵⁷ Currently, 24 major VA leases are in limbo.¹⁵⁸

Manage its Real Property Portfolio, GAO-09-776T (Washington, DC, 2009), <http://www.gao.gov/assets/130/122697.pdf>. For example, VA has authority to outlease its facilities for up to 3 years, but may not retain the proceeds of any such leasing (Authority to Procure and Dispose of Property and to Negotiate for Common Services, 38 U.S.C. § 8122(a)(1)). U.S. Government Accountability Office, *Federal Real Property: Progress Made on Planning and Data, but Unneeded Owned and Leased Facilities Remain*, GAO-11-520T (Washington, DC, 2011), 5, <http://www.gao.gov/products/GAO-11-520T>.

¹⁵² Before the sunset of that authority in 2011, VA could enter into such a long-term lease if (1) at least part of the property's use would contribute to VA's mission, (2) the lease would not be inconsistent with that mission; and (3) the lease would enhance the use of the property (Enhanced-Use Leases, 38 U.S.C. § 8162(a)(2)). Congress reauthorized enhanced-use leasing, but limited it to a single use: the development of supportive-housing for veterans who are homeless or at risk of homelessness (Honoring America's Veterans and Caring for Camp Lejeune Families Act of 2012, Sec. 211, Pub. L. No. 112-154, 126 Stat. 1165 (2012).)

¹⁵³ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment K (Facilities)*, accessed June 2, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_K_Facilities.pdf.

¹⁵⁴ Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104.

¹⁵⁵ *Hearing on Assessing VA's Capital Inventory Options to Provide Veterans' Care Before the Committee on Veterans Affairs*, 113th Cong., 42 (June 27, 2013) (Statement of Robert A. Sunshine, Deputy Director, Congressional Budget Office), accessed June 20, 2016, <https://www.gpo.gov/fdsys/pkg/CHRG-113hhrg82242/html/CHRG-113hhrg82242.htm>.

¹⁵⁶ *Ibid.* CBO maintains that the structure of VHA's lease transactions—the lease of a facility, designed by and built for VHA, and for which payments retire most or all of the debt over the life of the lease—is in the nature of a governmental purchase, and, as such, the full cost of acquiring the facility should be budgeted up front, rather than spread over the duration of the lease. As budget rules generally require that Congress offset that aggregate cost, CBO's position has had the effect of blocking what had previously been a manageable funding process.

¹⁵⁷ *Hearing on Assessing VA's Capital Inventory Options to Provide Veterans' Care Before the Committee on Veterans Affairs*, 113th Cong., 44 (June 27, 2013) (Statement of Robert A. Petzel, M.D., Under Secretary for Health, Veterans Health Administration, U.S. Department of Veterans Affairs), June 20, 2016, <https://www.gpo.gov/fdsys/pkg/CHRG-113hhrg82242/html/CHRG-113hhrg82242.htm>.

¹⁵⁸ "Witness Testimony of Honorable Robert A. McDonald, Secretary, U.S. Department of Veterans Affairs, Hearing on 2/10/2016: U.S. Department of Veterans Affairs Budget Request for Fiscal Year 2017," House Committee on Veterans' Affairs, accessed June 20, 2016, <https://veterans.house.gov/witness-testimony/the-honorable-robert-a-mcdonald-2>.

VA-18-0457-A-001203

One of the primary benefits of leasing is that it can provide flexibility and speed.¹⁵⁹ But the time VHA has required to execute a lease, from planning through to activation, has taken almost 9 years in the case of a major lease,¹⁶⁰ in contrast with private-sector expectations of build-to-suit leases that often take fewer than 3 years.¹⁶¹

In acknowledging the magnitude of the challenges associated with VA's capital program and the budget constraints within which VA is operating, the *Independent Assessment Report* includes a suggestion that transformative options be considered, to include alternative vehicles for capital delivery such as public-private partnerships.¹⁶²

Capital Asset Management

Capital asset management itself requires reengineering. Facilities-related functions are dispersed through VA, resulting in a lack of accountability for outcomes, a mismatch between planning efforts and funding decisions, and separation of project execution and facilities management,¹⁶³ suggesting a need for transformative changes in operations.¹⁶⁴

In its work to foster transformation, department officials have recognized many organizational and process challenges that require priority attention, including the need to realign its infrastructure, identify new (private) sources of financing, streamline investment decision making and contracting, and improve the management of capital projects.¹⁶⁵ Organizational change aimed at streamlining and better aligning core processes is vital to effective operation of VA's facilities programs.

Capital-Asset Imperatives

The planning and development of a new delivery model centered on establishing integrated networks of care has major implications for identifying, planning for, and realizing VHA's capital needs. Greater reliance on community care, inherent in that model, establishes a new set of imperatives, specifically, a need for

- facility realignment
- more effective means of repurposing or other divestiture of unneeded buildings and land
- new, more effective tools to meet VHA's need for new clinic capacity and major construction
- more effective management of VHA's capital needs

¹⁵⁹ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment K (Facilities)*, 159, accessed June 2, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_K_Facilities.pdf.

¹⁶⁵ Interviews of VA staff by Commission on Care staff, April 2016.

COMMISSION ON CARE FINAL REPORT

Facility Realignment

VA planning must closely examine the role of, and future for, individual facilities, in light of a transformative new delivery model. For more than a quarter century, VHA leaders have cited the need for medical center mission changes, realignments, disposal of unneeded buildings, and where indicated, hospital closures.¹⁶⁶ The critical importance of transforming VA health care delivery gives new urgency to providing tools to realign VHA's care-delivery infrastructure. The Commission recognizes that the SECVA does have authority to "consolidate, eliminate, abolish, or redistribute the functions of . . . [VA] facilities, and to carry out an administrative reorganization" of a field facility.¹⁶⁷ But that authority may generally not be unilaterally exercised.¹⁶⁸ In addition, despite VA's having established two previous commissions to address the need for facility realignment, leaders have had only limited success in achieving that objective. The exercise of SECVA's broad authority to reorganize is tempered by the prerogatives and fiscal authority held by Congress. Congress has rejected legislation that proposed a process to reassess the future of individual VA facilities,¹⁶⁹ reflecting concerns over veterans losing access to care and the potential of constituents losing employment. Such concerns can be addressed. To be successful, a capital asset realignment process must be conducted on a systemwide basis within a framework that provides for sound planning; the exercise of objective, independent expertise; and a reliable mechanism for implementation. Congress can look to and adapt a proven model¹⁷⁰ — the military base realignment and closure (BRAC) process — to meet those objectives and achieve marked improvements in access to care.

Congress should enact legislation, based on DoD's BRAC model, to establish a VHA capital asset realignment process to more effectively align VHA facilities and improve veteran's access to care. Creating a robust capital asset realignment process is vital because previous capital divestiture efforts have failed.¹⁷¹ This process should offer a level of rigor far beyond what currently exists for repurposing and selling capital assets. It should require VHA to employ criteria set by the VHA Care System governing board (see Recommendation #9) to conduct locally-based analyses of capital assets, based on national process criteria. Information generated would be used to assist an independent commission, established under the

¹⁶⁶ "VA Chief Seeks Panel to Revamp System," Christopher Scanlan, *Philly.com*, accessed December 31, 2015, http://articles.philly.com/1989-07-18/news/26134051_1_va-hospitals-derwinski-veterans-hospital. "Distinguished Group Selected for CARES Commission," Department of Veterans Affairs, Office of Public and Intergovernmental Affairs, March 3, 2003, accessed December 31, 2015, <http://www.va.gov/opa/pressrel/pressrelease.cfm?id=578>.

¹⁶⁷ Authority to Reorganize Offices, 38 U.S.C. § 510.

¹⁶⁸ Authority to Reorganize Offices, 38 U.S.C. § 510(c). In instances where a reorganization would reduce employment by 15 percent or more at a facility, VA must provide Congress a detailed plan and justification, and must defer implementation for at least 45 days.

¹⁶⁹ Veterans Millennium Health Care and Benefits Act, H.R. 2116, 106th Cong. (1999). Section 107 of House-passed H.R. 2116 would have established a mechanism for VA to cease providing hospital care at medical centers which were no longer providing high quality, efficient hospital care because of factors such as aging physical plant, functional obsolescence, and low utilization, and to redirect funds instead toward establishment of enhanced-service programs. In taking up H.R. 2116, the Senate did not adopt that provision, and it was not included in the Veterans Millennium Health Care and Benefits Act, Pub. L. No. 106-117, 113 Stat. 1545 (1999), accessed January 12, 2016, <https://www.gpo.gov/fdsys/pkg/PLAW-106publ117/html/PLAW-106publ117.htm>

legislation, in making recommendations regarding realignment and capital asset needs.¹⁷² The independent commission would conduct a thorough, one-time process, to include making site visits and holding hearings to inform recommendations that would constitute a proposed national realignment plan. The VHA Care System governing board would review, and adopt or make recommendations to revise, the independent commission's recommended realignment plan. The commission would then empower the VHA Care System governing board to implement the recommendations unless, within a specified timeframe, Congress disapproves the entire plan on an up or down vote. The Commission on Care envisions that after the completion of a realignment carried out under such proposed legislation and in the course of ongoing VHA transformation, the VHA Care System governing board would make all additional facility alignment decisions, to meet veterans' needs and to fully integrate with the strategic vision for the VHA Care System.

Repurposing and Divestiture of Unneeded Buildings and Land

Maintaining health care facilities to provide state-of-the-art care requires ongoing financial support. Bearing the additional cost of maintaining outdated, vacant, and unused buildings diminishes operating funds needed for patient care, and yields no benefit. Even taking unused buildings offline and placing them in *mothball status*, requires tens of millions of dollars in basic building maintenance.¹⁷³ If VA could sell, repurpose, or otherwise divest itself of unused or underutilized buildings in a timely, cost-effective manner, it would free funds for the purposes for which they are appropriated.¹⁷⁴

Enhanced-use leasing authority has in the past provided VHA a viable tool that prevents the need for such unnecessary spending, while permitting development of vacant property for uses compatible with VHA's mission, and effective use of the proceeds, whether in cash or in kind.¹⁷⁵ This leasing mechanism has been put to particularly effective use in leveraging an asset that VHA can no longer use, but which has development potential, as consideration for an asset it may need, such as clinic space. But limiting enhanced-use leasing to a single use that may not be feasible in many locations precludes effective use of a valuable capital-alignment tool.

In many instances, however, the condition or remote location of VHA buildings does not lend itself to enhanced-use leasing. Given the need to dispose of a large inventory of vacant

¹⁷² The process should take into account the community health needs assessments (CHNA) that not-for-profit hospitals are required to carry out under current law, (Patient Protection and Affordable Care Act of 2010, Pub. L. No. 111-148, 124 Stat.119, sec. 9007(a) (2010)) and opportunities to engage community providers in collaborative partnerships. This provision requires tax-exempt hospitals to create a hospital community health needs assessment every three years. This hospital CHNA is developed alongside community stakeholders. The community health needs assessment requirements include: demographic assessment identifying the community the hospital serves; a community health needs assessment survey of perceived healthcare issues; quantitative analysis of actual health care issues; appraisal of current efforts to address the healthcare issues; and formulation of a 3-year plan under which the community comes together to address those remaining issues collectively.

COMMISSION ON CARE FINAL REPORT

buildings for which there is no realistic prospect of their being repurposed, a streamlined divestiture process is needed.

Meeting Clinic Capacity and Other Infrastructure Needs

Developing a new delivery model and establishing a thorough realignment process may shrink VHA's future capital needs but will not eliminate them. As congressional budget rules have frustrated VHA efforts to lease needed clinic space, it is critical that VHA and Congress find models or remedies to establish new ambulatory care space and renew leases of existing clinics. Congress and VHA should work together to find the means to meet VHA's need for new clinic capacity. Given an impasse in congressional authorization of VA clinic leasing based on build-to-lease contracts, VA should explore the feasibility of restructuring those arrangements. VA should explore an arrangement that remedies the concern that it is entering into capital leases. Such an approach, for which VA provides the builder with space needs rather than a complete design, would have the additional benefit of bringing projects on line much sooner. Absent an effective solution to meeting VA's ongoing need for clinic space, Congress must be willing, as it was in passing VACAA, to take extraordinary steps¹⁷⁶ to overcome a funding challenge, and, in this instance to waive, or suspend for at least 5 years, the operation of current congressional authorization and scorekeeping requirements governing major medical leases.

In addition to severe leasing challenges, current statutory spending limits make it difficult for VHA to modernize and renovate its aging facilities.¹⁷⁷ Notably, minor construction funds, available for "constructing, altering, extending, and improving"¹⁷⁸ any VA facility, are limited to \$10 million,¹⁷⁹ yet such projects may require substantially more given the age and condition of many VA buildings. Congress last lifted the threshold of what constitutes a major medical facility project – the amount above which a project requires specific authorization – more than a decade ago.¹⁸⁰ The Commission believes that with the tight controls a governing board would exercise, that threshold should be lifted substantially, providing needed flexibility to carry out minor construction projects.

As VHA works more closely with community providers and participates in discussions regarding community health needs, it should be open to opportunities to discuss and potentially work toward joint efforts at meeting infrastructure needs.¹⁸¹

¹⁷⁶ Veterans Access, Choice, and Accountability Act of 2014, Pub. L. No. 113-146, 128 stat. 1754, sec. 803 (2014).

¹⁷⁷ VA Office of Inspector General, *Veterans Health Administration: Review of Minor Construction Program*, 8, accessed June 3, 2016, <http://www.va.gov/oig/pubs/VAOIG-12-03346-69.pdf>.

¹⁷⁸ Consolidated Appropriations Act, 2016, Pub. L. No. 114-113, 129 Stat. 2242 Div. J., Title II, Department of Veterans Affairs (2015).

¹⁷⁹ A major medical facility project is one involving a total expenditure of more than \$10 million. Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104(a)(3)(A).

¹⁸⁰ Sec. 812 of the Veterans Benefits, Health Care, and Information Technology Act of 2006, Pub. L. No. 109-461, 120 Stat. 3403 (2006), raised the threshold as to what constitutes a major medical facility project from more than \$7 million to more than \$10 million.

¹⁸¹ One such public-private model, such as under discussion in Omaha, NE, where talks have centered on private donors' partially funding construction of a replacement medical center, necessarily poses challenges, but merits exploration and support. ("VA Exploring Public-Private Plan for New Facility," Lincoln Journal Star, accessed June 3, 2016, http://journalstar.com/news/state-and-regional/nebraska/va-exploring-public-private-plan-for-new-facility/article_6a90778e-6962-545f-a86a-3f27930bd84e.html.) Although Congress must ultimately provide apt facilities for VA care-delivery, the law has long authorized the SECVA to accept gifts or donations, for purposes of facility

Capital Asset Management

The Commission fully recognizes that VHA has much to do on its own to more effectively meet its capital asset needs. At the core, leaders must strengthen and streamline the capital asset programs' management and operation, to include better aligning the component elements; streamlining the leasing program, contracting, and investment decisions; managing and streamlining project delivery for construction and renovation; and adopting a facility (or building) life-cycle-model planning tool. These are all important elements of needed system transformation.

As depicted in Figure 3, meeting and managing VHA's capital-asset needs require an integrated approach that requires congressional support to tackle the multiple capital-asset challenges facing VHA. The Commission's recommendations for meeting and managing those interrelated capital-asset needs are set forth in the *Implementation* section following Figure 3.

construction. (Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104(e)) Nevertheless, new legislative authority would almost assuredly be needed to permit development of public-private partnerships that provide new platforms for the construction of new or replacement medical facilities. For example, H.R. 5099 would establish a pilot program permitting VA to enter into public-private partnership agreements to plan, design, and construct new VA facilities using private donations. To Establish a Pilot Program on Partnership Agreements to Construct New Facilities for the Department of Veterans Affairs, H.R. 5099, 114th Cong. (2016), <https://www.congress.gov/bill/114th-congress/house-bill/5099>.

VA-18-0457-A-001208

COMMISSION ON CARE FINAL REPORT

Figure 3. The Complicated Process of Meeting and Managing VHA's Capital-Needs

**Implementation****Legislative Changes**

- Provide VA new, more flexible authorities to realign facilities, meet capital-asset needs, and divest itself of unneeded buildings.
- Establishing a VHA capital asset realignment process that provides (notwithstanding any other law) for more effectively aligning VHA facilities with the objective of improving the access, quality, and cost-effectiveness of VA care, and provides for:

COMMISSION RECOMMENDATIONS

- Establishing an independent commission (empowered to hold public hearings, make site visits, and have full access to VHA analyses and data) charged with developing a national capital asset realignment plan that would include recommendations to the VHA Care System governing board (see Recommendation #9) for systemwide facility realignment (to include changes in facility mission, facility downsizing, integration of facilities, and closures), with the rationale for each recommended change.
- The proposed plan would identify (a) the criteria used in developing realignment recommendations, (b) proposals for reinvestment and savings/cost avoidance resulting from the realignment, (c) the projected care improvements that would result, and (d) mechanisms to minimize the adverse effects on displaced employees, to include assuring that, to the extent feasible, VA retrain and reemploys displaced employees.
- The VHA Care System governing board would be empowered to adopt or alter the proposed realignment plan, and to implement the final plan unless, within a specified timeframe, Congress disapproves the plan as a whole on an up-or-down vote.
- Waive or suspend for at least 5 years current authorization and scorekeeping requirements governing major medical facility leases under 38 U.S.C. § 8104.
- Amend 38 U.S.C. § 8104 to lift the threshold of what constitutes a major medical facility project from \$10 million to \$50 million.
- Amend pertinent provisions of 38 U.S.C. § 8161, and what follows, to reinstate and extend for 10 years the authority in prior law (as in effect on December 30, 2011) for VHA to enter into enhanced-use leases for any use that is not incompatible with VA's mission.
- Provide the VHA Care System governing board authority to promulgate regulations that for a period of not more than 5 years, and notwithstanding any other law, would ease the divestiture of unneeded vacant VHA buildings, to include (a) shifting to a third party the cost of meeting environmental requirements, (b) allowing VHA to retain the proceeds of any property sale, and (c) creating a streamlined process to address historic preservation considerations.

VA Administrative Changes

- None required.

Other Department and Agency Administrative Changes

- None required.

Information Technology

Recommendation #7: Modernize VA's IT systems and infrastructure to improve veterans' health and well-being and provide the foundation needed to transform VHA's clinical and business processes.

Problem

To operate a high-performing VHA Care System, VA requires a comprehensive electronic health care information platform that is interoperable with other systems and other health care providers; enables scheduling, billing, claims, and payment; and provides tools that empower veterans to better manage their health. Creating a single, uniform, integrated IT platform will promote care continuity, cost savings, and consistent care delivery and business processes.¹⁸²

VA's antiquated, disjointed clinical and administrative systems cannot support these essential clinical and business processes and consequently are unable to support the Commission's transformation vision for VHA. In addition, currently within VHA, there is no experienced senior health care IT leader focusing on the strategic health care IT needs of veterans and VHA staff.

The Commission Recommends That . . .

- VHA establish a Senior Executive Service (SES)-level position of VHA Care System chief information officer (CIO), selected by and reporting to the chief of VHA Care System (CVCS) with a dotted line to the VA CIO. The VHA CIO is responsible for developing and implementing a comprehensive health IT strategy and developing and managing the health IT budget.
- VHA procure and implement a comprehensive, commercial off-the-shelf (COTS) information technology solution to include clinical, operational and financial systems that can support the transformation of VHA as described in this report.

Background

A fully functional electronic health record (EHR) can improve the quality of patient care, help avert medical errors, and improve communication among providers and with patients.¹⁸³ Starting in the 1970s, VHA became a leader in the development of EHR technology with VistA and a computerized patient record system (CPRS).¹⁸⁴ Full implementation of the EHR, together with other reforms, helped improve the quality of care at VHA.¹⁸⁵ During the last decade, VHA has not been able to maintain an IT advantage.¹⁸⁶ Although in the past most VHA clinicians

¹⁸⁶ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment H (Health Information Technology)*, vi, accessed April 5, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_H_Health_Information_Technology.pdf.

have had a high opinion of the clinical applications and databases enabled by VistA and CPRS, a lack of upgrades has put VHA's EHR at risk of becoming obsolete.¹⁸⁷ Many large U.S. health care systems that were early adopters of homegrown EHR systems found themselves in similar circumstances and have since purchased and migrated to commercial off-the-shelf (COTS) products.¹⁸⁸ DoD recently made the same choice.¹⁸⁹

To achieve the Commission's vision of a health care system that delivers quality, access, choice, and veteran well-being, VHA requires effective, robust, and modern information technology systems. A robust EHR system would allow veterans and clinical providers to send, receive, find, and use electronic health information in a manner that is appropriate, secure, timely, and reliable. It would be seamlessly interoperable with other systems including DoD, private-sector providers, and with other VA enterprise systems such as those in the Veterans Benefits Administration (VBA). It would support VHA clinical workflow, evidence-based practice, and patient safety. It would provide clinicians, patients, and administrators the data, analytic power, and user interfaces required to monitor the effectiveness of care and improve it over time. A robust IT system for VHA should include more than just the EHR, however, extending to all the systems and tools required to facilitate and automate business processes that support access and veterans' care. These capabilities include an effective scheduling system, telephone systems, mobile applications, telehealth, financial management systems, human resources systems, and other systems that enable community care.

To realize such a transformation of IT in a system as complex as VHA requires exceptional leadership and staff, sufficient budget, a robust change management plan, effective systems for accountability and quality control, and efficient and agile contracting.¹⁹⁰ Presently, VHA appears to lack a majority of these factors required for success.¹⁹¹

Analysis

Leadership and Staff

Prior to 2006, VHA had a chief health informatics officer responsible for the VHA electronic record system and for coordinating with VA on IT systems. The programmers in VHA worked closely with the clinicians who used the tool to create a system that met their needs.¹⁹² VHA was able to prioritize clinical needs and patient safety requirements within its overall budget and plan for IT spending; however, there was no specific budget line item for the electronic health

COMMISSION ON CARE FINAL REPORT

record system or related technology, and there was limited central oversight or accountability for information technology infrastructure.

VA's IT budget was centralized in 2006, and the Office of Information and Technology (OIT) was assigned to deliver, operate, and manage IT and its budget, across the department. With this change, VHA's needs became only one of the priorities that OIT has had to accommodate and VHA's priorities have not always prevailed.¹⁹³

To ensure that clinical needs and patient safety are a priority, many large health care systems, such as DoD, Cleveland Clinic, Geisinger, and Kaiser Permanente, have a medical CIO (i.e., CMIO) who manages and advocates for the clinical IT needs of the organization. A CMIO ensures that clinicians are involved in the selection of any IT systems they use to perform their job functions and provide patient care, including EHRs. Clinicians involved in the selection and deployment of an IT system are more likely to feel ownership of it and fully adopt its use. The CMIO usually reports to the health system's CEO or CMO, and working in concert with these individuals and the organization's CIO, makes sure that health information needs are prioritized and funded.¹⁹⁴

VA does not have staff with the necessary expertise to execute large-scale IT projects. Previous system implementations have failed because VA did not have individuals with adequate experience to effectively plan and manage system development and deployment. If VA had an adequate system and skilled staff to monitor and identify program and contracting problems affecting the progress of prior IT implementations, effective and timely decisions could have been made to either redirect or terminate VA IT projects that ultimately failed. To avoid repeating these previous IT implementation failures, VA needs to develop effective oversight systems and develop in-house staff with the expertise to oversee, fully support, manage, and execute complex integrated IT programs.¹⁹⁵

Given all of these critical needs, the Commission believes that it is essential for VHA to have a CIO with health care expertise and substantial experience, reporting to the chief of VHA Care System. The VHA CIO will be responsible for managing the complex implementation of a state-of-the-art comprehensive information system platform to support the new integrated VHA Care System, with the functionality, interoperability, and data management capabilities to support the delivery and coordination of high-quality health care for veterans. The CIO will need to work closely with clinical and operational leaders on the effective execution of the new system, and will also need to collaborate with the VA CIO to ensure the integration and coordination of the health care information system and the Veterans Benefit Administration system.

Budget

The 1-year budget appropriations cycle makes it difficult to secure multiyear funding for long-term development and important IT projects.¹⁹⁶ The budget process is disconnected from total lifecycle IT costs.¹⁹⁷ That disconnect has grown wider with a change in law¹⁹⁸ under which Congress provides VHA advanced medical care appropriations—in effect a 2-year budget—while health IT funding remains 1-year money.¹⁹⁹ As the Congressional Research Service (CRS) testified,

*providing an advance appropriation for some VHA accounts and funding IT accounts under a regular appropriation act could create a situation whereby, for example, VHA could not purchase computer software although it has procured medical equipment that needs software. Another example would be the difficulty of procuring IT infrastructure to support opening of a new community-based outpatient clinic (CBOC).*²⁰⁰

Spending on new systems and upgrades to existing systems now represents only 15 percent of VA's total IT budget (see Figure 4),²⁰¹ meaning that essential upgrades like a new scheduling package and EHR modernization have not had the funding or focus required to succeed. Clinical users have become increasingly frustrated by the lack of any clear advances with VistA during the past decade. Numerous VHA clinicians have experience with commercial EHR systems and want the same level of features, modern clinical capabilities, integration, and mobility they see emerging in the commercial marketplace.²⁰²

Figure 4. VA IT Spending

In July 2015, DoD awarded a \$4.3 billion, 10-year contract to overhaul the Pentagon's electronic health records for millions of active-duty military members and retirees. Officials estimate that

COMMISSION ON CARE FINAL REPORT

during its potential 18-year life, the contract could be worth just less than \$9 billion.²⁰³ The recent Senate appropriations bill for VA OIT allots \$63 million toward development and modernization of VA's existing EHR (i.e., VistA Evolution).²⁰⁴ Assuming that VA's implementation of a new COTS EHR would be similar in size and scope to DoD's EHR implementation, VA would be short \$3.67 billion in funding for a new COTS EHR, given the current funding amount of \$63 million per year. VA will require a substantial increase in IT funding to support the successful implementation of a new comprehensive COTS EHR.

Robust Change Plan

Because VistA has been customized at each medical center, there are few standard data elements. The varied algorithms lead to a complex, heterogeneous mix of hardware and software that impedes system changes and new capabilities and raises operations and maintenance costs.²⁰⁵ Due to excessive project management overhead, a complex legacy IT infrastructure that is difficult to modernize, and more than 130 variations of the primary software system deployed across VHA medical facilities, the implementation of improved IT capabilities in the last 10 years has been extremely limited.²⁰⁶ VA is currently weighing whether to continue to modernize VistA or purchase a COTS health information technology platform. The Commission recommends moving to a COTS program.

Whether VHA moves forward with the purchase of a COTS product, as recommended by the Commission, or continues attempting to modernize VistA, VHA must effectively manage the change process. At present, a lack of standard clinical documentation has made it harder to develop effective clinical decision-support systems and hinders EHR information exchange among VA Medical Centers (VAMC), between VA and non-VA facilities (including those of DoD), and between VA and individual veterans. Shared data must be well labeled in a way that the receiving system can identify and properly ingest such data. An electronic medical record can contain as many as 100,000 different data fields. The lack of data standards presents challenges to using comparable data for analysis and disparities among the 130 tailored local instances of VistA, complicating information sharing, data aggregation, and analytics.²⁰⁷ VHA has not established comprehensive semantic definitions for data elements through the use of standard nomenclatures, terminologies, and code sets. Doing so is required to ensure consistency and integration across multiple systems, leverage follow-on IT products, and facilitate analytics for clinical decision making.²⁰⁸

The Office of the National Coordinator (ONC) for Health IT, under HHS, is responsible for advancing national connectivity and interoperability of health information technology. The

²⁰⁷ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment H (Health Information Technology)*, vi, accessed March 31, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_H_Health_Information_Technology.pdf.

²⁰⁸ *Ibid.*, viii.

ONC developed the National Interoperability Roadmap with the goal of being able to use electronic health information exchange, so information can follow a patient where and when it is needed, across organizational, health IT developer, and geographic boundaries. The roadmap lays out a clear path to catalyze the collaboration of stakeholders who are going to build and use the health IT infrastructure.²⁰⁹ VA's intent to expand veteran care to more community providers through the creation of locally-integrated health care networks will mean that it is important for VHA to follow the ONC roadmap and standards. Following this roadmap includes using the continuity of care document to exchange data, which was established by ONC and is followed by community health care providers. VA OIT is currently collaborating with the ONC on VA's plans for interoperability and has committed VA to following the roadmap.²¹⁰

VHA does not yet have a robust, detailed strategy and roadmap for IT initiatives across VHA that integrates veteran access to scheduling via phone, telehealth, and mobile apps.²¹¹ National deployment of the VistA Scheduling Enhancement and the veteran mobile scheduling Veteran Appointment Request app, are initial steps to prepare for the implementation of new COTS electronic medical system with a scheduling package.

To resolve the underlying systemic issues with VistA scheduling, VA awarded a contract for the implementation of VA's new COTS medical appointment scheduling system in August 2015.²¹² This system is a COTS scheduling solution that, when implemented, is expected to move VHA from primarily a face-to-face appointment model to a coherent, resource-based system with broad opportunities for improved services for VA stakeholders.²¹³ Deployment is awaiting the final decision on whether VHA will continue with VistA or purchase a full COTS product.

COTS Solution

The current VistA/computerized patient records systems are based on a tightly integrated, monolithic architecture and design with numerous and diverse functional components and associated interdependencies. These characteristics impose barriers to modernizing the respective systems. In addition, the high cost of infrastructure operation and maintenance (85 percent of the total IT budget) reduces funding available for new development efforts.²¹⁴ Maintenance and data sharing are further complicated because most VAMCs have customized their local versions of VistA, leading to approximately 130 different versions of VistA across the country.²¹⁵

COMMISSION ON CARE FINAL REPORT

VHA relies on a VistA scheduling package to provide veterans with access to health care. The system is antiquated, highly inefficient, does not optimally support processes or allow for efficient scheduling of appointments. A report on scheduling published by the Northern Virginia Technology Council (NVTC) in October 2014, showed that VA's exam-scheduling processes are not enabled by state-of-the-art technologies or consistently applied standard operating procedures.²¹⁶ To improve this situation, VHA has developed, and is in the process of a national roll out of, VistA scheduling enhancements, which provides an improved user interface (i.e., graphic user interface or GUI). Although the new GUI will help veterans gain access to care by implementing better scheduling procedures, it does not address the need that managers, planners, and administrators have for accurate and timely data on clinic use.²¹⁷ For instance, VHA's new health care operations dashboard shows that more than 55 percent of clinic slots in VHA go unused each day.²¹⁸ However when questioned about this data, VHA notes that it is not correct.²¹⁹ The underlying VistA scheduling software does not allow accurate representation of clinician time toward each clinic stop. As a result, whether data is presented in a dashboard or a new GUI tool, as long as the underlying data cannot be captured accurately, then VHA will not have the information it needs to effectively manage the supply of clinic slots.²²⁰

VA's financial management information technology system is woefully outdated and VA has previously wasted approximately \$500 million in two failed attempts to replace it. Given VA's lack of an integrated finance and logistics IT system, VA has no method to perform commitment accounting.²²¹ VA's current financial management system does not support streamlining and automation of VA's revenue cycle.²²²

Community care processes currently include eligibility determinations, referrals and authorizations, care coordination, network management, claims, and customer service.²²³ VA's information technology systems limitations often demand manual processes to support community care that can reduce the timeliness and accuracy of data and obscure the true state of VHA's activities. Relying on manual processes slows collections and payment activities and introduces errors and waste into the process.²²⁴ Barriers to automation are multifactorial,

including confusing eligibility rules governing which veterans may receive care outside VHA and for what conditions, in what circumstances, and which services may be billed to third-party insurers.²²⁵ In addition, there are multiple authorities for purchasing community care—all with different business rules²²⁶ and reimbursement rates, as well as antiquated financial management information systems that are not standardized to private-sector processes. All of these impediments are exacerbated by workers throughout the revenue cycle who are poorly compensated and marginally trained, experience high turnover, and work in environments with a continuous 20 percent vacancy rate;²²⁷ thus, they cannot effectively manage certain business practices such as insurance verification and ensuring clinicians complete necessary coding documentation.²²⁸

Many large U.S. health care systems that originally developed in-house EHRs have since purchased and migrated to COTS EHRs.²²⁹ DoD recently made the same choice, deciding to replace its homegrown EHR with a COTS product to take advantage of private-sector innovation and have an EHR that communicates with private-sector systems. For a system in which 60 to 70 percent of military health care takes place outside the DoD,²³⁰ this was an important business consideration that is also consistent with VHA's long term direction. Very large IT programs with purpose-built systems and labor-driven business models are shifting rapidly toward more open source, COTS systems. Large proprietary IT solutions are increasingly being replaced by less risky, agile, and open-source solutions or IT as-a-service models, and getting away from client-server models.²³¹

Interoperability

VHA's EHR issues stymie interoperability among VHA facilities as well as between VHA and DoD and other non-VHA providers. Multiple assessments noted the lack of interoperability resulted in incomplete patient records with potentially substantial implications for veterans and VHA. Incomplete records introduce unnecessary clinical risk, complicate the transition from

COMMISSION ON CARE FINAL REPORT

DoD to VHA care, and inhibit VHA's ability to bill and collect revenue in an accurate and timely manner.²³²

As GAO reported in August 2015, VA and DoD have taken initial steps to increase interoperability between their existing electronic health record systems.²³³ They have deployed the Joint Legacy Viewer (JLV), which provides a patient-centric, integrated view of a patient's health data from VA, DoD, and community health partners on one screen. It has been available at all VA medical centers since October 2014 and currently has more than 70,000 users.²³⁴ The JLV is a positive step in supporting coordination of care among VA, DoD, and community partners, but it only allows for providers to view veterans'/service members' medical records and does not yet allow for the other agencies' medical records to be updated by providers.²³⁵

VA's next evolution in interoperability with DoD and community partners is the deployment of their Enterprise Health Management Platform (eHMP). eHMP is intended to provide VA streamlined access to complete patient history from VA, DoD, and community health partners in a single, reliable, customizable, and secure interface that is easy to use. It is reported to deliver a modern, web-based user interface and supporting infrastructure and is intended to replace the Computerized Patient Record System (CPRS) as VA's primary point-of-care application. The national rollout of eHMP is expected to be completed by December 2017.²³⁶

VHA does not have everything that is needed in an IT system to manage the business and clinical aspects of care in the community and support the overall veteran experience in an expanded community network. To address these gaps and provide health care well into the future, VA intends to develop in house a comprehensive and interoperable digital health platform (DHP). The DHP is intended to seamlessly integrate all of VHA's core processes, including scheduling, supply chain management, billing, and claims. Through consolidation of more than 40 contact center systems and more than 130 versions of the VistA EHR and clinical procurement/inventory systems, the DHP is designed to enable VHA's operation as a holistic, platform business and greatly reduce the cost of system maintenance across the IT enterprise.²³⁷

Because there is no unique patient identifier, problems exist with "1) accessing and integrating information from different providers and provider computer systems, 2) aggregating and providing a lifelong view of a patient's information, and 3) supporting population-based research and development."²³⁸ To accurately match veteran patient data that is exchanged between VA and non-VA providers, both organizations need to use the same unique patient

identifier. This practice is currently not used.²³⁹ Each health care system uses a unique patient identifier number, but it is specific to that system.²⁴⁰ VA uses patients' social security numbers as unique identifiers; whereas, due to stricter security standards required by HIPPA privacy laws that community providers must adhere to, many non-VA providers use other personally identifiable information (e.g., first name, last name, date of birth, and phone number) to match patient identities between record systems. Studies have shown that patient identification error rates range from 7-20 percent.²⁴¹ For VA to accurately identify patients and their records, a unique national patient identifier is essential.

The security of electronic records is an ongoing concern. One in three Americans had health care records breached in 2015.²⁴² Recent hacks of U.S. hospital health care systems through the use of ransomware, viruses that hold systems hostage until victims pay for a key to regain access, further highlight the need for enhanced VA cybersecurity.²⁴³ VA's OIG has repeatedly identified the same weaknesses and deficiencies in VA's information security program in its annual FISMA audit reports.²⁴⁴ Although VA has recently made some progress in developing policies and procedures to address current security gaps, OIG's FY 2015 audit concluded that information security is still a *material weakness* for VA and that VA must take comprehensive measures to mitigate security vulnerabilities affecting VA's mission-critical systems.²⁴⁵ For sharing of veteran data to be secure, only the designated correct parties can have access to patients' data.²⁴⁶ Interoperability increases the risk to veterans' health records.²⁴⁷ Cybersecurity guidelines and best practices are being developed by HHS in response to the requirements in the recently enacted Cybersecurity Information Sharing Act;²⁴⁸ however, security protocols also cannot impede health information exchange with VA community providers and health systems. VA OIT needs to be involved in the health information exchange planning discussions, which

COMMISSION ON CARE FINAL REPORT

are currently handled solely within VHA, so that VA OIT can assist in removing impediments to health information exchange.²⁴⁹

Veterans currently have to opt in (i.e., provide consent) to allow VA to share their health information with non-VHA/community care providers. Although the technology is in place for VA to exchange patient health information with more than 100 health information exchange partners, only a fraction of data can be exchanged in these networks because, due to lack of awareness, only 3 percent of veterans have opted in to allow VA to share their health information.²⁵⁰ The standard industry policy is to have patients opt out of having their health data shared with their other health care providers. VA is prohibited from taking this approach because statutory language in 38 U.S.C. § 7332 prohibits VA from disclosing information relating to drug abuse, alcoholism or alcohol abuse, infection with the human immunodeficiency virus, or sickle cell anemia, except when required in emergencies, without written authorized consent from the patient.²⁵¹

In response to this limitation, VA approved and submitted Legislative Proposal VHA-10 (10P-07), Authority for the Department of Veterans Affairs (VA) to Release Patient Information under 38 U.S.C. § 7332 to Health Care Providers for Treatment of Shared Patients in 2013. The proposal allows veterans to opt out of sharing their data with VA community providers instead of having to opt in. The proposal was approved by OMB and was included in the president's 2015 Budget. VHA provided a briefing to a Senate Veterans Affairs Committee staff in April 2015 on this legislative proposal. A House Bill was introduced, but it limited the opt-out option to the *Choice Program*. VA's Office of Congressional and Legislative Affairs responded back to Congress that the bill should be expanded to include all external purchased care options (i.e., community providers) thus directly supporting more veterans.²⁵²

Collaboration between VA OIT and VHA is paramount to transforming VHA's health IT infrastructure. Such collaboration would be most effectively achieved by establishing an IT leader for VHA who is focused on ensuring that the strategic and operational IT needs of VHA clinicians, staff, and veterans are met. Current OIT leadership is in the process of modernizing VA's IT management processes, to include putting in place IT account managers (ITAMs) for each of the agency's departments, including VHA.²⁵³ An account manager is neither senior enough, nor has the level of expertise and experience, to manage the complexity of the VHA IT system. VHA's extensive IT needs require a VHA CIO with authority over the health IT budget and the execution of the health IT strategy. VA needs a robust process for IT investment decisions, especially those relating to VHA's health strategy. The VHA CIO would work with the CVCS and the VA CIO to define the health IT strategy and key IT acquisitions/projects and ensure that health IT funding is aligned and committed to the execution of VHA's health IT

²⁴⁹ Jamie Bennett, VLER Health Program Manager, phone call with Commission on Care Staff, March 2, 2016.

²⁵⁰ Elaine Hunolt, email on February 1, 2016 in response to follow-up questions from her briefing to the Commission on Care, December 15, 2015

²⁵¹ 38 U.S.C. § 7332 Subchapter III - Protection of Patient Rights Sec. 7332 - Confidentiality of certain medical records.

²⁵² Elaine Hunolt, email on February 1, 2016 in response to follow-up questions from her briefing to the Commission on Care, December 15, 2015.

²⁵³ "OI&T Enterprise Strategy: Putting Veterans First," LaVerne Council, Assistant Secretary for Information & Technology, Chief Information Officer, Department of Veterans Affairs, briefing to Commission on Care, December 15, 2015.

strategy. Rolling out a new system takes multiple years, and VA must commit to funding system deployments to completion.

The modernization of VHA's IT infrastructure requires a substantial increase in and reallocation of VA's IT budget to implement it. The budget process for VA health care IT funding should be the same as the process for VHA medical care funding. That shift can be accomplished by establishing a separate line item for *health* IT within VA's IT appropriation, and providing for advanced appropriations for that account. In addition, there is also a potential supplementary role for government-wide IT legislation. For example, H.R. 4897, the Information Technology Modernization Act of April 2016, would create a \$3.1 billion revolving fund for upgrading outdated federal IT systems.²⁵⁴

The Commission strongly recommends that VA purchase a comprehensive COTS health IT platform, and implement all information systems with minimal customization. VHA leadership is in the process of assessing whether VistA is the best solution to support veterans' future health care needs or whether a new EHR, such as a COTS product or open-source EHR, should be used.²⁵⁵ The decision to choose a COTS product would be consistent the approach adopted by DoD and by other large health systems that have moved away from homegrown solutions to commercial and open-source products. It would allow VHA to focus energy on excellent patient care as a core competency and shift the IT development and maintenance risk of software products to external vendors with more expertise in this area.²⁵⁶ It is also likely to accelerate interoperability as vendors continue to offer IT solutions that meet meaningful use standards and the roadmap published by ONC.

A COTS product must be able to execute key functionalities required by VHA. These requirements include one standard version of an EHR across all VHA sites of care; interoperability within VA, such as with Veterans Benefit Administration (VBA), and between VHA and DoD, and community providers; robust security; and the ability to accommodate a national unique patient identifier. This system must also be a robust clinical management tool that supports VHA clinical workflow and has a customizable interface for clinical users, allows for evidence-based clinical order sets and patient safety features like automated medication reconciliation, has robust analytic capability for both clinical and administrative functions, and enables automated abstraction and reporting of performance measures.

The system must also seamlessly support administrative functions like scheduling, patient intake, eligibility determination, referrals, and patient out-of-pocket expense determination. The system must enable effective business operations in billing coding, automated claims processing, and all aspects of supply chain management. This COTS purchase should include a scheduling package. Improvements in scheduling should dramatically increase access and satisfaction, as well as data quality, productivity, and operational reporting capabilities.

²⁵⁴ "Two IT Modernization Bills Could See Movement in Congress," Aisha Chowdhry, accessed April 28, 2016, <https://washingtontechnology.com/articles/2016/04/22/it-bills-congress.aspx>.

⁷³ Sloan Gibson, Deputy Secretary of Veterans Affairs et al., briefing to Commission on Care, April 18, 2016.

²⁵⁶ "DoD awards Cerner, Leidos, Accenture EHR Contract," Tom Sullivan, accessed May 12, 2016, <http://www.healthcareitnews.com/news/dod-names-ehr-contract-winner>.

COMMISSION ON CARE FINAL REPORT

Broadening and improving scheduling capabilities will provide more opportunities for veterans to become active partners in their own care.²⁵⁷

For VHA to transition to a COTS product, the new VHA CIO must develop and implement a strategy that will allow the current nonstandard data to effectively roll into a new system, engage clinical-end users and internal experts in the procurement and transition process, ensure effective cybersecurity, and limit spending on the current systems to fund only critical changes required for continued operations. Finally, this plan should be coordinated with ONC and DoD.

Implementation

Legislative Changes

- Provide a specific appropriation to fully fund the complete development and deployment of the comprehensive COTS electronic health platform, recognizing this will require significant resources above the current annual appropriation and funding to support VHA's IT transformation; including funds that ensure appropriate training of all staff, recognize loss of staff productivity during implementation, and provide proper maintenance and upgrades of VA IT infrastructure in preparation for new and successor technologies.
- Establish within the Department's IT appropriation a line item for health IT, and provide for advanced appropriations for that account, consistent with the overall VHA IT strategy.
- Amend section 38 U.S.C. §7332, to authorize VA to share protected health information under the same rules as all other HIPAA protected information.

VA Administrative Changes

- Hire a CIO for the VHA IT transformation. The CIO should report to the CVCS, with secondary reporting responsibility to VA CIO.
- Establish a transformation strategy that addresses all of the following needs (as directed by the VHA CIO):
 - standardizes data elements in the current IT systems through the use of standard nomenclatures, terminologies and code sets in order to promote the transition to a COTS EHR and to support interoperability²⁵⁸
 - develops a robust cybersecurity plan for VHA IT infrastructure, in coordination with VA CIO and Chief Information Security Office, which addresses both current systems and defines
 - the requirements for new systems

²⁵⁷ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment H (Health Information Technology)*, 46, accessed May 3, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_H_Health_Information_Technology.pdf.

²⁵⁸ *Ibid.*, 55.

- collaborates with the Office of the National Coordinator for Health IT on national interoperability standards and implementation
- limits any continued VistA development and associated spending to only those upgrades required to keep VistA functioning until a new system is in place
- Plan and implement procurement of a comprehensive COTS electronic health platform that executes all of the following requirements:
 - establishes one logical version of an electronic health record platform in VHA²⁵⁹
 - standardizes evidenced-based, best practice clinical order sets across VHA
 - incorporates effective analytic capabilities to drive health and business outcomes and offers the ability to interface with other tools for data management and presentation²⁶⁰
 - modernizes appointment scheduling so that it accurately measures wait times, is not susceptible to data manipulation, and is focused on the individual needs of the veterans²⁶¹
 - accomplishes a coordinated IT infrastructure for appointment scheduling, coding, billing, claims payment, third party collections, and other core VHA business processes, including the following specific capabilities: integration across patient intake, medical records, coding, and billing systems; single sign-on capability; automated first-party claims matching; real-time estimate of out-of-pocket patient expenses; and automation to support algorithmic edits and claims correction²⁶²
 - supports the business processes required to implement integrated community care networks, including eligibility determinations, referrals and authorizations, care coordination, network management, claims and customer service
 - promotes full interoperability with IT systems across VA (including VBA and National Cemetery Administration) and between VA and DoD
 - supports the development of full interoperability with integrated community care network facilities and providers

²⁵⁹ LaVerne Council, Assistant Secretary for Information & Technology, Chief Information Officer, Department of Veterans Affairs, briefing to Commission on Care staff, April 27, 2016.

²⁶⁰ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment H (Health Information Technology)*, viii, accessed March 31, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_H_Health_Information_Technology.pdf.

²⁶² The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 49, accessed February 16, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

- enables automated abstraction and reporting of quality performance measures including process and outcome measures of clinical quality, access measures, and cost effectiveness that are the same as the private sector
- includes functionality to use a national unique patient identifier
- integrates supply chain and financial systems with the electronic health records to provide accurate operational data²⁶³
- Streamline its current IT procurement processes so that IT procurement is expeditious, including lengthier contract vehicles with more options, the use of indefinite delivery indefinite quantity vehicles, blanket purchase agreements, time and material contracts, and flexible contract structures to allow for the onboarding of emerging technologies in a competitive fashion.
- Increase health IT expertise within VHA.

Other Department and Agency Administrative Changes

- CMS and federal health care providers should collaborate to develop a national unique patient identifier standard. CMS should require health care providers to use these identifiers as a condition of participation in Medicare and HHS should require federally qualified health centers to use them as a condition of participation. The President should require all federal health care providers to adopt the standard.

²⁶³ LaVerne Council, Assistant Secretary for Information & Technology, Chief Information Officer, Department of Veterans Affairs, briefing to Commission on Care staff, April 27, 2016.

Supply Chain

Recommendation #8: Transform the management of the supply chain in VHA.

Problem

Effective management of all aspects of the supply chain has become a competitive differentiator for health care delivery systems. Modernization and automation of the supply chain in health care have the potential to save hundreds of millions of dollars, if done well. VHA cannot modernize its supply chain management and create cost efficiencies because it is encumbered with confusing organizational structures, no expert leadership, antiquated IT systems that inhibit automation, bureaucratic purchasing requirements and procedures, and an ineffective approach to talent management.

The problems are systemic. The organizational structure is chaotic, contracting operations are not aligned to business functions, and processes are poorly constructed, lacking standardization across the organization. Information technology infrastructure is inadequate, and it lacks appropriate interoperability among IT systems. VHA is unable to produce high-quality data on supply chain utilization and does not effectively manage the process using the insights such data could provide.²⁶⁴

Background

Health systems nationwide, under pressure from reforms driven by the Affordable Care Act, are looking at every aspect of their business to maximize cost savings, while maintaining quality services.²⁶⁵ This effort includes examining the supply chain for ways to save money.²⁶⁶

The Commission Recommends That . . .

- VHA establish an executive position for supply chain management, the VHA chief supply chain officer (CSCO), to drive supply chain transformation in VHA. This individual should be compensated relative to market factors.
- VA and VHA reorganize all procurement and logistics operations for VHA under the CSCO to achieve a vertically integrated business unit extending from the front line to central office. This business unit would be responsible for all functions in a fully integrated procure-to-pay cycle management that includes policy and procedures, contract development and solicitation, ordering, payment, logistics and inventory management, vendor relations and integration, data analytics and supply chain visibility, IT alignment, clinician engagement and value analysis, and talent management across all these supply chain functions.
- VA and VHA establish an integrated IT system to support business functions and supply chain management; appropriately train contracting and administrative staff in supply chain management; and update supply chain management policy and procedures to be consistent with best practice standards in health care.
- VHA support the Veterans Engineering Resource Center (VERC) Supply Chain Modernization Initiative including consistent support from leadership, continued funding and personnel, and the alignment of plans and funding within OIT to accomplish the modernization goals.

COMMISSION ON CARE FINAL REPORT

Price competition achieved through technology and aggressive management of supply chain efficiencies by retailers such as Walmart and Amazon are held up as just the kind of disruption that health care requires.²⁶⁷ Health care organizations as diverse as Kaiser Permanente, Cleveland Clinic, Stanford Medicine, and Johns Hopkins Health System have taken on the challenge of transforming their supply chains, realizing savings of as much as hundreds of millions of dollars.²⁶⁸ VHA, which in FY 2014 spent approximately \$3.4 billion on clinical supplies, medical devices, and prosthetic appliances, has an opportunity to realize similar savings.²⁶⁹

Opportunities for efficiency in the supply chain include reducing pricing for purchases and lowering operating costs of procurement processes. To achieve price savings, organizations must have detailed information on what products they use, understand and reduce variability in the products purchased, and aggressively negotiate pricing, usually by consolidating purchases to a small number of preferred vendors who are willing to offer volume discounts and improve service delivery. On the operations side, cost savings are achieved by managing inventory lifecycle and restocking processes; order management; and the logistics of shipping, receiving, and transportation to drive down costs and lower waste and breakage. In health care, it also pays to ensure that clinical staff, both nurses and doctors, are treating patients rather than conducting inventory checks or ordering and collecting supplies.²⁷⁰ To be successful in managing the supply chain in health care, a partnership with clinical staff is key. Variability in device and supply purchases can be driven by clinician preferences and thus, to reduce variability, clinicians must be engaged in analyzing product options and examining data on product effectiveness to determine what products to use with patients.²⁷¹

VHA has a successful internal model of aggressive supply chain management that can serve as a model for improving the management of medical, surgical and other supplies: the VHA Pharmacy Benefits Management Service (PBM). PBM has taken a systems approach to

managing pharmaceutical supplies, logistics, and prescribing.²⁷² PBM has largely solved the internal contracting deficiencies in VA by consolidating its activities under just two contracting organizations that oversee all national-level contracts for pharmaceuticals. PBM also applies effective mechanisms to drive standardization of supplies through a national formulary, clinical guidelines for prescribers and utilization review, and feedback to help clinicians identify outlier prescribing practices.²⁷³ Vital to the success of this program is the involvement of clinicians and pharmacists in a vertically integrated model of engagement and decision making through facility-level, Veterans Integrated Service Network (VISN)-level, and national-level PBM committees that contribute to formulary and clinical guideline decisions and manage utilization review with local clinicians.²⁷⁴ PBM also has a sophisticated web of communications, education, and engagement efforts to ensure clinical leaders across the system are helping drive PBM policy and practices.²⁷⁵ As a result, 90 percent of purchases are acquired through pharmaceutical prime vendor contracts.²⁷⁶

PBM, taking advantage of standardized industry nomenclature and bar codes for pharmaceuticals, has implemented automated dispensing, distribution, and ordering processes, including VA's Consolidated Mail Outpatient Pharmacy (CMOP).²⁷⁷ The use of CMOP, a system of seven highly automated pharmacies that process more than 460,000 prescriptions every work day, results in exceptional accuracy and lower processing costs than would result if filling prescriptions at each VAMC.²⁷⁸ Eighty percent of prescriptions in VHA are filled through CMOP,²⁷⁹ which has been recognized for the last 6 years as the best or one of the best mail order pharmacies in the country meeting or exceeding customer satisfaction scores of health care systems like Kaiser Permanente and on-line pharmacies like Express Scripts and Walgreens Online Pharmacy.²⁸⁰ Customer service, veteran satisfaction, and patient safety delivered through team-based care are a hallmark of the mission of PBM,²⁸¹ and are a useful reminder of the principles that must drive any successful transformation of supply chain management in VHA.

COMMISSION ON CARE FINAL REPORT

Analysis

VHA's supply chain for clinical supplies, medical devices, and related services is inadequate compared to the agency's pharmacy organization or to best practices in leading hospital systems.

*Its contracting processes are bureaucratic and slow, which can delay veterans access to care. Purchasing processes are cumbersome which has driven VHA staff to work arounds and exacerbates the variation in prices VA pays for products. Utilization is difficult to measure or manage given a lack of data which likely leads to significant avoidable expense for VA.*²⁸²

Leadership and Organizational Structure and Function

Best-in-class supply chain organizations typically have a single group responsible for the strategy, sourcing, procurement, and logistics of clinical supplies and medical devices. The organization is typically led by an executive-level leader, such as a chief supply chain officer (CSCO), and personnel are aligned along product categories to develop and use deep expertise in the products and suppliers they manage.²⁸³ In contrast, the organizational structure for contracting, logistics, and supply management in VA and VHA is complex and duplicative.²⁸⁴ Four contracting entities are located within VA central office but report to two different management offices within VA's office of acquisition, logistics, and construction (OALC).²⁸⁵ Procurement personnel within VHA's regional contracting and VISN offices report to VHA's national office of procurement. In contrast, facility-based and VISN logistics personnel report to their local VAMC or VISN director and not to the national VHA logistics office.²⁸⁶ To further complicate the management picture, clinical supplies are managed by the logistics organization, yet medical devices are managed by the Prosthetics and Sensory Aid Service (PSAS)²⁸⁷ (see Figure 5). In most health care organizations, the supply chain chief operating officer and their integrated supply chain group manages the procurement and distribution of all clinical supplies and medical devices.²⁸⁸ This is not the case in VA. Senior leaders in VA's and VHA's supply chain organizations and field-based supply chain personnel indicate current organizational structure is too complex and should be simplified.

*National supply chain leaders expressed lack of clarity regarding the scope of responsibilities of the entities for which they are responsible, which has led to some tension and what one leader described as a 'turf war.' Others described a vacuum of ownership and accountability, and lack of clarity on roles and responsibilities.*²⁸⁹

²⁸² The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, v, accessed April 29, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

Figure 5. Organizations Comprising VA's Supply Chain²⁹⁰

Notes: Some VISNs may have different reporting relationships with facility prosthetics staff.

The separation of clinical supplies and prosthetics/medical devices causes issues in coordinating products needed for procedures. Frontline staff members indicate the time it takes to procure simple items through contracting (1 to 3 months) is problematic. For example, heart valve surgery may be delayed because some heart valves cost more than the micro-purchase threshold (\$3,000), thus the purchase must be made through the contracting process.²⁹¹ Medical center staff consistently expressed concern that VHA procurement offices are not responsive to the needs of a health care organization and do not communicate effectively with them,²⁹² findings borne out by low customer satisfaction scores given to these organizations.²⁹³

There is great overlap and redundancy in procurement and logistics functions in VA and VHA and the reporting structures are not aligned to ensure that the needs of veteran patients and their clinical providers are met. In an environment with limited sharing of best practices and a lack of transparent, open communications, the current complicated reporting structures impede customer-service quality and effectiveness. The original intent behind the current structure was to consolidate and strengthen purchasing power through the establishment of national contracts; however implementation of the vision has been poor and the result has been a

²⁹⁰ Ibid., 49.

²⁹¹ Ibid., 67.

²⁹² Ibid., 68.

²⁹³ Ibid., 69.

COMMISSION ON CARE FINAL REPORT

complicated, bureaucratic system filled with redundancies.²⁹⁴ These broken processes serve as a precursor for catastrophic systems failures.²⁹⁵

There is an immediate need to consolidate and streamline procurement and logistics for medical and surgical supplies under one leader in VHA, the VHA chief supply chain officer (CSCO), who would be accountable for transforming VHA supply chain management. As identified under MyVA, medical and surgical supply chain management is the first priority but the rest of the supply chain needs to be addressed by the CSCO in a staged approach. The VERC or other experts in business process engineering must be engaged to create a vertically aligned organizational structure with clear delegated responsibilities at each level of the organization to create an efficient and responsive procurements and logistics process which the VHA CSCO would lead.

Clinical Engagement and Value Analysis

In contrast to pharmaceuticals, usage of clinical supplies and medical devices is not strictly monitored or managed in VA. In general, physicians and nurses can choose whichever products they believe are best for patients and the supply chain organization's role is to make those items available.²⁹⁶

VHA does not have a means to determine what supplies should be standardized or a feedback loop administrators and staff use to assess whether standards were being used when they did exist.²⁹⁷ As a result, limited product standardization has been achieved across VHA, despite VHA establishment of national standardization user groups in 2001 responsible for identifying items for standardization based on national procurement data.²⁹⁸ To date, national product standardization has been achieved in only a limited number of categories.²⁹⁹ Since 2011,

VHA required that medical centers establish Clinical Product Review Committees (CPRCs) to: (i) review and approve the use of new clinical items and reusable medical equipment (RME) at each medical center; (ii) maintain a list of approved expendable clinical supplies and RME by establishing and maintaining a Medical/Surgical Supply Formulary; and (iii) ensure compliance with nationally standardized contracts and blanket purchase agreements. In all sites visited, CPRCs exist and meet regularly but reviews were generally formalities.³⁰⁰

³⁰⁰ Ibid., 82.

Under this 2011 policy, the establishment of VISN oversight committees was also required to provide accountability and feedback to the local committees, but these committees were apparently never established.³⁰¹

VHA, with the engagement of the Veterans Engineering Resource Center (VERC), is making progress on clinician alignment to accomplish value-based purchasing decisions for medical and surgical supplies. VERC has recently rolled out a national clinical product review committee (CPRC-E) e-portal to better organize this function. This portal provides a central system and standard processes for all new product requests and approvals to inform the procurement processes.³⁰²

In the area of medical and surgical supplies, clinician preference can drive variability in procurement and utilization. As has been done in VHA for pharmaceutical prescribing, a similar system to engage and align clinicians must be undertaken for medical devices and surgical supplies. VERC has started this process, but requires further funding and leadership support to fully implement a clinician-driven sourcing process. Current and future leaders of VA and VHA must ensure that VERC continues to receive the funding support and leadership engagement it needs to fully accomplish this transformation with support and direction from a VHA CSCO.

Information Technology, Data Standards, and Analytics

Information technology systems, data systems, and analytical capability for finance, inventory management, and purchasing impede VHA's ability to effectively manage its supply chain.³⁰³ VHA needs greater "end-to-end visibility into the operational and financial performance of their supply chain" and more effective means to accomplish supply chain budgeting, forecasting, inventory management and automation of at least some key supply chain functions.³⁰⁴

*VA lacks visibility into supplies and devices spending at the level of granularity usually seen in the private sector. For example, in the private sector, it is typically possible to measure clinical supply spend and utilization at the service, patient, or physician level. However, this is not possible in VHA because it does not capture such data. Therefore, supplies spend per case can only be calculated in aggregate, which is relatively meaningless and does not allow for fair comparison across hospitals, services, or physicians. This inhibits VA's ability to manage utilization and to understand fully the impact of product standardization efforts.*³⁰⁵

VERC is working to reduce the more than 130 versions of VistA in place across the country so that the same data sets can be tracked and reported.³⁰⁶ Funding was approved by OIT for the Future Transformation Tool (FTT) graphical user interface that will standardize product names

COMMISSION ON CARE FINAL REPORT

and provide data integration across all of VHA. Point of Use Solution, a commercial off the shelf supply management software product, has been purchased to achieve better inventory and demand management control and has been deployed to 32 percent of facilities, as of April 2016.³⁰⁷

True sustainment of a clinician driven process cannot be achieved with fragmented information systems that do not communicate. Leaders at all levels of the organization are not able to effectively identify and manage procurement requirements or provide effective feedback to clinicians on utilization. Similarly, automated inventory control, ordering, billing, and payment cannot occur without a seamless information technology infrastructure. With a current IT system in which fiscal, supply chain, and clinical informatics systems do not interface, the hopes of moving to automated processes for supply ordering, equipment life cycle management, and vendor communications cannot be realized. A plan for the transformation of supply chain management, developed by a VHA CSCO with support from VERC, must be fully integrated with planning and procurement within OI&T and fully financed to accomplish these important goals.

Policy and Procedures

Ninety-eight percent of all clinical supplies are acquired using purchase cards³⁰⁸ and 75 percent of what VHA spends on clinical supplies is made through this purchase mechanism.³⁰⁹ This is not a surprise given that the standard contracting process can take anywhere from 150 to 180 days to complete,³¹⁰ yet use of purchase cards is inefficient as this mechanism does not take advantage of economies of scale and potential cost savings an organization the size of VHA can achieve through price negotiations and strategic sourcing.³¹¹ It can also be contrary to law, as use of purchase cards often necessitates orders be split to remain under the \$3,000 purchase card limit.³¹² An analysis of purchase records showed that 38 percent of supply orders were made through standing vendor contracts which is in stark contrast to the private sector benchmark of aiming to complete 80-90 percent of supply purchases from master contracts with negotiated price discounts.³¹³ Indeed, the private sector trend in health care has been for hospitals and health care systems to form alliances in “group purchasing organizations” to achieve the scale that VHA naturally enjoys.³¹⁴ Weaknesses in logistic management have been recognized in VHA for some time and still remain.³¹⁵ For instance, a review of logistics business

practices at 17 VHA medical facilities in 2014 showed that none of the facilities achieved 100 percent compliance on the factors assessed, and the rate of noncompliance ranged from 53 to 88 percent, depending on the business metrics examined.³¹⁶

VA is inhibited by a failure to update its acquisition regulations to take advantage of modernization made in 2014 to the governmentwide regulations to promote simplified purchasing procedures.³¹⁷

VERC initiatives to improve VHA supply chain are intended to standardize business processes and address the great price variations for the purchasing of medical and surgical supplies. A national medical surgical prime vendor (MSPV) contract has been established. This development has several advantages to include (a) increased ability to leverage pricing negotiations; (b) standardized pricing; (c) elimination of redundant contract development, bidding, and selection; and (d) future ability to integrate with CPRC E-Portal.³¹⁸ VA has established a goal for 85 percent of all orders in FY 2016 be made under the prime vendor contract and has made 1,100 contracting officers available to meet demand against the contract.³¹⁹ As of April 2016, an estimated \$24.4 million in supply chain costs had already been avoided since January.³²⁰

The establishment of a new MSVP contract in April 2016, the assignment of 1,100 staff to support its use, and the expectation communicated to the field that 85 percent of all purchases be made from the contract are important steps in the right direction. For efficient ordering processes to take hold and be sustained across VHA, all of the policies and procedures from the bedside (or surgical suite) to the head contracting office must be reworked to align with the desired business outcomes. Reworking policies and procedures must occur together with appropriate training and communication at all levels of the organization. Each staff member involved in the procurement process must be held accountable for meeting the new requirements and expectations assigned to them. Updating the VA Acquisition Regulation (VAAR) is just one small piece of such a transformational change. The VERC or others with appropriate experience in aligning business processes within government should be assigned responsibility to finish developing and implementing plans for such a transformation under the direction of a VHA CSCO.

Contracting

Analysis of the *Independent Assessment Report* confirmed issues with the responsiveness of contracting. For example, at one facility, if a request was submitted to contracting that was incomplete or inaccurate, it took on average 21 to 39 days from the date of initial submission to

³¹⁶ U.S. Department of Veterans Affairs, *VA Supply Chain News*, Issue 13, Jan/Feb 2015.

³²⁰ Ibid.

COMMISSION ON CARE FINAL REPORT

receive the first response from contracting requesting, for example, additional information or paperwork.³²¹ This problem appears to be a widespread.

In another instance, interviews conducted as part of the independent assessment showed that VA vendor contracting processes to order equipment valued at less than \$3,000, for example, scalars for dentistry, can be confusing and lengthy, leading to shortages in equipment and delays in clinic as equipment is located. Delays in sterile processing were also indicated by providers as an issue pertaining to equipment availability.³²²

Communication with contracting is another substantial challenge within VHA. In surveys that assessed the effectiveness of VA's contracting organization, VHA employees' customers rated the communications received from contracting officials the lowest of all contracting dimensions that were evaluated.³²³ Several interviewees recommended that VA provide more clarity on the status of contracting requests to help them plan and schedule care.³²⁴

Individuals in contracting believed that VAMC staff members were responsible for some of the delays in the contracting process. They reported that requests submitted to them from VAMCs were often incomplete or unclear and that facilities were poor at forecasting demand for items, leading to unpredictable peaks in demand for contracting services that exceeded their capacity. The VHA Procurement and Logistics Organization (PLO) and facilities are seeking to address these challenges by placing contract liaisons in facilities to better support contracting officer representatives throughout the process.³²⁵

Contracting compliance analysis showed substantial opportunity for improvement. Analysis of purchase order data showed that 38 percent of purchases were made on a government contract, 27 percent were made at open-market prices, and 34 percent did not have a source type specified.³²⁶ Private-sector organizations typically aim to buy 80 to 90 percent of their clinical supplies and medical devices on some type of negotiated contract.³²⁷

Interviews and observations undertaken as part of the independent assessment revealed that there are two primary reasons for VHA's relatively high share of open-market purchasing. First, in contrast to pharmaceutical purchasing, VHA's supply purchasing systems are not integrated

³²¹ The consulting team based this on an IFCAP/eCMS transmission log received during a VAMC site visit (2015). McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, x, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

³²² Grant Thornton, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment G (Staffing/Productivity/Time Allocation)*, 91, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_G_Staffing_Productivity.pdf.

³²³ The consulting team derived this from a VHA procurement metrics book. McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, 69, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

³²⁴ McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, x, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

³²⁵ Ibid.

³²⁶ Ibid., xii.

³²⁷ Ibid.

with contract or pricing catalogs. Therefore, the purchasing process relies on buyers (often clinical staff) to research whether an item is on contract and through which contract a purchase should be made. Because of that complexity, several buyers reported that they bypass this step and buy products through the channel that is most familiar and convenient, for example, by replicating previous orders to their usual supplier, despite changes that may have occurred (new contracts and pricing arrangements, for example). Second, VHA has limited ability to monitor and drive compliance with the contract hierarchy because the required data are not captured electronically. In fact, more than 60 percent of all clinical supply items do not have a contract number listed.³²⁸

VHA's fragmented inventory management systems and processes also create challenges. VHA's current inventory management does not have a feedback loop to link inventory to product use, contracting, ordering, and vice versa. This lacking information prevents optimal use of the MSPV contract program and creates missed opportunities to establish more effective volume-based national or regional contracts. It also leads to peaks and troughs in demand for contracting services, which can overwhelm contracting's capacity.³²⁹

There are pockets of good performance and innovation in VHA that could be replicated across its supply chain. The *Independent Assessment Report* notes that the Denver Acquisition and Logistics Center (DALC) is a bright spot within VHA's supply chain organization in its acquisition and distribution of select devices such as hearing aids to veterans. It has developed an integrated operating model that brings together clinicians, contracting, finance, logistics, and program management. That integrated team makes decisions around product and supplier selection based on a holistic view of what is best for veterans and for VHA.³³⁰

Talent Management

VHA is unable to hire good talent to manage its supply chain. In 2014, 20 to 30 percent of logistics positions were unfilled, and 20 percent of medical supply aide jobs were vacant.³³¹ The causes were identified as lengthy time-to-hire, nonexistent internal career progression ladders for these individuals, and inability to provide competitive pay due to position downgrades made by OPM under Title 5.³³² Examples of recent downgrades include supply technician, mail manager, administrative officer, and materials handler.³³³

*It is well known in the health care industry that there is a shortage of supply chain talent currently. The private sector organizations interviewed during this assessment stated that they are recruiting more highly trained individuals than they did in the past and, because of competition for talent, are paying them more than they used to. This may be contributing to VHA's recruitment and retention challenges.*³³⁴

In Recommendation #15, the application of the more than 60-year old standards and processes used in the Title 5 personnel system does not serve the needs of a modern health care delivery

COMMISSION ON CARE FINAL REPORT

organization. Health care supply chain management is a recognized field of study and a valued component of leadership teams at the highest performing health care organizations. For VHA to compete for top leadership talent in this field and frontline staff, logistics and procurement personnel must be included in a new excepted personnel system for VHA under Title 38 (see Recommendation #15).

To address talent management issues, VERC has established a new VA Acquisition Academy (VAAA) Supply Chain Management School.

*The mission of the Supply Chain Management School is to provide best-in-class education, training, professional development, and certification of the VA supply chain workforce. VAAA's competency-based curriculum addresses general and technical skills, VA-specific functional areas, and core activities for VA logistics professionals. Emphasis is on translating theory, fundamentals, and concepts to practical application with realistic VA-based scenarios utilizing hands-on application of problem-solving skills.*³³⁵

The supply chain management school is organized under VAAA which has been recognized by external organizations to offer high quality training.³³⁶

Implementation

Legislative Changes

- Establish a new excepted personnel system under Title 38 to permit VHA to compete effectively with the private sector for personnel required to run a complex health care system, including staff to manage and operate a modern supply chain system.

VA Administrative Changes

- Establish an executive position for supply chain management, a VHA chief supply chain officer (CSCO), to drive supply chain transformation in VHA. This individual should be compensated relative to market factors.
- Transform policy and procedures for supply chain management in parallel with identification and procurement of new management software: new software should support the new processes and not the existing, poorly organized business processes and requirements.
- Establish a staged process for the transformation of all supply chain operations in VHA under the direction of a VHA CSCO, with support from VERC.
- Reconcile the VAAR with the Federal Acquisition Regulation (FAR) to ensure the VAAR aligns with recent updates to the FAR to permit streamlined acquisition processes.
- Provide consistent and standardized training to ensure those developing and administering contracts have updated information regarding FAR and VAAR

COMMISSION RECOMMENDATIONS

regulations as well as a thorough understanding of their responsibilities under the new approach to supply chain management and how to carry out these duties.

Other Department and Agency Administrative Changes

- None required.

Governance, Leadership, and Workforce

Board of Directors

Recommendation #9: Establish a board of directors to provide overall VHA Care System governance, set long-term strategy, and direct and oversee the transformation process.

Problem

The existence—and concealment—of unacceptably long delays in care at the Phoenix VA Medical Center (VAMC), and similar problems at multiple other VAMCs, had both direct and indirect causes. Weak governance was found to be among those indirect causes.³³⁷ As the authors of a root-cause analysis of the Phoenix scandal highlighted, “a governance gap in leadership continuity and strategic oversight from one executive leadership team to another” contributed to the wait-time problems.³³⁸ The report authors observed, “Unlike other health care systems, VHA does not have a governance mechanism to fill the role of a board of directors.”³³⁹ The governance limitations made evident in the Phoenix scandal have profound implications for the long term. As discussed in this report, the Commission believes VHA must institute a far-reaching transformation of both its care delivery system and the management processes supporting it. Changes of the magnitude facing VHA would be difficult for any health care system to achieve. A transformation will take years to accomplish and must be sustained over time. Yet the short tenure of senior political appointees, each administration’s expectations for short-term results,³⁴⁰ and VHA’s operating in a “dynamic environment [in which it is] answering to a large number of stakeholders, sometimes with

The Commission Recommends That . . .

- Congress provide for the establishment of an 11-member board of directors accountable to the President, responsible for overall VHA Care System governance, and with decision-making authority to direct the transformation process and set long-term strategy. The Commission also recommends the governing board not be subject to the Federal Advisory Committee Act and be structured based on the key elements included in Table 5.
- The Board recommend a chief of VHA Care System (CVCS) to be approved by the President for an initial 5-year appointment. Additionally, the Commission recommends the governing board be empowered to reappoint this individual for a second 5-year term to allow for continuity and to protect the CVCS from political transition. If necessary, the CVCS can be removed by mutual agreement of the President and the governing board.

³³⁹ Ibid.

³⁴⁰ Ibid.

competing demands”³⁴¹ offer little reason for optimism that real transformation could take hold without fundamental changes in governance.

Background

VHA, as an agency within a cabinet department, is accountable to the secretary of Veterans Affairs (SECVA) and to the President. This framework, when it works well, can provide VHA access to, and support from, the President and White House staff. Like other executive branch agencies, VA and VHA undergo Office of Management and Budget (OMB) oversight; must win OMB approval of proposed rulemaking, budgets, IT development, and performance plans; and are also subject to governmentwide regulation of such areas as procurement, personnel, and property management. VHA health care and operations are subject to close congressional scrutiny.³⁴² VHA undergoes oversight from several independent bodies, including the internal Office of the Inspector General audits and external Government Accountability Office audits.

Within VA, VHA participates in the VA Executive Board (VAEB) and Senior Review Group, which are designated as the principal governance bodies of the department.³⁴³ VAEB serves as the department’s risk-governance board and determines VA’s strategic direction. VAEB oversees the department’s planning, programming, budgeting, and execution. Notwithstanding certain strengths inherent in this framework, VHA governance can be paralyzed by bureaucratic decision-making processes and competing stakeholder concerns.³⁴⁴

Among its principal recommendations, the *Independent Assessment Report* calls for “establishing a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.”³⁴⁵

Analysis

In recent years, VHA leadership priorities and strategic direction have been unclear. Leaders have been consumed by crisis and by responding to congressional demands, creating a reactive, rather than proactive environment.³⁴⁶ Additionally, the leadership vision has lacked continuity.³⁴⁷ The SECVA and deputy secretary of Veterans Affairs may exercise oversight of

³⁴¹ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, xiv, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

VHA and try to impose accountability, but incumbents do not necessarily have experience in federal health care administration or delivery.³⁴⁸ The SECVA has often lacked independent information and metrics on VHA performance, and the oversight, risk management, and compliance functions of VHA report to the undersecretary for health (USH) or to lower officials in VHA.³⁴⁹

Previous studies, dating back 20 years,³⁵⁰ have proposed fundamental change in VHA's governance and government structure, to include a proposal that it be restructured as a government corporation.³⁵¹ The earliest rationale for making VHA a government corporation was based on the view that the system needed a new service-delivery strategy,³⁵² and envisioned specific legislation to permit the corporation to operate more expansively under a wide range of reforms.³⁵³ Although the authors of the 1996 report presented a VHA government

³⁴⁸ Department of Veterans Affairs Governance Structure, VA Directive 0214 (2014). McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, viii, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf. Under Secretary of Health, 38 U.S.C. § 305. While statute requires the USH of VHA to be appointed “solely on the basis of demonstrated ability in the medical profession, in health-care administration and policy formulation, or in health-care fiscal management; and on the basis of substantial experience in connection with the programs of the Veterans Health Administration or programs of similar content and scope” there is no such selection criteria for the VA Secretary or VA Deputy Secretary. Of the eight men to hold the position of Secretary of Veterans Affairs, only one, James Peake would qualify to be USH (“United States Secretary of Veterans Affairs,” Wikipedia, accessed June 15, 2016, https://en.wikipedia.org/wiki/United_States_Secretary_of_Veterans_Affairs#List_of_Secretaries_of_Veterans_Affairs) and of the six men to hold the position of DEPSECVA, none would qualify to be USH.

³⁵⁰ Veterans Benefits Improvement Act of 1994, Pub. L. No. 103-446, 108 Stat. 4645 (1994). In 1994, Congress in sec. 1104 of Public Law 103-446 called for an independent examination of the justifiability of establishing an alternative government structure to provide health care services for veterans, culminating in the 1996 report.

³⁵¹ Klemm Analysis Group, Lewin Group, Arthur Anderson LLP, *Feasibility Study: Transforming the Veterans Health Administration into a Government Corporation* (Washington, DC: Department of Veterans Affairs, 1996), 23. A government corporation has been described as “a government agency that is established by Congress to provide a market-oriented public service and to produce revenues that meet or approximate its expenditures.” Kevin R. Kosar, Congressional Research Service, *Federal Government Corporations: An Overview*, 2, accessed June 15, 2016, <https://fas.org/sgp/crs/misc/RL30365.pdf>. Booz Allen Hamilton, *Veterans Health Administration (VHA) National Center for Patient Safety (NCPS) Systems Review: Final Report* September 22, 2015. Concerned Veterans for America, *Fixing Veterans Health Care: A Bipartisan Policy Taskforce*, accessed June 15, 2016, <http://cv4a.org/wp-content/uploads/2016/01/Fixing-Veterans-Healthcare.pdf>. Commission on the Future for America's Veterans, *Preparing for the Next Generation*, 3, accessed June 15, 2016, http://s3.amazonaws.com/siteninja/site-ninja1-com/1438121489/original/2014-05_Commission-Report-on-America-Veterans.pdf. That task force study, for example, called for an independent governance model and stated that “the operational structure of VHA does not lend itself to progress. Due to its size, governmental structure and geographic extension it does not readily foster innovation and faces challenges in addressing the politics of changing demographics and ancient facilities.” The study report states, “VHA provides excellence in care in spite of its operations/governance structure, not because of it.”

³⁵² Klemm Analysis Group, Lewin Group, Arthur Anderson LLP, *Feasibility Study: Transforming the Veterans Health Administration into a Government Corporation* (Washington, DC: Department of Veterans Affairs, 1996), 23. The strategy was premised in part on the view that VHA would be operating in a resource-constrained environment and lacked the resources it would need to invest in making significant changes.

³⁵³ Ibid. The 1996 report proposed such measures as providing VHA authority to seek additional revenue streams, to include billing and keeping funds from Medicare, Medicaid, and other government sources; authorizing it to invest nonappropriated funds; developing a trust fund for deposit of Medicare taxes by active-duty personnel; incorporating VHA as a Federal Employee Health Benefits Plan selection; allowing it to become part of health maintenance organization (HMO) networks and open HMO enrollment to veterans; changing appropriation law to create

corporation as a means of achieving specific objectives, those objectives were largely met (though ultimately not fully sustained) by reforms within existing government structures and processes set in place by former USH Kenneth W. Kizer.³⁵⁴

Nearly 20 years later, the report analyzing the root causes of delayed care at the Phoenix and other VA centers proposed creation of “governance mechanisms to bridge ‘Secretary suite’ leadership transitions and provide more stable strategy, oversight, and stewardship.”³⁵⁵ Explaining that “the study team feels that the complexity of this organization requires a more stable and professionalized governance model that more closely resembles the governance of large health care systems in the private sector,”³⁵⁶ the study authors proposed the creation of a board-of-directors-type oversight board to set the strategy for the organization, define priorities, provide operational oversight, and review budget requests. “The board would . . . create a body that would be the steward of the organizational vision, providing institutional memory and continuity as senior political appointees transition.”³⁵⁷

Frequent turnover of the USH is a critical problem. Recently, each USH has served for only a relatively short period, leaving office with a change in administration or sooner. This pattern has deprived VHA of vitally needed sustained leadership and has likely contributed to short-term decision making. VHA history shows a connection between longer tenure and transformative accomplishment.³⁵⁸ As testimony to the Commission from three former USHs would indicate, brevity of tenure tends to limit leaders’ strategic horizon and create a pattern of leadership discontinuity. Because transformative change can only be realized through many years of focused leadership, VHA and those who depend on it cannot afford the senior leadership turnover routinely associated with a change in administration.

The complex, sustainable transformation VHA needs will take years to implement. To succeed, VHA needs strong, consistent leadership and a governance framework that can assure effective development and execution of transformation plans over time. The current governance structure emphasizes operational, rather than strategic priorities; experience has shown it to be incapable of sustaining transformational change. Establishing a well-designed, overarching-governance model would provide an opportunity to achieve objectives shared by both the executive and legislative branches.

To be effective, a VHA Care System governance model should be empowered with a governing board that exercises fiduciary-like responsibilities (not subject to the Federal Advisory Committee Act) to carry out the following key functions:

multiyear/no-year appropriations; reforming human resources management practices for increased flexibility in hiring and firing, compensation, leave, and other functions; and reforming; and reforming procurement and contracting.

³⁵⁴ Ibid., 46, 48. The Klemm report saw a VHA corporation as having greater capacity to focus on strategic as well as short term goals; greater results orientation; greater flexibility; greater capacity to replicate and develop best practices; upgraded staff competence and expertise at senior levels; and greater political independence.

COMMISSION ON CARE FINAL REPORT

- select the chief of VHA Care System (CVCS) and recommend the appointment of the CVCS to the President
- provide long-term, strategic direction for VHA Care System and establish priorities, milestones, and timelines
- oversee, direct, and make critical decisions regarding the transformation process
- review and approve major operational, business, and organizational plans
- set VHA Care System performance objectives and provide annual reports to Congress and the President on VHA Care System performance
- review and make decisions regarding VHA's budget request, and independently assess and report to Congress on the adequacy of VHA budgets

New governance and changes to assure continuity of leadership are critical to meeting the needs of VHA and veterans who depend on it. At the core of this foundational recommendation, the Commission calls for establishing a VHA board of directors,³⁵⁹ referred to as the VHA Care System governing board, which is independent of department leadership to provide governance, strategic direction, decision making, and oversight of VHA Care System's operations and transformation. Table 5 provides details regarding the governing board.

Table 5. Overview of VHA Care System Governing Board

Detailed Outline for VHA Care System Governing Board	
Voting Members	The President, the majority leader of the Senate, speaker of the House, the minority leaders of the Senate and House would each appoint two members. In addition, the SECVA would serve on the Board as a voting member.
Qualifications	Members would be selected to achieve collectively broad experience, expertise, and leadership, such as experience in senior management of large, private, integrated health care systems; clinical expertise; extensive experience with federal government health care systems; extensive experience with (though not current employment in) VHA; expertise in federal medical facility construction and leasing, and commercial property transactions; expertise in government contracting; expertise in federal health care budgeting and finance; expertise in health equity and disparities; and veterans' representation. Because of the importance of veterans' representation, at least one of each congressional leader's two appointees would be a veteran; at least one of the appointees of the President would be a veteran who receives VHA care.

³⁵⁹ Michael A. Froomkin, "Reinventing the Government Corporation," *University of Illinois Law Review*, (1995): 543, accessed June 15, 2016, <http://osaka.law.miami.edu/~froomkin/articles/reinvent.htm>. Congress need not create a government corporation to meet VHA's governance needs. The Commission notes that Congress has created entities it has called government corporations that are not predominantly commercial enterprises, rely on appropriations, and do not have the potential to become self-sustaining. A principal intention behind assigning this status and title has been to provide insulation from central management oversight agencies and the application of general management laws. When the corporation relies in whole or in part on appropriations, Congress retains the power of the purse, and the means of exercising it on matters large and small, and through formal and informal means.

Detailed Outline for VHA Care System Governing Board	
Terms	Governing board members would serve staggered terms of up to 7 years, with the governing board members electing a chair and vice chair from among the membership (other than the SECVA, who would not be eligible to serve as the chair) for 3-year terms.
Personnel Matters	Compensation would be at a rate equal to the daily equivalent of annual pay prescribed for level IV of the executive level. ³⁶⁰
Funding	Congress would provide a specific budget for the operation of the governing board as a separate account within VA's appropriations.
Relationship to the CVCS	Relationship to the CVCS: The governing board would provide the President its recommendation for a chief of VHA Care System (CVCS); the President would appoint that executive to a 5-year term; the governing board would annually review the CVCS's performance and be empowered to reappoint that official to a second 5-year term, to allow for continuity and to protect the CVCS from political transitions. The CVCS can be removed by mutual agreement of the President and the governing board.
Staff	The chairperson would determine the size and compensation of the permanent staff of the board, including an executive director responsible for governing board operations and a chief of staff. The director of the proposed transformation office within VHA would report to the chairperson through the CVCS.
Powers	<p>The board would have the power to do the following:</p> <ul style="list-style-type: none"> ▪ Select the CVCS and recommend the candidate to the President. ▪ Review the performance of the CVCS on an annual basis. ▪ Reappoint the CVCS to a second 5-year term. ▪ Remove the CVCS with the mutual agreement of the President. ▪ Direct and exercise decision-making authority regarding the transformation process and operations related to the transformation process. ▪ Establish priorities, milestones, and timelines for the transition process. ▪ Review and approve major new initiatives; major operational and organizational plans (including plans regarding capital asset and facility management); strategic and business plans; and goals and metrics for operational performance and established priorities. ▪ Oversee and manage facility and capital asset strategies and operations. ▪ Review, approve, and/or amend VHA's budget requests, and independently assess and comment on pertinent elements of the President's budget, as deemed appropriate.
Reporting	The board would report annually to the President and Congress on VHA's progress toward transformation.

Navigating transformation of one of the largest agencies in the federal government requires not only extraordinary leadership, but steady, sustained, long-range-focused governance. A governing board structured to provide continuity of membership—as the Commission proposes through staggered terms among members—is vital. A second critical step toward assuring such continuity would be to address the tenure of the CVCS and the process for selecting candidates for that position.³⁶¹ VHA, Congress, and the President would be better served by a VHA leader who holds a 5-year term of office, with the governing board empowered to reappoint that leader to a second 5-year term.

³⁶⁰ The rate of compensation provided for members of the Commission on Care.

³⁶¹ Under Secretary of Health, 38 U.S.C. § 305. Current law provides that the Under Secretary is appointed by the President with the advice and consent of the Senate. When a vacancy in that position occurs or is anticipated, the Secretary is to convene a commission (the composition of which is set forth in the statute) which is to recommend at least three individuals to the Secretary, who is to forward those names, with any comments the Secretary considers appropriate, to the President.

COMMISSION ON CARE FINAL REPORT

It is important that that the CVCS report to the board and function as a chief executive officer of VHA. Although the Commission envisions that the President would appoint this official, it is critical that the governing board be empowered to recommend to the President an individual for appointment when the office becomes vacant. This would replace the framework in current law that requires the establishment of a new commission convened solely to carry out the task of recommending candidates to the President.³⁶²

A governing board must be tailored to the unique needs of VHA.³⁶³ It should include members of appropriate expertise and experience to provide strategic guidance and continuity of leadership and it should possess authority to exercise the powers needed to realize and sustain a VHA transformation.³⁶⁴

Although some might consider Congress to be VA or VHA's board of directors and might question the appropriateness of establishing a VHA board of directors, this governance model does not diminish Congress's role. Instead, a board that would report periodically to congressional committees would provide a level of close oversight and health care expertise that would complement, and in many ways enhance, Congress's work.

A change in governance alone will not bring about successful transformation. This recommendation must be instituted in concert with many other Commission recommendations. For example, a board will require data, and data systems, to carry out its responsibilities, and establishing these and other appropriate systems, as addressed throughout this report, is key to empowering a board to drive and sustain transformation.

Implementation

Legislative Changes

- Amend 38 U.S.C., Chapter 3 to establish a VHA Care System governing board.
 - Amend 38 U.S.C. § 305 – which currently provides in subsection (a) for the President to appoint the USH by and with the advice and consent of the Senate, and subsection (c) for the establishment of a commission to provide recommendations for appointees for USH when a vacancy is expected or has occurred – as follows:
 - Amend subsection (a) to provide for the President to appoint the CVCS to a 5-year term of office.
 - Repeal subsection (c) of that section.
 - Provide instead for the governing board to recommend a CVSC candidate.
 - Authorize the governing board to reappoint the CVSC to a second 5-year term.

VA Administrative Changes

- None required.

³⁶² Under Secretary of Health, 38 U.S.C. § 305.

³⁶³ Booz Allen Hamilton, *Veterans Health Administration (VHA) National Center for Patient Safety (NCPS) Systems Review: Final Report*, September 22, 2015, 60.

³⁶⁴ The Board is not an advisory body, and as such would not be subject to the Federal Advisory Committee Act.

Other Departments and Agency Administrative Changes

- None required.

Leadership

Recommendation #10: Require leaders at all levels of the organization to champion a focused, clear, benchmarked strategy to transform VHA culture and sustain staff engagement.

Problem

High-performing organizations have healthy cultures in which diverse staff members feel respected and engaged at work. These workers, in turn, are better able to demonstrate compassion and caring toward customers in their delivery of high-quality services. Leaders at all levels of the organization are responsible for promoting a positive organizational environment and culture through how they treat staff and the systematic approach they take to decision making and management. VHA has among the lowest scores in organizational health in government.³⁶⁵ For the past decade, VHA's executives have not emphasized the importance of leadership attention to cultural health, and it has not been well integrated in training, assessments, and performance accountability systems.

The Commission Recommends That . . .

- VHA create an integrated and sustainable cultural transformation by aligning all programs and activities around a single, benchmarked concept.
- VHA align leaders at all levels of the organization in support of the cultural transformation strategy and hold them accountable for this change.
- VHA establish a transformation office to drive progress of this transformation and report to the chief of the VHA Care System and the new VHA Care System governing board (also included in Recommendation #12).

Background

Healthy organizations successfully align, execute, and renew themselves through learning and innovation.³⁶⁶ They are characterized by a high level of trust, accountability, and ownership among staff; high functioning, empowered teams; and an environment that provides psychological safety and open communication, focuses on the needs of customers, and instills pride in performance.³⁶⁷ An inclusive workplace where diversity is valued, staff feel empowered and supported, are treated with fairness, and cooperation and open communication helps engage employees and drive organizational performance.³⁶⁸ Engaged

³⁶⁵ McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 56, accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf.

COMMISSION ON CARE FINAL REPORT

employees who are dedicated to their work and attached to the organization and its mission support a healthy organization.³⁶⁹

Companies that have a healthy organizational culture or engaged staff outperform those that do not. Companies that score in the top 25 percent of organizational health metrics outperform comparable companies in the bottom 25 percent by more than two-fold.³⁷⁰ Similarly, high employee engagement is correlated with better staff and customer experiences that include higher patient satisfaction, higher staff retention, better safety and quality, higher productivity and lower absenteeism.³⁷¹ Companies with engaged employees outperform those without by more than 200 percent.³⁷² Leaders and supervisors play a key role in establishing and sustaining employee engagement and in establishing a positive environment and culture that supports a healthy organization.³⁷³

Analysis

VHA staff and leaders are highly dedicated to the mission of VA and to serving veterans.³⁷⁴ This dedication is arguably VHA's greatest strength, and it can be leveraged to create and sustain positive change.³⁷⁵ There are substantial impediments to moving VHA forward, however, as noted in the *Independent Assessment Report*. There is a pervasive lack of trust throughout the organization.³⁷⁶ Staff perceives VHA to be bureaucratic and political and to lack a systems orientation.³⁷⁷ Employees want to work for an organization that is accountable and efficient, but instead they operate in a bureaucratic, siloed, and political organization.³⁷⁸ The culture creates risk aversion in staff, and when cultural factors are measured in VHA, none of the metrics align with the definition of a healthy organization.³⁷⁹ Staff find the work environment at VA challenging, with no connection to leadership, and feel they receive little positive

reinforcement or clear feedback on performance.³⁸⁰ As demonstrated in the Federal Employee Viewpoint Survey for 2015, VHA staff does not believe top leaders lead (only 47 percent positive³⁸¹) and only 65 percent have a positive view of their immediate supervisor compared to 70 percent in other large federal agencies.³⁸²

Through the review of available documents and briefings from key staff, the Commission found VA and VHA have a number of activities intended to support a positive environment and culture in VHA (see Table 6), but the efforts are not systematic, integrated, or broadly deployed.³⁸³ The efforts are under-resourced to achieve success. Specifically, the effort lacks mandatory positions at the facilities to lead these efforts and has no requirements on the VHA Central Office (VHACO) program offices to participate in the efforts.³⁸⁴ At the same time, the efforts are duplicative in that multiple offices communicate similar, but distinct messages to field staff and leaders. VHA appears to lack systematic mechanisms to ensure leaders at all levels of the organization have the knowledge, skills, and ability to create an effective culture; metrics are not comprehensive or aligned with a single-change model; and leaders in VHACO and the field are not consistently held accountable for their actions in support of a positive organizational culture.³⁸⁵

COMMISSION ON CARE FINAL REPORT

VHA must rebuild a high-performing, healthy culture by cultivating greater employee collaboration, ownership, and accountability to accomplish its mission.³⁸⁷ This cultural transformation needs to occur at all levels of the organization (VA, VHACO, veterans integrated service network [VISN], VA medical center, and community-based outpatient clinic). To achieve transformation in VHA, create a healthy environment and culture, and sustain staff engagement, the solution must start with leaders. Leaders must understand and believe in the powerful effect they have on the climate and culture in their organization. Change occurs one employee at a time. Leaders at all levels must commit to this change process. They must be inspired by top executives and embrace the values and mission of VHA and then, in turn, inspire their teams, engaging with individual employees to make change. Leaders must be given the roadmap and tools to make such change and then be supported with training, coaching, and feedback to achieve success. They must also be held accountable for their personal behavior and for the actions they take to positively influence the environment and culture of their unit or facility. Leaders should not be on their own in this transformation. Fellow leaders, outside experts, national program offices, and VA and VHA top executives must provide them with incentives, support, feedback, coaching, and, when needed, admonishment to support this cultural transformation.

To align leaders at all levels with expectations for the cultural transformation, all leaders must understand the role they play in the process. VHA must create standards for the behavior and actions leaders adopt to accomplish the transformation and widely publicize the standards among leaders and staff to establish uniform expectations across the organization and a single vision of cultural transformation. The CVCS and other senior leaders must model and reinforce these behaviors to further embed expectations. These behaviors and actions should be integrated into leadership assessment tools such as a 360 evaluation, performance management frameworks, and coaching guides to ensure expected behaviors and actions are reinforced across the leadership development and advancement system. The strategy must include the development of tools, training, guidelines, and operating procedures that create a living curriculum to support leaders in developing and deploying these new skills and behaviors. Finally, to ensure leaders at all levels implement the behaviors and actions, the strategy must establish both explicit rewards and sanctions. The rewards and recognition (nonmonetary) should liberally acknowledge and publicize leaders and staff who embody the very best standards of behaviors and actions that support a positive organizational culture. At the same time, leaders and staff at all levels must clearly understand what behavior and actions are not acceptable and be held accountable through disciplinary action if they cross these boundaries. Expectations and repercussions should be clearly articulated.

VA and VHA have a number of competing models of organizational health and staff engagement. The models are not integrated with one another or with an overall leadership competency model. Some models are robust, coupling abundant resources and training, while others are not. To create a clear focus for engagement and organizational health and guide

³⁸⁷ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 55 accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

transformation effectively, one model must be selected for use in VHA. To do so, VHA must establish a cross functional executive team to make this decision. The team should include all of the stakeholder offices involved in current efforts, but none of them should lead the effort, to avoid parochial interests driving decisions. Once a single model is selected, the executive team must then outline a clear strategy, involving and engaging the offices in VHA with relevant expertise and resources to support the execution, and put forward a single strategic plan. Consequently, each of those offices must also be required to stand down its own efforts that are not part of this new model going forward and align its work and budget behind a single focused model and strategy. Tools, training, and communication to support broad deployment must be part of the strategy, and the CVCS and the executive team must present a compelling, transparent rationale for what the model is, why it was selected, and how it is to be deployed. All leaders and staff members in the organization must understand their roles in cultural transformation and what is expected of them.

The strategy must establish and articulate a clear set of behaviors and actions expected of staff to ensure their alignment around the transformation. The standards should be incorporated into the hiring process to ensure that VHA is hiring into the new culture and avoids a poor fit from the start. These behavioral expectations must be articulated clearly in the on-boarding process and reinforced on an ongoing basis in performance evaluations, reviews, and individual development plans. Leaders at all levels of the organization must also reinforce these behavioral expectations with staff and be provided with tools, messages, and communication support to accomplish this. Leaders must also recognize and reward the positive examples of the desired behaviors and sanction the worst examples, up to and including discipline and removal.

The change strategy should also recognize that cultural transformation and staff engagement go beyond individual leader and staff behaviors. Systems and processes at both the local and national level can impede the realization of the positive organizational culture desired. As such, the transformation strategy must also anticipate changing systems and processes as an explicit component of transformation. Leaders at all levels must establish mechanisms to elicit staff concerns and have quality improvement tools in place to address them, such as LEAN Six Sigma. Line staff must be engaged as part of the solution to these system issues. Leaders should be transparent about these issues and publicly track and report on progress.

To ensure the effective execution of this strategy, specific responsibilities must be assigned to program offices. The program offices must also support the VISN and facilities in their transformation effort by developing the standards and guidance for them to use and making program office expertise available to support coordination, coaching, and sharing of best practices across the institution. The program offices must be held accountable for supporting the application of these same standards and process within VHACO.

Standards for facility implementation must include a funded, full-time equivalent employee to support each major facility director³⁸⁸ and be the point person to coordinate efforts with VHACO and other facilities. Facilities may take the opportunity to consolidate related functions that currently exist in the facility. Each facility must have a local mechanism, such as an organizational health council, to integrate and drive transformation locally. But this does not

³⁸⁸ This equates to one person at each of the approximately 141 VHA health care systems led by a facility director.

COMMISSION ON CARE FINAL REPORT

mean the facility should create yet another committee or oversight group to accomplish the transformation. Instead, facilities must look to existing leadership structures and activities, consolidating similar efforts to create an efficient process.

Finally, the executive team must oversee the development of a consolidated and meaningful set of metrics, using community standards where available, to track cultural transformation, organizational health and staff engagement. The metrics should not only measure the desired outcomes but also provide insights to leaders on how to fix problems by providing sufficient detail and specificity to offer this insight. Once deployed, the metrics should be used by the executive team and responsible program offices to identify under-performing facilities and to provide additional expertise, resources, and support to help those facilities improve. If, after much support, the continuing behavior and actions of the leaders at the under-performing facility are identified as the cause of the long-term culture problem, these individuals must be removed from leadership positions in VHA.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Develop and implement a strategy for cultural transformation.
- Establish a cross-functional senior executive team reporting directly to the CVCS with long-term responsibility for creating, executing, and tracking the cultural transformation.
- Align frontline staff in support of the cultural transformation strategy.
- Require standards and a strategy for execution of the cultural transformation from every program office and facility and these efforts must be fully funded.
- Develop consolidated, meaningful metrics for organizational health and staff engagements with input from experts and field users.

Other Department and Agency Administrative Changes

- None required.

Recommendation #11: Rebuild a system for leadership succession based on a benchmarked health care competency model that is consistently applied to recruitment, development, and advancement within the leadership pipeline.

Problem

VHA, like any large organization, requires excellent leaders to succeed. Succession planning and robust structured programs to recruit, retain, develop, and advance high potential staff are essential to maintaining a pipeline of new leaders. In health care, leadership programs must prepare candidates with the specialized knowledge and skills required of health care executives, while also helping to mature their leadership traits. VHA does not use a single leadership competency model, and what it does use is not specific to health care or benchmarked to the private sector. VHA also does not use competency models as a tool to establish standards for hiring, assessment, and promotion. As a result, executive leaders and promising staff members do not have the tools they need to guide career transitions and ensure VHA has the leaders it needs for the future.

The Commission Recommends That . . .

- VA establish, as an Office of Management and Budget management priority for VHA, the goal of implementing an effective leadership management system in the agency.
- VHA executives prioritize the leadership system for funding, strategic planning, and investment of their own time and attention.
- VHA adopt and implement a comprehensive system for leadership development and management that includes a strategic priority of diversity and inclusion.
- Congress create more opportunities to attract outside leaders and experts to serve in VHA through new and expanded authority for temporary rotations and direct hiring of health care management training graduates, senior military treatment facility leaders, and private not-for-profit and for-profit health care leaders and technical experts.

Background

*Our Corps does two things for America: We make Marines and we win our nation's battles. Our ability to successfully accomplish the latter depends upon how well we do the former.*³⁸⁹

Effective leaders are required for organizational success. Thus, attracting, growing, and advancing leaders is a key business imperative across all sectors.³⁹⁰ The most urgent human capital management need worldwide, according to one survey, is the development of leadership talent.³⁹¹ This need is driven by a changing workforce that is motivated more by passion than by monetary incentives, a rapid advance in knowledge that quickly creates obsolescence, and technology drivers that change business practices over months instead of years.³⁹² Investing in new supervisors and emerging leaders is critically important because

COMMISSION ON CARE FINAL REPORT

employees report that when they quit a job they leave their supervisors and not their organization.³⁹³ In an organization like VHA, with more than 300,000 employees but only a bit more than 200 executives, VHA's 28,000 supervisors are responsible for leading the staff.³⁹⁴

Going back to at least 1998, the federal civilian sector has had difficulty identifying and promoting individuals with leadership skills.³⁹⁵ Staff members who can produce results and meet organizational objectives are promoted into supervisory and leadership positions.³⁹⁶ Yet, the skills needed to be a successful leader are different than those needed to be a successful technical expert. Today, soft skills such as empathy, effective listening, and team coaching are valued in leaders.³⁹⁷ The most effective leaders are those who consistently display integrity, high moral character, and the ability to inspire others.³⁹⁸ An effective leadership system develops leaders at all levels, from frontline supervisor to executives, and does so in all dimensions of leadership: "knowing, doing, and being."³⁹⁹

Analysis

In a review of VHA's approach to leadership development, the *Independent Assessment Report* noted the current system was not sufficient to meet VHA's need for high-quality, prepared leaders.⁴⁰⁰ VHA lacks a comprehensive approach to leadership development that would include formal structured programs such as networking, reflection, goal setting, learning, mentoring, experiential learning, and a clear career ladder. As a result, leaders are unable to fully prepare

⁴⁰⁰ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 37, accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf.

for future roles.⁴⁰¹ Although VHA does have some components of a development program, the activities are not connected to a career path and not well coordinated. Comprehensive development efforts are impeded by the use of multiple competing competency models in VA that make it impossible to align assessment and development with a cohesive standard. Emerging leaders are left to navigate career progression largely on their own and may be stymied because development opportunities are cancelled due to budget restrictions. Even when promising young leaders complete the current activities, gaps remain in their experience and training because the training programs are not coordinated.⁴⁰² As a result, VHA does not have a robust pipeline of young leaders ready to take on higher-level responsibilities.⁴⁰³

Included in the *Independent Assessment Report* is a recommendation that VA stabilize, grow, and empower leaders. This recommendation includes suggestions to fill current vacancies with high-quality leaders, improve the attractiveness of the roles, ensure leaders are prepared to assume their roles, and create a comprehensive strategy that connects top performers to leadership opportunities and development plans.

There is little concrete information in the assessment to suggest how VA and VHA should accomplish these objectives. The commission examined VA's and VHA's current work to assess whether they have created plans to operationalize the leadership development recommendations articulated in the *Independent Assessment Report*.

Neither VA nor VHA has rationalized the multiple competency models within the department. A competency model is the core driver informing recruitment, development, assessment, and advancement in any comprehensive approach to leadership development and management.⁴⁰⁴ Having a cogent competency model is a prerequisite to a coherent strategy.⁴⁰⁵ Leading a health care organization requires specialized knowledge and skills not required of leaders in other fields.⁴⁰⁶ Thus, any competency model applied in VHA must include health care specific components. Health care executive competencies embrace such topics as an understanding of ethics in health care, management of self-governing professionals (e.g., physicians, nurses), the technical knowledge of health care regulation and operational management, and leading change, in addition to other leadership skills and knowledge.⁴⁰⁷

The current models used in VHA do not reference external benchmarks, and they are not health care specific. VHA plans to continue to use the High Performance Development Model (HPDM) as its competency model.⁴⁰⁸ HPDM was developed by VHA and is not benchmarked to private-sector competency models for health care executives. VHA plans to use the model to drive

COMMISSION ON CARE FINAL REPORT

position requirements, performance management, and training content.⁴⁰⁹ The plan mentions coordination with VA Learning University but provides no detail.⁴¹⁰ The plan also does not provide specific information about how the use of HPDM will link to formal recruitment, performance assessment, and advancement of leaders.⁴¹¹

VHA is working to understand the current career progression of candidates who move into field-based executive positions. VHA field leaders are cultivated from within VHA with about 98 percent advancing from lower-level field positions such as associate director, service chief, or chief of staff.⁴¹² As a result, field senior executives often lack outside experience and first-hand knowledge of alternative management methods.⁴¹³ Most companies look for a mix of internal and external hires, and the circumstances of the organization often drive the mix.⁴¹⁴ For instance, Henry Ford Health System, a successful growing company with a robust internal leadership development program has set a target of 70 percent internal promotions and 30 percent external hires.⁴¹⁵

The VHA pool of internal candidates is also deficient in racial and ethnic diversity with striking under-representation of women of color in all of the positions that constitute the pipeline for medical center director positions (see Figures 6 and 7).⁴¹⁶ VHA leadership development programs have failed to effectively recruit and advance under-represented minorities with a striking over-representation of White men in the leadership class that feeds the senior executive service (see Table 7).⁴¹⁷ Minority women shoulder the biggest burden of formal mentoring within the organization.⁴¹⁸ VHA also has the lowest representation of veterans among its staff (31 percent) compared to Veterans Benefit Administration (52 percent) and National Cemetery Administration (74 percent). The number of veterans among doctors and dentists in VHA is only about 14 percent of the employees.⁴¹⁹ Among leaders, 22 percent of senior executives are veterans and a similar number (23.8 percent) populate the leadership pipeline.⁴²⁰

American Indian/Alaska Native Female	0% (0)	0% (0)	1% (7)	1% (4)	1% (3)	1%

Note: VHA offers career development opportunities from entry-level programs (TCF and GHATP) to an SES preparatory curriculum (HCLDP). Overall, White men make up about 23% of VHA employees but are over-represented in the HCLDP program at 41%. African American and Hispanic men and women are under-represented in the same program.

TCF= Technical Career Field; GHATP=Graduate Healthcare Administration Training Program; LEAD=Leadership, Effectiveness, Accountability, and Development; HCLDP=Health Care Leadership Development Program.

No evidence was presented to indicate that career progression mapping is occurring for positions within VHA central office, where high-quality leaders are also required.⁴²¹

⁴²¹ Department of Veterans Affairs, Veterans Health Administration, *VHA Workforce Planning Report 2015*, 94, accessed June 10, 2016, http://vaww.succession.va.gov/Workforce_Planning/WorkforcePlanningLibrary/2015%20VHA%20Workforce%20Report.pdf.

COMMISSION ON CARE FINAL REPORT

VHA has much work to do to produce an effective leadership management system. Recruitment, retention, development and advancement are key processes that require immediate and sustained attention from VHA leaders. Without substantial changes, high-potential staff will continue to struggle to understand their career trajectory. Without a driving competency model and coordinated training to guide advancement, hiring decisions will continue to be made without uniform standards against which to measure applicants and new executive hires will continue to struggle to understand VHA and their role in leading it. Without the committed engagement and support of the chief of VHA Care System (CVCS) and the other top VHA executives for the leadership management system and their direct communications about and modeling of the leadership competencies, VHA will continue to flounder. As a result, veterans will be denied the high-performing health system they deserve.

Executive Commitment

The long-term success of any enterprise rests on having excellent leaders in key positions and sustaining them over time. To accomplish this goal, leadership management, development, and recruitment must be a core responsibility and a priority for VHA senior executives. To start, VA must include the goal of achieving an effective leadership management system in VHA as a component of the department's management agenda in the annual budget. The goal is a robust, high-quality, diverse leadership team in VHA. VA needs to establish a credible operational plan and accountability mechanisms for meeting this goal. Executive leaders are then held accountable for attaining the leadership management goals, including personally investing time in meeting diversity targets, recruitment plans, and succession planning objectives. These targets are to be reviewed in the individual performance of top leaders as well as in the Office of Management and Budget's ongoing review of the department's management objectives. Executive leaders need to also set and communicate clear expectations for the behavior of leaders and staff and to invest their own time in mentoring, coaching, and developing subordinate leaders and promising staff, including under-represented populations. They must be visible and role-model leadership competencies in meetings, training, and new-hire orientations. They must take an interest in developing leaders and help create opportunities for them to gain leadership experience and competencies. The CVCS and senior executives must keep in mind that their sole role is not to manage crises or to oversee a process or to manage up. Rather, their primary role is to lead their people. Their time and attention must reflect that priority.

Leadership Model

To establish clear leadership standards to guide hiring, development, and the advancement of leaders, VHA needs to adopt one benchmarked health care competency model. Currently, VHA is subject to the Office of Personnel Management executive core qualifications, HPDM, and standards for servant leadership. Although all of the models have value, none provide a clear trajectory for high-potential staff to follow, and they do not provide opportunities for VHA to intersect with leaders in the private sector. VHA must stop using these varied competency models and instead adopt a single model that is benchmarked to private-sector standards. The Commission is not making a recommendation about which model VHA should choose. Rather VHA should apply the criteria below to select a model around which to base its leadership development program:

- The standard must embrace leading through ethics and values, demonstrating character and concern for others, and creating a strong organizational culture.
- The standard must be health care based and describe the knowledge, skills, ability, and leadership bearing and behaviors that health care leaders must master to be effective.
- The standard must be a robust competency model including aligned training and tools to permit quick implementation.
- The model must describe different career tracks and the mastery requirements for key points in each career track. Key career tracks such as VISN director, facility director, and VHA Central Office (VHACO) program executive should fit into the competency model.
- A career path must specify the competencies that require mastery before moving to a higher position.
- VHA may need to enhance the model with competencies in care and services to Veterans and knowledge of military occupational health.

Training and Assessment

VHA needs to develop assessment tools based on the competency model, including 360, 180, self-assessment, and supervisory review processes. Leaders and developing leaders should be required to use at least one of the assessments each year and to apply the results to identifying their training and development needs. Findings from the assessments should be rolled into an individual development plan (IDP) for each leader or developing leader and enrollment in a leadership course should require a documented need from one of these assessments.

Figure 8. At Each Leadership Level, Mastery of Leadership Competencies Increases

COMMISSION ON CARE FINAL REPORT

Training must be mapped against the competency model career track. All current leadership training should be mapped against the model. Gaps should be identified and filled with commercially available, or where needed, internally developed training. This training should include leadership competencies for the care of veterans, including an understanding of military occupational health, combat injuries and exposure, combat readjustments, and military sexual trauma. (See Appendix H for descriptions of such training material.) VHA should look for opportunities to partner with Department of Defense and the private sector to provide joint training and development opportunities to fill some of the identified gaps. VHA must develop one or more face-to-face training series that allow high-potential candidates to complete all the competencies required to move to the next career stage. As VHA strengthens its partnership with community providers and health systems, executive and high-potential training resources from VHA should be made available to community health care leaders and VHA should join training offered by these private-sector partners.

Based on the benchmarked competency model, VHA should collaborate with Academic Affiliates to establish two new programs. The first is to create opportunities for VHA physicians to gain masters-level training in health care management to prepare them to lead a medical facility. Second, VHA should work to create rotations in VHA for external physicians who are completing graduate health care management programs. Like academic affiliate residency training programs, VHA should collaborate with academic medicine to establish, fund, and run these programs with the goal that all participants rotate in management positions in VHA or VHA-partnered private-sector systems for six or more months during their training. Graduates of such programs would be candidates for recruitment into the VHA leadership pipeline and would encumber a pay-back commitment to VHA for any direct funding provided.

All training should include formal assessment to assure that learners have mastered the material and this mastery should be noted in their IDPs and training record.

As part of the leadership development model, experiential learning opportunities and formal coaching are critical to executive learning. Individual and group coaching standards and programs must be established for all developing and new leaders. A program for senior leaders to pair them with private-sector health care leaders must also be supported. VHA must establish rotation opportunities for developing leaders to rotate for substantial periods (e.g., 3 to 18 months) in not-for-profit hospital systems. This program could be structured as a certificate program that the employee and VHA jointly fund and include a payback commitment on the part of the trainee. Similar rotations from the private sector into VHA should be developed with health care system partners to help develop private-sector competencies in care for veterans and inject private-sector approaches into VHA.

Apply the Leadership Model

VHA is required to apply the competency model in all hiring decisions for executive career field positions. Thus all functional statements must be based on the model, all interview protocols must incorporate the competencies, and all candidates who are not internally certified to the standard of the job must undergo an assessment by a board to ensure they meet the position requirements. Conversely, internal candidates must be required to demonstrate mastery of the competencies before qualifying to apply for a position. VHA must adopt the strategies of executive recruiters to identify and recruit needed experts outside of government with the

VA-18-0457-A-001261

competencies VHA seeks. Recruiters can look to the pipelines the Commission has recommended building to bring military treatment facility commanders and other senior leaders and private sector experts into VHA as a network for identifying additional recruits. Executive recruiters can particularly help ensure diverse candidates are identified for open positions.

VHA will require competency assessments and IDPs for all existing executives, potential executives, and new hires. Current leaders and new hires who have an identified gap in any competency must have it included in their IDP and be required to fill these deficiencies by a specific deadline or face demotion or dismissal. Completion of IDP development opportunities is required for advancement in grade or promotion to higher position within the leadership pipeline.

VHA will aggressively manage its leadership candidate pool by identifying and tracking all high-potential individuals. Diversity statistics should be tracked and diversity in this pool actively managed. This pool of candidates derives from annual ratings as well as leadership development program graduates. Supervisors and executive leaders must provide ongoing coaching for higher positions to this pool of developing leaders. VHA must identify anticipated succession needs and offer development opportunities that would help prepare candidates for these anticipated openings. Once the positions are open, individuals in the high-potential pool must receive notices of new job postings and detail opportunities that provide experience into higher positions. Candidates who agree to be in this pool should be required to enter into formal mentoring relationships with leaders outside their chain of command to further advance their career development. For highest-level positions (VISN director, facility director, VHACO chief officer) a formal pool of approved or precertified candidates should be established.

To expand the perspectives and management experience in its leadership pipeline, VHA must develop explicit strategies to on-ramp diverse candidates at critical midcareer transition points. This process includes creating pathways for retiring commanders and other senior officers of military treatment facilities to compete effectively for leadership positions in VHA. To increase VHA understanding of private-sector health care, VHA must develop midcareer entry points for private-sector candidates. This could be accomplished through the use of temporary hiring authority and the ability to convert these positions to permanent staff positions if leadership competencies standards have been met by the candidates. Such opportunities can be modeled on efforts recently announced by DoD and, wherever practicable, should be developed collaboratively with DoD to establish the legal and policy requirements for implementing these programs. Finally, the current graduate health administration training program (GHATP) program should be expanded to include more schools and programs with diverse trainees. This expansion must allow high-performing residents to continue to convert to full time positions.

On-boarding

A formal on-boarding process should be instituted for all new executive hires. In addition to the transactional knowledge the individual will need, on boarding should establish the expectations for what it means for that executive to be successful in VHA. The values of the organization and the expectations for ethical practice must be conveyed by the CVCS and the top leadership team. A formal assessment of knowledge and skills should be made during on-boarding and an IDP established to cover the probationary period of new hires if any deficiencies are identified.

VA-18-0457-A-001262

COMMISSION ON CARE FINAL REPORT

Completion of the IDP is required for continued employment. All new leadership hires should be assigned a coach based on their individual needs. Within their first 6 months of employment, the undersecretary for health and Secretary should meet with these new executives to build a relationship with them and hear their fresh perspectives on the performance of VHA.

Stabilize Leadership

VHA should immediately stabilize its leadership ranks by authorizing VA medical center and veterans integrated services network (VISN) director details to last up to a year with no restrictions on an acting leader competing for the permanent position. VHA should also create flexible capacity by creating more assistant-level positions (e.g., assistant director, assistant VISN chief medical officer, assistant nurse executive, deputy chief officer). These individuals would comprise the pool of potential leaders and also allow for cross filling positions that are empty due to development assignments, training, or other leadership development opportunities.

Implementation

Legislative Changes

- Establish direct-hire authority from the graduate health care administration training program, military treatment facility, and private-sector fellow pools, clarifying application of merit-system principles, including approaches to managing veterans' preference in these programs.
- Establish Intergovernmental Personnel Act authority for VHA to include the for-profit private sector; this could be done as a pilot program with a report to Congress before considering whether to make the authority permanent.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Fund and implement leadership assessments, training, coaching, and developmental opportunities based on the new leadership competency model.
- Aggressively manage leadership recruitment, retention, development and advancement using the new leadership competency model: All hires and promotions are required to demonstrate these competencies.
- Require a formal on-boarding process for HPDM 3 and 4 leaders at all levels that reinforces the leadership competency model.
- Take immediate steps to stabilize the continuity of leadership by extending the length of authorized details to extend the continuity of leadership at medical centers and allow leaders detailed to a position to compete for a permanent appointment to the position by removing the non-compete requirements.

COMMISSION RECOMMENDATIONS

- Establish the competency model in regulation and include requirements for its use in hiring, promotion and dismissal and clarify the application of veterans' preference in executive development.

Other Department and Agency Administrative Changes

- None required.

COMMISSION ON CARE FINAL REPORT

Recommendation #12: Transform organizational structures and management processes to ensure adherence to national VHA standards, while also promoting decision making at the lowest level of the organization, eliminating waste and redundancy, promoting innovation, and fostering the spread of best practices.

Problem

Leadership structures and processes should be organized to promote agile, clear decision making, the free flow of ideas, and identification of organizational priorities, as well as make clear reporting relationships and lines of accountability within the organization. VHA currently lacks effective national policies, a rational organizational structure, and clear role definitions that would support effective leadership of the organization. The responsibilities of VHA Central Office (VHACO) program offices are unclear, and their functions overlap or are duplicative. The role of the Veterans Integrated Service Network (VISN) is not clear, and the delegated responsibilities of the medical center director are not defined.

Background

A prerequisite of a successful, high-performing system is having strong leaders and a strong leadership system.⁴²² An organization's leadership system is "the way leadership is exercised, formally and informally, throughout the organization; the basis for key decisions and the way they are made, communicated, and carried out."⁴²³ It includes "structures and mechanisms for making decisions; ensuring two-way communication; selecting and developing leaders and managers; and reinforcing values, ethical behavior, directions, and performance expectations."⁴²⁴ In an organization the size of VHA, with a budget of \$69 billion,⁴²⁵ more than 300,000 employees, and more than 1,000 sites of care,⁴²⁶ strong leadership systems are essential.

The Commission Recommends That . . .

- VHA redesign VHA Central Office (VHACO) to create high-performing support functions that serve Veterans Integrated Service Networks (VISNs) and facilities in their delivery of veteran-centric care.
- VHA clarify and define the roles and responsibilities of the VISNs, facilities, and reorganized VHA program offices in relation to one another, and within national standards, push decision making down to the lowest executive level with policies, budget, and tools that support this change.
- VHA establish leadership communication mechanisms within VHACO and between VHACO and the field to promote transparency, dialogue, and collaboration.
- VHA establish a transformation office, reporting to the chief of VHA Care System with broad authority and a supporting budget to accomplish the transformation of VHA and manage the large-scale changes outlined throughout this report (also included in Recommendation #10).

⁴²⁶ "About VHA," Department of Veterans Affairs, accessed February 5, 2016, <http://www.va.gov/health/aboutVHA.asp>.

In the last successful reorganization of VHA in 1995,⁴²⁷ the organizational design and functional roles of the leadership system were organized into clear structures with clear functions. The VISNs were responsible for operations⁴²⁸ and VHACO program offices were responsible for policy, guidelines, and outcomes.⁴²⁹ The National Leadership Board (made up of VISN directors and all program office leaders) was responsible for collective, fact-based decision making and the Friday Hotline call was used to communicate leadership priorities and decisions directly to VA medical center (VAMC) leadership. A negotiated performance measurement system based on consistent, benchmarked, outcome-focused metrics⁴³⁰ was also established that was supported by centralized functions that benefit from economies of scale.⁴³¹ As part of the reorganization, VHA experienced a reduction in staff and consolidation of VHACO offices to create a flat, agile leadership system.⁴³² Because this functional matrix was not sustained, VHA now faces the challenge of reinstituting an effective leadership system.

Analysis

Twenty years after the Kizer reorganization, VHA has a very different leadership system, under which it “is intensely, unnecessarily complex due to a lack of clear operating model, limited role clarity, fragmentation of authority, and overlapping responsibilities.”⁴³³ The *Independent Assessment Report* included the following findings about the VHA operating model:⁴³⁴

- VHACO has grown rapidly since 2009 from 753 in FY 2009 to 1,990 in FY 2014.
- The VISNs’ ability to manage and support their regions is heavily hampered by resourcing restrictions and direct VHACO control over VAMC operations.
- The VAMCs’ operating model suffers from powerful silos, which prevent an effective end-to-end mission focus.
- VA’s increasingly top-down management style, coupled with poor prioritization and the external political environment, result in a lack of clarity around strategic direction, reactivity to external headwinds, and flawed efforts to standardize.

VHACO has grown rapidly in the past few years.⁴³⁵ The growth in central office was driven in part by new ideas, new priorities, and new crises being addressed through the creation of new

COMMISSION ON CARE FINAL REPORT

offices and new staff infrastructure to support it.⁴³⁶ A portion of the growth came from the centralization of functions that were previously managed in the field such as business office functions. The final component has come from the duplication in VHA of offices in which decision-making authority rests with VA, such as communications and regulatory management. VHA has also duplicated functions and responsibilities between two or more offices in VHA, such as primary care, surgery, mental health, and geriatrics and extended care. This increased growth in staff and offices has resulted in more complex and lengthy decision processes, often with little clarity as to whom ultimate responsibility for decisions or follow up falls.⁴³⁷

One symptom of the top-down management is VHACO control of budgeting and resource management. “Support funding is outside local control” and the “increasing share of Specific Purpose funding hinders” local leaders in their ability to use resources effectively.⁴³⁸ In FY 2015, specific-purpose funds were spread across more than 450 line items,⁴³⁹ taking money away from general purpose funding and restricting how this money can be used. Both VHACO and Congress have been complicit in taking control away from medical center directors through these budget controls.⁴⁴⁰ For instance, the congressional appropriation to fund VHA for 1998 included only five appropriation line items; medical care, medical administration, construction major, construction minor, and medical and prosthetic research.⁴⁴¹ In contrast, the budget request to Congress for FY 2016 included 12 budget categories relevant to VHA with some of those accounts having four or five subcategories.⁴⁴² In his testimony before the Commission and Congress, Secretary McDonald made the point that such fragmentation of the VHA budget and the prohibition to reallocate across budget categories without first receiving Congressional approval was an impediment to effective and agile management of the department.⁴⁴³ Greater Congressional control of VHA spending is understandable in light of VA’s lack of adequate management systems and data analytic capabilities to track expenditures in real time⁴⁴⁴ and report them to Congress and central office. The only means available to hold the medical centers

⁴⁴³ On January 21, 2016, Secretary of Veterans Affairs, Robert A. McDonald, provided the following testimony before the U.S. Senate Committee on Veteran’s Affairs “Flexible Budget Authority: We need flexible budget authority to avoid artificial restrictions that impede our delivery of care and benefits to Veterans. Currently, there are over 70 line items in VA’s budget that dedicate funds to a specific purpose without adequate flexibility to provide the best service to Veterans. These include limitations within the same general areas, such as health care funds that cannot be spent on health care needs and funding that can be used for only one type of Care in the Community program, but not others. These restrictions limit the ability of VA to deliver Veterans with care and benefits based on demand, rather than specific funding lines.” accessed June 10, 2016,

<http://www.veterans.senate.gov/imo/media/doc/VA%20Sec%20Testimony%2001.21.2016.pdf>

⁴⁴⁴ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 105, accessed March 10, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

accountable was to fund the priority initiatives as separate budget lines or indicate allocations to be made under the specific-purpose process.

To fix the overly complex and bureaucratic structure of VHA, the *Independent Assessment Report* suggests that VHA “redesign (its) operating model to create clarity for decision-making authority, prioritization, and long-term support.”⁴⁴⁵ VHA must take a systems approach to reorient its leadership operations, restructuring and re-orienting VHACO program offices to ensure all of the following:⁴⁴⁶

- fact based, innovative decision making that is responsive to the field, other offices, and external stakeholder requirements
- feedback mechanisms to incorporate system learning into policy development and operational guidance
- communication mechanisms to effectively share information across offices and reach VISN and facilities to explain expectations and tie decisions to organizational values and goals
- effective execution of policy decisions through expert coaching, deployment of resources, and guidance based on external benchmarks and sharing of internal best practices
- analytic capability and infrastructure to effectively monitor progress and outcomes of all organizational priorities

Such a reorientation will involve a different skill set and expertise than currently required in VHACO. Transformation will call for recruiting new expertise, making advancement decisions based on these new competencies, reinforcing them through recognition and performance assessment, and developing new skills in current staff through training and coaching. This skill set includes a high level of technical expertise relevant to the program office; the ability to build relationships with external stakeholders; demonstrated skills in coaching, staff development, and training; certification in quality improvement methodologies; analytic capabilities to develop and track metrics; and the ability to lead transformational change. VHA must fully fund the retraining and the hiring of skilled staff in VHACO to accomplish this transformation.

For the VHACO program offices to work effectively with one another and with the field, the specific authority of each office must also be defined. Where overlap and confusion exists between offices, programs must be combined and streamlined or eliminated with a corresponding reduction in force. In changing the structure and orientation of VHACO program offices, VHA leadership can take the opportunity to align functions to achieve its stated priority of patient-centered care. In a fully aligned operating structure, business processes from the VAMC front line to central office must be organized to deliver important

⁴⁴⁵ Ibid., ix.

COMMISSION ON CARE FINAL REPORT

patient outcomes rather than aligned in professional silos. For instance, instead of having an office of nursing, one for social work, and a lead for physician assistants, business offices should be aligned around the work they do together, like patient aligned care teams, to deliver positive outcomes for veterans.

The administrative operations of VHACO should also be flattened. Senior staff should be speaking directly to other senior staff to discuss and make decisions rather than relying on bureaucratic, paper-based processes as a means of negotiation: It is neither a healthy culture nor an efficient process. At the same time, VHACO needs to take full advantage of being a large-scale enterprise by centralizing functions such as acquisition package development, recruitment package development, and account reconciliation so that staff is not required in each program office to take on these occasional but complex activities. The net savings resulting from this reorganization and delayering of the bureaucracy must be reinvested in the transformation process.

VISNs must also examine the skills needed to take on an expanded role as facilitators, coaches, and guides in improving services and sharing best practices across facilities. VISNs are critical players in the feedback loop between service delivery and VHACO to identify ineffective processes, problems, and emerging issues that need to be raised to VHACO for help in clearing away barriers to effective operations. Similar to VHACO, VISNs must define the new skill set required by their staffs and establish these requirements in hiring, promotion, and performance evaluation as well as training and coaching staff to develop these competencies. Finally, the chief of VHA Care System (CVCS) should establish a required staffing ratio for the VISN office and reduce the staffing in VISNs that exceed this standard.

A new operating model also means that medical center directors must control the budget, staff, supplies, and infrastructure required to deliver needed health care. This model includes consolidation of budget lines and new authority and expanded authority to reallocate funds across the remaining budget categories. To manage the new VHA Care System and ensure that facility and network directors have the local control needed to make decisions about how to deliver services, fewer restrictions should be placed on the VHA budget. To start, specific-purpose funds must no longer be used to direct obligations at facilities. Congress should also work with the administration to reduce the number of budget lines and specific spending authorities back to a simpler system like that used in 1998. To support these changes and create transparency, medical centers should be accountable for their expenditure of funds by ensuring accurate, complete, and timely cost accounting. This last requirement, however, can only be met if it is supported by effective financial management data systems and fully trained staff and leadership who understand how to use such systems.

To support the leaders, program offices, and the field in this transformation, the CVCS must establish a transformation office that has appropriate expertise in business process reengineering and is fully funded to conduct this work. Existing offices with the requisite expertise, including the Office of Strategic Integration and the Veterans Engineering Resource Center (VERC), should be rolled into the transformation office. This office would oversee transformation and incubate new initiatives with the goal of incorporating them into regular work of other program offices once the new initiative is established. This mechanism, if used consistently, would prevent VHA from growing new offices as new priorities arise.

VA-18-0457-A-001269

Finally, as part of cultural change within the leadership system, the CVCS, VISN directors, and program office leaders must promote open and productive dialogue among themselves about problems and solutions. To accomplish this goal, leaders must address both the culture within the leadership ranks, as well as establish systems and processes that support identification and discussion of problems. The CVCS must model this behavior by inviting input on problems and rewarding leaders when they bring issues forward, including rewarding them with access to expertise, staff, and money; removing barriers; and aligning other leaders in support of solutions.

In its work to oversee change in VHA, the transformation office will create an implementation plan for transformation, identifying key strategies and milestones. This plan will drive data collection, development of strategic goals and supporting objectives to encourage effective planning, accountability, and the ability to unearth critical gaps that need to be addressed. The transformation office will require each new initiative to establish a project plan and provide periodic reports that include all of the following components: tactic/action, initiative owner, cost (i.e., operational, equipment, contracts), number of FTEs, start and completion dates, outcome measures, strategic drivers, and milestone.⁴⁴⁷ The President's Management Agenda Scorecard will serve as the evaluation model. The Office of Management and Budget created this tool to evaluate new initiatives and track progress on outcomes over time with regular spotlight reports (red, yellow, green) to leadership.⁴⁴⁸

Implementation

Legislative Changes

- Simplify the VHA budget to include fewer accounts while at the same time requiring more transparent and detailed accounting of VHA expenditures.

VA Administrative Changes

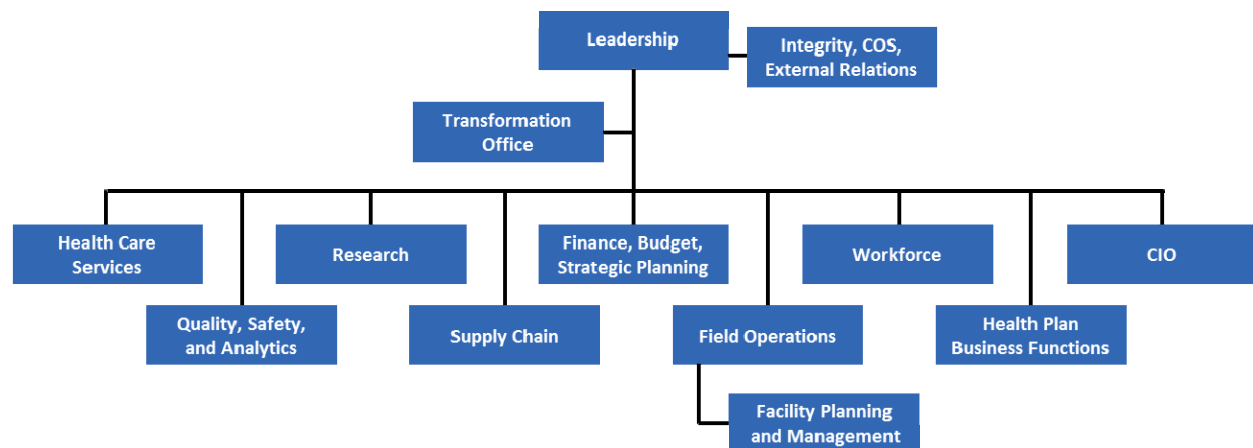

The following administrative changes are a priority during the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B. Responsibility for establishing a transformation plan with milestones, timelines, and evaluation of outcomes is assigned to the transformation office that the Commission recommends be established in VHA.

- Eliminate duplication within VHA and consolidate program offices to create a flat structure. Figure 9 is one model of an organizational chart for accomplishing this goal. This organizational chart shows how VHA can be streamlined to mirror the structure of large private-sector hospital systems. Figure 10 is the current VHA organizational chart, provided as a point of comparison and to emphasize the cumbersome nature of the current structure.

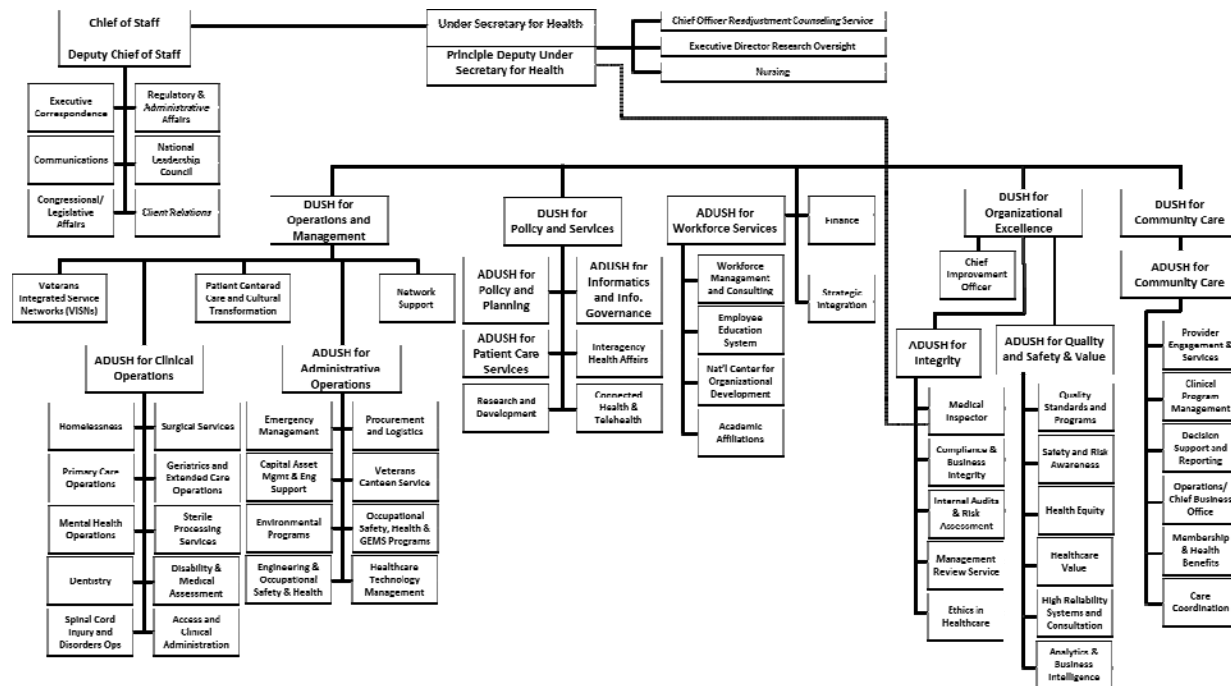

⁴⁴⁷ For example, see "VA Faith-based and Community Initiative President Management Agenda Scorecard," September 30, 2008,

⁴⁴⁸ "Office of Federal Financial Management President's Management Agenda," Office of Management and Budget, accessed June 15, 2016, https://www.whitehouse.gov/omb/financial_fia_pma/.

COMMISSION ON CARE FINAL REPORT

Figure 9. Proposed VHA Organizational Chart⁴⁴⁹

Note: This organizational chart is an example of how to align VHA functions to create a flatter organization, remove duplication, and streamline decision making as discussed throughout this section of the report. Of note, the placement of the Transformation Office, CIO, and supply chain in this diagram is consistent with recommendations made by the Commission elsewhere in this report. In this chart, COS is chief of staff.

Figure 10. Current VHA Organizational Chart⁴⁵⁰

⁴⁴⁹ Modified from Appendix C, Mike Mayo-Smith and Pat Vandenberg, *Task Force on Improving Effectiveness of VHA Governance: Report to the VHA Under Secretary for Health*, (Washington, DC, Veterans Health Administration, February 2015), 41.

⁴⁵⁰ Ibid.

COMMISSION RECOMMENDATIONS

- Eliminate the duplication of functions between VHA and VA by closing VHA offices as needed.
- Create innovative organizational structures that are aligned to patient's needs rather than professional silos, to support clinical care.
- Undertake a reduction-in-force in VHACO that facilitates delayering and efficiency in communication and decision making.
- Establish a transformation office implementation plan to ensure effective and comprehensive implementation of the transformation across VHA. The transformation plan is to capture all of the transformation activities recommended in the Commission report, establish specific timelines and milestones for accomplishing each objective, and report on both progress and outcomes at least quarterly to VHA leadership and the governing board. Periodic evaluation of the effect of these change initiatives on internal and external stakeholders would also be appropriate.
- Clarify the roles and responsibilities of VISNs and facilities and implement a change strategy to orient staff and leaders to these new expectations. Establish effective leadership communication mechanisms to promote transparency, dialogue, and collaboration among VHACO offices and with the field.

Other Department and Agency Administrative Changes

- None required.

Recommendation #13: Streamline and focus organizational performance measurement in VHA using core metrics that are identical to those used in the private sector, and establish a personnel performance management system for health care leaders in VHA that is distinct from performance measurement, is based on the leadership competency model, assesses leadership ability, and measures the achievement of important organizational strategies.

Problem

To achieve the Commission's vision of quality, access, and choice for veterans, VHA must effectively measure outcomes and hold leaders accountable for improvement. VHA can measure itself against internal best practices, but veterans deserve care that uniformly meets or exceeds private-sector quality standards. A clear, concise, balanced measure set, identical to private-sector standards, will give leadership, staff, and administrators focus and direction for their work. VHA leaders are responsible for delivering these quality outcomes for veterans. They do so by exercising leadership skills and traits in their management and direction to staff. Short-term gains can be realized at the expense of staff morale and well-being, but the long-term health of the organization cannot. Therefore, organizations must be sure to assess leaders' performance not just on *what* they achieve but *how* they achieve it.

Background

One of the criteria for performance excellence in health care is the measurement, analysis, and improvement of organizational performance.⁴⁵¹ Performance measurement is used to track daily operations, overall organizational performance, and progress in achieving organizational objectives and action plans. Performance measurement is also used to benchmark organizational performance against internal and external standards.

Organizational performance measurement is not the same as workforce performance management.⁴⁵² Workforce performance management is intended to reinforce intelligent risk taking, help focus the workforce on the needs of patients and other customers, and support

The Commission Recommends That . . .

Organizational Performance Measurement

- VHA streamline organizational performance measures, emphasize strategic alignment and meaningful effect, and use benchmarked measures that allow a direct comparison to the private sector.
- The new Office for Organizational Excellence work with experts to reorganize its internal structure to align business functions with field needs and consolidate and eliminate redundant or low-priority activities.

Workforce and Leadership Performance Management System

- VHA create a new performance management system appropriate for health care leaders, tied to health care leadership competencies, and benchmarked to the private sector.
- The CVCS and all secondary raters hold primary raters accountable for creating meaningful distinctions in performance among leaders.
- VHA recognize meaningful distinctions in performance with meaningful awards.

⁴⁵² *Ibid.*, 20.

health care delivery and the achievement of action plans.⁴⁵³ Although there is a relationship between organizational performance measurement and workforce performance management, they are not synonymous processes.

Workforce performance management is made up of much more than just clinical outcome measures. As noted by the American College of Healthcare Executives (ACHE), performance evaluations of hospital CEOs must also evaluate leadership traits such as judgment, communication, and diplomacy.⁴⁵⁴ Furthermore, ACHE emphasizes the inclusion of individual professional objectives in performance plans, such as promoting ethical behavior, supporting diversity and inclusion within the organization, or fostering effective medical staff relationships.⁴⁵⁵ ACHE and other leading practitioners⁴⁵⁶ emphasize that performance management is not a plan or an event, but rather a continuous, ongoing process and conversation among the leaders and their reviewers. A workforce performance management system must also make meaningful distinctions among individuals⁴⁵⁷ and promote high performance through rewards, recognition, and incentive practices.⁴⁵⁸ Ideally, when coupled with a leadership competency model and development program, workforce performance management should also help to identify high-performing potential leaders and provide guidance to the workforce on how to move up in the leadership ranks.⁴⁵⁹ As deployed in FY 2015 and evaluated by the *Independent Assessment Report*, VHA's performance management system failed to effectively achieve any of these objectives.⁴⁶⁰

Analysis

One of the findings in the *Independent Assessment Report* was that “hundreds of operational performance measures overwhelm leaders and this, combined with limited transparency and inconsistent data availability, makes it difficult to focus on what is most important.” More than 300 measures spanned everything from critical clinical metrics to political priorities introduced to address the most recent crisis. VHA reports that it was tracking approximately 500 measures,

COMMISSION ON CARE FINAL REPORT

including 156 related to access, 29 measuring employee engagement, 18 on high-performing networks, 250 best practice measures, and seven related to trust.⁴⁶¹

Distinct from performance measurement, the performance management process⁴⁶² is a cycle that begins with clear input from top leadership on the priorities of the organization, followed by clear targets, performance tracking, reviews, and rewards. The *Independent Assessment Report* noted that, “Individual performance management processes are hindered by targets inconsistent with the VHA mission, delayed implementation, lack of meaningful performance dialogue, and limited rewards.”⁴⁶³ Many of the same system flaws that impede effective organizational performance also impede individual success. Performance plans are released late in the performance cycle,⁴⁶⁴ metrics are hard to track in real time and lack the detail required for individual performance assessment,⁴⁶⁵ and few plans are written to support shared accountability and team-based solutions. In addition, participants observed that the current senior executive performance agreements and rating process (a) do not result in meaningful distinctions in performance between individuals, (b) do not drive meaningful conversations about individual performance, (c) and do not consistently focus on key health care metrics of quality, safety, patient experience, operational efficiency, finance, and human resources.⁴⁶⁶ The *Independent Assessment Report* notes that the rewards currently offered to employees do not motivate them to work toward exceptional performance.⁴⁶⁷

Information provided to the Commission indicates that VHA has taken action to address some of these findings. First, the USH has reestablished a performance accountability workgroup (absent for a number of years) comprising leaders from the field and VHACO to provide oversight and direction to the performance measurement process.⁴⁶⁸ The workgroup has been charged with aligning metrics to each level of VHA, dramatically simplifying metrics, and increasing the capacity of the organization to focus on measures that truly matter.⁴⁶⁹ The group has created an aspirational vision of a performance measurement system that describes cascading accountability from the top of the organization with health system outcomes (reported annually) through strategic measures (reported quarterly), to tactical measures (reported monthly) to transactional measures (reported in real time).⁴⁷⁰ It is critical that these aspirations become policy.

⁴⁷⁰ Ibid.

Starting in the 1990s, VHA has used performance measurement, benchmarking, and reporting internally to motivate higher clinical quality performance by individuals and teams.⁴⁷¹ As a large, national health care system, internal benchmarking can be a valid method to drive change, yet both internal and external audiences may ask how well VHA performance compares to that of private-sector providers. VHA currently posts some patient quality, safety, and outcome measures on both its website and on the Department of Health and Human Services (HHS) Hospital Compare website.⁴⁷² These measures allow patients to evaluate the quality of care they receive from VA and make informed health care decisions. They include measures of timely and effective health care; measures of readmissions; complications of death, surgical complication measures and health-care related infection measures; survey data of patient experiences; and other measures required of hospitals participating in Medicare.⁴⁷³ Former USH Kizer believes this reporting is insufficient, noting

*the VA health care system has become increasingly insular and inward-looking. It now has little engagement with private-sector health care, and too often it has declined to make its performance data public. For example, it contributes only a small proportion of its data to Hospital Compare and has declined to participate in other public performance reporting forums such as the Leapfrog Group's efforts to assess patient safety.*⁴⁷⁴

The Commission has reviewed VHA's principal measurement approach, Strategic Analytics for Improvement and Learning Value Model (SAIL) and has determined that although it is modelled on private-sector approaches to measurement and rating, measures are not exactly the same as those reported in the private sector and consequently impede direct benchmark comparisons of VHA to the private sector. Updating these measures so they are consistent with the private sector will be especially important as integrated delivery networks are established and more care is received in the community, as they will allow for making objective comparisons.

Measurement, analysis, and improvement of organizational performance work together as a key system.⁴⁷⁵ The USH has signed a new organizational chart for VHA that acknowledges the interconnection of these elements by establishing an office for organizational excellence that encompasses all of these functions.⁴⁷⁶ To be effective, not only must all of the various units within this office work together but also they must work with personnel in the field to coach and develop their ability to effectively apply performance measurement and improve organizational performance.

⁴⁷⁶ See the proposed organizational chart at end of Recommendation #12.

COMMISSION ON CARE FINAL REPORT

These improvements in performance measurement do not appear to be mirrored on the performance management side of the equation. The draft FY 2016 performance plan template for network directors and medical center directors,⁴⁷⁷ although more streamlined than in previous years, continues to reflect confusion of performance measurement and performance management. It also continues to distribute all of the organization's key (and not so key) priorities under OPM executive core qualifications of leading change, leading people, business acumen, building coalitions, and results driven. The new, streamlined performance measures described above could be considered results-driven; however, the rest of the plan continues to be a confusing presentation of instructions to field leaders, restatements of policy, and performance objectives for action plans. Only the last category is appropriate for workforce performance management.⁴⁷⁸ The Corporate Senior Executive Management Office has implemented a new online performance management data tool that allows for tracking and assessment of the performance management process for senior executive service and equivalent leaders in VA.⁴⁷⁹

To improve performance measurement and organizational performance, the *Independent Assessment Report* recommends that VHA focus and simplify organizational performance measurement to clarify accountability, actively support the mission, and promote continuous improvement. Specifically, VHA must create a simplified, focused, balanced scorecard that reduces the total number of metrics to about 20; establish metrics that support cross-functional collaboration; cascade metrics down the organizational hierarchy; and make data tracking transparent, timely, broadly available, credible, reliable, and meaningful down to the lowest level of the organization. Furthermore, leaders should support continuous improvement, problem-solving, and the exchange of best practices across the organization rather than focusing on only correcting poor performance.⁴⁸⁰ The Commission broadly agrees with this approach to performance measurement. In addition, the Commission emphasizes that VHA customers and stakeholders require public reporting of clinical quality measures that are the same as, and therefore directly comparable to, measures used by the private sector. Although VHA may require an enhanced set of measures that reflects services not broadly deployed in the private sector, or for which measures do not yet exist, a minimum set that are the same as private-sector measures must be used by VHA. As VHA expands integration of care with the community, the use of the same measures as the private sector will be important so that direct comparisons can be made of care delivered inside VHA and that delivered under contract or partnership agreement by the VHA community care network.

VHA also requires a cohesive, integrated personnel performance management system that is specific to the knowledge, skills, and abilities required of health care leaders; includes

accountability to key organizational outcomes; but also assesses organizational and professional objectives. A new personnel performance management system must be free of OPM requirements for executive core qualification and certification process and instead be benchmarked to the private sector⁴⁸¹ and consistent with the new leadership competency model. Congress required DoD to establish independent competency standards for the Commanders of Military Treatment Facilities (MTFs) and should consider doing the same for VHA.⁴⁸² This new performance management model must be based on both evaluation of leadership competencies and demonstrated success in delivering on strategic priorities. To break with current perceptions of the rating scales, it would be helpful to establish a new rating scale for the performance management system. Once the new system is developed, VHA must conduct training to describe the system, rating process, and expectations for both participants and raters.

A performance management system must also address the responsibilities of the rater. This includes clearly establishing written performance requirements for subordinates that are both timely (i.e., prior to the start of the rating period) and meaningful. Raters must be required to provide continuous feedback and assessment throughout the year to recognize and reward progress and outstanding achievements as well as to coach and trouble shoot when needed. The CVCS must establish this expectation by clearly communicating what is required of raters, and most importantly, by modeling the behavior. Finally, raters must provide meaningful ratings that distinguish achievement based on objective performance and demonstrated leadership skills. For instance, the Cleveland Clinic has moved to a system of forced rankings for which the top 10 percent of performers are celebrated and the bottom 10 percent are given intensive coaching or, if justified, sanctioned.⁴⁸³ To accomplish the last point, raters themselves must be given feedback and oversight to understand how their approach to rating compares to other leaders in the organization. If raters' assessments are not consistent with rating standards, their supervisor must bring this issue to their attention and include it in the performance assessment they receive.

The newly established performance management data tool can be used to support the performance management process. The submission of written performance plans (or failure to do so) can be tracked and reported; and the quality of those plans can be audited to provide feedback to raters. Final ratings and a comparison of raters can be conducted and provided to all of the executive raters in the organization. Finally, such a tool can also be used to identify and track high performers who deserve further investment and development as leaders from VHA.

⁴⁸³ Delos M. (Toby) Cosgrove, MD, CEO, Cleveland Clinic, statement during Commission on Care public meeting, March 22, 2016.

COMMISSION ON CARE FINAL REPORT

Implementation***Legislative Change***

- Obtain legislative relief from the requirement to use the OPM executive core qualifications system of competencies and ratings and tied to new Title 38 pay authority for health care leaders (see Recommendation #15).

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Establish a workgroup and engage outside experts to create a new performance management system for VHA leaders that is appropriate for health care executives.
- Establish standards and processes to hold raters accountable for creating meaningful distinctions in performance between subordinate leaders.
- The new Office for Organizational Excellence should work with experts to reorganize their internal structure to align business functions with field needs and consolidate and eliminate redundant or low-priority activities.

Other Department and Agency Administrative Changes

- None required.

Diversity and Cultural Competence

Recommendation #14: Foster cultural and military competence among all VHA Care System leadership, providers, and staff to embrace diversity, promote cultural sensitivity, and improve veteran health outcomes.

Problem

The VHA Care System must implement a systemic approach to developing the cultural and military competence of its leadership, staff, and providers, as well as measure the effects of these efforts on improving health outcomes for vulnerable veterans. Although VHA has made some strides in specific program areas, cultural competency is an essential part of providing effective care to veterans, and must become a strategic priority throughout the organization, because of the unique needs military service, and especially participation in combat operations, may cause.

The Commission Recommends That . . .

- VHA implement a systemic approach to establishing cultural and military competence across VHA and its community providers, and provide the resources required to fully integrate the related strategy into veteran's care delivery.
- Cultural and military competency training be required on a regular basis for VHA Care System leadership, staff, and providers.
- Cultural and military competency be criteria for allowing community providers to participate in the VHA Care System.

Background

Cultural competence is the ability of health care organizations and their providers to understand and respond effectively to the cultural, language, and in VA's case, military service experience brought by the patient to the health care encounter. It has been endorsed as a viable skill set to reduce, if not eliminate, the rate at which health care disparities occur. VHA has recognized the problem of health disparities among its patient population and has taken steps to address it by tasking certain internal offices with building cultural and military competence throughout the organization. For example, VHA established the Office of Health Equity (OHE) and charged it with championing the efforts to identify, understand, and address health care disparities among veterans.

Analysis

There are seven essential strategies for promoting and sustaining organizational and systemic cultural competence. These strategies include the following:⁴⁸⁴

- Provide executive-level support and accountability.
- Foster patient, community, and stakeholder participation and partnerships.
- Conduct organizational cultural competence assessments.
- Develop incremental and realistic cultural competence action plans.

⁴⁸⁴ Miriam E. Delphin-Rittmon et al., "Seven Essential Strategies for Promoting and Sustaining Systemic Cultural Competence," *Psychiatric Quarterly*, 84, (2013), 53-64.

COMMISSION ON CARE FINAL REPORT

- Ensure linguistic competence.
- Diversify, develop, and retain a culturally competent workforce.
- Develop an agency strategy for managing staff and patient grievances.

VA has taken some steps to address cultural and military competence strategies, but these programs are not sufficient to address the breadth and depth of the problem. These strategies will not take hold and become fully ingrained in VHA's culture unless VHA leadership makes them a key priority and commits the resources and on-going, comprehensive training required to build cultural competencies across the entire VHA workforce.

Military Competency

In addition to addressing the needs of minority veterans and vulnerable veterans populations, VA must address military-specific needs and ensure that all providers in the VHA Care System have sufficient military competency (i.e., knowledge of specific issues and health care needs of those who served in the military). VHA's Office of Academic Affiliations developed a *Clinician Pocket Card* for providers that includes questions for clinicians to ask veterans about their military health history.⁴⁸⁵ The *Pocket Card* and similar resources should be given to all VHA and community providers to leverage during veteran patient medical assessments and appointments. In addition, VA's Office of Public Health (OPH) provides information on VA health care programs for veterans who were exposed to environmental and occupational hazards during military service, such as Agent Orange, chemicals leading to Gulf War veterans' illnesses, and Camp Lejeune water contamination.⁴⁸⁶ This military exposure information should be leveraged in VA's cultural competency strategy.

Health care disparities often result from patients' lack of trust in their health care provider; therefore, enhancing the patient-provider relationship is paramount in overcoming these disparities. Stereotypical thinking on the part of providers about certain patient groups, including veterans, may unwittingly influence their prognosis.⁴⁸⁷ Specific reasons for the increase of health care disparities in the military population include the following:

- the cultural norms of the military are such that to admit or display any signs of perceived weakness, especially related to mental health issues, discourages military personnel and veterans from seeking medical care and treatment
- changes in the demographical makeup of the civilian population result in similar changes to the military population
- a small but gradual increase in the number of foreign born personnel who have joined the ranks of the military

⁴⁸⁵ Department of Veterans Affairs, Office of Academic Affiliations, *Military Health History: Pocket Card for Health Professions Trainees and Clinicians*, accessed June 12, 2016, <http://www.va.gov/oaa/archive/Military-Health-History-Card-for-print.pdf>.

⁴⁸⁶ "Public Health: Military Exposures," U.S. Department of Veterans Affairs Intranet, accessed June 12, 2016, <http://vaww.publichealth.va.gov/exposures/index.asp>

⁴⁸⁷ G.L.A. Harris, "Reducing Healthcare Disparities in the Military Through Cultural Competence," JHHSA (2011), 148.

- a disengaged provider culture that may have become more immersed in the medical culture than the military culture

VA must make cultural and military competence a strategic priority, provide the resources needed to execute the strategy, and hold leadership and providers, both within VHA and community partners, accountable for strategy implementation and integration into VA's culture.

Women

Women are the fastest growing group within the veteran population.⁴⁸⁸ As of 2011, approximately 1.8 million (8 percent) of the 22.2 million veterans were women. Data indicate that by 2020 women veterans will comprise nearly 11 percent of the total veteran population. As the number of women veterans increases, VHA continues to prepare for an increasing demand for women veterans' health care needs.⁴⁸⁹ To address the health disparities affecting women veterans, VHA must provide high-quality, equitable care on par with that of men, deliver that care in a safe and healing environment, provide seamless coordination of services, and actively recognize women as veterans.⁴⁹⁰

In the past, VHA found gaps in its ability to provide comprehensive primary care for women veterans because many primary care providers had little or no exposure to women patients and women were often referred outside of primary care for gender-specific care. To close these gaps, VHA has implemented women's health comprehensive primary care clinic models with the goal of providing complete primary care from one designated women's health provider (DWHP) at one site. An analysis of FY 2012 data revealed that women assigned to DWHPs had more positive overall experiences with care and were more satisfied on six composite scores including access, communication, shared decision making, self-management support, comprehensiveness, and office staff.⁴⁹¹ VA has substantially reduced gender gaps in care,⁴⁹² but women veterans still encounter challenges when accessing care. VHA leadership must support the future planning of women's services and programming so that women veterans receive the highest quality health.⁴⁹³

LGBT Equity

In its systemwide implementation of cultural competency, VHA should leverage best practices from an area in which the agency is already an equity leader: treatment of LGBT patients. Every year since 2007, the Human Rights Campaign has published a Health Equality Index (HEI) report that aims to measure the quality of health care for LGBT patients based on core criteria

⁴⁸⁸ "Women Veterans Health Care," Department of Veterans Affairs, accessed June 12, 2016, <http://www.womenshealth.va.gov/>.

COMMISSION ON CARE FINAL REPORT

that require health care systems to couple strong policies with appropriate training.⁴⁹⁴ In 2016, VAMCs made up 20 percent of all HEI participants. Among participating VAMCs, 84 percent were designated with *Leader* status.⁴⁹⁵ VHA hospitals publicize that discrimination against LGBT patients and employees is prohibited. Senior managers are registered for HEI training. And equal visitation rights are granted to families and friends of LGBT patients. VHA hospitals play a critical role in promoting patient care equality in states where VHA is the only Equality Leader.⁴⁹⁶ VHA should create strong policies and mandatory training, like that used to promote health equity for LGBT patients, to address equity issues for racial and ethnic minorities and women.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- VHA Care System providers should be required to ask patients about their military health history and incorporate veterans' responses into patients' treatment plans.
- VHA leadership should support the future planning of women's services and programming so that women veterans receive the highest quality health care.
- VHA should leverage the best practices developed in support of LGBT equity and implement them across VHA.
- VHA Care System providers should be required to attend comprehensive, on-going cultural and military competency training.

Other Department and Agency Administrative Changes

- None required.

⁴⁹⁴ "How the VA is leading the way on LGBT patient care," Andrew Park, The Week, February 25, 2014, accessed June 12, 2016, <http://theweek.com/articles/450361/how-v-a-leading-way-lgbt-patient-care>.

Workforce

Recommendation #15: Create a simple-to-administer alternative personnel system, in law and regulation, which governs all VHA employees, applies best practices from the private sector to human capital management, and supports pay and benefits that are competitive with the private sector.

Problem

VHA has staffing shortages and vacancies at every level of the organization and across numerous critical positions, including facility leadership, clinical staff, supply chain personnel, and customer service staff. VHA lacks competitive pay, must use inflexible hiring processes, and continues to use a talent management approach from the last century. A confusing mix of personnel authorities and position standards make staffing and management a struggle for both supervisors and human resources personnel. Title 5 was not created with a modern health care delivery system in mind and falls short of offering what is needed to create a high-performing health care system.

Background

During the 1990s, Congress passed the Government Performance and Results Act⁴⁹⁷ to correct shortcomings in the way government was managed and assessed in an effort to bring modern business management practices into the federal government. The law was updated in 2011,⁴⁹⁸ yet one essential

The Commission Recommends That . . .

- Congress create a new alternative personnel system that applies to all VHA employees and falls under Title 38 authority. The system must simplify human capital management in VHA; increase fairness for employees; and improve flexibility to respond to market conditions relating to compensation, benefits, and recruitment.
- VHA write and implement regulations for the new alternative personnel system, in collaboration with union partners, employees, and managers, that does all of the following:
 - Meets benchmark standards for human capital management in the health care sector and is easy for HR professionals and managers to administer.
 - Promotes veteran preferences and hiring.
 - Embodies merit system principles (merit-based, nonpartisan, nondiscrimination, due process) through simplified, sensible processes that work for managers and employees.
 - Creates one human capital management process for all employees in VHA for time and leave, compensation, advancement, performance evaluation, and disciplinary standards/processes.
 - Provides due process and appeals standards to adverse personnel actions.
 - Allows for pay advancement based on professional expertise, training, and demonstrated performance (not time-in-grade).
 - Promotes flexibility in organizational structure to allow positions and staff to grow as the needs of the organization change and the success of each individual merits.
 - Establishes simplified job documentation that is consistent across job categories and describes a clear path for staff professional development and career trajectories for advancement.
 - Eliminates most distinctions (except for benefits) between part-time and full-time employees.
 - Grandfathers current employees with respect to pay and benefits.
- VHA ensure all positions, to include human resources management staff, are adequately trained to fulfill duties.

⁴⁹⁸ GPRA Modernization Act of 2010, Pub. L. No. 111-352, 124 Stat. 3866 (2011).

COMMISSION ON CARE FINAL REPORT

component of modernizing the management of federal programs is still missing: reform of human capital management.⁴⁹⁹

The Civil Service Act was initially passed in 1883 and revised in 1978.⁵⁰⁰ The *general schedule*, which governs the pay and job classification process, was codified by regulation in 1949. The U.S. workforce, including the federal workforce, has changed dramatically since these laws and regulations were implemented. As noted in a recent report from the Partnership for Public Service, “the personnel system, designed more than 60 years ago, now governs more than 2 million workers and is a relic of a bygone era, reflecting a time when most federal jobs were clerical and required few specialized skills.”⁵⁰¹ As of 2013, nearly two-thirds of federal employees work in professional or administrative positions focused on knowledge-based work, with the Department of Veterans Affairs accounting for the largest percentage of such workers.⁵⁰²

The Partnership for Public Service calls for broad reform of the civil service system, noting that the

*the federal workforce has become an island disconnected from the larger talent market for knowledge-based professional and administrative occupations that are mission critical. . . . Federal employee pay . . . is not tied to the broader labor market, making it harder to compete with the private sector for talent. That disconnect is exacerbated by a job classification system that describes a workplace from the last century.*⁵⁰³

This system lacks mechanisms for rewarding top performers, demoting or firing poor performers, and holding managers accountable.⁵⁰⁴ The unnecessarily complex hiring system is difficult for applicants to navigate and makes it challenging for hiring managers to identify the most qualified candidates, hindering the ability to bring in experienced candidates from the private sector.⁵⁰⁵

*The civil service system has become a maze of rules and procedures that are not perceived as rational by the people who serve in government or by the general public. . . . Rigid policies . . . are now a burden on a government that needs to encourage flexibility and innovation to meet rapidly changing and difficult challenges.*⁵⁰⁶

⁵⁰⁶ Ibid.

The General Accounting Office (GAO) also continues to point to human capital management as a high-risk area across government.⁵⁰⁷ DoD has proposed walking away from the Title 5 civil service system to support modernization of human capital management,⁵⁰⁸ President Barack Obama has repeatedly called for a commission to overhaul and modernize the civil service,⁵⁰⁹ and Congress is considering whether the time is right for civil service reform.⁵¹⁰

VHA currently uses three different personnel systems: Title 5 (the civil service/general schedule system) for senior executive service (SES) and other, mostly nonclinical, employees; Title 38 for physicians, dentists, and other specified health care professionals;⁵⁰⁹ and Title 38 Hybrid for allied health professionals such as pharmacists and licensed physical therapists.⁵¹⁰ Each system has its own set of requirements, procedures, and rules for the employees under its respective authority.⁵¹³ Currently, about two-thirds of VHA employees serve in the Title 38 Hybrid occupations.⁵¹⁴

VHA is not alone in having an excepted service system. More than a dozen agencies have special legislative authority to create a personnel system to fit their particular needs, including the Federal Bureau of Investigation, National Institutes of Health, National Security Agency, U.S. Public Health Service, Defense Intelligence Agency, U.S. Nuclear Regulatory Commission, and National Aeronautics and Space Administration.⁵¹¹ In an acknowledgement of the failure of the general schedule process to meet the needs of certain professions, OPM has also instituted governmentwide direct hiring authority for difficult-to-recruit positions, including medical officer, nurse, pharmacist, radiologic technician, and information technologist – all positions critically important to VHA’s mission success.

Modernizing human capital management is a global imperative for the private sector as well, with 92 percent of participants in one assessment of 7,000 businesses noting that a new approach to human resources is a critical organizational priority in 2016.⁵¹² According to a report from Deloitte, which examined broad human resource (HR) trends, “HR is redesigning almost everything it does – from recruiting to performance management to onboarding to reward systems” to learning and development.⁵¹³ Younger workers are driving many of these

COMMISSION ON CARE FINAL REPORT

changes with expectations for meaningful work, learning opportunities, and career progression.⁵¹⁴ These workers have been choosing the federal government in diminishing numbers, with only 6 percent of federal employees currently younger than 30 years of age (compared to 23 percent of the civilian workforce).⁵¹⁵ In VHA, millennials (those 34 and younger) make up only 15 percent of the workforce, but are disproportionately over-represented among staff that quit VHA, at 20 percent.⁵¹⁶

As of January 2016, VHA had a vacancy rate of 16 percent for all positions, despite filling more than 40,000 positions in FY 2015.⁵¹⁷ VHA faces the additional challenge that 40 percent of its overall workforce is eligible for retirement in the next few years.⁵¹⁸ This problem occurs in the face of acknowledged national shortages of physicians⁵¹⁹ and geographic misalignment of the current health care workforce that leaves many localities short of needed providers.⁵²⁰ Taken together, this information makes clear that excellence in human capital management continues to be a business imperative for VHA.

Analysis

The human resource function within VHA needs a fundamental overhaul to increase responsiveness, efficiency, and customer service, as well as to align its orientation to the business needs of VHA.⁵²¹ Medical center directors do not receive the support they need from HR to accomplish hiring, disciplining, and planning for succession of employees.⁵²² During exit interviews, staff members who leave VHA cite barriers to career growth, insufficient professional development, a lack of promotions, and poor on-boarding and training as reasons for departing.⁵²³ In a recent national survey of VA employees, improving end-to-end hiring, recognizing stellar job performance, and providing professional development and career

planning ranked, numbers one, six, and nine respectively as top priorities for improving the employee experience at VA.⁵²⁴

The Civil Service System Does Not Support a High-Performing Health System.

Recruitment in VHA operates in an incredibly complex environment. Federal rules and regulations make HR more challenging than it is in the private sector.⁵²⁵ For example, interviews in 2014 with more than 500 VHA hiring managers and HR staff members pointed to the top problems with Title 5 recruitments as OPM classification standards, grading of position descriptions, position characterization, and the ranking and rating process.⁵²⁶ The group specifically noted that there are many staff positions required in a health care delivery system that do not translate into a general schedule occupational series; therefore, when the positions are graded, the grade and salary is too low to compete with the private sector. Examples of such positions are custodial workers (hospital employees need to apply antiseptic cleaning techniques, but general custodians do not) and general facilities and equipment maintenance (hospital employees need to understand the maintenance of such items as specialized medical equipment, positive pressure rooms, and sterile plumbing systems that are not requirements for general plant maintenance at an office building).⁵²⁷ In another example, VHA managers noted that the OPM classification standard for supply chain positions rendered VHA unable to compete for local talent because the assigned grade was too low.⁵²⁸

The general schedule system also has been identified as a barrier to career advancement.⁵²⁹ Clerical staff members in particular often cannot advance in pay and responsibility without leaving their positions and moving into a different job series.⁵³⁰ Similarly, frontline customer service staff under the general schedule cannot receive advanced steps within the grade for better performance or completing job-related certifications or degrees, unlike nurses and allied health professionals who can receive advances in pay for these accomplishments.⁵³¹

The hiring process in VHA is acknowledged to take too long.⁵³² “HR is expected to fill a position within 60 calendar days . . . but process requirements, even if perfectly executed, take about 49

COMMISSION ON CARE FINAL REPORT

to 62 days.” Hiring timelines can span 4-8 months compared to private-sector hiring that takes between 0.5 and 2 months.⁵³³

This finding was echoed in a Northern Virginia Technology Council report on information technology challenges in VA that indicated across the board hiring of needed staff proceeds too slowly. “The causes are complex, but much of the delay can be traced to redundant, inconsistent, and inefficient hiring processes.”⁵³⁴ One driver of extended VHA hiring times is the government background checks and the licensing and credential review for clinical staff that is managed through VetPro, an internet-enabled data bank for credentialing VHA personnel.⁵³⁵

Although addressing recruiting and hiring problems will not be easy, doing so is essential to maintaining VHA’s workforce.⁵³⁶ An internal VHA workgroup that examined HR concluded that a complete break with Title 5 and a reworking of current Title 38 hiring authority is required, stating:

*The existing Personnel system does not meet today’s market or demand. With VHA’s tremendous volume of occupations to hire and significant turn-over rate in critical positions, it is necessary to promote an efficient organizational system to be able to hire qualified candidates as quickly as possible. The current classification system led to disparity across the systems and only looks at the duties of the position versus the qualifications of the person. The VHA hiring system must be agile and attractive to recruit those that just graduated or are entering the workforce... An agency specific excepted employment system would allow VHA to meet the unique staffing demands that are required of a complex health care organization.*⁵³⁷

VHA is Not Competitive in Pay for Many Positions

Many VHA staff have substantially lower earning potential than their private-sector counterparts. Despite a generous benefits package and the possible opportunities for greater work-life balance, and for research and teaching in a system that serves the important role of caring for the nation’s veterans, lower salaries reduce VHA’s competitive edge in the marketplace when trying to attract top talent.⁵³⁸ For example, although VHA is often able to provide physicians an entry salary that is comparable or better than industry standards, physicians’ long-term earning potential is dramatically less in VHA than that of their private-sector peers. “At the top of the salary ranges, VHA providers made less than their counter parts

by up to \$310,000 and on average, \$74,631. The only specialties for which VHA physicians made equal to or more than industry averages were anesthesiology, nephrology, ophthalmology, and psychiatry.”⁵³⁹ In another example of barriers to competitive pay, current provisions in law limit VA to a 60 percent level of market pay compensation for allied health professionals, even when recruitment failures demonstrate the need to offer higher salaries.⁵⁴⁰ As noted above in the discussion on classification, failure to appropriately classify positions also leads to a salary that is not competitive with private-sector health care organizations for positions such as customer service personnel.

In the area of educational debt repayment relief, VHA lags behind other federal and state agencies that use such programs to fill critical physician shortages in medically under-served areas.⁵⁴¹ VHA can offer up to a maximum of \$60,000 for 2 years (\$30,000 per year). HRSA National Health Service Corps (NHSC) runs three programs: the NHSC loan repayment program that provides up to \$50,000 in loan payments, the Student-to-Student Loan Repayment Program for up to \$120,000, and the State Loan Repayment Program with each state establishing loan amounts that are administered by HRSA.⁵⁴² These amounts range broadly from \$80,000 in Arizona and Arkansas, \$90,000 in Colorado, \$100,000 in Georgia and Alabama, and \$190,000 in California.⁵⁴³

Clinic Staffing Is Impaired by Current Law, Regulation, and Policy

Successfully reallocating staff to meet veterans’ needs in a rapidly evolving health care environment is difficult in VHA. The *Independent Assessment* recommended that VHA use extended clinic hours and weekend clinics to better optimize space and increase access to care for veterans.⁵⁴⁴ VA policy currently prohibits full-time VA physicians from receiving fee-basis compensation from the same VA facility in which they are salaried, although they can, under certain circumstances, receive fee-basis appointments at other VA facilities.⁵⁴⁵

These restrictions can make it hard to meet policy requirements for night and weekend schedules⁵⁴⁶ without reducing staffing on inpatient units or under-resourced primary care clinics. Use of alternative work schedules and overtime pay for physicians to meet local patient demands should be under control of local medical center directors.

COMMISSION ON CARE FINAL REPORT

VHA Staff Receive Inadequate Training Including at Initial Hire

Leading practices include providing mandatory onboarding training that introduces policies, procedures, and necessary skills. Onboarding programs include various activities that expose new hires to the culture of the organization and expectations based on roles and responsibilities. A report released by the Society for Human Resources Management suggests, “Formal orientation programs help new employees understand many important aspects of their jobs and organizations, including the company’s culture and values, its goals and history and its power structure.”⁵⁴⁷ To make up for inadequate on-boarding and to fill current staff’s understanding of VA, VHA is providing VA 101 training for current employees, with 60 facilities having completed the training in FY 2015.⁵⁴⁸ Employees in VA continue to desire a wide array of training, including customer service training, professional development, peer-to-peer training, hands-on training, and role-specific training.⁵⁴⁹

HR Professionals Must Focus on People and Business Priorities Not Compliance

VHA job candidates indicate they have unsatisfactory recruiting experiences, noting failures in timely follow-up and communication.⁵⁵⁰ VA human resources management and administration indicate that VA HR professionals do not exhibit a uniform level of competency, frequently do not understand the employee recruitment process end-to-end, and fail to provide high quality consultative support to managers with respect to all HR functions, but particularly in the area of progressive discipline and firing of employees.⁵⁵¹ Currently HR professionals in VA are largely focused on compliance with a complex set of rules,⁵⁵² rather than adding true value to the organization and being able to be full partners in accomplishing VHA business objectives. Resolving these staffing issues would render the overall HR function more effective.

VHA must become the employer of choice to attract and retain the very best health care workforce. To help it accomplish this goal, VHA requires competitive pay and flexible hiring and talent management processes. VHA cannot achieve that goal within its current personnel systems. A uniform alternative personnel system under Title 38 for all VHA human capital management would accomplish all of the following:

- Meet the unique staffing demands of a health care delivery organization.
- Allow market-based compensation and pay-setting latitude using broad pay bands to support staff growth and progression within their job. VHA must consider total compensation (with benefits), as compared to market rates because the government provides many more benefits than private-sector organizations. Consequently, VA may

⁵⁴⁷Talya Bauer, Society for Human Resource Management, *Onboarding New Employees: Maximizing Success*, 2010, 9-10, accessed May 13, 2016, <https://www.shrm.org/about/foundation/products/documents/onboarding-percent20epg-percent20final.pdf>.

⁵⁵⁰ McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 110, accessed April 13, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf.

⁵⁵¹ Sam Retherford, Principal Deputy Assistant Secretary for Human Resources and Administration, Department of Veterans Affairs, speaking to the leadership workgroup of the Commission on Care, December 15, 2015.

⁵⁵² Ibid.

pay less than private-sector employers for a position, but the total compensation (with benefits) may end up being equivalent to private-sector total compensation.

- Allow flexibility in the processes used to hire staff including direct hiring when needed.
- Support career planning and professional development through the application of competency models and training specific for health care as part of position management.
- Simplify the management tasks for supervisors and hiring managers who will only need to know one set of rules and processes instead of four.
- Simplify the job of HR professionals who will only need to know one set of rules and processes instead of four.
- Allow development and training of the HR workforce in VHA to focus on only one personnel system to create true end-to-end hiring expertise.
- Reduce competition within government where shortages of HR professionals create competition for Title 5 trained HR professionals.
- Create streamlined and uniform standards and approach to discipline and dismissal.
- Create fairness among staff in sick leave, vacation pay, salary, awards and bonuses, and compensatory time off.
- Support flow of staff between the field and VHA Central Office (VHACO) under a single personnel system.

Establishing a new human capital management system in VHA will neither be easy nor quick, nor will it be a panacea that alone will fix all that is wrong with recruitment, retention, development, and advancement. In designing and implementing a new system, VHA must take full advantage of private-sector resources and expertise in human resource management and ensure that the new system is built to be compatible with the private-sector. As VHA moves toward greater integration of care delivery, with networks of community providers, compatibility in personnel systems and a resulting greater flow of employees between VHA and community sites can help create closer linkages between the two parts of the care delivery system.

Implementation

Legislative Changes

- Create a simple-to-administer alternative personnel system, in law and regulation, which governs all VHA employees, applies best practices from the private sector to human capital management, and supports pay and benefits that are competitive with the private sector.
- Update student loan reimbursement limits to be competitive with other federally administered programs and market conditions.

COMMISSION ON CARE FINAL REPORT

- Establish an appeals process that provides staff appropriate due process that is based on the regulatory standards for the new alternative personnel system.

VA Administrative Changes

- Eliminate barriers to creating hiring pools for positions with frequent turnover (e.g., extend the length of time over which candidates can continue to be hired from a completed certification until all of the qualified candidates are hired or have declined offers).
- Eliminate barriers to initiating a recruitment process when vacancies are anticipated; positions need not be empty before recruitment ensues. In some cases, hires should also be made before the departure of key personnel to allow for on-the-job training and mentoring of the replacement.
- Benchmark credentialing to private-sector processes and consider outsourcing the process as much as practicable through centralized mechanisms.
- Release market pay and total compensation information to the field for all job categories using commercially available data and information, at least every 2 years.

Other Department and Agency Administrative Changes

- OPM should continue to oversee and administer benefits for VHA but not impose any of the other existing conditions or requirements on the management of the new alternative personnel system. The new personnel system should be governed by the new legislative requirements and those established during the anticipated rulemaking process in VA. These requirements include market-based pay, performance awards, or performance and disciplinary processes other than those imposed under Title 38.

Recommendation #16: Require VA and VHA executives to lead the transformation of HR, commit funds, and assign expert resources to achieve an effective human capital management system.

Problem

Effective planning for and management of human capital are core enabling requirements for any organization. If the system that supports the employees fails, then the organization fails. Executive leaders must ensure the success of human capital management; however, for too long in VA, human capital management has not been a top priority for leadership time, attention, and funding support. Human capital management personnel must be equal members of the leadership team, contributing fully to strategic decisions and planning for future initiatives.

Background

As recognized by GAO, “to attain the highest level of performance and accountability, federal agencies depend on three enablers: people, process, and technology. The most important of these is people, because an agency’s people define its character and its capacity to perform.”⁵⁵³ Human capital management, although often viewed as a cost, must be viewed as an investment in business success.⁵⁵⁴ For too long, VA human capital management has been undervalued and under resourced. A 1993 report from GAO outlined many of the same deficiencies found in 2016: a focus on compliance instead of outcomes, a lack of proactive human capital planning and management, and a weak system of rewards and incentives to attract and retain qualified personnel.⁵⁵⁵

Today, VA Human Resources and Administration (HRA) shares responsibility for human capital management with VHA. Neither organization has been able to establish a high-performing, effective, human capital management system. For VHA to transform to a high-performing organization, human capital management must do the same.

Analysis

VA “needs a fundamental overhaul of the core support functions (including human resources) . . . to increase responsiveness and efficiency and improve customer service. These functions should be aligned with the needs of the VHA organizations delivering care to

The Commission Recommends That . . .

- VHA hire a chief talent leader who holds responsibility for the operation’s entire HR enterprise, is invested with the authority and budget to accomplish the envisioned transformation, and reports directly to the CVCS.
- VA and VHA prioritize the transformation of human capital management with adequate attention, funding, and continuity of vision from executive leaders.
- VA align HR functions and processes to be consistent with best practice standards of high-performing health care systems.
- VA Human Resources and Administration and the Office of Information and Technology should create an HR information technology plan to support modernization of the HR processes and to provide meaningful data for tracking, quality improvement, and accountability.

COMMISSION ON CARE FINAL REPORT

Veterans.”⁵⁵⁶ Governance and responsibility for human capital management is fragmented and complicated.⁵⁵⁷ Medical center directors appear to be largely on their own in addressing human capital management needs, without competent and timely assistance to support hiring employees, planning for succession, and taking disciplinary actions.⁵⁵⁸ Recruiting takes too long and is cumbersome because information is not shared freely among the various organizational components.⁵⁵⁹ Candidates are not treated with respect, experience lengthy intervals between contacts from VA, fail to receive timely follow-up once candidates are selected, and experience a lengthy on-boarding process.⁵⁶⁰ Human capital management also fails to effectively support the disciplinary process, which is perceived as too long and too difficult.⁵⁶¹ Insufficient resources are devoted to training,⁵⁶² leaving VHA vulnerable to failure.

VA requires a comprehensive redesign of the human resources function to be more responsive, more efficient, and more focused on customer service.⁵⁶³ Transforming HR will require “redesigning key processes, shifting the mindset of [human resources] staff from compliance to effectiveness, training [human resources] and its customers on key roles and responsibilities, and rationalizing its technology systems.”⁵⁶⁴

Some progress has been made in updating human capital management functions. VA is in the process of implementing new talent management software to provide better process management and analytics.⁵⁶⁵ HRA has also started a new HR Academy.⁵⁶⁶ The academy is intended to demonstrate alignment between training resources and competency requirements⁵⁶⁷ and to describe the experience needed to advance to the next position level in human resources.⁵⁶⁸ VA instituted a new online senior executive service performance management system that permits real-time tracking of the performance management process and analysis of

performance outcomes;⁵⁶⁹ however, HR specialists must still use as many as 30 different IT systems that do not communicate with each other to do their work.⁵⁷⁰ Although some new systems have been purchased, life cycle funding for them is not guaranteed by the Office of Information and Technology and no concrete plan has been approved to replace and consolidate the many current systems that are not interoperable. In addition, funding support for HRA initiatives overall are not planned, allocated, and maintained at consistent levels year-to-year in the departmental budget, impeding long term transformation.⁵⁷¹

A VHA workgroup was formed with HR subject matter experts and leadership to identify hiring barriers and develop recommendations for improvements. The workgroup fielded a survey in July 2014 to gather broad input from VHA on the deficiencies in the management of human capital in VHA. These experts concluded that VHA should move to a new alternative personnel system under Title 38.⁵⁷² (See Recommendation #15.)

Substantial deficiencies in human capital management still remain in VA. The funding mechanism to support the departments' human capital management does not support long-range planning and effective program implementation. The lines of authority and management for human capital management professionals do not permit consistency in the quality and skill of the human capital management professionals hired and promoted, nor does the reporting structure allow HRA to hold human capital management staff accountable for effective service delivery. The investment in human capital management information technology systems has been inadequate for decades.⁵⁷³

Top leadership, including the SECVA, DEPSECVA, and CVCS, must make the transformation of human resources a top priority as demonstrated by investing their personal time in human capital management transformation; reviewing and endorsing a transformation plan including the funding required to accomplish it; receiving regular progress updates; and engaging in problem-solving sessions with human capital management leaders to refine and advance transformation efforts. Top leadership must demonstrate to other leaders that human capital management transformation is an organizational priority by disseminating clear goals for transformation in planning documents, communicating expectations for change that are clear to all key employees, and sharing successes with subordinate leaders and employees. The CVCS must ensure that the executive who leads the human capital management function has the demonstrated knowledge, skills, and experience in human capital management to competently lead the function and make this individual part of the executive leadership team on par with other key functions like finance and clinical operations. (See suggested organization chart in Recommendation #12.)

⁵⁷³ Ibid.

COMMISSION ON CARE FINAL REPORT

The SECVA, DEPSECVA, and CVCS must engage subordinate leaders in the transformation process by ensuring the needs of these leaders have informed the transformation solutions; that subordinate leaders are assigned specific responsibilities under the transformation plan; and they are held accountable by the CVCS for outcomes. They must also ensure that the HR transformation and ongoing HR function is adequately resourced to be successful.

The VA HRA and VHA Workforce Management Office must engage change management experts to undertake a review of human resource business processes, management structures, funding, and technology needs to create a transformation agenda and human capital management plan. As VHA is shifting to a new alternative personnel system under Title 38, the human capital management plan should consolidate in VHA the HR functions, responsibility, and authority required to hire, manage, develop, reward, and discipline staff and consider whether functions such as benefit management remain with HRA or move to VHA. Furthermore, the plan should address all of the following issues:

- need for a chief of talent management
- consistency with benchmark standards of private-sector health care systems
- key organizational structures and roles and responsibilities of VA and VHA in human capital management that are clearly defined and consistent with benchmark organizations
- the full life cycle of human capital management (i.e., planning, recruitment, hiring, retention, development, performance management, and discipline), which should be supported effectively by human capital management and fully meet the needs of managers and staff
- federal sharing authority and the ability to outsource human capital management functions to the private sector are addressed
- IT investments and analytical capability to provide meaningful, timely data to managing staffing, performance tracking, and accountability
- meaningful performance metrics and risk management indicators that are established for human capital management⁵⁷⁴
- funding and full-time equivalent employee staffing for human capital functions that meet private-sector benchmark standards for health care
- knowledge, skills, and ability required of human capital management professionals at each grade and within each series, which should be clearly defined, and a requirement to assess current staff, new hires, and promotions against this standard, which should include procedures for dismissal

⁵⁷⁴ U.S. General Accountability Office, *Human Capital: A Self-Assessment Checklist for Agency Leaders*, GAO/OCG-00-14G, version 1, September 2000, 34, accessed June 10, 2016, <http://www.gao.gov/assets/80/76520.pdf>.

Once completed, this analysis and draft plan must be shared widely within the department to gain feedback and input, and it must be shared with OPM, OMB, and Congress. After incorporating feedback and finalizing the plan, HRA should engage change management experts to fully implement the transformation agenda and new human capital management plan. Implementation will require funding contributions from VA and VHA that the SECVA must mandate.

HRA must develop and implement an effective progressive discipline process for all staffing authorities (i.e., Title 5, Title 38, Title 38 Hybrid, Title 38 7306, and SES). This process must include clear standards, guidelines, and training for supervisors and managers on how to implement the new progressive discipline process. All managers and supervisors and human capital management professionals must complete the training, and VA must establish a process for ensuring that new supervisors and managers complete the training on an ongoing basis. HRA must develop HR staff to be effective coaches so they can provide the coaching and support that managers need as they embark on disciplinary procedures to ensure timely and effective interventions.

VHA supervisors and managers must be held accountable for applying these procedures when poor performance or conduct occurs. To enable accountability, VHA must have a technology infrastructure to actively track and manage poor performance (annual ratings and disciplinary actions) that both human capital managers and supervisors can use to keep track of issues.

The Commission notes GAO is launching a comprehensive audit of human capital management functions in VA to be delivered to Congress in September 2016.⁵⁷⁵ The review and resulting recommendations will provide further insights to promote meaningful transformation of human capital management in VHA.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Employ HR and change management experts to undertake a review of its business processes, management structures, funding, technology, and the legal authority needed in HR to create a transformation agenda and human capital management plan.
- Require VHA to allocate budget to fully support the change plan and ongoing HR operations.

⁵⁷⁵ Ms. Frieda Stenzel, lead investigator, U.S. Government Accountability Office, during an initial meeting with VACO HR&A about a new study being undertaken by GAO, December 18, 2015. The study is intended to 1) assess VHAs capacity to perform its workforce planning and talent management, and 2) evaluate the effectiveness of VHAs human capital functions.

COMMISSION ON CARE FINAL REPORT

- Develop and implement an effective progressive discipline process for all staffing authorities.

Other Department and Agency Administrative Changes

- None required.

Eligibility

Recommendation #17: Provide a streamlined path to eligibility for health care for those with an other-than-honorable discharge who have substantial honorable service.

Problem

Addressing access issues is at the core of the Commission's charge. Veterans face a range of barriers to care, from geographic barriers to facility-specific problems, such as long wait times for an appointment or lack of evening or weekend hours. These barriers, which affect even those with service-incurred health conditions, can be overcome. Some former service members, however, have encountered a more fundamental barrier when applying for care. Because of the character of their discharge, they are not considered veterans, and thus are not eligible for VA care.

The Commission Recommends That . . .

- VA revise its regulations to provide tentative eligibility to receive health care to former service members with an other-than-honorable discharge who are likely to be deemed eligible because of their substantial favorable service or extenuating circumstances that mitigate a finding of disqualifying conduct.

In some cases, individuals have been dismissed from military service with an other-than-honorable (OTH) discharge because of actions that resulted from health conditions (such as traumatic brain injury, posttraumatic stress disorder [PTSD], or substance use) caused by, or exacerbated by, their service. Under VA regulations, these individuals do not meet the definition of a veteran, and are therefore ineligible for VHA medical care. This situation leaves a group of former service members who have service-incurred health issues (namely mental health issues) unable to receive the specialized care VHA provides.

Background

Veteran status is the basis for eligibility for all VA benefits,⁵⁷⁶ and under law a veteran is a person who has met three criteria: active-duty military service (subject to specified exceptions), 2 years of continuous service, and discharge or separation from the military under conditions other than dishonorable.⁵⁷⁷ The military characterizes discharges into one of five categories: honorable, general (under honorable conditions), OTH, bad conduct (adjudicated by a general court or special court-martial), and dishonorable.⁵⁷⁸

Congress has established specific bars to VA benefits. Those barred by statute include deserters, individuals sentenced by a general court-martial, and conscientious objectors who refused to perform military duty.⁵⁷⁹ VA regulations interpret the phrase "discharged or released . . . under conditions other than dishonorable" to mean that a discharge or release because of one of the following offenses is considered to have been issued under dishonorable conditions:

(1) acceptance of an OTH discharge to escape trial by general court-martial, (2) mutiny or

COMMISSION ON CARE FINAL REPORT

spying, (3) an offense involving moral turpitude, (4) willful and persistent misconduct, and (5) certain homosexual acts involving aggravating circumstances.⁵⁸⁰

Limited exceptions to those statutory and regulatory bars permit VA to award of benefits. A claimant may be granted benefits if VA determines that the claimant was insane at the time of the offense leading up to discharge.⁵⁸¹ Benefits may be granted based on a prior period of other-than-dishonorable service for individuals with two or more periods of service.⁵⁸²

Former service members with an OTH discharge as a result of a regulatory (rather than a statutory) bar are eligible for VA care for service-incurred conditions.⁵⁸³ Former service members with OTH discharges are not recognized as veterans, so they will be routinely denied treatment unless they initiate, and prevail in, an adjudication conducted by the Veterans Benefits Administration as to the character of their discharge. No routine mechanism exists to trigger adjudication to determine if such a discharge is not dishonorable. In many instances, the character of an individual's discharge is predicated on behaviors that resulted from, or are linked to, behavioral health conditions that had their origin in service, yet VA regulation bars the individual from receiving benefits.⁵⁸⁴

Analysis

Veterans' benefits are understood to be earned. The principle has been described as follows: In harsh environments in which lives may be on the line, serious breaches of conduct that interfere with the military mission should rightfully brand the offender for life and should likewise prohibit them from being eligible for the special military benefits and entitlements reserved for honorable and meritorious service.⁵⁸⁵

Some argue the offender's mental state at the time of the misconduct must be taken into account when considering veteran status.⁵⁸⁶ For example, many service members have experienced combat and sustained psychological wounds of war that manifest behaviors that lead to military discipline.⁵⁸⁷ VA regulations not only fail to account for the role of those psychic wounds, but are themselves overbroad, weak discriminators as to what is truly dishonorable service. To illustrate, commentators have identified two regulatory bars as particularly problematic: those based on moral turpitude,⁵⁸⁸ and willful and persistent misconduct.⁵⁸⁹ Neither of those two regulatory terms, which originated in 1944,⁵⁹⁰ are defined; neither provides

criteria or examples of what is or is not covered. Both are ambiguous and susceptible to subjective judgment,⁵⁹¹ with great potential for different VA regional offices reaching different outcomes on the same facts.⁵⁹² VA officials have acknowledged that these terms are broad and imprecise,⁵⁹³ and advocates have documented the resultant disparities in VA adjudicative decisions.⁵⁹⁴

The only specific mental-health exception to the bar-to-benefits rules — that the person was insane at the time of the commission of offense⁵⁹⁵ — is very limited. VA regulations define the term *insane*, as follows:

*An insane person is one who, while not mentally defective or constitutionally psychopathic, except when a psychosis has been engrafted upon such basis condition, exhibits, due to disease, a more or less prolonged deviation from his normal method of behavior; or who interferes with the peace of society; or who has so departed (become antisocial) from the accepted standards of the community to which by birth and education he belongs as to lack the adaptability to make further adjustments to the social customs of the community in which he resides.*⁵⁹⁶

VA's Office of General Counsel (OGC), in a now almost 20-year old precedential opinion, has construed that regulation narrowly. Responding to a request for an opinion regarding the parameters for behavior that would constitute insanity under the regulation, the General Counsel advised, as follows:

*The question of insanity arises in numerous legal proceedings, and its meaning may vary according to the jurisdiction and the object or purpose of the proceeding. However, in all contexts, the term indicates a condition involving conduct which deviates severely from the social norm. Black's Law Dictionary, at 794, states that '[t]he term is more or less synonymous with . . . psychosis, which itself has been defined as "a mental disorder characterized by gross impairment in reality testing' or, in a more general sense, as a mental disorder in which 'mental functioning is sufficiently impaired as to interfere grossly with the . . . capacity to meet the ordinary demands of life.'"*⁵⁹⁷

VA-18-0457-A-001302

COMMISSION ON CARE FINAL REPORT

As understood by VA OGC at the time, *insanity*, with its emphasis on gross impairment, and as reflected in practice,⁵⁹⁸ is a highly restrictive standard. That narrow standard is also limiting with respect to the range of symptoms that could be considered under the *insanity* exception: gross cognitive impairment or gross impairment in capacity to function in daily life. That limited range effectively excludes behaviors associated with a widely prevalent service-related condition, PTSD. Those behaviors, which often lead to disciplinary actions, include aggressive behavior, substance-abuse,⁵⁹⁹ impulsivity, and risk-taking (including sensation seeking, aggressive driving, interpersonal violence, and self-injurious or suicide-related behavior).⁶⁰⁰ Research has shown that combat veterans with PTSD and other psychiatric diagnoses have a heightened risk of misconduct outcomes.⁶⁰¹ Other than its *insanity* rule, the regulations provide no specific opportunity to consider mental health as a likely cause of, or mitigating factor in, disciplinary issues leading to an individual's discharge.

The following are illustrative examples of how these regulations have worked in practice:

- John, a service member with multiple deployments to Iraq and Afghanistan and 7 years of service, received an OTH discharge after self-medicating with marijuana. He was denied VA treatment for PTSD.⁶⁰²
- Tim, a rifleman with two purple hearts and four campaign ribbons for service in Vietnam, was sent to combat while still 17 years old, and had a nervous breakdown and suicide attempt before his 18th birthday. He was sent back to Vietnam involuntarily for a second tour, and had a third nervous breakdown that led to an AWOL and OTH discharge. He was denied service connection for PTSD because the nature of his discharge.
- Tom, a combat infantryman in the first Gulf War, on his return, started experiencing symptoms of PTSD and attempted suicide. He was denied leave to be with his family,

⁶⁰² Swords to Plowshares, presentation to Commission on Care, January 21, 2016, accessed June 25, 2016, <https://commissiononcare.sites.usa.gov/files/2016/03/Presentation-on-OTH-Discharges.pdf>. Note, in the interest of privacy the paper has used fictitious names to identify the former service members.

but left anyway. After a 60-day absence, he returned and was given an OTH discharge. He was denied services for 20 years.⁶⁰³

In short, the VA regulation used to determine whether the character of a veteran's OTH discharge is disqualifying does not take into account behavioral health problems associated with military service. As a result, former service members who were discharged for disciplinary problems that cannot be disassociated from PTSD or other behavioral health disorders are routinely barred from VA treatment for those disorders.

Individuals with PTSD and traumatic exposure are at heightened risk of substance abuse,⁶⁰⁴ depression,⁶⁰⁵ homelessness,⁶⁰⁶ premature mortality,⁶⁰⁷ and suicide.⁶⁰⁸ Access to VA health care is vital to successful reintegration of combat-traumatized veterans into society because it provides "the only reservoir of combat PTSD expertise."⁶⁰⁹

The importance of early access to needed treatment for behavioral health conditions like PTSD cannot be overstated,⁶¹⁰ yet many former service members are reluctant to seek treatment for behavioral health problems.⁶¹¹ Those with unfavorable discharge records who finally come forward to seek medical care must not only initiate a request for a character of discharge adjudication, but be prepared to confront a lengthy process if they elect to do so.⁶¹²

COMMISSION ON CARE FINAL REPORT

Several generations of former service members were exposed to combat trauma and continue to live with the psychological wounds of war. Lack of access to treatment for those who sustained psychological wounds that went untreated and were manifest in undesirable behavior in service is concerning. Although Congress could address this concern, VA has the means to remedy the problem without congressional action by amending its own regulations. VA could afford former service members needed treatment for their conditions when they are able to establish that their health problems were incurred in service.⁶¹³ In other circumstances, when it is likely an individual could establish eligibility for VA care, current regulation permits the individual to receive the care on the basis of a tentative eligibility determination.⁶¹⁴ This regulation permits VA to provide treatment without prior adjudication of the character of discharge.

VA should revise its regulations to lift the immediate bar to health care for former service members who have an OTH discharge. VA should award tentative eligibility for health care to at least some former service members who have an OTH discharge. The criteria for awarding tentative eligibility for care could include service in a combat theater, more than a single enlistment, duration of service, or some combination thereof. This approach would allow VA to provide meaningful access to treatment without delay for those likely to be granted eligibility. For health care purposes, VA should also revise its regulations by recognizing that the severe punishment of characterizing a person's service as OTH is not justified when extenuating circumstances (to include behavioral health issues at the time) explain or mitigate that misconduct that resulted in the OTH discharge.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- Amend 38 C.F.R. 17.34 to provide for tentative eligibility determinations applicable to individuals with OTH discharges who have had substantial honorable service, including service in a combat theater.
- Amend of 38 C.F.R. 3.12(d) to provide for recognition of extenuating circumstances that show, for purposes of health care eligibility, that service was not OTH.

Other Departments and Agency Administrative Changes

- None required.

⁶¹³ Sec. 2, Pub. L. No. 95-126, 91 Stat. 1106 (1977).

⁶¹⁴ Tentative Eligibility Determinations, 38 C.F.R. 17.34.

Recommendation #18: Establish an expert body to develop recommendations for VA care eligibility and benefit design.

Problem

Although VHA continues to offer the promise of health care to all veterans, its capacity to meet that promise is constrained by appropriated funding.⁶¹⁵ Congress and VA leadership must work to identify who VHA will serve, and what services it will provide, yet eligibility criteria have not been examined in 20 years.⁶¹⁶

Background

VHA's core mission is to care for veterans who has borne the battle. But its secondary mission of caring for veterans' non-service-connected health care needs is longstanding, dating back to Civil War origins. Congress has included veterans without service-connected needs among those eligible as highlighted below:

The Commission Recommends That . . .

- The President or Congress task another body to examine the need for changes in eligibility for VA care and/or benefits design, which would include simplifying eligibility criteria, and may include pilots for expanded eligibility for nonveterans to use underutilized VHA providers and facilities, providing payment through private insurance.
- The SECVA revise VA regulations to provide that service-connected-disabled veterans be afforded priority access to care, subject only to a higher priority dictated by clinical care needs.

- In March 1865, Congress incorporated the National Home for Disabled Volunteer Soldiers and Sailors, originally intended for Union veterans who suffered economic distress from disabilities incurred during the Civil War. The National Home constructed the first hospitals for Civil War veterans in 1866, and after a series of acts of Congress, those hospitals were opened in 1887 to veterans suffering economic distress from disabilities not incurred in military service.⁶¹⁷
- The World War Veterans Act of 1924, which established the Veterans Bureau⁶¹⁸ (the predecessor to the Department of Veterans Affairs), authorized its director to provide hospitalization and related travel expenses to veterans whose services dated back as far as 1897, regardless of the type or cause of their disabilities, as long as those veterans who were unable to pay received preferential admission.⁶¹⁹
- Public Law 85-56 (1957), which codified prior VA laws and regulations, effectively expanded eligibility to veterans of future wars, providing needed hospital care for veterans with service-connected disability incurred or aggravated during war, or for any other disability if the veteran is unable to pay for hospital care.⁶²⁰

⁶¹⁸ The Veterans Bureau consolidated the National Home and other veterans-related functions housed in different government bureaucracies.

⁶¹⁹ World War Veterans Act, 1924, Pub. L. No. 68-242, (1924).

⁶²⁰ Veterans Benefits Act of 1957, Pub. L. No. 85-56, 71 Stat. 83 (1957). That law provided separate authority in section 512 for outpatient medical treatment, which was limited to treatment for a service-connected disability.

COMMISSION ON CARE FINAL REPORT

- In 1966, Congress expanded eligibility for hospital care to *peacetime* veterans (of service after January 1955).⁶²¹
- In 1970, Congress extended eligibility for hospital care to veterans 65 and older for a non-service-connected disability,⁶²² exempting that group of veterans from taking the then-required oath affirming their inability to defray the expense of care for non-service-connect ailments.⁶²³
- With the Veterans Health Care Expansion Act of 1973, Congress eliminated the distinction between wartime and peacetime veterans for purposes of eligibility for outpatient care, and further expanded eligibility to outpatient care. It granted veterans who are 80 percent or more service-connected disabled eligibility for treatment of any condition, and authorized others eligible for hospital care to receive outpatient care to prepare for or preclude a need for hospitalization or to complete treatment initiated during hospitalization.⁶²⁴
- Congress expanded eligibility again in 1976, authorizing hospital care for treating a non-service-connected condition of any veteran 65 or older (without regard to ability to pay), authorizing outpatient care for any disability to any veteran 50 percent or more service-connected disabled, and directing VA to ensure, by regulation, special treatment priority to service-connected veterans and others receiving benefits because of a need for aid and attendance, or being permanently housebound.⁶²⁵

Eligibility laws for veterans' health care have changed substantially during the past century, yet the commitment to serving service-connected veterans and veterans in financial need has remained constant.

Prior to enactment of the Veterans' Health Care Eligibility Reform Act of 1996,⁶²⁶ VHA was a hospital-based model with entirely different eligibility rules for hospital care than for outpatient care. The eligibility reform law was aimed at transforming access to VA care from a 1950s hospital-based model to one that erased distinctions between eligibility for hospital and outpatient care.⁶²⁷ It essentially provided that all veterans are eligible for VA hospital care and *medical services*.⁶²⁸

⁶²⁵ Veterans Omnibus Health Care Act of 1976, Pub. L. No. 94-581, 90 Stat. 2842 (1976). The patchwork of eligibility provisions resulting from a succession of incremental changes set the stage for development and enactment of the Veterans' Health Care Eligibility Reform Act of 1996, Pub. Law 104-262.

⁶²⁶ Veterans' Health Care Eligibility Reform Act of 1996, Pub. L. No. 104-262, 110 Stat. 3177 (1996).

⁶²⁷ *Ibid.*

⁶²⁸ The term "medical services" was broadly defined to include in addition to medical examination and treatment, preventive health services; surgical services; wheelchairs, artificial limbs, and similar appliances; optometric and podiatric services; noninstitutional extended care services; and rehabilitative services (including services to restore physical, mental, and psychological functioning. Hospital, Nursing Home, Domiciliary, and Medical Care; General, 38 U.S.C.

§ 1701(6),(8). VA regulations more fully set out the "medical benefits package" that VA is to provide patients, as needed; VA regulations detail that the benefits package includes services ranging from emergency care and prescription drugs to

Recognizing there could be circumstances in which VHA might lack capacity to provide timely care, Congress noted in the reform act that the requirement to provide care would be in effect only to the degree to which there were appropriated funds to pay for such care.⁶²⁹ This qualified availability of care clearly indicated veterans' health care is not an entitlement. Congress went further, though, and established a statutory patient enrollment mechanism for VA to manage access.⁶³⁰ The law specifically requires VA to establish and operate a patient enrollment system managed in accordance with statutory priorities and within any additional priority classifications established by VA. The eligibility reform act gave VA tools both to limit demand consistent with available funding and to discourage veterans from seeking VA care simply to fill an occasional need not met by a private health plan.⁶³¹ The act also requires the SECVA to manage the enrollment system such that care is timely and of acceptable quality.⁶³²

The enrollment system the department established is not being used today to calibrate supply and demand as envisioned.⁶³³ Although law and VA regulation require a system of annual patient enrollment,⁶³⁴ VHA last curtailed enrollment in 2003, and then only for veterans who were deemed eligible based on the category 8 criteria (see Table 8) that include those with higher-level incomes who lack any higher priority. In 2009, the Obama administration eased access for higher income veterans. Under that policy, veterans whose gross household income exceeds VA's current geographic income limit by 10 percent or less may enroll for VA care, subject to cost-sharing requirements.⁶³⁵ In 2014, Congress established the *Choice Program* to expand availability of care through contracts with community providers. Veterans' choice was limited by reference to distance and wait-time issues, but was otherwise broadly open to any enrolled veterans.⁶³⁶

⁶³⁰ Management of Health Care: Patient Enrollment System, 38 U.S.C. § 1705. As explained in the report of the House Committee on Veterans Affairs which developed the legislation, "[T]he Act would...provide the VA with an important tool, the authority to design and manage access to care through a system of patient enrollment...Enrollment...would help the VA plan more effectively, so that facilities can better calculate and dedicate the resources needed to provide the care its enrollees require. The Act would direct the Secretary...to establish and operate a system of annual patient enrollment and require that veterans be enrolled in a manner giving relative degrees of preference in accordance with specified priorities. At the same time, it would vest discretion in the Secretary to determine the manner in which such enrollment (or registration) system would operate. For example, the VA would be able to establish a system which simply registers patients throughout all or part of a fiscal year, or could employ a time-limited registration period. Significantly, the Act would permit the Secretary to set priorities within the specified priority classifications established in the Act. The Secretary could, for example, establish a policy which, within any priority classification, gives veterans who have previously been "enrolled" as VA patients priority over new applicants. However, the Committee expects any enrollment system to be designed and administered to assure that any veteran with a service-connected condition would receive priority treatment for that condition whether or not that veteran had enrolled for VA care." H. Rep. No.104-690, 6-7.

Analysis

Two decades have passed since Congress last reexamined VHA eligibility and benefits, and many far-reaching changes that affect veterans' health care have occurred in that time. In more than a decade of war, 2.75 million troops have deployed to Iraq and Afghanistan⁶³⁷ where many have faced long and repeated deployments; constant risk of injury and death; and high levels of psychological disorders, substance abuse issues, and physical health problems.⁶³⁸ Post-9/11-era veterans are enrolling for VA care at historically high levels.⁶³⁹

Under current law and VA policy, enrollment is open to a relatively broad spectrum of veterans, though some veterans with higher incomes are not eligible to enroll.⁶⁴⁰ As discussed above, the law draws distinctions between those whose health problems have been adjudicated as service-connected and those whose problems are deemed non-service-connected. If Congress substantially reduced funding for VA medical care, the distinction would be important because those with service-connected issues have higher priority for enrollment. Under VA's current enrollment policy, which bars only veterans with higher incomes from receiving care, the

Veterans with gross household income that do not exceed VA's means test threshold and a geographic means test by more than 10 percent may enroll for care, while those with higher income and no other special eligibility may not.

COMMISSION ON CARE FINAL REPORT

statutory service-connected enrollment priority has little practical significance.⁶⁴¹ Future budget constraints could result in more restrictive enrollment criteria⁶⁴² or recurrence of lengthy wait times that hinder service-connected, disabled veterans' ability to receive timely care.

Current eligibility law does afford special status to veterans who deployed to a combat theater. It grants a 5-year window of eligibility for care to those veterans who are not otherwise eligible.⁶⁴³ All combat veterans are also eligible for readjustment counseling services at VHA Vet Centers without needing to enroll in VHA care and without time limitation.⁶⁴⁴ It is questionable, however, if the 5-year time limit takes sufficient account of continued reluctance of some veterans to seek care for behavioral health problems⁶⁴⁵ or of the difficulties of establishing service-connection years later for conditions that may be linked to wartime exposures to toxic substances.⁶⁴⁶ It is challenging for veterans to establish service-connection for health conditions that may have been caused by or associated with a long-distant exposure for which there may be no documentation. Given emerging evidence that combat exposure should be considered a risk factor for coronary heart disease,⁶⁴⁷ it has been suggested that combat exposure may not only take a toll on psychological health, but may exert a physiologic toll as well.⁶⁴⁸

Congress has attempted to remedy the challenge of documenting toxic exposures and establishing that particular illnesses are linked to wartime or other service exposure. It has, for example, enacted statutes that provide certain veterans eligibility for health care on the presumption that they were exposed to particular toxic substances.⁶⁴⁹ Congress went a step further in the Honoring America's Veterans and Caring for Camp Lejeune Families Act of 2012 which provided eligibility for care for several types of cancer and other specified conditions for family members of veterans who had been exposed to drinking water contaminated with industrial solvents and other toxic chemicals at the Marine Corp base.⁶⁵⁰

Congress has made only limited provision for VA to cover care for family members of certain veterans,⁶⁵¹ but with research suggesting that long combat deployments can take a

⁶⁴¹ Prior to 1996, provisions of law required VA to ensure special priority to service-connected veterans in furnishing outpatient care. 38 U.S.C. § 1712(i), repealed by § 101(c), Pub. L. No. 104-262.

psychological toll on family members,⁶⁵² there may be circumstances under which it might be argued that VA should afford such family members behavioral health services. Studies indicate that longer deployments, deployment extensions, and posttraumatic stress disorder in military personnel are associated with psychological problems for the spouse.⁶⁵³ Long-term effects are unknown, yet studies suggest children may have heightened risk for psychosocial issues during a parent's deployment.⁶⁵⁴

The experience of the nation's longest war and increased options available under the Affordable Care Act (ACA), particularly to previously uninsured non-service-connected veterans, may raise new questions for policymakers.⁶⁵⁵ VHA's most recent survey of enrollees showed that 20 percent of enrollees reported that they were uninsured, down from 22 percent in 2014.⁶⁵⁶ Enrollment in VHA-provided care meets the ACA requirement for health care coverage, creating pressure to continue to provide care to those enrolled.⁶⁵⁷ Given that VHA serves large numbers who are poor or near poor and have chronic medical conditions and behavioral health problems,⁶⁵⁸ it is important to note that receiving care under an ACA plan would not necessarily be a substitute for the rich benefits afforded through VHA. In addition, adults in this population are only eligible for coverage under ACA through state expansion of Medicaid that 19 states have elected not to accept, making this option unavailable to poor or near poor veterans in many parts of the country.⁶⁵⁹

Over time Congress has expanded VA health care eligibility to increasingly more cohorts of non-service-connected veterans. There is wide variability among different cohorts in the extent to which veterans rely on VA care. Those at the higher-income levels (priority categories 7 and 8) who were generally not eligible for ambulatory care prior to 1996, for example, rely on VA for

COMMISSION ON CARE FINAL REPORT

less than 22 percent of their outpatient care-needs, based on VA's most recent survey of veteran enrollees' health and use of care.⁶⁶⁰

One consideration, as suggested by a few Commissioners, is the feasibility of allowing veterans' family members and currently ineligible veterans to purchase VHA care through their health plans in areas where VHA hospitals and other facilities might otherwise need to close. In many parts of the country, VHA currently maintains hospitals and other health care facilities that are underutilized or in danger of becoming so. A related challenge is maintaining safe volume of care when patient loads decline. As an extensive literature attests, surgeons and other health care professionals tend to lose proficiency when they treat too few patients.⁶⁶¹ Similarly, VHA may be unable to continue offer specialty care in certain areas if it forced to close facilities. Patients in a polytrauma unit for example, require a full spectrum of routine and nonroutine health care.

Closing a low-volume hospital may be the answer in some instances. But closing VHA facilities reduces the choices available to veterans. Increasing the volume of patients treated by VHA in areas where it currently has excess capacity may ameliorate these challenges. See Appendix C for a further discussion of the challenge of future VHA hospital closures and an outline of suggested pilot programs.

Substantial changes have occurred since Congress last comprehensively examined eligibility for VHA care. These changes merit a reexamination of VA health care eligibility.⁶⁶² The Commission did not, however, view its charge of examining veterans' access and how best to organize VHA, locate health care resources, and deliver care in the years ahead⁶⁶³ as calling for it to make recommendations on this fundamental policy issue, and recommends that the President or Congress consider tasking another body to develop recommendations for VA care eligibility and benefit design. The Commission's work, however, has illuminated the fact that nothing in law or regulation assures a service-connected, disabled veteran of priority for care. VA can and should amend its regulations to provide for such priority, subject to a necessarily higher priority for urgent and emergent care.

Implementation

Legislative Changes

- Task another body to examine the need for changing eligibility for VA care and benefits design, which would include simplifying eligibility criteria, and may include exploring

APPENDIX A: FINANCING THE VISION AND MODEL

Estimating the Cost of Alternative Policy Proposals

This chapter presents estimates of the costs of allowing veterans access to expanded community care through integrated networks, as well as a range of other options. In the *Recommended Option*, the one chosen by the Commission and described in Recommendation #1, veterans would be eligible to receive community care for primary and standard specialty care with a referral from any primary care doctor in the VHA Care System. Special emphasis care, care provided in a distinctive fashion by VHA, is not included in community networks.

In addition to the *Recommended Option*, we considered three alternatives that are based on a similar concept of integrated networks, but which have potential costs that could vary dramatically due to differences in the openness of access to community care and the breadth of services eligible. We also estimated the costs of three options that differ in focus from the integrated network options, including options that move selected services entirely to the community, set up a premium support model, and expand access to all Priority 8 veterans. Finally, we estimated costs for two additional policies: expanding nurse navigator/care coordinator staff to help guide and coordinate veterans' care in the integrated networks of expanded community care and granting temporary eligibility for VA health care to those with other-than-honorable discharges.

Baseline Projections

We used projections from the Enrollee Health Care Projection Model (EHCPM) produced by VHA and Milliman as the baseline upon which to build our estimates. However, with the exception of the options involving premium support and an expansion of Priority 8 enrollment, we use separate analyses and not the EHCPM to derive the estimates. Costs of VA care are modeled as the product of utilization and cost per unit of care (unit cost). Utilization is dependent on both enrollment in, and reliance on, the VA health care system, total demand for health care, and other factors. Enrollment measures how many people enroll to receive VA health care, and reliance is the percentage of their medical care that enrollees receive through VA or VA-financed community care. Unit costs measure the cost of each health care service. Unit costs can be calculated for care in VA facilities, for care outside of VA facilities, or for both, depending on the scenario being estimated.

Utilization

Utilization depends on enrollment, reliance, total demand for health care, and characteristics of the health care system, such as medical technology and practice patterns. We discuss enrollment and reliance in further detail below, but overall demand for health care is similarly important. Enrollment, reliance, and overall demand each have a multiplicative effect on

COMMISSION ON CARE FINAL REPORT

utilization and total costs. For example, if enrollment increases by 10 percent, costs will increase by 10 percent (assuming new enrollees have the same characteristics as existing enrollees). Thus, it is important to consider carefully the effect of any policy change on enrollment, reliance, and overall demand for health care. Each of these factors is subject to effects by policies that make care more convenient, less expensive, or less restricted.

Enrollment

Currently there are 22 million veterans, 9 million of whom have enrolled and 7 million of whom are eligible to enroll but have not done so. Even though the number of veterans is decreasing, projected numbers of enrollees and patients should remain relatively stable during the next 20 years. Younger veterans enroll at particularly high rates, and once enrolled, they remain continuously enrolled until death.

This enrollment trend is subject to change based on various inputs. Enrollment rates are projected based on current policy, and if policy changes, the number of enrollees and patients will change. For example, an increase in cost sharing would likely decrease enrollment and the number of patients, yet easing access to care would likely increase enrollment and the number of patients. Changes to other health insurance policies outside of VA can also affect enrollment and the number of patients (for example, changes to the Affordable Care Act).

Figure A-1. Changes in Number of Veterans, Enrollees over a 20-year Period

Veterans, Enrollees, and Patients FY 2014-2034

Reliance

On average, enrolled veterans receive 34 percent of their health care through VHA, and approximately 80 percent of enrollees have other health insurance in addition to VA health care. Many factors affect reliance rates including, age, income, service-connected disabilities, distance from VA facilities, cost-sharing levels, and characteristics of other insurance options. Any policy that affects the cost of receiving VA care, the convenience of receiving VA care, the cost or convenience of other health insurance held by enrollees, or demographic or health characteristics of enrollees, is likely to change reliance. Any increase in reliance will increase

VA-18-0457-A-001317

costs to VHA, and the effect can be very large. In the absence of a policy change, VHA predicts that reliance will decline slightly from 34 percent to 32 percent during the next 20 years.

Unit Cost

Unit cost measures how much a particular service, procedure, or drug costs to provide. Unit costs can measure the cost of the unit of care in the VHA system or in the community, depending on where veterans receive care. We used unit cost projections from the EHCPM for 78 Health Care Service Categories (HSCs). The unit of measurement depends on the service. Examples include office visits, pathology procedures, vision exams, and inpatient surgical days. Unit cost projections reflect anticipated changes in price inflation and health care practice patterns, as well as historical trends. EHCPM projects separate unit costs, depending on whether veterans receive a service in a VA facility, in the community at historic Care in the Community (CITC) rates, or in the community at Medicare allowable rates. Any policy that affects the quantity of care provided in VA facilities, as opposed to the community, will have an effect on the total cost of care. If veterans receive care in the community, the rate of provider reimbursement will also affect costs.

Baseline Cost Projections

The baseline cost projections, produced by the EHCPM, show how cost will change in the future. They incorporate projected changes in enrollment, reliance, unit costs, and other factors. The projections reflect current policy with regard to enrollment eligibility and VA health care benefits, with the exception of the *Choice Program*, which is assumed to continue for veterans living more than 40 miles away from a VA medical care facility.⁶⁶⁴

We based the projections on assumptions about inflation and anticipated effects of changes in health care practice on the cost of VA health care in the next 20 years. New military conflicts, policies, legislation, regulations, and external factors, such as economic recession, can occur and change projected demand for VA health care during this period. The projections do not include requirements for several activities/programs not projected by the VA EHCPM, including nonrecurring maintenance; readjustment counseling; state-based, long-term services and support programs; and some components of the CHAMPVA program.

In the absence of any policy changes, costs increase from \$53 billion in 2014 to \$125 billion in 2032. This growth is largely due to inflation and how health care practices are expected to change over time, which reflects factors that affect the cost of both VA and non-VA health care. These trends increase the cost of VA health care regardless of changes in enrollment growth and demographics. Within enrollment, the increasing number of enrollees adjudicated for service-connected disabilities by the Veterans Benefit Administration (VBA) is the most significant driver of cost increases. Enrollees will likely increase their reliance to reflect the substantially higher reliance of enrollees in the service-connected Priorities 1-3.

These baseline estimates, along with our scenario estimates presented below, carry some key limitations. First, the EHCPM does not track capacity at VA facilities. We assume health care

⁶⁶⁴ Veterans qualifying based on wait times or excessive travel burdens are not included.

COMMISSION ON CARE FINAL REPORT

utilization will increase or decrease at the average unit cost, when in fact it is the marginal cost that would be relevant for cost estimates. This marginal cost could be smaller or larger than the average cost, depending on existing capacity. Although we did make some assumptions about fixed and variable unit costs when care leaves VA facilities in our policy estimates below, precise estimates are not possible given data availability. Second, the EHCPM does not consider health care capacity in local communities. For these and other reasons, the EHCPM is best for the near future and for policy scenarios that do not stray dramatically from current policy. A 2008 RAND review of the EHCPM highlighted these limitations, which are particularly important for analyzing policy changes such as expanded community care.⁶⁶⁵ In light of the types of policy choices VHA is likely to consider in the future, it would be particularly beneficial for VHA to collect and incorporate the data necessary to mitigate these limitations. Due both to these limitations and to the general uncertainty regarding any long-term changes in the health care system, we suggest focusing attention on the 2019 estimates of the scenarios below, as 2019 is the first year to incorporate the fully phased-in effects of the scenarios.

Policy Estimates

In this section, we present results for the *Recommended Option* and three alternative options for expanding access to providers outside of VA through integrated networks. These options expand community care for different categories of care and vary by whether referrals are required to receive specialty care. We present estimates for several other scenarios we examined, each with a design or focus that differs from the integrated network options. Finally, we estimate costs for two other policies discussed in this report: (1) expanding the use of nurse navigators to help patients coordinate their care in VA and in the community, and (2) expanding eligibility to all veterans with an other-than-honorable (OTH) discharge until the adjudication process is complete to determine whether they will remain eligible.

Community-Delivered Services Networks

This section describes the *Recommended Option* and the first three alternative options. At least initially, all care currently provided by VA would continue to be provided by VA. In addition, expanded community care, also called Community-Delivered Services (CDS), will be provided by an integrated network consisting of providers (medical practitioners including physicians, midlevel practitioners and therapists, and hospitals and clinics) vetted by VA. CDS will focus on tertiary and quaternary care, and may include primary care and all standard specialty care, depending on the scenario considered. CDS will not include special-emphasis care and some types of specialty care provided in a distinctive fashion by VHA. The network of CDS providers that VA will coordinate varies by community. To make the flow of service both appropriate and smooth in operation, there will be navigators who will help guide veterans to the best and most appropriate providers inside and outside VA.

The Commission's recommendation to create the VHA Care System (see Recommendation 1) considers the ways in which health plans can vary the size and scope of networks as a means of managing costs. It highlights that broad, open networks offer greater choice, but narrow, well-

⁶⁶⁵ Katherine M. Harris, James P. Galasso, and Christine Eibner, "Review and Evaluation of the Enrollee Health Care Projection Model," RAND Corporation, Santa Monica, CA, 2008.

managed networks potentially result in lower costs. It discusses ways in which, after networks are designed, VHA could exercise additional cost controls by steering patients to different providers within the networks. Finally, the recommendation regarding the VHA Care System emphasizes that access and local needs are important considerations in setting up the integrated networks, and that governance of the networks should be a process of ongoing management and evaluation.

In the estimates that follow, we assume that networks are designed and governed in a way that gives major consideration to cost, choice, and access. We assume that management of the integrated networks would be an iterative process that involves continual evaluation of resulting outcomes, including cost outcomes, and that networks would be adjusted in light of those outcomes. We also assume that local communities and services with poor access would require more community providers and/or expanded capacity within VHA than those that already have adequate access. Finally, we assume that the networks will be integrated, relatively narrow, and well-managed with the aim of controlling costs effectively. One exception is that for the *Recommended Option*, we added an estimate that assumes less-managed, broader networks to illustrate that costs are sensitive to network size and management.

Technical Assumptions for Community-Delivered Services Options

We based our estimates on utilization and unit cost data and projections for 78 HSCs that we obtained from the VHA Office of Policy and Planning. Starting from a base year of 2014, we projected utilization and unit costs through 2034. For HSCs that are eligible for CDS networks, we assume a certain fraction of care, depending on the option, shifts from VA facilities to the networks. We assume traditional CITC will be offered and used at baseline levels.⁶⁶⁶ We assume that the *Choice Program* ends and that those formerly in the *Choice Program* will take advantage of the community care offered in the CDS networks. All effects are phased in during the first 5 years.

Both CDS networks and CITC are priced at Medicare allowable rates by matching Medicare fee schedule data to VA HSCs.⁶⁶⁷ A few benefits that are not covered by Medicare, such as dental, are priced at historic CITC unit costs. Cost sharing for CDS networks is assumed to be the same as that for care in VA facilities.

For care shifting into the CDS networks, we use data on the components of HSC unit costs that we obtained from the VA Allocation Resource Center. We assume VA is able to adjust resources such that only the equipment and national overhead portions of unit costs remain in VA facilities. These portions, which together averaged approximately 10 percent of care in 2014, form our proxy for the portion of unit costs that VA will not be able to shed in scenarios for which, on net, care leaves VA facilities for CDS networks. Note that unit costs do not include costs associated with the physical building or nonrecurring maintenance. These costs are not part of the EHCPM, and costs and/or savings associated with changes to facilities and nonrecurring maintenance are not included in our estimates.

⁶⁶⁶ CITC accounted for approximately 11 percent of modeled expenditures in the base year 2014.

⁶⁶⁷ Medicare Allowable rates were provided by Milliman at the request of VA. They were produced using repricing performed at the area-specific level for inpatient, outpatient, and professional care. For services that were not repriced within an HSC, Medicare amounts were estimated.

COMMISSION ON CARE FINAL REPORT

Improving access, choice, and/or quality of services is likely to induce greater reliance and enrollment in the VA system. Although reliance and enrollment increases result in greater budgetary costs for VA, it is important to note that these increases do not represent societal costs or costs to the government. The VA budgetary cost increases may be associated with reductions in out-of-pocket expenses and improved health care benefits for patients, as well as savings to Medicare, Medicaid, and other government programs. Our cost estimates are confined solely to the VA budget.

Approximately 52 percent of eligible veterans have enrolled in VA health care, and enrolled veterans receive 34 percent of health care through VA. There is little data from which to anticipate how reliance and enrollment might change under the scenarios, and our estimates use wide ranges of assumptions for these parameters. In forming our assumptions, we consider a variety of factors, such as insurance coverage and other characteristics of eligible veterans (both enrolled and unenrolled), survey responses of veterans (both enrolled and unenrolled) on use and reasons for lack of use of VA health care, and research on take-up of health insurance coverage.⁶⁶⁸ We are confident that enrollment and reliance would increase more with greater patient choice and access. For all options, we present low, middle, and high estimates.

In addition to increases in reliance and enrollment, reduced cost sharing, increased convenience of receiving community care, and the removal of a requirement to get a referral for specialty care can increase the total amount of medical care that a patient receives. Depending on the option considered, some health care is subject to reduced cost sharing from levels typical of private insurance coverage and Medicare to the very small levels of cost sharing found in the VA system. We assume utilization increases for health care subject to lower cost sharing and/or removal of a requirement to get a referral, with our estimates based in part on the literature examining how cost sharing affects health care demand.⁶⁶⁹

Caveats

There are a number of caveats associated with all of our estimates. These caveats are important, and to the extent that these assumptions do not hold, the estimates will be inaccurate. The estimates do not include savings and costs of reducing or repurposing infrastructure, or effects on VA's teaching, research, and emergency preparedness missions. Medicare allowable rates are assumed adequate to provide all veterans with robust CDS networks in their local areas. For care priced at historic CITC rates, national average rates are assumed to represent future rates. Shifting care into CDS networks does not affect the unit cost of care that remains in VA facilities. Reductions in the volume of care within VA facilities, and potentially adverse effects quality, are not addressed. Other than equipment and national overhead, the costs of care shifting out of VA facilities are phased out concurrently with other effects in the model. New enrollees are assumed to cost slightly less than existing enrollees for *CDS Alternative 3* and the

Keeler, Arleen Leibowitz, and M. Susan Marquis, "Health Insurance and the Demand for Medical Care: Evidence from a Randomized Experiment," *American Economic Review* 77(3) (1987), 251-77.

same as existing enrollees in the *Recommended Option* and *CDS Alternatives 1 and 2*.⁶⁷⁰ Finally, we do not estimate any administrative costs associated with CDS networks other than the additional RN care managers hired to handle the increased clinical and administrative burden of expanded community care. These additional, nonmodeled administrative costs could be substantial.

Commission Recommended Option

The *Recommended Option* would expand community care. At least initially, all care currently provided by VA would continue to be available through VA. In addition, expanded community care, also called CDS, would be provided by an integrated network consisting of providers (medical practitioners including physicians, midlevel practitioners and therapists, and hospitals and clinics) vetted by VA or a third-party administrator. The CDS network would include all primary and standard specialty care; it would not include special-emphasis care (care that is provided in VA in a distinct fashion).⁶⁷¹ In 2014, 68 percent of care would have been eligible for CDS networks at current VA prices. A referral from a primary care provider would be required to receive specialty care. This referral could come from a provider either at VHA or from the community network. In this scenario, we assumed all other characteristics of the VHA Care System would remain the same as under current policy. We assume that the *Choice Program* ends and that those formerly in the *Choice Program* will take advantage of the community care offered in the CDS networks.

We expect that allowing enrollees to get primary and standard specialty care in the community will increase reliance for care provided in the community because many veterans would have a choice among a larger number of providers and would be more likely to have the option to receive care at a more convenient location. We also expect enrollment to increase because some eligible veterans would be induced to enroll by the prospect of having VA pay for them to see a doctor in the community. We assume that 60 percent of eligible care shifts from VA facilities to CDS networks. Currently reliance is 34 percent. Under this scenario, we model reliance levels of 40, 50, and 60 percent, which correspond to reliance rates increases of approximately 18, 47, and 76 percent, respectively. These reliance increases apply only to CDS care, not CDS-eligible care that is provided in VA facilities. Although the choice of providers is expanded and wait times are potentially reduced in VA, there continues to be a requirement for a referral to access specialty care, as there is in the current system. We modeled enrollment increases of 5, 15, and 20 percent for the low, middle and high estimates, which assume integrated, narrow, and well-managed networks that are designed and managed with cost as one of the major considerations. We also modeled an enrollment increase of 50 percent, more consistent with a less-managed, relatively broad network for which cost is a less important consideration. Finally, we assume that newly entering veterans who receive treatment in CDS networks because of this policy have a 20 percent utilization increase for new demand in CDS networks. Much of this care was

⁶⁷⁰ Assumptions based on previous analysis by VHA and Milliman.

⁶⁷¹ Special-emphasis care includes: prosthetics and orthotics, recreational therapy, rehabilitative care, pharmacy, home-based primary care, spinal cord injury and disorders, some categories of long-term services and supports, mental health and homeless care. We count all mental health as special-emphasis because mental health categories cannot easily be differentiated by care that is VA special-emphasis and care that is not.

COMMISSION ON CARE FINAL REPORT

formerly subject to sizable cost sharing with private insurance or Medicare, and now it would be subject to little if any cost sharing associated with VA-financed care.

Figure A-2 displays estimates for the *Recommended Option*. Estimates for well-managed, narrow networks range from \$65 billion to \$85 billion in 2019, with a middle estimate of \$76 billion. The middle estimate is moderately above the baseline projection of \$71 billion. Although reliance and enrollment increases push VA budgetary costs up, the switch from VA unit costs to the less costly Medicare allowable rates for CDS networks and CITC mitigate the increases. The estimate for the less-managed, broader network scenario is \$106 billion in 2019, illustrating that costs could increase markedly if governance of the network places less importance on cost or if VA were unsuccessful in tightly managing the network.

Figure A-2. Projected Costs of Recommended Option

APPENDIX A
FINANCING THE VISION AND MODEL

COST ESTIMATES Commission on Care Scenarios							
	Brief Description	Utilization Increase	Enrollment Increase (low, middle, high)	Reliance (low, middle, high)	Cost FY 2014 Actual (billions)	Cost FY 2019 Projected (billions)	Cost FY 2034 Projected (billions)
Baseline	2014 Actual		9,078,615	34%	\$53	\$ 71	\$ 138
Recommended (low)	Referral Based Care in VHCS (68% of current VHA care eligible as CDS)	+20% of new demand in CDS Care	5%	40%	\$	65	\$ 132
Recommended (middle)	same	same	15%	50%	\$	76	\$ 155
Recommended (high)	same	same	20%	60%	\$	85	\$ 173
Recommended (less-managed)	same	same	50%	60%	\$	106	\$ 213
Alternative 1 (low)	Similar to Recommended but primary care, inpatient med and surg and some standard specialty care not eligible for CDS remain in VHA (47% of care eligible for CDS)	+20% of new demand in CDS Care	0%	10%	\$	66	\$ 128
Alternative 1 (middle)	same	same	5%	35%	\$	73	\$ 140
Alternative 1 (high)	same	same	10%	50%	\$	78	\$ 151
Alternative 2 (low)	Similar to Alternative 1 but primary care coordinator must only be consulted; no referral required (47% of care eligible for CDS)	+20% CDS eligible Care	5%	60%	\$	97	\$ 191
Alternative 2 (middle)	same	same	10%	80%	\$	123	\$ 243
Alternative 2 (high)	same	same	20%	100%	\$	154	\$ 307
Alternative 3 (low)	Similar to Alternative 2 but primary care, inpatient med/surg and specialty care eligible for CDS and no consult required	+20% CDS eligible Care	75% (level)	80%	\$	167	\$ 320
Alternative 3 (middle)	same	same	85% (level)	90%	\$	206	\$ 395
Alternative 3 (high)	same	same	95% (level)	100%	\$	250	\$ 479
Keep Selected Services (low)	Move most standard ambulatory specialty care to community	+20% of new demand in CDS Care	0%	10%	\$	64	\$ 128
Keep Selected Services (middle)	same	same	4%	25%	\$	70	\$ 136
Keep Selected Services (high)	same	same	8%	40%	\$	75	\$ 145
Premium Support	Enrollees under age 65 can choose a subsidized insurance premium with cost sharing in lieu of VHA care	42% of enrollees <65 choose premium support	6%		\$	82	\$ 158
Eligibility Expansion	Allow all eligible veterans to enroll	increase to 30% market share among priority 8	5%		\$	72	\$ 140
Initiatives	Nurse navigators for CDS care				\$	71	\$ 138
	Make veterans with Other than Honorable Discharges Temporarily Eligible for VA Health Care While Claims are Adjudicated				\$	72	\$ 139

Additional Sample Cost Models

CDS Alternative 1

CDS Alternative 1 is similar to the Commission's *Recommended Option* above. The main difference is that a narrower subset of services is available in the CDS networks. Primary care, inpatient medical and surgical care, and some standard specialty care are not eligible for CDS networks and must be accessed within VA. The CDS network for *CDS Alternative 1* would focus on tertiary and quaternary care; it would not include primary care, some specialty care, inpatient medical and surgical care, and special-emphasis care (care that is provided in VA in a distinct fashion). In 2014, 47 percent of care would have been eligible for CDS networks.

Because less care is eligible for CDS networks than in the *Recommended Option*, less care will shift to CDS networks, reliance increases will be smaller, and enrollment increases will be smaller. We assumed that 50 percent of eligible care shifts from VA facilities to CDS networks. We modeled increases in reliance of 10, 35, and 50 percent, which correspond to reliance rates of approximately 37, 46, and 51 percent. These reliance increases pertain only to CDS care, not CDS-eligible care provided in VA facilities. We modeled enrollment increases of 0, 5, and 10 percent. As in the *Recommended Option*, we assume newly entering veterans who receive treatment in CDS networks because of this policy have a 20 percent utilization increase for new demand in CDS networks.

Figure A-3 displays estimates for CDS Alternative 1. Estimates range from \$66 billion to \$78 billion in 2019, with a middle estimate of \$73 billion. As in the *Recommended Option*, the middle estimate is close to the baseline projection of \$71 billion. Although reliance and enrollment increases push VA budgetary costs up, the switch from VA unit costs to Medicare allowable rates for CDS networks and CITC offsets these effects.

Figure A-3. Projected Costs of CDS Alternative 1

CDS Alternative 2

Like *CDS Alternative 1*, CDS care in *Alternative 2* would focus on tertiary and quaternary care. CDS networks would not include primary care, special-emphasis care, inpatient medical and surgical care, and some types of specialty care.

This option differs from the *Recommended Option* and *CDS Alternative 1* in that veterans must consult their VHA primary care provider in some way before seeking specialty care, but they *do not* need a referral to receive CDS eligible care whether they receive it in or out of VA. Some specialty care, all primary care, and all special-emphasis care are only provided in VA unless the veteran is eligible for traditional CITC. However, after the primary care consultation, the choice of whether to seek eligible care in CDS networks is entirely up to the veteran. As in *CDS Alternative 2*, the care eligible for CDS networks comprised 47 percent of total modeled expenditures in 2014.

We expect reliance increases to be relatively high, and we apply these reliance increases to CDS eligible care regardless of where veterans receive it because referrals are not required for any CDS eligible care. Further, we expect enrollment increases to be higher than the *Recommended Option* and *CDS Alternative 1* because the absence of a referral requirement makes this a more attractive policy for potential enrollees. We model reliance rates of 60, 80, and 100 percent for care eligible for CDS networks; enrollment increases of 5, 10, and 20 percent; 70 percent of VA facility care shifting into CDS networks; and a 20 percent utilization increase for CDS eligible care.

COMMISSION ON CARE FINAL REPORT

Estimates are displayed in Figure A-4. In 2019, the baseline projection is \$71 billion. *CDS Alternative 2* estimates range from \$97 billion to \$154 billion, with a middle estimate of \$123 billion. The potential for considerable reliance and enrollment increases could push costs substantially higher than the baseline.

Figure A-4. Projected Costs of CDS Alternative 2

CDS Alternative 3

CDS Alternative 3 differs from *Alternative 2* in two main ways. First, a broader array of care is eligible for CDS networks. CDS would include primary and standard specialty care, including inpatient medical and surgical care. It would not include special-emphasis care (care that is provided in VA in a distinct fashion). This array of eligible care is the same as that for the *Recommended Option*, and comprised 68 percent of total modeled expenditures in 2014. Second, enrollees do not need to consult with a primary care doctor in order to access CDS eligible care.

CDS Alternative 3 would offer an extremely generous benefits package for patients. With no referral or consultation, no premiums, and little if any copayments, patients would have access to a robust network of high-quality providers in their area. Although care within VA facilities would be available, no clinical contact would be necessary for those seeking care in CDS networks. Even within VA facilities, care is more attractive because patients would no longer need to consult their primary care doctors to receive specialty care. The benefits of this option contrast with the 10 to 30 percent cost sharing typical in Medicare and private coverage, the low

provider reimbursements, stigma and access barriers often associated with Medicaid,⁶⁷² and the requirements for referrals and/or prior authorizations that are widespread among health insurance plans. Few veterans would have reason to turn down such an attractive option.

Consequently, we model high ranges for reliance, enrollment, and care shifting into CDS networks. We model reliance rates of 80, 90, and 100 percent for all CDS eligible care; enrollment shares of 75, 85, and 95 percent; and a 70-percent rate of eligible care shifting from VA facilities to CDS networks. We apply the reliance increases to all care eligible for CDS networks, even if the care is provided in VA facilities or traditional CITC, because this option eliminates the need for consultations with primary care doctors for all CDS eligible care. Additionally, we assume that the total amount of CDS eligible care received by veterans from any provider and payer increases by 20 percent due to the lack of a referral requirement and/or reduced cost sharing.

Estimates are displayed in Figure A-5. In 2019, when effects are fully phased-in, estimated costs range from \$156 billion to \$237 billion, with a middle estimate of \$195 billion. This compares to a baseline projection of \$71 billion. Although estimates are highly uncertain, a key takeaway is that this option could result in very large cost increases relative to the baseline scenario, *Recommended Option*, and CDS Alternatives 1 and 2.

COMMISSION ON CARE FINAL REPORT

Keep Selected Services

The *Keep Selected Services (KSS)* scenario would move most standard ambulatory specialty care entirely into the community, yet keep the remainder of care entirely within VA facilities or traditional CITC. Although VA would no longer provide most standard ambulatory specialty care in VA facilities, it would continue to provide primary care, inpatient care, and special-emphasis care in VA facilities, including long term services and supports, prosthetics and orthotics services, inpatient and outpatient mental health and substance abuse, inpatient medical and surgical care, prescription drugs, medication management, recreational therapy, and immunizations. Under this scenario, approximately 35 percent of the cost of care currently provided in VA would be provided solely in the community. Providers in the community would receive Medicare rates.

We modeled increases in reliance of 10, 25, and 40 percent, which correspond to reliance rates of approximately 37, 43, and 48 percent. These reliance increases pertain only to care that moves into the community. We modeled enrollment increases of 0, 4, and 8 percent.

Estimates are displayed in Figure A-6. In 2019, when effects are fully phased-in, estimated costs range from \$64 billion to \$75 billion, with a middle estimate of \$70 billion. This estimate compares to a baseline projection of \$71 billion. Although estimates are highly uncertain, a key takeaway is that even with expanded community care, cost increases are constrained when veterans cannot choose whether they receive care in VA facilities or in the community.

Figure A-6. Projected Costs of Keep Selected Services Scenario

Premium Support⁶⁷³

Under the *Premium Support* (PS) scenario, all current and future enrollees younger than age 65 can choose a subsidized insurance premium with cost sharing (for some priorities) in lieu of their current VHA benefit. Enrollees electing the premium and cost sharing subsidy no longer have access to any VA services, including the special services VA offers. Under this scenario, there is an annual election period, and VA actively engages with enrollees to make a decision. Enrollees ages 65 and older receive no additional benefit options.

For those enrollees choosing the subsidized insurance program, the cost sharing varies by priority level: 10 percent for priorities 1 and 2; 20 percent for priorities 3 and 4; 30 percent for priorities 5 and 6; and 40 percent for priorities 7 and 8. Veterans would buy *Silver* policies on the state individual insurance exchanges, and VA would provide additional cost sharing assistance to meet the target subsidy. If enrollees purchased plans offered with lower cost sharing, such as *Gold* (20 percent cost sharing) or *Platinum* plans (10 percent cost sharing), the additional premium costs would likely exceed the cost of purchasing a Silver plan and subsidizing the cost sharing. The cost estimates did not consider the potential effect of adding a large number of veterans on exchange plans. Were VA to do this, considerations for veteran morbidity as well as the proposed cost sharing subsidies would need to be accounted for within the purchase of state exchange plans from commercial insurers.

To determine participation rates in the subsidized premium program, we summarized enrollees' FY 2014 baseline data into cost brackets by attaching 2015 EHCPM unit costs to workload and then summarizing the total cost of workload provided to each enrollee. Overall, 42 percent of enrollees younger than age 65 were assumed to select the subsidized premium option, but the model assigned different rates of participation depending on enrollees' priority level and historical VA utilization. Enrollees with little to no costs were assumed to participate in the program at a higher rate as compared to those who had larger levels of VA costs. Participation rates for priority 5 veterans were assumed to be half the rates set for other priority levels. This assumption was made because many of these lower-income enrollees already have the option of participating in a highly subsidized state exchange plan with low cost sharing. It is also assumed that offering this option will motivate additional nonenrolled veterans to enroll to receive the subsidized premium plan. To estimate this effect, we analyzed the proportion of veterans by priority level with either no insurance or individual insurance plans, as reported in recent years of data captured by the American Community Survey (ACS). We estimated that this potential subsidy would lead to an additional 577,000 enrollees over the projection period.

Finally, it is assumed that the subsidized premium plan serves as a primary payer and does not supplement other coverage available to the enrollee, such as Medicare or employer sponsored insurance.

⁶⁷³ Analysis developed by Milliman for VHA Office of the Assistant Deputy Undersecretary for Health (ADUSH) for Policy and Planning.

COMMISSION ON CARE FINAL REPORT

Figure A-7. Projected Costs of Premium Support Scenario

Eligibility Expansion⁶⁷⁴

Under the *Eligibility Expansion* (EE) scenario, the VA health care system expands to allow all veterans to enroll in VA health care. In 2014, half of veterans eligible under priorities 1-7, 8b,⁶⁷⁵ and 8d were enrolled, representing a 50 percent *market share*,⁶⁷⁶ with the highest market share among those with service-connected priorities. The market share among Priorities 8a and 8c was an estimated 21 percent, reflecting enrollment from before suspension began in January 2003 and from enrollees who initially enrolled in another priority and later transitioned to Priorities 8a and 8c. If the suspension of new priority 8 enrollment had never occurred, we estimate that the market share would be 28 percent in 2014 and 30 percent in 2021 under natural growth and priority transition rates.

Under a scenario of lifting priority 8 enrollment suspension beginning in FY 2017, we estimate that the market share would climb steadily during a 5-year phase-in period to reach 30 percent in 2021, which equates to 464,000 new priority 8 enrollees. The market share is not expected to reach the level observed among other priorities because Priority 8 veterans have higher incomes, are not service-connected disabled, are more likely to have employer-sponsored coverage and individually purchased health plans, and are less likely to be uninsured relative to other priorities. Further, regression analysis of market shares among veterans in census data demonstrated that higher income veterans, nondisabled veterans and veterans with employer-sponsored health insurance are all less likely to enroll. To develop the cost estimates, newly

⁶⁷⁴ Analysis developed by Milliman for VHA Office of the Assistant Deputy Undersecretary for Health (ADUSH) for Policy and Planning.

⁶⁷⁵ Priority 8b and 8d were enrolled on or after June 15, 2009 and have incomes that exceed the current VA or geographic income limits by 10 percent or less.

⁶⁷⁶ Market share is the percentage of veterans who are enrolled in VHA out of all veterans. This differs from the enrollment share, which is the percentage of eligible enrollees who are enrolled.

eligible priority 8 veterans are assumed to have the same morbidity and reliance as current priority 8 enrollees.

By 2032, based on the estimated market share, we project an additional 368,000 priority 8 enrollees with an additional \$1.8 billion in costs.

Figure A-8. Projected Costs of Eligibility Expansion Scenario

Additional Cost Factors

Nurse Navigators

VHA already has a robust care manager program that largely overlaps with the proposed nurse navigators in the CDS scenarios. VHA patient aligned care teams (PACTs) were created to coordinate care and maintain long-term relationships with patients. Most PACTs exist in a primary care setting, but there are also special-emphasis PACTs, such as those for spinal cord injury and disorders, geriatrics, and HIV care. All patients may choose to be assigned to a primary care PACT, and the vast majority do so: There are approximately 5.3 million unique patients in primary care PACTs out of a total of 5.8 million.

The primary care PACT typically consists of a provider, an RN care manager, a clinical associate, and a clerk. This team is assigned to a panel of approximately 1,200 patients. There are also expanded team members who are assigned to multiple panels, such as clinical pharmacy specialists, nutritionists, and behavioral health professionals. The RN care manager is the lynchpin of the primary care PACT.

One of the tasks of the care manager is to coordinate care received in VHA facilities with care received in the community. Because this coordination role would increase with the CDS scenarios, we provide a notional estimate for expanding the number of care managers to account for the additional administrative and clinical burden of an increase in community care.

VA-18-0457-A-001332

COMMISSION ON CARE FINAL REPORT

Based on discussions with VHA primary care operations and policy staff, we assume that one additional RN care manager per five panels would be necessary to handle a substantial increase in community care such as that associated with the CDS scenarios.⁶⁷⁷ Based on 2014 data on the number of patients in PACTs and the recommended panel size, we estimate that 882 RN care managers would need to be hired if the CDS scenarios were fully phased in. Incorporating the average total compensation of RN care managers (\$94.4 thousand in FY 2014) and inflating costs using the projected patient population and personnel inflation trend from the EHCPM, we generate the following cost estimates. These estimates are assumed to be fully phased in. The cost of this policy is \$100 million in 2019 and rises to \$158 million in 2034.

Figure A-9. Cost of Hiring Additional RN Care Managers

Other-than-Honorable Discharges

We also consider a policy for which those with an OTH discharge are made temporarily eligible for VA health care while their claims are adjudicated. The adjudication process would determine whether these individuals would remain eligible for care or would lose eligibility. Adjudication would be based on the reason for the discharge. For example, if the discharge were due to behavior associated with a mental health condition caused by serving in the military, that person would likely be positively adjudicated. However, the specific criteria for adjudicating cases still needs to be determined.

To model the cost of this proposal, we assume all people with an OTH discharge who would otherwise be eligible for VHA care are initially eligible. We assume that, consistent with the rest of the population, 73 percent of veterans with an OTH discharge are eligible for VA health care based on income and disability criteria. During a period of 5 years, their cases are examined, and 50 percent are positively adjudicated. Whether this number is actually higher or lower than 50 percent will depend on the exact details of the policy as well as the specific circumstances of veterans with an OTH discharge. In our model, the number of eligible veterans with an OTH discharge who enroll increases during the first 5 years as they become aware of the new rules. It

⁶⁷⁷ These estimates would differ depending on the CDS option pursued, but we provide a single notional estimate to give a sense of the magnitude of costs involved.

increases to 52 percent, which is the enrollment share of veterans who are currently eligible. In reality, this rate could be higher or lower for those with an OTH discharge if they are different from those who are already eligible. We assume costs per patient are similar to other veterans of the same age.

The cost of this policy increases from \$264 million in 2014 to \$1.23 billion in 2033. Fully phased-in, the cost is \$864 million in 2019. The shape of the cost curve reflects increasing enrollment during the first 5 years as veterans learn about the new rule and sign up. It also reflects adjudications as all enrolled veterans are initially eligible and then their eligibility is adjudicated during the 5 years. These calculations reflect estimates that the number of veterans with an OTH discharge for active duty military has fallen from a high of 8.8 percent in 2002 to 2.1 percent in 2015. We assume that the rate continues at 2.1 percent of discharges throughout the projection window.

Figure A-10. Projected Costs of Temporarily Covering Veterans with OTH Discharges

Conclusion

The estimated cost of allowing veterans to receive expanded community care through integrated networks varies dramatically depending on the specifics of the policy, including which categories of care are eligible for the community and whether referrals are required to access specialty care. We estimate that the *Recommended Option*, which provides increased community care that is reimbursed at Medicare allowable rates but maintains referrals for specialty care, increases costs modestly, assuming that networks are narrow and well-managed with cost as a major consideration. *CDS Alternative 1*, which offers a more restricted array of services eligible for CDS care, yet maintains a referral requirement, does not substantially increase costs. However, *CDS Alternative 3* and to a lesser degree *Alternative 2*, which eliminate the need for referrals for standard specialty care, potentially lead to very high costs. The estimated costs of the other scenarios range from small to substantial, though these costs would

COMMISSION ON CARE FINAL REPORT

ultimately depend on the details of the proposals (e.g., the premium support schedule). Finally, we find that the costs of introducing expanded nurse navigators/care coordinators and making those with OTH discharge temporarily eligible are comparatively modest.

APPENDIX B: LEADERSHIP IMPLEMENTATION

Table B-1. Organizational Health and Cultural Transformation

Action	Responsible	Timeline
That VHA create a comprehensive, coordinated, sustainable cultural transformation effort by aligning programs and activities around a single, benchmarked concept.		
Establish the charter for the cross-functional SE team responsible for cultural transformation.	SECVA/DEPSECVA or CVCS depending on level	Now (0-6 mos)
Assess cultural transformation models and decide on a single model.	Chartered SE team	Now (0-6 mos)
Create an execution strategy for cultural transformation.	Chartered SE team	Now (0-6 mos)
Develop communication strategy and materials and release.	Chartered SE team	Near (18 mos)
That VHA aligns leaders at all levels in support of the cultural transformation strategy.		
Establish a subcommittee under the SE team to drive leadership transformation.	Chartered SE team	Near (6 mos)
Establish leadership standards for behaviors and actions.	Chartered SE team Subcommittee	Near (6-9 mos)
Publicize the standard.	Chartered SE team Subcommittee/CVCS/HTM	Near (12 mos)
Develop assessment tools.	SE Subcommittee/NCOD, NCEHC, HTM	Near (12-24 mos)
Establish expectations (in policy) for use of leadership standards in IDPs, performance review, hiring, promotions.	HTM/CVCS	Near (12-36 mos)
Provide coaching to the standard.	(Current HCM office responsible)	Near (24 mos)
Collect standards, training, support materials into a living curriculum for leaders.	EES/HTM	Near (24 mos)
Modify VA Directive 5021 (Employee/Management Relations) to include unacceptable behavior and unacceptable performance standards related to organizational transformation responsibilities of leaders and update table of penalties to correspond.	HRA/HTM	Future (36 mos)
That VHA align frontline staff in support of the cultural transformation strategy.		
Establish subcommittee to support staff transformation.	Chartered SE team	Near (9 mos)
Establish behavioral expectations/requirements for staff.	Subcommittee	Near (9-18 mos)
Develop hiring tools against the staff standard.	Subcommittee	Near (18-36 mos)
Establish requirements (in policy) for use of the standard for IDP, performance reviews, advancement in grade/promotions.	HTM/HRA/nursing and similar/unions	Near (18-36 mos)

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Support leaders and supervisors at all levels of the organization to communicate and reinforce these standards with staff (see align leaders, above).	(Policy owner)	Near (18 mos)
Establish program office and VAMC standards and strategy for execution.		
Establish subcommittee to develop VAMC and PO execution standards.	Chartered SE team	Near (18 mos)
Establish execution strategy and policy requirements.	Chartered SE team Subcommittee/NCEHC/ NCOD	Near (18-36 mos)
Develop consolidated, meaningful metrics with input from experts and field users.		
Assign responsibility for metric development.	Chartered SE team/CVCS	Near (6 mos)
Develop and test metrics.	Organizational Excellence	Near (6-18 mos)
Deploy metrics.	Chartered SE team/CVCS/ (policy owner)	Near (18 mos)
Identify outliers and intervene.	SE team/CVCS/(policy owner)	Near (24 mos)

APPENDIX B
LEADERSHIP IMPLEMENTATION

Table B-2. Recruitment, Retention, Development, and Advancement

Action	Responsible	Timeline
VHA executives are required to make the leadership system a top priority for funding, strategic planning, and investment of their own time and attention.		
Establish a VHA leadership management goal for inclusion in the 2018 budget with specific targets, including diversity targets.	VHA Human Capital Management/NLC leadership subcommittee of the HR committee	Now (3 mos)
Submit the leadership management goal to VA for inclusion in the budget submission for 2018.	VHA OPP and CVCS	Now (3 mos)
Adopt VHA leadership management goal and submit to OMB/White House.	VA OPP and SECVA	Now (3 mos)
Establish an operational plan and accountability mechanisms for meeting these goals.	VHA Human Capital Management/NLC leadership subcommittee of the HR committee	Now (4 mos)
Include yearly targets in the performance plan of the CVCS and SES members.	VHA NLC subcommittee on performance planning	Now (4 mos)
Schedule regular communication (at least quarterly) to the field that speaks to mission, vision, values, and expectations for ethical behavior.	CVCS	Now – ongoing
Schedule regular meetings with VHACO and field senior staff that allows for a discussion of mission, vision, values and expectations for ethical behavior.	CVCS	Now – ongoing
Develop opportunities for developing leaders to participate in the leadership and management decisions and processes of VHA.	CVCS /ask NLC executive committee to develop and implement a plan	Now (6 mos)
Adopt and implement a comprehensive system for leadership development and management.		
Convene a group to review ACHE and the National Center for Health Care Executives and devise a benchmarked model that meets the needs of health care executives in VHA as well as the private sector.	NCEHC with NCOD, & Human Capital Management; report to the NLC subcommittee for leadership development	Now (6 mos)
Create career tracks for key positions based on this new competency model.	HTM	Near (within 12 mos)
Fund and implement leadership assessments, training, coaching, and developmental opportunities based on the new leadership competency model.		
Develop assessment tools (360, 180, self-assessment, supervisory) to support the competency model.	HTM with support as required from other offices, e.g., NCOD, EES	Near (within 18 mos)
Assess existing training against the model and identify gaps.	EES	Near (18 mos)
Develop and implement a plan to fill these gaps.	EES/reporting to NLC to ensure funding	Near (plan 20 mos – fill gaps 36 mos depending on \$)

VA-18-0457-A-001338

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Assess opportunities to share additional leadership training with DoD and create a plan to implement it.	HEC/JEC	Near (9 mos)
Develop and fund a face-to-face training to fulfill competencies for critical career positions.	EES	Near (24 mos)
Develop a masters level training program for clinical leaders in partnership with academic medicine.	EES/Academic Affiliations	Near (36 mos)
Establish sharing agreements with non-profit institutions to permit the exchange of executives for extended rotations.	EES/Academic Affiliations	Near (18 mos)
Create an experiential learning program to parallel the competency model.	EES, HTM reporting to the leadership development subcommittee of the NLC	Near (24 mos)
Establish a coaching program.	HTM/EES	Near (18 mos)
Incorporate tracking of competency assessment, training, coaching, and IDP completion into an appropriate IT platform (e.g., TMS).	HRA/EES/Workforce Management and Consulting	Near (18 mos)
VHA is required to aggressively manage leadership recruitment, retention, development and advancement using the new leadership competency model: all hires and promotions are required to demonstrate these competencies.		
Create functional statements for all key positions based on the competency model.	HTM	Near (18 mos)
Create interview questions incorporating competencies for all key positions.	HTM	Near (12 mos)
Establish a process for certifying internal candidates for advancement to the next position.	Human Capital Management	Near (18 mos)
Incorporate the tracking of competency achievement with performance ratings and create a tracking mechanisms and pool of high potential candidates.	Human Capital Management	Near (18 mos)
Create regulatory requirements for the use of the competency model in hiring, promotion, development opportunities, and discipline; and incorporate procedures for veterans preferences.	Human Capital Management in VHA	Near (36 mos)
Establish an IDIQ, PBA or similar contract for executive recruitment.	Human Capital Management	Now (6 mos)
Establish requirement in policy for all ECF, SES / SES equivalent to complete IDP.	Human Capital Management	Future (following regulatory change)
Create on-ramp for retiring MTF.	Human Capital Management / DoD Coordination	Now (6 mos)
Expand (GHATP) program.	EES	Now (6 mos)
Establish a plan for developing and managing the candidate pool.	NLC subcommittee for leadership	Now (6 mos)
Require a formal on boarding process for leaders at all levels that re-enforces the leadership competency model.		
Establish an onboarding curriculum and process.	Human Capital Management, EES, HTM	Now and Near (18 mos)

VA-18-0457-A-001339

APPENDIX B
LEADERSHIP IMPLEMENTATION

Action	Responsible	Timeline
VHA is required to take immediate steps to stabilize the continuity of leadership.		
Extend authority for length of details and ability to compete for the detail position.	Human Capital Management	Now (6 mos)
Establish and fund assistant level positions in all key career development tracks.	CVCS	Now (18 mos)

COMMISSION ON CARE FINAL REPORT

Table B-3. Organizational Structure and Function

Action	Responsible	Timeline
Eliminate duplication within VHA and consolidate program offices to create a flat structure.		
Eliminate the duplication of functions between VHA and VA by closing VHA offices.		
Create innovative organizational structures to support clinical delivery that are aligned to patient's needs rather than professional silos.		
Undertake a reduction-in-force (RIF) in VHACO that promotes delayering and efficiency in communication and decision making.		
Publish a new organizational chart consistent with Figure 9.	CVCS	Now (1 mos)
Prepare an initial RIF for offices eliminated.	VHA Human Capital Management	Now (3 mos)
Engage VERC (or other resources with expertise in business process reengineering) to re-design the processes and structures with remaining offices to ensure end-to-end support for field function and to further reduce duplication; including clinical function re-organization.	Transformation Office/ VERC	Near (3-12 mos)
Each program office in collaboration with VERC or other transformation resources identifies areas of "stop work" with staffing and budget savings.	Transformation Office/ PO/ CVCS	Near (3-12 mos)
Publish clear roles, responsibilities and expectations that apply to all VHACO offices.	Transformation Office/ CVCS	Now (1 mos)
Develop in-service training to orient existing VHACO staff to the new expectations for the role of VHACO.	Transformation Office/ EES	Now (1 mos)
Develop training curriculum to support VHACO staff in developing the skills and competencies required.	Transformation Office/ EES	Near (18 mos)
Develop an engagement strategy to inspire VHACO staff to embrace their new role and tie to in-service training roll out.	Transformation Office/ CVCS	Now (1 mos)
Modify in-service training and implement in on-boarding process for new VHACO employees.	Transformation Office/ EES	Now (6 mos)
Adopt customer service training in VHACO and roll it out; include as part of new employee on-boarding in VHACO.	Transformation Office/ EES	Near (12 mos)
Draft basic competencies for VHACO program staff (e.g., customer service, quality improvement, coaching, effective communication, change leadership, data analytics).	Transformation Office/ HCM	Near (12 mos)
Require the basic competencies in functional statements as a basis for hiring and promotion.	Transformation Office/ Each PO	Near (18 mos)
Acquire, configure, and train PO staff on data analytics infrastructure to support program office and field tracking of key performance metrics.	Office of Organizational Excellence/OIT	Near (18 mos)

APPENDIX B
LEADERSHIP IMPLEMENTATION

Action	Responsible	Timeline
Clarify and specifically define the roles and responsibilities of the VISNs and facilities, pushing decision making down to the lowest level.		
Publish clear roles, responsibilities and expectations that apply to the VISNs.	Transformation Office/ CVCS	Now (1 mos)
Develop in-service training to orient existing VISN staff to the new expectations for the role of VISN.	Transformation Office/ EES	Now (1 mos)
Develop an engagement strategy to inspire VISN staff to embrace their new role and tie to in-service training roll out.	VISN directors	Now (1 mos)
Modify in-service training and implement in on-boarding process for new VISN employees.	Transformation Office/ EES	Now (6 mos)
Draft basic competencies for VISN staff (e.g., quality improvement, coaching, effective communication, change leadership, data analytics).	Transformation Office/ HCM	Near (12 mos)
Require the basic competencies in functional statements as a basis for hiring and promotion.	Transformation Office/ each PO	Near (18 mos)
Gain agreement from Congress to institute three appropriation lines only: medical, major construction, research.	CVCS/SECVA/OMB	Near (12 mos)
Eliminate segregation of specific-purpose funds to the VISNs and facilities.	CVCS/Office of Finance	Now (6 mos)
Modernize financial management system (FMS) to permit effective cost accounting and tracking of priority spending.	OIT/Office of Finance	Future (36 mos)
Develop training to support effective use of FMS to permit effective account tracking and reporting and roll it out.	Finance/EES	TBD post procurement
Establish quarterly spend reports covering all priority areas (e.g., NRM, IT, facility minor, purchased care, mental health, women's health, administration) by facility and release to Congress and the public.	Finance Office	TBD post procurement
Delegate decisions in recruitment, retention and advancement (e.g., hiring bonus, retention bonus, market pay) for staffing to the facility.	CVCS/HCM	Now (1 mos)
Delegate training and travel decisions.	CVCS/EES/OAA	Now (1 mos)
The USH establishes leadership communication mechanisms within VHACO and between VHACO and the field to promote transparency, dialogue and collaboration.		
Improve communication with field leadership and frontline employees through the liberal use of social media, town halls and other direct engagement channels with a dedicated champion to help the USH and senior staff in this endeavor.	CVCS	Now (3 mos)
Reestablish in-person leadership conferences, at least semi-annually, to foster communication and relationship building between VHACO, VISN and facility leadership.	CVCS/EES/NLC	Now (6 mos)
Add behavioral competencies to performance plans that promote effective communication amongst leaders.	CVCS	Near (12 mos)

VA-18-0457-A-001342

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Establish expectations and requirements for program office leaders to communicate the USH leadership messages, coordinate PO communications with the USH and with one another.	CVCS	Now (3 mos)
Establish a transformation office with broad authority and a supporting budget to accomplish the change.		
Establish the new transformation office in the organizational chart, populate with expertise in business process re-engineering, and fund initially using savings from closure and consolidation of offices in VHACO and a budget reduction to all other VHACO offices.	CVCS	Now (6 mos)
Create a Transformation Office strategic plan to educate and provide guidance to the new initiatives and support the goals of VA and VHA.	Transformation Office	Near (3-6 mos)
Create a new initiative implementation plan to include follow-on priorities, tasks and milestones. The Transformation Office will support the operation and the plan moving forward.	Transformation Office	Near (3-6mos)
The Transformation Office will be responsible for evaluating all new initiatives and programs using the President's Management Agenda Scorecard or a model that emulates its rating standards of Green represents success; yellow for mixed results; and red for unsatisfactory. These ratings are indicative of standards of success or failure.	Transformation Office	Near (3-6mos)

Table B-4. Performance Metrics and Management

Action	Responsible	Timeline
Create a new performance management system for VHA leaders appropriate for health care executives.		
Establish a workgroup and engage outside experts to create the new performance management system that is benchmarked to private-sector models, is consistent with the new leadership competency model, and recognizes both leadership competencies and success in delivering strategic priorities. The model should include a new rating scale.	Transformation Office/Human Capital Management	Now (6 mos)
Develop and conduct training on the new performance management system for all participants to describe the system, rating process, and expectations.	Human Capital Management	Near (6-12 mos)
Establish a mechanism to capture performance assessment outcomes and track and manage high-potential staff.	Human Capital Management/HRA	Now (3 mos)
Establish a project plan to deliver annual guidance on performance plans at least a month in advance of the new fiscal year (i.e., at the start of the new rating period).	Human Capital Management/CVCS/Sec/OMB	Now (3 mos)
Hold raters accountable for creating meaningful distinctions between leaders.		
Provide training to raters on the application of the new performance management system and expectations for ratings.	Human Capital Management	Future (12 mos)
Require raters to establish plans for subordinates that are timely and meaningful; track and provide feedback on meeting this goal.	Human Capital Management/HRA	Now (3 mos)
By modeling the behavior and communicating the requirement, establish expectations that raters, and secondary-level raters, engage in continuous dialogue and coaching with subordinates about performance throughout the year, not just at mid-year and at the end of the rating period.	CVCS	Now (3 mos)
Establish oversight and feedback process for raters and incorporate this into the raters performance evaluation.	Human Capital Management/CVCS	Now (12 mos)
Provide coaching to raters and focused reviews if their rating profile doesn't provide meaningful distinctions in performance.	Supervisors	Near (12 mos)

COMMISSION ON CARE FINAL REPORT

Table B-5. Leadership Implementation: Human Capital Management

Action	Responsible	Timeline
VA re-align HR functions and processes to be consistent with best practice standards of high-performing health care systems.		
Charge HRA to undertake an HR transformation study and ensure budget and solicitation of customer requirements.	SECVA/DEPSECVA	Now (0-6 mos)
Engage HR and change management experts to develop a benchmark human capital management plan for VA.	HRA	Now (0-6 mos)
Circulate new human capital plan for feedback and finalize.	HRA with input from VHA, Congress, OPM, OMB, SECVA/DEPSECVA, CVCS	Now (6 mos)
That VA and VHA leaders make transformation of Human Capital management a priority, with adequate attention, funding and continuity of vision.		
Endorse human capital management plan and ensure alignment of budget, IT system funding, training resources, and accountability mechanisms to support it.	SECVA/DEPSECVA and CVCS, as applicable	Near (9 mos)
Employ HR and change management experts to fully implement the transformation agenda and the new human capital management plan.	HRA	Near (12-30 mos)
Create an HR IT technology plan.	HRA & OIT	Near (9 mos)
Establish meaningful measures and risk indicators for VA human capital management.	HRA	Future (24 mos)
Incorporate HR measures into systematic reporting to leadership; and as appropriate into performance plans for key subordinate leaders.	HRA, DEPSECVA, CVCS as appropriate	Near (18 mos)
VA develop and implement an effective progressive discipline process for all staffing authorities (i.e., Title 5, Title 38, Title 38 Hybrid, Title 38 7306, and SES).		
Develop clear standards, guidelines, and training on progressive discipline.	HRA (with support from OPM)	Now (6 mos)
Managers, supervisors and HR professionals complete training.	SECVA/ DEPSECVA and CVCS (HTM office)	Near (12 mos)
Train HR staff to be coaches in progressive discipline.	HRA	Now (6-12 mos)
Establish performance metrics for HR professionals and client feedback mechanisms to ensure effective coaching and support for progressive discipline process.	HRA	Near (12 mos)
Establish performance expectations for VA supervisors and managers to apply the progress discipline process.	SECVA/ DEPSECVA, CVCS	Near (12 mos)

APPENDIX C: PILOT PROJECTS FOR EVALUATING EXPANDED CARE

As discussed in Recommendation #18, some Commissioners support the idea of developing pilot programs to test the feasibility of avoiding VA hospital closures by allowing veterans' spouses and currently ineligible veterans to purchase VA care in selected areas.

Problem

In many parts of the country, VHA currently maintains hospitals and other health care facilities that are underutilized or in danger of becoming so. This trend is driven by four main factors: (a) the overall decline in the size of veterans population, (b) the migration of veterans away from some parts of the country, such as New England and the Upper-Midwest, (c) the general trend in health care toward less intensive use of acute-care hospital beds, and (d) increased use of purchased care, which now accounts for 27 percent of all appointments.

A related challenge is maintaining safe volume of care when patient loads decline. As extensive literature attests, surgeons and other health care professionals tend to lose proficiency when they treat too few patients.⁶⁷⁸

Simply closing a low-volume hospital is sometimes the answer. But closing a local VA hospital may mean that area veterans will have reduced access not only to routine, but also to specialty care related to their military service, such as for spinal cord or traumatic brain injuries. In many areas, such care is not available or is in short supply outside VHA.

At the same time, it may not be clinically feasible for VHA to engage in highly specialized care if it lacks the ability to offer other forms of care in the same setting. Patients in a polytrauma unit for example, require a full-spectrum of routine and nonroutine health care.

Increasing the volume of patients treated by VHA in areas where it currently has excess capacity may ameliorate these challenges. Toward that end, VHA could develop pilot programs to test the feasibility of enabling veterans' spouses and currently ineligible veterans in these areas to purchase VHA care through their health plans. These pilots could be tested in conjunction with the growth of the high-performance, integrated VHA networks recommended elsewhere in this report. These networks will allow VHA far more flexibility than in the past to expand or contract its local capacity in different markets as appropriate.

COMMISSION ON CARE FINAL REPORT

Background***Current Nonveteran Access to VHA Care***

VHA already treats many nonveterans. VHA estimates it treated 694,120 unique nonveteran patients at a total cost of \$1.9 billion in 2015,⁶⁷⁹ or 3.6 percent of total VHA obligations.⁶⁸⁰

By far the largest subgroup within the nonveteran patient population are participants in the Civilian Health and Medical Program of the Department of Veterans Affairs (CHAMPVA). CHAMPVA beneficiaries are the dependents of permanently and totally disabled veterans, survivors of veterans who died from service-connected conditions or while on active duty, or spouses of veterans who at the time of death were rated permanently and totally disabled from a service-connected condition.

Congress authorized CHAMPVA in 1973. The authorization specifies that VHA is the secondary payer for those with Medicare Part A and B coverage. In cases for which VA medical facilities are equipped to provide the care, VA may use facilities not being used for the care of veterans to provide services to the dependent or survivor.

Congress has also directed VHA to offer specific health care services to many other classes of nonveterans. These include mental health and counseling services for family caregivers of seriously injured veterans of post-9/11 service. Several provisions of law also authorize VA care for certain family members of veterans who were exposed to toxic substances. In the case of veterans with 50 percent or more service-connected disability, VHA must provide by law “consultation, professional counseling, marriage and family counseling, training and mental health services as are necessary in connection with” the veteran’s treatment.⁶⁸¹

Analysis

Others who have developed strategic plans for the long-term future of VA health care have recommended expanding upon these precedents, specifically by allowing currently ineligible veterans and the spouses of veterans to purchase VHA care.⁶⁸² In effect, providing such care would allow VHA to operate as an accountable care organization, capable of receiving reimbursement from patients covered by Medicare, Medicaid, as well as by private insurance plans. Among the potential benefits envisioned are the following:

- optimizing patient safety, productivity, and cost-effectiveness by ensuring sufficient patient volumes in currently under-utilized facilities
- preserving mission critical veterans’ programs that would otherwise need to be terminated in many parts of the country
- optimizing the integration of VHA and non-VHA care within communities

APPENDIX C
PILOT PROJECTS FOR EVALUATING EXPANDED CARE

- providing a *public option* for health care to a wider range of veterans as well as nonveterans in communities where health care choices are currently limited
- bringing in new sources of revenue to contribute to the funding for veterans' healthcare

The pilot projects described below would specifically evaluate whether such a strategy will allow VHA to optimize the quality and cost-effectiveness of its health care system by avoiding low volumes of routine and specialty care in certain sections of the country. These pilot projects would also allow VHA to evaluate whether such a strategy could provide new revenues for sustaining the VA health system while providing other benefits to veterans and the public at large.

The chart below sketches six possible pilot projects designed to test different specific policy configurations. The configurations include projects in which VA care is marketed to health care plans on fee-for-service (FFS) basis, and plans in which VA facilities are markets to health care plans as Accountable Care Organizations that provide integrated health services to a fixed population of insured patients for a fixed cost.

*Demonstration Projects to Assess VHA's Capability to Treat
Nonveteran Spouses and Ineligible Priority 8 Veterans*

	Eligibility	Capitation/Fee For Service	Timing
Demonstration 1: FFS plan covering spouses	Non-veteran spouses of veterans (not CHAMPVA eligible) With Private Insurance	FFS	Years 2-7
Demonstration 2: FFS plan covering veterans currently ineligible for VA care	Priority 8 veterans now ineligible for enrollment with private insurance	FFS	Years 2-7
Demonstration 3: FFS plan covering spouses	Non-veteran spouses of veterans (not CHAMPVA eligible) with private insurance	FFS	Years 3-8
Demonstration 4: FSS plan covering veterans currently ineligible for VA care	Priority 8 veterans now ineligible for enrollment with private insurance and/or Medicare	FFS	Years 3-8
Demonstrations 5 and 6: Accountable health care organization plans for spouses and currently ineligible veterans	Ineligible Priority 8 and non-veteran spouses	Enrollment: May choose higher cost plan with more coverage and less copayment; lower cost option with less coverage and higher copayments.	Years 4-9

COMMISSION ON CARE FINAL REPORT

	Eligibility	Capitation/Fee For Service	Timing
Demonstrations 7 and 8: Accountable health care organization plans for spouses and currently ineligible veterans	Ineligible Priority 8 and non-veteran spouses with private insurance and/or Medicare	Enrollment: May choose higher cost plan with more coverage and less copayment; or lower cost option with less coverage and higher copayments. Pilot sites would be deemed Accountable Health Care Organizations for Medicare Advantage plans.	Years 5-10

Certification of Access: Any participating VHA facility must certify that its waiting times for primary care, specialty care and behavioral health are less than 30 days.

Site selection: Sites should include facilities in different regions with various population densities (urban, suburban, rural) and levels of service complexity. VHA may also consider such factors as stability of medical center leadership, and whether local markets are underserved or subject to high degrees of market concentration among either providers or payers.

Assumptions

- Many provisions are subject to Congressional authorization.
- Participating VHA facilities will be able to retain any “profit” associated with treatment of new users without offset;
- Congress will (preferably) waive the current prohibition on Medicare funding federal health care programs,
- VHA will not be subject to proving “level of effort” in order to receive Medicare funds

Assessment

After the first year of operations, VHA will assess these projects according the following criteria:

- Was access to care or patient satisfaction among veterans already enrolled in the system affected by the demonstration?
- What was the level of patient satisfaction among new users purchasing VA care?
- Did VHA cover the costs of delivering care to its patients purchasing care? If so, what were its net revenues and how were they used?
- If VHA collected Medicare funds, did funding cover costs of delivering care?

VA-18-0457-A-001349

APPENDIX C
PILOT PROJECTS FOR EVALUATING EXPANDED CARE

- Were there administrative challenges in opening the VHA to new users? If so, what lessons were learned?
- How did VHA promote the demonstration project to those eligible?
- What are the recommended strategies for further implementation?
- Were there non-financial benefits to treatment of new users, such as diversifying case mix, providing sufficient volume to allow certain VHA services to remain available, or keeping scarce health professionals employed in an area that is medically underserved?
- How did the demonstrations affect the overall quality of care, market structure, pricing, and range of health care options available to both veterans and nonveterans in the surrounding community?

APPENDIX D: HISTORY AS A CONTEXT FOR SYSTEMIC TRANSFORMATION

History provides opportunities to see the problems and challenges facing VHA today through the lens of recurring themes from the past. Veterans' health care has, over the course of its history, been marked by periods of both progress and problems. Understanding the challenges of the past and the solutions used to address them provides context for building a plan for reforming veterans' health care in a manner that is flexible and sustainable.

Challenges and Growth

The federal government's role as a care provider for veterans has evolved, paralleling, to some extent, medicine's evolution. Prior to World War I, the only benefits afforded then-eligible veterans were pensions and domiciliary care (which involved only incidental medical treatment), provided under the National Home for Disabled Volunteer Soldiers and Sailors established after the Civil War.⁶⁸³

World War I brought real change. At the time, no single agency was responsible for the anticipated deluge of sick and wounded soldiers. The more than 200,000 wounded who returned home from battle quickly exceeded capacity of the U.S. Public Health Service (PHS), the National Home, and other agencies. According to one account of the period, "[c]haos and confusion reigned for more than two years . . . [n]ew hospital construction languished," and "[b]y 1921, veterans' care had become a national embarrassment."⁶⁸⁴ At the recommendation of a presidential committee, Congress passed legislation in 1921 to consolidate the several veterans-related bureaucracies into a single Veterans Bureau, to which the President Warren Harding transferred 57 PHS hospitals. A new administrator, Frank T. Hines, proposed care and treatment of veterans' non-service-connected ailments when facilities and bed space were available. Congress adopted the proposal in the World War Veterans Act of 1924.⁶⁸⁵

Under Hines' tenure, VA grew from 64 to 91 hospitals, nearly doubling bed capacity. Civil Service Commission personnel rules and low pay led to generally poor quality VA physicians, yet Congress rebuffed VA proposals to set up a VA Medical Corps.⁶⁸⁶ With many physicians having left VA to serve in World War II or for more lucrative practice, the VA health care system was left critically understaffed.⁶⁸⁷

COMMISSION ON CARE FINAL REPORT

World War II and the need to care for millions of service members, including 671,000 wounded, highlighted the problems facing VA. Scathing reports of shoddy veterans' care, including an exposé characterizing veterans' hospitals as backwaters of medicine, magnified the problems.⁶⁸⁸

Congressional hearings led to a shakeup in leadership and General Omar Bradley was appointed to head the agency, with its network of 97 hospitals, and a need for more.⁶⁸⁹ Dr. Paul Magnuson, who served as VA's chief medical director (CMD) from 1948 to 1951, later described the conditions at the time:

The majority of Veterans Administration hospitals were stuck in far off places, some of them on Indian reservations, others as much as fifty miles from the nearest through-line railway stop. The doctors were all full-time Civil Service employees, hemmed in by regulations and practically forbidden to do any research, attend any medical meetings or otherwise keep in touch with scientific progress. Operating rooms closed at noon so everybody could spend the afternoon happily doing required paperwork, while patients waited days and weeks for surgery.⁶⁹⁰

With President Harry Truman's statement that "the Veterans Administration will be modernized," new VA leadership worked with Congress to pass far-reaching legislation, Public Law 293, which created a VA Department of Medicine and Surgery (DM&S), and freed VA physicians, dentists, and nurses from the Civil Service Commission and its rules.⁶⁹¹ Within weeks, the chief medical director of the new DM&S issued a policy memorandum that outlined a cooperative affiliation agreement between VA and medical schools under which deans' committees would recommend consultants and attending physicians for appointment to VA, and residency-training programs would be established at VA hospitals. The law, and Policy Memorandum #2, broke a recruitment logjam and enabled the short-staffed department to hire medical professionals needed for the dozens of new VA hospitals being built. Soon after, medical students and residents began working in 32 VA hospitals. The reforms instituted under Bradley and his team were palpable,⁶⁹² with the physician staff at VA hospitals increasing from 2,300 (1,700 of whom were detailed by the military) in June 1945 to 4,000 full-time staff a year later.⁶⁹³ By 1948, VA had 125 hospitals in operation with 60 medical school affiliations and 2,000 residents.⁶⁹⁴

After this turn-around, Bradley left to become Army Chief of Staff, and under his successor, "who did not enjoy the same level of prestige and support that Bradley did . . . VA quickly

reverted to its pre-Bradley ways and remained that way for the next forty years,”⁶⁹⁵ according to one account.

By the early 1950s, the veteran population had grown to more than 20 million.⁶⁹⁶ VA was operating 162 hospitals, with an average census of more than 104,000 patients.⁶⁹⁷ A VA historian observed that “waiting lists contained 22,613 applicants awaiting admission, none of whom were service-connected, although some of the latter were hospitalized in other than VA hospitals.”⁶⁹⁸ At the time, non-service-connected veterans seeking care had to state under oath that they could not afford to pay for hospitalization, and admission was granted only when beds were available in VA or other federal hospitals.⁶⁹⁹ Critics called for reducing free medical care of non-service-connected veterans, and questioned whether some were getting care that they could afford. This issue led VA to institute a policy of formal counseling under which hospitals would supply the veterans with an estimated cost of care to assist them in determining their ability to pay.⁷⁰⁰

In contrast to the generous Bradley-era funding, the 1950s funding cuts necessitated layoffs, bed-closures, and moth-balling of newly constructed hospital wards.⁷⁰¹ During this period, annual debates over the DM&S budget centered on the number of beds VA should operate. VA leaders contended that the number should be 125,000, yet the director of the Bureau of the Budget (the predecessor to the Office of Management and Budget [OMB]) asserted 87,000 was sufficient.⁷⁰²

The expiration of the incumbent CMD’s term led to the appointment in 1955 of medical educator Dr. William Middleton, dean of the Wisconsin Medical School, and a long-time member of a VA special medical advisory group. One of his first acts as CMD was to champion medical research in VA and broaden its scope to include geriatric research. Soon after, Congress began earmarking funds for VA research, and expanded DM&S’ statutory role to include medical research.⁷⁰³ During Middleton’s tenure, from 1955 to 1963, VA research funding grew from some \$6 million to more than \$30 million.⁷⁰⁴ Middleton’s work laid the foundation for a research program long recognized for pioneering important medical technologies, including medical use of radioisotopes, dialysis, cardiac pacemakers, liver transplantation, as well as seminal studies that documented the benefits of coronary artery bypass surgery and drug treatment of hypertension.⁷⁰⁵ The program also stood out for its capacity to design and rapidly implement large-scale cooperative trials, first mounted in the 1950s with successful evaluation

of chemotherapy for tuberculosis.⁷⁰⁶ Working on issues relevant to veterans, VA researchers developed functional electrical stimulation systems to allow patients to move paralyzed limbs, helped develop the first ankle-foot prosthesis, and launched the largest-ever trial of psychotherapy to treat posttraumatic stress disorder.⁷⁰⁷

Middleton expanded the VA educational program. In addition to growing the number of medical residents it helped train, VA provided training to a large share of clinical psychologists, graduate dentists, student nurses, occupational and physical therapists, social work students, and dietetic interns. Middleton instituted numerous advances in VA care such as introducing outpatient care for preadmission workups and post-hospital treatment that allowed earlier release from inpatient stays. He moved VA away from operating hospitals for specific diseases (as had been done for tuberculosis and mental illness).⁷⁰⁸

The enactment of Medicare in 1965 raised questions about the effect that program would have on the VA health care system. The House Veterans Affairs Committee sent a questionnaire to a group of 10,000 veterans explaining the new program and asking the veteran to if they preferred VA care or treatment in a community hospital under Medicare.⁷⁰⁹ Some 59 percent responded, and nearly two-thirds of respondents preferred VA.⁷¹⁰ At the time, the policy governing those eligible for VA care based on financial need was that Medicare benefits were to be considered in determining an individual's ability to pay for needed care.⁷¹¹

The enactment of Medicare and other changes in health care in 1977, led to a commission being established by the National Academy of Sciences (NAS) which issued a report pursuant to a congressional directive to evaluate the VA health care system. Among its findings, the commission reported that VA had a surplus of acute beds and recommended that new facilities be constructed only after examining bed availability in the community. It also recommended that underutilized VA hospitals be closed or converted to long-term care facilities, and resources redistributed to permit a shift from inpatient to outpatient care. The NAS commission also recommended that VA experiment with models for community-based integrated care.⁷¹² The commission's recommendation for integrating the VA system into the nation's civilian health care program⁷¹³ provoked objection, particularly in Congress.⁷¹⁴ Hearings produced sharp rejections of the NAS commission findings and its call to end VA's role in providing health care to veterans.

⁷¹⁴ *Hearings before the Subcommittee on Medical Facilities and Benefits of the Committee on Veterans Affairs*, 95th Cong., 1st Sess. (July 21, 1977), Statement of Dr. Saul Farber.

The VA of the 1970s and 1980s is remembered as bureaucratic, reliant on paper health care records, and driven by patient admissions (on which budgets were based).⁷¹⁵ The quality of VA care was also an issue. Complaints from Vietnam veterans and critical media accounts fueled outrage, and led to the view that the system was broken. The question, how to fix it, reopened an earlier dialogue around making VA a cabinet-level department, a view strongly supported by veterans service organizations (VSOs) and veterans' leaders in the House of Representatives. In 1988, after years of debate, and opposition from administration offices and advisors, President Reagan signed legislation creating a Department of Veterans Affairs.⁷¹⁶ The new department, with DM&S now renamed the Veterans Health Services and Research Administration (to emphasize its research legacy in such fields as infectious disease, pacemaker technology, and prosthetics), employed some 194,000 people with a \$12 billion budget.⁷¹⁷

Facing an aging veteran population⁷¹⁸ expected to overwhelm the system by 2010, the new secretary, Edward Derwinski, in 1989 requested Congress establish an independent commission to review the alignment and mission structure of VA's hospitals. Congress rebuffed the request after VSOs, suspecting a plan to close hospitals, lobbied against it.⁷¹⁹ Derwinski created his own "Commission on the Future Structure of Veterans Health Care" that was to review all VA hospitals and recommend needed mission changes. Instead, the so-called Mission Commission called for expanding eligibility law to enable veterans to obtain the full continuum of VA health care services. Although the commission identified the need for fundamental restructuring of the VA health care system, the subject was soon overtaken by national health reform proposals, and what role VA might have under a universal coverage system.⁷²⁰

Dr. James Holsinger, a new under secretary for health (USH), made care quality a top goal and issued a Blueprint for Quality tool in 1992, setting the stage for more far-reaching changes instituted by his successor, Dr. Kenneth Kizer. Care quality, a perennial topic, had led to the previous under secretary's resignation following reports of multiple veterans' deaths under questionable circumstances at VA's North Chicago medical center.⁷²¹ Two years later, Derwinski lost his job after creating ire among veterans' organizations in response to his proposed pilot program to open two VA hospitals to poor, rural nonveterans.⁷²²

COMMISSION ON CARE FINAL REPORT

Transformational Leadership

VA's second secretary, Jesse Brown, brought his passion as a veterans advocate to the department's leadership.⁷²³ Among Brown's most important early acts was selecting Dr. Kenneth Kizer, a prominent California physician-administrator and educator, from among 90 candidates identified by a search committee for the USH post.⁷²⁴ With experience heading the California department of public health, Kizer saw health care as a system, and data as a tool to improve it.⁷²⁵

Kizer, in essence, launched a major reengineering of the VA health care system through better use of information technology, measurement and reporting of performance, integration of services, and realigned payment policies.⁷²⁶ His vision was large and bold, underscored by his belief that "we have to be able to demonstrate that we have an equal or better value than the private sector, or frankly we should not exist."⁷²⁷ At VA, Kizer found a workforce trapped in a micro-managerial, command-and-control system in which there was little accountability.⁷²⁸ He set the tone for what was to come at a meeting with senior managers at which he stated,

*The old culture must give way to a new culture . . . that is based on innovation and creativity; a culture based on personal initiative and individual and collective accountability; a culture that is based on outcomes and heightened productivity; and a culture that is committed to change.*⁷²⁹

Among his first steps was the development of what was to become a Vision for Change, a new organizational model to restructure both field operations and central office management. At its core was the creation of 22 veterans integrated service networks, or VISNs, (replacing four regions which had been responsible for overseeing 40 to 45 hospitals each), with decision making shifted away from VA Central Office (VACO) to the new VISN directors. VISNs were to be the basic budgetary and planning unit, and to have staffs of no more than 7 to 10 employees.⁷³⁰ Each VISN was in charge of all the care provided to veterans in that network, and each was funded on a capitated basis rather than based on historical costs.⁷³¹ The VACO structure would be marked by its *flatness*, foregoing a tiered hierarchy.⁷³²

⁷³² James Rife, *Not Your Father's VA: The Transformation of VA Health Care in the Late 20th Century* (Washington, DC: Department of Veterans Affairs, 2014), 111.

The system Kizer and his team inherited was characterized by a multitude of problems.⁷³³ Kizer and his team literally reengineered the veterans' health care system based on a set of transformation strategies: to create management accountability, integrate and coordinate services, improve the quality of care, align system finances with desired outcomes, and modernize information management.⁷³⁴

Kizer also launched a technological revolution in VHA with deployment of a powerful electronic medical record,⁷³⁵ and development of systems such as medication bar-coding to tackle medical errors and ensure patient safety.⁷³⁶

Some of Kizer's successes involved winning support within the administration and from Congress for bold initiatives. He won a critical concession from OMB that VA savings could be reinvested into VA, permitting his transformation efforts to be funded through internal cost-savings rather than new funding,⁷³⁷ and garnered support from Congress for a dramatic reduction of acute care beds and for closing massive regional offices.⁷³⁸ These steps and congressional passage of legislation to reform health care eligibility laws paved the way for establishing universal primary care in VA and developing community-based clinics across the country.⁷³⁹

Sweeping Reform

During a 5-year period, Kizer dramatically changed almost every major VHA management system and improved operational performance through the use of performance measures and contracts. He closed nearly 29,000 acute care beds, merged 52 medical centers into 25 multi-campus facilities, reduced staffing by almost 26,000, opened more than 300 community-based outpatient clinics, and treated 24 percent more patients. In addition to bringing measurable quality into VA health care, Kizer achieved marked reductions in waiting times and medical errors.⁷⁴⁰

Kizer's tenure brought dramatically improved quality, service, and operational efficiency to VHA yet threatened powerful interests. As he noted, "...places like Florida, Arizona, and the

COMMISSION ON CARE FINAL REPORT

Sun Belt States were not getting their fair share [of funds] and their elected officials were unhappy about it. People from Pennsylvania and Illinois and New York were not about to give their money away, so there was this big disconnect.”⁷⁴¹ Kizer’s team developed a capitation system to more equitably allocate funds across the system. Aware of the political ramifications, he implemented incremental changes during a 2- to 3-year period to make them as painless as possible. But the congressional goodwill he had enjoyed unraveled when Kizer and his VISN directors began cutting and consolidating facilities to accommodate VISN funding cuts. The threat of hospital mergers and consolidations ultimately led several senators to block his confirmation to a second term.⁷⁴²

Under new eligibility reform law, all veterans became *eligible* for VA health care, though its authors did not envision that the system could or would serve all eligible individuals, or even all who might someday seek VA care. The law’s priority-based enrollment system was intended to give VA a tool to align demand for care with its funding level.⁷⁴³ The law instead unleashed political pressure to expand enrollment, opening the door to an influx of veterans who historically had not been VA health care users and many of whom were already covered under military retirement benefits, private insurance, or Medicare.⁷⁴⁴ That expansion led to a tremendous demand for prescription drug benefits by new enrollees and in 2003, Secretary Tony Principi ended enrollment for higher income (category 8) veterans “to keep the system solvent.”⁷⁴⁵ At about the same time, other related pressures led Principi to establish an advisory body, the Capital Asset Realignment for Enhanced Services (CARES) Commission, to develop a comprehensive capital asset plan. Principi cited the age of VA facilities and the changes in medical practice, but also reminded a congressional oversight committee of a 1999 Government Accountability Office finding that “maintaining obsolete or duplicative structures diverts \$1 million a day, every day, every year, away from the care of veterans.” Principi did not want to repeat Kizer’s experience and hoped to avoid political backlash.⁷⁴⁶

The CARES Commission released a final report in February 2004 that recommended relatively few actual facility closures, though it proposed substantial facility mission changes at a number of facilities.⁷⁴⁷ As the then USH later recounted, “CARES, like so many things in Washington, was well-intended, but it was derailed politically once it began moving toward actual targeted action within specific congressional districts.”⁷⁴⁸

Despite such defeats, Principi and VA under secretaries following Kizer met formidable challenges, left legacies, and saw the veterans’ health care system continue to be heralded for several years.⁷⁴⁹ A cascade of other events muddled, and even blackened, VHA’s reputation:

accounts of veterans' suicides (and an alleged cover-up); incompetent surgeries and patient deaths at a high-visibility VA medical center (VAMC); failed software acquisitions;⁷⁵⁰ hard-hitting inspector general audit reports on issues such as system flaws, quality of care issues, and lack of timely care that fueled congressional oversight and other constraints. The 2014 scandal that erupted at the Phoenix VAMC represented a decisive turning point and set the stage once again for transforming veterans' health care.

Among initial steps on that long road to transforming the system, the Senate in July 2014 unanimously confirmed Robert A. McDonald, former chief executive officer of Proctor & Gamble, as secretary of veterans affairs. With a business career of delivering better results, McDonald, along with DEPSECVA Sloan Gibson and USH Dr. David Shulkin, has been working to improve VA's health care system and service delivery, and to set a framework for long-term reform. Days after McDonald's confirmation, Congress passed the Veterans Access, Choice, and Accountability Act of 2014, omnibus legislation to improve veterans' access to care. This legislation established the *Choice Program*, mandated an independent assessment of VHA, and established the Commission on Care.

COMMISSION ON CARE FINAL REPORT

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDIX E: THE EVOLVING HEALTH CARE INDUSTRY

Health care has evolved in major ways since the federal government began providing care to veterans after the Civil War, and it will continue to evolve substantially in the future. There are a number of factors that drive evolution in health care, such as population and lifestyle changes, changes within the various health care professions, medical and information systems technology, and systems changes in management and operations.⁷⁵¹ IBM Center for Applied Insight reports that there are 18 trends to watch in health care.⁷⁵² These trends closely encompass those highlighted below. The categories in which the trends fall mirror key topic addressed in the Commission's report to include data system interoperability (10 trends), consumer technology (two trends), health care providers (two trends), government regulations (two trends), and human resources and leadership (two trends). With health care changing so rapidly, and in so many different ways, it is imperative that veterans' health care continually evolve to remain aligned with current and future trends. This section highlights key trends that, based on past experience and current practice, will likely shape health care in the future, were considerations in formulating the Commission's recommendations, and will likely affect transformation of veterans' health care.

Emergence of Large Health Care Systems

The health care industry is moving away from stand-alone community hospitals that serve the needs of a local constituency to large, multiple-campus health care systems.⁷⁵³ The industry will see more high profile mergers and acquisitions in the second half of 2016.⁷⁵⁴ The December 2015 Health Research Institute's report indicates that well-known health care systems may have a market advantage as Americans are willing to travel further for care from a well-known system. This may explain the development and affiliation for Mayo Clinic in Arizona and Florida, and Cleveland Clinic opening in Florida. The report also states that although people are willing to drive for care they are not willing to pay prices higher than the local market. Because of increasing use of outpatient services and same-day surgery, facilities within these health care systems require fewer inpatient beds.⁷⁵⁵ With the advancement of psychotropic drugs, the perceived need for large mental hospitals has declined.⁷⁵⁶ Because of shorter recovery stays, increased outpatient services, telemetry and other monitoring programs, and new medical inventions, hospitals are now built as smaller facilities with parts or sections that can be quickly

COMMISSION ON CARE FINAL REPORT

modified for future changes and medical advances.⁷⁵⁷ VHA will need to consider this trend in evaluating its current physical plant and planning for future facility needs.

Management Changes

As health care systems become increasingly complex, there is a need to manage these institutions using current management theories and models.⁷⁵⁸ During the past few decades, hospital and health care management changed from being managed by a traditional top-down model to continuous quality improvement models that respond to issues such as staff satisfaction, medication errors, safety matters, and wasteful use of supplies. To address errors, hospitals have implemented Six Sigma principles. To address waste, hospitals have implemented LEAN principles. Embracing these changes in management approach and implementing Six Sigma and LEAN principles will support VHA's transformational process.

Health Care Payment

The health care industry is in the midst of transforming its payment model away from a fee-for-service model to value-based payments, a system that drives improved health outcomes.⁷⁵⁹ This transformation is tied to the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), which health care experts expect to shape care delivery and payment reform across the U.S. health care system over the coming decades. Congress created MACRA as a transformative law to fast track the health care system's transition from a traditional fee-for-service payment model to new risk-bearing, coordinated care models.⁷⁶⁰ Because this legislation is still in rulemaking, it is premature for the Commission to weigh in on its potential effect on VA. The MACRA legislation expands the trend toward creation of accountable care organizations (ACOs) and bundled payments for care. ACO models have been reported to drive reduced hospitalization and generate cost savings.⁷⁶¹

Specialty Care Facilities

With changes in the federal payment for hospitals, some high-cost and longer-stay care treatments have been moving out of community hospitals to specialty hospitals. For example, long-term acute care hospitals primarily treat patients on ventilators; rehabilitation facilities treat short-term, post-acute patients who need primarily physical and occupational therapy services for orthopedic or stroke incidences; and cancer hospitals provide innovative treatments for Stage 4 cancer. As a result, community hospitals may no longer need beds to take care of these special patients. VHA will need to consider this trend in planning integrated care networks and evaluating its facility needs in conjunction with these networks.

Outpatient Care and Lifestyle-oriented Venues for Care

With improvements in surgical procedures, many surgeries that required post-surgery hospital stays are now routinely performed in outpatient settings.⁷⁶² Many nonsurgical procedures are being performed in outpatient clinics as well, such as medical imaging, cardiac catheterization, substance abuse treatment, gastrointestinal screening and cancer treatment.⁷⁶³ As care that was once provided only in hospitals is now provided in specialized medical clinics, care that was once provided only in physicians' offices is now being provided in alternative settings. As reported in Health Affairs, "another health care trend consumers are using to save both time and money is that rather than making appointments with their doctors, they are choosing to use walk-in clinics."⁷⁶⁴ Many of these clinics are located in pharmacies, retail chains, or supermarkets, allowing consumers quick, convenient, less-costly care.⁷⁶⁵ Do-it-yourself health care is also a trend, with increasingly more people taking responsibility for their health care. Consumers are using smart phone apps to monitor vital signs, medication adherence, and even urinalysis.⁷⁶⁶ As part of a commitment to continuous improvement, VHA will need to consider alternative venues as it creates integrated health care networks.

Medical Technology

Medical technology companies create life-changing innovation, and "advanced medical devices and diagnostics allow people to live longer, healthier and more productive lives."⁷⁶⁷ In fact, during the past 30 years, medical advancements helped add five years to U.S. life expectancy and reduce fatalities from heart disease, stroke, and breast cancer by more than half.⁷⁶⁸ These advancements also yield savings across the health care system by replacing more expensive procedures, reducing hospital stays, and allowing people to return to work more quickly.⁷⁶⁹ Ensuring veterans receive care that employs cutting-edge technology will be an important part of establishing integrated care networks.

Telemedicine

According to the American Telemedicine Association, "telemedicine is the use of medical information exchanged from one site to another via electronic communications to improve a patient's clinical health status."⁷⁷⁰ Telemedicine includes a growing variety of applications and

COMMISSION ON CARE FINAL REPORT

services using two-way video, email, smart phones, wireless tools, and other forms of telecommunications technology. The use of telemedicine has spread rapidly and is now becoming integrated into hospitals, specialty departments, home health agencies, private physician offices, as well as consumers' homes and workplaces. The following are examples of how telehealth is being used:

- A specialist assisting the primary care physician in rendering a diagnosis might use interactive video or store-and-forward transmission of diagnostic images or information.
- Home-use devices might be used to remotely collect information such as vital signs, blood glucose, or heart electrocardiogram data and transfer it in real time to a home health agency or a remote diagnostic testing facility for interpretation.
- Consumers' internet and wireless devices might be used to obtain specialized health information or participate in online peer-to-peer support groups.

VHA already excels in the use of telehealth and should expand upon its work in this area.

Midlevel Practitioners

During the past few decades, new categories of health care professionals have become increasingly commonplace in hospital settings. For example, hospitalists, physicians who specialize in the practice of hospital medicine, take over when the community-based physician admits his/her patient to the hospital.⁷⁷¹ The hospitalist does not perform the surgery but rather takes on the monitoring of the hospital services needed by the patient. Another example is medical technicians, who monitor the specialized medical equipment and devices that previously were under the purview of nurses in specialty units such as intensive care units. The growing physician shortage has led to reliance on mid-level health care providers. According to the Centers for Medicare and Medicaid Services' National Provider Identifier dataset, there were approximately 106,000 practicing nurse practitioners and 70,000 practicing physician assistants in 2010.⁷⁷² Provider trends may play into ways VHA can address its current staffing shortage.

Electronic Patient Health Information

Health records have undergone transformation from free-form physician notes of the 17th century to electronic health records (EHRs) of the 21st century. Today, providers are using clinical applications such as computerized physician order entry systems; EHRs; and radiology, pharmacy, and laboratory systems to track patient care and progress. Health plans are providing access to claims and care management, as well as member self-service applications.⁷⁷³ These advances allow the medical workforce to be more mobile and efficient (i.e., physicians can check patient records and test results from wherever they are). Though their use comes with

inherent potential security and privacy risks, they will surely play a substantial role in shaping future health care.⁷⁷⁴ Interoperability of these sources of patient information will be a continuing key issue in private-sector, military, and veterans' healthcare organizations.

Population Health

Population health refers to considering incidence and prevalence of diseases in a given area to determine if the area or the environment is contributing to the illness. Physicians and other health care providers may look at a region's demographics to determine what types of care are needed within the population. For example, if 65 percent of the region is older than age 65, then a series of wellness programs that address the chronic care concerns of this population may be needed. From a population health perspective, communities and their respective populations are as important as the individual patients who comprise them when it comes to keeping residents healthy. For VHA, population health issues may revolve around populations of veterans who served in particular wars and operations and the respective injuries and illnesses associated with them.

Geriatric Care

In the United States and Western Europe the birth rate has slowed⁷⁷⁵ and people are living longer.⁷⁷⁶ Demographic researchers report that if an American makes it to age 65, he/she should have about 17 to 20 additional years of life.⁷⁷⁷ Nursing homes and assisted living facilities are now seeing increasingly more of residents' first-time admissions occurring at age 80 or older. Some congregate care retirement facilities report that even with admission in the 80s, the average life expectancy is another 12 or 13 years.⁷⁷⁸ The aging population accounts for increasingly more hospital admissions, and as a result, hospitals rely on more revenue from Medicare.⁷⁷⁹ The VHA beneficiary population mirrors the general U.S. population, and older veterans receiving care through VHA may be sicker than their private-sector counterparts.

Chronic Disease Care

Chronic conditions now account for more than 50 percent of the death rate. Acute problems had previously been the primary causes of death.⁷⁸⁰ Even HIV/AIDS has moved away from being considered an immediate death sentence, and now, with proper treatment, is considered by

COMMISSION ON CARE FINAL REPORT

most to be a chronic disease.⁷⁸¹ The Centers for Disease Control reports that since 2014, more Americans are dying as a result of chronic conditions and diseases than from acute diseases. Most chronic diseases result from lifestyle choices. Lifestyle diseases result from choices that individuals make.⁷⁸² Health care systems invest resources in addressing lifestyle-related issues caused by behaviors such as smoking, using opiates, and overeating.⁷⁸³ Lifestyle diseases such as cancer caused by smoking, addiction caused by drug use, and diabetes caused by obesity, are costly to treat.⁷⁸⁴ Because lifestyle diseases change over time, they are important to consider in thinking about the future of veterans' healthcare. Treating chronic diseases can be costly because care is ongoing, and assuming this trend continues to become more prominent, it will affect the cost of care and how it is provided.⁷⁸⁵

Needs-based Health Care

The Affordable Care Act requires all not-for-profit hospitals to complete a survey of the community (community health needs assessment, or CHNA) to show what entities in the community will address identified needs (asset mapping) and then report on how the hospital will address these needs in a community health care implementation program (CHIP).⁷⁸⁶ Starting in 2016, hospitals must post these reports on their websites and conduct these evaluations every 3 years thereafter. Monitoring community health needs can lead to preventing or stopping the spread of disease. For example, scarcity of quality food has been documented to result in poor school attendance and increased illness.⁷⁸⁷ Some Americans simply have not been exposed to how to prepare vegetables and fruits because they live in areas that are called *food deserts*, where healthy foods are not readily available. Identifying such needs and how they will be addressed can help improve health for specific populations.⁷⁸⁸ In Washington, DC, such a health assessment led to new treatments and protocols for addressing the appearance of a rare strain of tuberculosis brought in by a group of legal immigrants.⁷⁸⁹ Using CHNA and CHIP could be part of VHA's ongoing planning process.

Behavioral Health

Treatment for mental health, now more commonly referred to as behavioral health, has changed dramatically since a 1968 federal law required individuals be cared for in the least restrictive environment.⁷⁹⁰ This law led to an expectation that most patients would receive care in out-patient facilities. Recently legislation was passed that requires insurance companies to increase the amount of payment for behavioral health, which could add more patients to the health care system.⁷⁹¹ VHA is a leader in mental health treatment and should continue to be a trendsetter in this regard.

Preventive Medicine

Traditionally, physicians were trained to cure illness and to restore the sick to health. The trend, however, is changing, and physicians are now trained in prevention and are more active participants in the prevention of illness.⁷⁹² Additionally, insurance and Medicare now cover preventive care and annual physicals, further supporting prevention.⁷⁹³ Preventive medicine is a key component of integrated health care and will need to be considered as VHA works to transform veterans' healthcare.

Pharmacy Changes

Health Affairs reports that "in 2015 . . . an alarming trend of new high-cost specialty pharmaceuticals entered the market. . . . Overall drug spending increased 12.2 percent last year, the highest rate of increase in more than a decade."⁷⁹⁴ Escalating drug prices account for some of this increase, including more than 3,500 generic drugs that at least doubled in price from 2008–2015 and about 400 drugs that increased in cost 1000 percent.⁷⁹⁵ Newly emerging and very expensive developments in the area of genomic medication also contribute to the increase. "One way to combat skyrocketing prices will be biosimilar drugs. These drugs are near substitutes for original brand drugs and could bring significant price discounts."⁷⁹⁶ Because many of VHA's beneficiaries seek only prescription benefits, prescription drug trends will be important to consider in the transformation process.

Commission Workgroups

The Commission on Care organized itself into workgroups in order to complete an analysis of relevant issues, consider options, and suggest recommendations to the full Commission for debate. The Commission formed five workgroups with each responsible for sections of the Independent Assessment or other topics taken on by the group. In establishing each workgroup an effort was made to balance perspectives and expertise, although Commissioners expressed interests were also taken into account in forming the membership of each group. The membership of each workgroup and the topics taken on by each is summarized in Table F-1.

Table F-1. Workgroup Structure and Topics

WORKGROUP NAME	TOPICS	MEMBERSHIP	
Health Care Alignment	<ul style="list-style-type: none"> ▪ Demographics ▪ Health care Capabilities ▪ Care Authorities ▪ Access Standards ▪ Governance 	<ul style="list-style-type: none"> ▪ Blecker ▪ Johnson ▪ Longman ▪ Selnick 	<ul style="list-style-type: none"> ▪ Gorman ▪ Khan ▪ McClenney

Health Care Leadership	<ul style="list-style-type: none"> ▪ Organizational Health ▪ Leadership Systems 	<ul style="list-style-type: none"> ▪ Blecker ▪ Hickey ▪ Selnick ▪ Steele 	<ul style="list-style-type: none"> ▪ Cosgrove ▪ McClenney ▪ Schlichting
Health Care Trends	<ul style="list-style-type: none"> ▪ Market Trends ▪ Technology ▪ Financing ▪ Vision 	<ul style="list-style-type: none"> ▪ Blom ▪ Johnson ▪ Schlichting 	<ul style="list-style-type: none"> ▪ Cosgrove ▪ Khan ▪ Webster

Each workgroup, together with any staff assigned to it, reviewed the findings and recommendations of the Independent Assessment and the Integrated Report; investigated external benchmarks and best practice models; heard testimony in public meetings (with the full Commission); met in workgroup session with VA employees, leaders, former staff and external experts to gather additional insights and explore relevant questions. Commissioners reviewed white papers and strawman proposals prepared by staff and by one another. Based on the assessments and group deliberations, each workgroup developed recommendations for consideration by the full Commission. Details of the process and outputs from each workgroup are described in the following sections.

COMMISSION ON CARE FINAL REPORT

Health Care Alignment Workgroup

The alignment workgroup organized its work around six main topics: governance, realignment of facilities and services, medical sharing, eligibility, other than honorable discharges, and the organization of provider networks. The workgroup met in a face-to-face session on October 7, 2015 to review the charge of the workgroup, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each topic was introduced through a summary paper or summary points which then were used as the basis for a conference call or a face-to-face discussion. For most topics, subsequent calls were held to discuss more detailed papers or to re-visit outstanding issues not yet resolved.

Commissioners also reviewed draft papers and provided additional feedback, revisions, and comments through written comments. The papers were finalized for inclusion in the draft Commission report for discussion on April 19. A summary of the work completed on each topic is provided in the table below.

Health Care Operations Workgroup

The health care operations workgroup was organized around five main topics: access standards, scheduling, clinical workflow, staffing (HR), and productivity. The workgroup (select Commissioners and support staff) first met face-to-face on October 7, 2015 to: introduce the staff, review guiding principles and business rules, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each of the main topics was discussed. During the larger public sessions the Commissioners and staff heard directly from Veterans Affairs staff or outside experts to inform future deliberations. In follow-on meetings the workgroup continued to present research on the four main topics; and cover other issues that may have come up during sessions (i.e., Best Practices) or from questions posed by Commissioners. To supplement the Commission conferences, the workgroup held teleconferences to cover additional research or present information from subject matter experts or emailed informational briefs and write-ups for review before a workgroup teleconference. Feedback from the Commissioners was addressed and the potential recommendations were refined. These papers were finalized and readied for presentation to the full Commission for deliberation and feedback. A summary of the work completed on each topic is provided in the table below.

Health Care Data, Tools & Infrastructure Workgroup

The Health Care Data, Tools & Infrastructure (DTI) workgroup organized its work around four main topics: Health Information Technology, Business Processes, Supplies and Facilities. DTI first met face to face on October 7, 2015 to: introduce the staff, review the charge of DTI, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each of the main topics were discussed. During the larger public sessions the Commissioners and staff heard directly from Veterans Affairs staff or outside experts to inform future deliberations. In follow-on meetings the workgroup continued to present research via white papers on the four main topics; and cover other issues that may have come up during sessions or from questions posed by Commissioners. To supplement the Commission face-to-face meetings, the workgroup held teleconferences to cover additional research or present information from subject matter experts. Feedback from the Commissioners was incorporated into the white papers and the potential recommendations were refined. Commissioners then reviewed the draft papers derived from this process and provided additional feedback, revisions, and comments through meetings and written comments. These papers were finalized and readied for presentation to the full Commission for deliberation and feedback. A summary of the work completed on each topic is provided in the table below.

Health Care Leadership Workgroup

The leadership workgroup organized its work around five main topics: organizational health and cultural transformation and four leadership system issues: recruitment, retention, development and advancement; organizational structure and function; performance management and performance measurement; and human capital management. The workgroup met in a face-to-face session on October 7, 2015 to review the charge of the workgroup, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each topic received an evidence review and summary which was the basis for a conference call or a face-to-face discussion. On a few topics, Commissioners or staff heard directly from VA staff or outside experts to inform the deliberation. Then, in a second meeting on the topic, the Commissioners debated a strawman proposal and alternative recommendations based on the evidence review and the prior Commission discussion. Feedback from the Commissioners was incorporated into the strawman and the potential recommendations were refined. Commissioners then reviewed the draft papers derived from this process and provided additional feedback, revisions, and comments through meetings and written comments. The papers were finalized and presented to the full Commission for deliberation and feedback on March 22, 2016. A summary of the work completed on each topic is provided in the table below.

Site Visits

Background

In the coming decades there will be increased demand for accountability in health care and increased emphasis on health care outcomes and measurements, and VHA will need to rise to meet these expectations to survive and remain competitive in the demanding and turbulent health care environment.⁷⁹⁷ The changing nature of health care organizations, including pressure to reduce costs, improve the quality of care, and meet stringent guidelines, has forced health care professionals to reexamine how they evaluate performance.⁷⁹⁸ Although many health care organizations have long recognized the need to look beyond financial measures when evaluating performance, many still struggle with what measures to select and how to use the results of those measures.⁷⁹⁹

As the nation's largest health care system in 2016, VHA employs more than 305,000 health care professionals and support staff at more than 1,000 sites of care, including hospitals, community-based outpatient clinics (CBOCs), nursing homes, domiciliaries, and 300 Vet Centers.⁸⁰⁰ Given the scope of this health care system, the Commission recognized the importance of direct lines of communication and interaction with VHA leaders, staff, and patients, to include conducting facility site visits. Commissioners conducted facility site visits to their local VA facilities to assist in the evaluation of the findings identified by the *Independent Assessment Report*, to contribute to an environmental scan of the VHA, and to inform the development of recommendations.⁸⁰¹

Scope of Site Visits

In January and February 2016, most of the 15 Commissioners conducted site visits to the VA medical centers (VAMCs) and CBOCs proximal to their respective residences. The Commissioners approached these site visits with a collaborative and information-seeking tone with the purpose of having open discussions with VAMC leadership, staff, and patients.

Individual Commissioners visited 12 VAMC facilities or CBOCs in 7 out of 19 Veteran Integrated Service Networks (VISNs). Additionally, all the Commissioners who attended the February 29, 2016, meeting in Dallas, TX, toured the Dallas VAMC.

COMMISSION ON CARE FINAL REPORT

Table F-6. VA Facility Site Visit Locations

VISN	VISN Name	VA Facility
2	VISN 2	VA Hudson Valley Health Care System (Montrose, NY)
6	VA Mid-Atlantic Health Care Network	Fredericksburg Community-based Outpatient Center, (Fredericksburg, VA)- part of Hunter Holmes McGuire VA Medical Center, Richmond, VA
7	VA Southeast Network	Ralph H. Johnson VA Medical Center (Charleston, NC) Wm. Jennings Bryan Dorn VA Medical Center (Columbia, SC)
10	VA Health Care System	VA Ann Arbor Health care System (Ann Arbor, MI) John D. Dingell VA Medical Center (Detroit, MI)
17	VA Heart of Texas Health Care System	Dallas VA Medical Center (Dallas, TX)
21	Sierra Pacific Network	Southern Nevada Health care System (Las Vegas, NV) VA Northern California Health Care System (Mather, CA) VA Palo Alto Health Care System (Palo Alto, CA)
22	Desert Pacific Health Care Network	Greater Los Angeles Health care System (Los Angeles, CA) VA San Diego Health care System (San Diego, CA)

The Commissioners were provided with a generic basic agenda as guidance, though they had the latitude to determine their own agendas as appropriate for the locations they visited. The model agenda included the following activities: a welcome and overview of the VA health care facility; tour of the facility; veteran discussion session (informal or formal); VHA employee session (e.g., informal or small group discussion); a discussion with the facility leadership, and were provided the recommended questions listed below:

- What does the medical center do well?
- What unique resources can the medical center draw on?
- What do others see as the strengths of the medical center?
- What could the medical center improve?
- Where does the medical center have fewer resources than others?
- What are others likely to see as weaknesses of medical center?
- What opportunities are open to the medical center?
- What trends could the medical center take advantage of?
- How can the medical center turn its strengths into opportunities?
- What threats could harm the medical center?
- What obstacles does the medical center face?
- What threats do the medical center's weaknesses expose it to?

VA-18-0457-A-001385

- What is the impact of MyVA?
- How do employees view working at VA compared to two or three years ago? If there is a change, what is driving it?
- In your view, what is the most important factor affecting patient satisfaction with the care you provide?
- In your view, has there been a change in the perception of the quality of care provided by the medical center? If so, what might be driving this different perception?

Once the Commissioners completed their visits, they provided the data they gathered to Commission staff to be organized in a strengths-weaknesses-opportunities-threats (SWOT) analysis framework. A SWOT analysis is a simple but useful framework for analyzing the four factors as they are faced by an organization. It helps organizations develop strengths, minimize threats, and take the greatest advantage of available opportunities.⁸⁰²

Findings

VHA leadership and staff enthusiastically shared their time, insights, perspective, and data on organizational and operational processes with the Commissioners. The site visits provided insight and reinforced the findings of the *Independent Assessment Report*.

Confirming what the *Independent Assessment Report* stated, the Commissioners found VHA facilities' staff members exhibit a deep commitment to serving veterans, but that VHA's health care facilities deliver strikingly different patient experiences, apply inconsistent business processes, and differ widely on key measures of performance and efficiency.⁸⁰³ Based on Commissioners' observations of weaknesses, challenges, and threats related to daily operations, VAMC staff members appear to be searching for suitable solutions. Anecdotal responses provided to the Commissioners illuminated the following systemic problem areas at the VAMCs:

- Care authorities: health care capabilities (i.e., purchased care)
- Staffing: productivity (i.e., human resources), health care capabilities, access standards, clinical workflow
- Leadership: staffing, productivity (i.e., human resources)
- Facilities: health care authorities (i.e., patient-centered community care)

Data from Commissioners' observation notes were organized into a SWOT analysis chart based on the common themes of the Commissioners' facility site visits. The purpose of this exercise was to gather information to inform the Commission's recommendations and to confirm or

COMMISSION ON CARE FINAL REPORT

dispute the findings of the *Independent Assessment Report*. The Commissioner site visit inputs are summarized in the table below.

Table F-7. SWOT Analysis of Commissioner Site Visit Observations

Strengths	Weaknesses	Opportunities	Threats
<ul style="list-style-type: none"> ▪ VA medical center workforce customer service and dedication ▪ Research and national databases ▪ Veterans service – connected services and programs ▪ Partnerships with medical schools and training programs 	<ul style="list-style-type: none"> ▪ Inefficient/ineffective HR policies ▪ High levels of staffing vacancies ▪ Lack of clinical space; inefficient configurations of clinical space ▪ Poor access to VA care for rural veterans ▪ Lack of an effective financial system to provide real-time payment process to veterans Choice and Purchased Care Programs ▪ Lack of effective VHA leadership workforce ▪ Lack of capacity/access to appointments in VHA ▪ Insufficient federal government health care appropriation rules 	<ul style="list-style-type: none"> ▪ Modernization of VA IT ▪ Customer service training/standards ▪ Strategic focus on VHA core mission ▪ Local funding flexibility from Congress ▪ New vision and mission for VHA health care ▪ Process/systems reengineering ▪ Recruitment of outside leader candidates and retention of high-performing VHA leaders 	<ul style="list-style-type: none"> ▪ Misalignment between Congress's health care operational plans for veterans and VHA strategic health care plans ▪ Competing stakeholders health care interests ▪ Office of Personnel Management outdated standards/policies ▪ Insufficient VHA leadership development ▪ Insufficient IT funding ▪ The physician shortages around the nation has severely impacted the care of patients

Conclusions

Fundamental transformation of VHA is needed to ensure optimal delivery of veteran-centered, high-quality care. Essential to laying the path to excellence and strategic planning is a comprehensive understanding of the current state as well as the opportunities and threats facing the system. A robust connection between leaders in VHA Central Office and leaders in the field is critical to meet the needs of the veteran population served.

As part of the strategic planning process, VA/VHA leadership should make recurring site visits to VHA facilities, including VAMCs, VISN headquarters, and CBOCs to obtain current insight of the following critical areas: health care trends, health care operations, facility management and renovation/replacement, business processes and contracting, and other trends or issues affecting VAMCs. VA/VHA leaders should use performance management tools and activities to ensure the strategic goals are being met in an effective and efficient manner. It is a constant challenge to continuously and reliably measure the pulse of the organization. Site visits promote a healthy culture of sharing and building an understanding of organizational mission.

APPENDIX G: VETERAN FEEDBACK

In addition to the more than 4,000-page *Independent Assessment Report*, the Commission examined dozens of other reports, studies, and presentations as cited in the hundreds of footnotes dispersed throughout this Final Report. Collectively, these many sources provide a wealth of information on the challenges VHA confronts in realizing a vision for veterans' healthcare that leverages the strengths of VA and capitalizes on the potential non-VA providers offer.

A key source the Commission considered was the views of veterans themselves. Given the Commission's brief tenure, it was not possible to conduct a survey representative of the views of millions of veterans receiving health care from VHA. Instead, the Commission encouraged veterans to offer feedback on their health care experiences and the work of the Commission through its website. Many veterans service organizations (VSOs) also provided views representing their members in open sessions with the Commission and in formal letters and position statements directly to the Commission.

The feedback offered by veterans through the Commission's web site covered a range of health care topics, such as whether and to what extent care should be privatized, how much choice veterans should have in deciding on their care, and their assessment of the quality of care received. Not surprisingly, veterans (including a few who were also VA employees) are quite passionate about their views on health care. For the most part, veterans' feedback from the web site expressed opposition to efforts to *privatize* VHA, although a few did want more access to non-VA providers. The *Choice Program* was frequently criticized for long delays in appointments, convoluted or misapplied eligibility criteria, and issues with how providers should be reimbursed for treatment and how much the veteran should pay. When the quality of care was noted, on balance veterans praised the care received from VHA, with a few disappointed, especially when care was outsourced to non-VA providers. Because the feedback was unstructured, veterans could offer any observations they found pertinent.

The Disabled American Veterans (DAV) shared with the Commission a compendium of more than 4,000 verbatim comments on veterans' health care experiences gathered from their members during April 2016. The DAV reviewed the comments and categorized 82 percent of the comments as "overall positive experiences."⁸⁰⁴ The Commission staff reviewed the comments from DAV, with findings consistent to DAV's.

⁸⁰⁴ Comments from veterans about their experiences as users of the VA health care system, printout provided to Commission on Care by Disabled American Veterans, April 2016.

VA Efforts to Gather Input on Veterans Views on Health Care

Like most institutions that provide products and services to customers, VA/VHA solicits input from veterans on their health care needs and their views on specific services VA/VHA provides. Surveys, focus groups, and in-depth interviews are the more typical means for gathering input from veterans. On occasion, VA, like most agencies, encourages veterans and others to submit comments on a particular aspect of VA services and benefits.⁸⁰⁵

The following sections describe the more typical methods employed by VA/VHA to gather input from veterans.

VHA Survey of Veterans' Health and Use of VHA

Conducted by the assistant deputy undersecretary for policy and planning, the survey of veteran enrollees' health and use of health care (Survey of Enrollees) is an annual survey of more than 40,000 veterans who are enrolled in VA's health care system. The Survey of Enrollees was initially designed to give VHA the information it needed to predict the demand for services in the future. The data are used to develop health care budgets and to assist VA with its annual enrollment decisions. Over the years, the data have also been used to analyze policy decisions, provide insights into specific populations and their perspectives, and inform management decisions affecting delivery of care. In addition to collecting basic demographic information, the survey explores insurance coverage, use of health care inside and outside of VA, pharmaceutical use, attitudes and perceptions about VHA services, perceived health status, and trends in smoking among veterans enrolled in the VHA system.⁸⁰⁶

Survey of Healthcare Experiences of Patients⁸⁰⁷

The Survey of Healthcare Experiences of Patients (SHEP) program was initiated in 2002 in an effort to create standardized survey instruments administered monthly to assess ambulatory and inpatient care. In an effort to standardize its survey instruments with other health care providers, SHEP now employs the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey methodology for VHA's primary care and inpatient medical and surgical services. These surveys are supported in the public domain by the CAHPS Consortium, Agency for Healthcare Research and Quality, Centers for Medicare and Medicaid Services, and National Committee for Quality Assurance. Although SHEP deployed the standardized CAHPS surveys,

⁸⁰⁵ "Quality of Care Feedback Form," Department of Veterans Affairs, accessed June 20, 2016, <http://www.va.gov/QUALITYOFCARE/apps/contact.asp>. As an example, the VA web site provides a Quality of Care feedback page for veterans and others to enter comments on the care a veteran received.

⁸⁰⁶ Westat, 2015 Survey of Veteran Enrollees' Health and Use of Health Care, accessed June 6, 2016, http://www.va.gov/healthpolicyplanning/SoE2015/2015_VHA_SoE_Full_Findings_Report.pdf.

⁸⁰⁷ For more details on SHEP and VHA's recent initiatives to expand the scope of the program, see "Health Services Research & Development, Commentary: Listening to Veterans about Access to Care," Steven M. Wright, VHA Office of Analytics and Business Intelligence, U.S. Department of Veterans Affairs, accessed June 20, 2016, <http://www.hsrd.research.va.gov/publications/forum/nov15/default.cfm?ForumMenu=nov15-1>.

the access questions were limited and did not evaluate the full scope of services used by veterans.

VHA intends to expand the SHEP program with additional surveys in 2016 and beyond. These surveys will focus on satisfaction with various specialty care services and experience with community care available through the Veterans Access, Choice, and Accountability Act of 2014. VHA has also launched a survey that focuses on new veteran enrollments and their experience with first clinic appointments.

Veteran Insights Panel

VHA also established a Veteran Insights Panel, comprising more than 3,200 veterans that are representative of users of VA health care.⁸⁰⁸ VHA interacts with the panel through email notification and a special access website (mobile device enabled). This approach provides VHA an opportunity to engage panel members in direct discussions, including real time feedback via live chat, about important themes and issues, and survey development and testing. The panel can be engaged collaboratively with operational program offices and researchers to prompt direct discussions with our veterans.

Voices of Veterans: On-going Research

Initiated in the spring of 2014, the VA Center for Innovation (VACI) sponsors an on-going effort to employ human-centered design (HCD)⁸⁰⁹ concepts in a pilot to explore veterans' experience with VA through the eyes of 40 veterans across a range of demographics and locations.⁸¹⁰ The pilot had two goals:

- To test the usefulness and application of an HCD methodology within the context of VA.
- To better understand veterans' experiences interacting with VA, identify pain points in the present day service delivery model, and explore opportunities to transform these interactions into a more veteran-centered experience.

Developing Veteran Personas

As a part of this pilot, VACI set out to identify high-level trends in ways veterans seek out assistance, use technology, take advantage of services, and react to challenging interactions. Based on these patterns, VACI created a set of four profiles, or personas, that represent the

⁸⁰⁸ Ibid.

⁸⁰⁹ Human-centered design (HCD) is a discipline in which the needs, behaviors and experiences of an organization's customers (or users) drive product, service, or technology design processes. It is a practice used heavily across the private sector to build a strong understanding of users, generate ideas for new products and services, test concepts with real people, and ultimately deliver easy-to-use products and positive customer experiences. HCD is a multi-disciplinary methodology which draws from the practices of ethnography, cognitive psychology, interaction and user experience design, service design, and design thinking. It is closely tied to "user-centered design," which applies parallel processes to technology projects, and "service design" which address the service specific experiences.

⁸¹⁰ U.S. Department of Veterans Affairs, Center for Innovation, *Toward a Veteran-Centered VA: Piloting Tools of Human-Centered Design for America's Vets, Findings Report, July 2014*, accessed June 20, 2016, http://www.innovation.va.gov/docs/Toward_A_Veteran_Centered_VA_JULY2014.pdf.

COMMISSION ON CARE FINAL REPORT

kinds of users within the set of 40 veterans engaged in the pilot (see Table G-1). Each persona is an archetype based on commonalities observed among veterans who exhibited similar behaviors and approaches to accessing VA services. They are not categorized by positive or negative experiences, but by shared expectations and needs. These personas were designed to help VHA begin to understand that it is serving users who are seeking not just different services, but also varied degrees of contact, support, information, and so forth. For this exercise, VACI assessed veterans' modes of communication, channels, frequency, stated and observed needs, reactions to service experiences, military service, and analyzed observed behavior and service experiences.

Table G-1. Veteran Profiles Developed by the VA Center for Innovation⁸¹¹

THE LIFER	THE TRANSACTIONAL
<p>Frequently use VA services and plans to continue doing so. Look to VA to play a supporting, community-building role in life. Grateful for VA benefits, but get frustrated when problems arise which break up the continuity of care—like when doctors change too frequently and when they cannot get transportation to VA facilities. Generally, try to speak highly of VA and wants to contribute to making it work better for fellow veterans.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA cares and takes the time to understand veteran's needs and story ▪ That cost of VA services won't rise ▪ That veteran can reach someone at VA anytime <p>Needs</p> <ul style="list-style-type: none"> ▪ Does not want to tell story over and over, especially after using VA for so long ▪ Wants to know what is going on with services and especially benefits ▪ Likes patient, nurturing health care 	<p>Joined the military largely based on the promise of the opportunities it would provide in life. Plan to use VA services to "get life on track" post-service. Tend to be in the younger generation of veterans (OEF, OIF, OND). Often engaged in the veteran community, see other veterans as allies, and advocates in helping folks understand and use their benefits. Will share frustrations if feels like VA is not helping as promised.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA will deliver on its promises and help veteran access the benefits earned ▪ That VA has benefits available to veterans families ▪ That it will be a headache, and veterans will have to figure it out on their own with the help of network <p>Needs</p> <ul style="list-style-type: none"> ▪ Accurate expectations ▪ Financial support at times, especially for family ▪ To feel a part of a community

⁸¹¹ Ibid.

THE JUST-IN-CASE	THE INFREQUENT
<p>Proud of service, but does not need VA and plans on using it only as a backup. Mature and organized by nature, has all papers in order with VA and have a good idea of services for which they are eligible. Grateful for the benefits available, but see working with VA as a tradeoff for time and will likely only lean on VA as a backup plan.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That will likely never need VA benefits ▪ That VA will be there if needed ▪ That there are benefits available to family ▪ That private benefits are of higher quality and greater ease <p>Needs</p> <ul style="list-style-type: none"> ▪ Peace of mind ▪ To be assured that all documents are in order ▪ To easily get in touch with one person about one question 	<p>Does not think very much about VA. Have used VA benefits in lifetime, yet often years will go by between those interactions. This might be because these veterans live in places where it is difficult to access VA services, because veterans are financially comfortable, or because it seems like too much hassle. Tend to prefer quick interaction—a short phone call or a few clicks on a website.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA is slow—like any bureaucracy ▪ That VA is for “other, injured veterans who need it more” ▪ That someone will tell veterans when and if they are eligible for something <p>Needs</p> <ul style="list-style-type: none"> ▪ To be able to quickly navigate processes ▪ To be reminded every few years of how VA might be able to help

Vantage Point: VA’s Official Blog

In addition to surveys, focus groups, and town-hall sessions, VA instituted a blog on its website and invites veterans and others interested in veterans matters to submit guest posts of potential interest to others in the community. Like most blogs, the content offered is vetted by the VA. Since 2010, Vantage Point includes hundreds of contributors with articles on various health care topics.⁸¹²

Veterans’ Views Gathered by VSOs

Like VHA, the VSOs solicit input from their membership and other stakeholders on a variety of topics and issues relevant to veterans. Occasionally surveys and polls are undertaken, but most VSO efforts to gather input take place at the grassroots level during town halls, chapter meetings and other gatherings. While these venues often suffer from self-selection bias and non- or under-represented participant samples, these are nevertheless an important source of timely information on topics of interest and concern to veterans. What follows is a selection of VSO efforts to gather input on issues important to veterans.

⁸¹² “Vantage Point: Official Blog of the U.S. Department of Veterans Affairs,” Department of Veterans Affairs, accessed June 20, 2016, <http://www.blogs.va.gov/VAntage/>.

COMMISSION ON CARE FINAL REPORT

The DAV Veterans Pulse Survey (2015)

In mid-2015 the DAV surveyed a nationally representative sample of veterans to solicit their views on issues important to veterans.⁸¹³ The survey includes questions on various aspects of veterans' healthcare. The survey consists of a national probability sample of 1,701 veterans intended to represent the veteran population in the United States. Oversampling occurred in certain subgroups, such as female veterans and veterans age 18-40 to allow for more precision in the response estimates for these subgroups.

Veterans of Foreign Wars Our Care Veterans Survey (2015)

In the fall of 2015, the Veterans of Foreign Wars of the U.S. (VFW) published a report on its veterans 2015 Health Care Options, Preferences and Expectations Survey.⁸¹⁴ In response to the intensified debate over reform of veterans' healthcare, the VFW launched a survey in the summer of 2015 designed to evaluate veterans' options, expectations, and preferences when seeking health care. The survey did not just focus on VA services, but sought to paint a picture of how the veterans' community at large interacts within the American health care infrastructure, and the choices they make in today's health care marketplace. According to the VFW report, 1,847 veterans responded to the survey, with 92 percent eligible for care and 83 percent of those eligible reporting that they utilize VA health care.⁸¹⁵ Respondents' average age was 65, with about two-thirds Vietnam War veterans.

VFW Survey of Women Veterans (2016)

In an effort to identify barriers women veterans face when accessing their earned veterans' benefits and services, the VFW has commissioned a survey of women veterans that will guide the VFW's policy priority goals for women veterans.⁸¹⁶ Though the survey data collection phase is completed, results have not been published prior to release of the Commission's Final Report.

⁸¹³ Disabled American Veterans (DAV), *The DAV Veterans Pulse Survey: A landmark study of the attitudes and perceptions of America's veterans*, accessed June 20, 2016, <https://www.dav.org/wp-content/uploads/DAV-Pulse-Report-Final.pdf>. The survey was conducted on behalf of DAV by GfK Knowledge Networks, Inc. using their KnowledgePanel® survey participants in November 2015.

⁸¹⁴ Veterans of Foreign Wars, *Our Care: A Report on Veterans' Options, Preferences and Expectations in Health Care*, September 22, 2015, accessed June 20, 2016, http://www.vfw.org/uploadedFiles/VFW.org/VFW_in_DC/VFWOurCareReport2015.pdf.

⁸¹⁶ "VFW Survey of Women Veterans: Help Hold the VA Accountable," Veterans of Foreign Wars, December 22, 2015, accessed June 20, 2016, <http://www.vfw.org/News-and-Events/Articles/2015-Articles/VFW-Survey-of-Women-Veterans/>.

The American Legion Survey of Patient Health Care Experiences (2014)

This survey of 3,116 opt-in, self-reported veterans focuses on satisfaction and levels of perceived benefits with VA's posttraumatic stress disorder/traumatic brain injury (PTSD/TBI) programs, including alternative and complementary treatments.⁸¹⁷

Survey questions include veteran status; gender; era of service; number of times deployed; diagnosis of TBI and/or PTSD; availability of appointments; time and distance to care facilities; treatment type (therapy, medication and complementary and alternative medicine); reported symptoms; efficacy of treatment; and side effects.

The American Legion Women Veterans Survey Report (2011)

This survey of 3,012 women veterans, and the resulting report, was prepared by ProSidian Consulting, LLC on behalf of The American Legion. The survey assessed the perceptions of and satisfaction with women veterans' health care and other benefits delivered to women veterans through the VA system. Additionally, the survey sought to determine the factors driving women veterans' decision to use the VA system as opposed to other private or public health care systems.⁸¹⁸

Iraq and Afghanistan Veterans of America Member Survey (2015)

During the first half of 2015, 1,501 Iraq and Afghanistan Veterans of America members completed a wide-ranging on-line survey covering such issues as employment, education, GI Bill usage, health (including mental health), VA utilization, VA benefits, reintegration and more. The survey was composed of approximately 300 questions, with respondents answering only questions relevant to their experiences. Health care topics included percent enrollment in and reliance on VA care; health insurance coverage by type; and experience rating for VA care. Usage percent and experiencing rating for the VA *Choice Program* was also covered separately.⁸¹⁹

The 2015 Wounded Warrior Project® Alumni Survey

This web-enabled, opt-in survey of 23,200 Wounded Warrior Project (WWP) members measures a series of outcome domains within the following general topics about WWP Alumni: background information (military experiences and demographic data), physical and mental well-being, and economic empowerment.⁸²⁰ This WWP membership survey has been conducted annually since 2010. As it has done in prior years, Westat conducts the survey and population-

COMMISSION ON CARE FINAL REPORT

weights the reported results, to include adjustments for potential non-response bias, to be representative of the WWP membership base (approximately 59,000).

Right to Care: Voices of Swords to Plowshares' Veteran Community (2015)

The Swords to Plowshares, Institute for Veteran Policy interviewed in-person or by phone 22 veterans.⁸²¹ Although the topics were established in advance, Swords to Plowshares characterized these interviews as individual “conversations” with a preselected group of veterans. The veterans were chosen to represent a cross-section of combat eras and VHA usage levels. The topics covered included: navigating VA care, reliance on VA and non-VA care, comprehensiveness of care, and rating quality of care. The study includes extensive verbatim comments from veterans on these topics.

Comments from Veterans About Their Experiences as Users of VHA (DAV, 2016)

During April 2016, DAV reached out to veterans around the United States and asked them to share their experiences with the VA health care system. As a result, DAV received (as of April 2016) more than 4,000 responses from veterans sharing their own stories about the care they received from VHA.⁸²² The Commission’s review of the material showed that a majority of the veterans’ comments were positive in nature. DAV’s own analysis concluded that 82 percent of the comments could be categorized as “overall positive experiences.”

Other Surveys on Veterans Issues

In addition to efforts by VA and VSOs to gather feedback from veterans on their health care, other organizations have also addressed veterans’ health care issues.

Concerned Veterans for America Survey of Veterans' Healthcare (November, 2014)

The Concerned Veterans for America commissioned The Tarrance Group to conduct a national survey of 1,000 veterans during November 2014.⁸²³ This survey used a random, demographically representative sample of veterans. Four survey items addressed health care, including: knowledge of any problems at VA; need for reform of veterans’ healthcare; importance of more choice (or options) in health care for veterans; and importance of best possible veterans care, even if outside VA.

Vet Voice Foundation Survey of Veterans (October, 2015)

Chesapeake Beach Consulting and Lake Research Partners conducted 800 phone (landline and cell) interviews of veterans during October 2015. The results were population weighted by demographics. Topics included rating the job VA hospitals are doing in their area and the extent they favor/oppose privatizing some of VA's health care.

COMMISSION ON CARE FINAL REPORT

APPENDIX H: ADDITIONAL RESOURCES

The VHA health care system is immense and complex. This report provides background for the areas for which the Commission has made recommendations, yet this information is but a glimpse at the intricacies of veterans' health care. The resources below may serve as a starting point for those who would like to develop a deeper understanding of the topic than the Commission could address in this report.

Veteran Health Competency Resources

American Nurses Foundation

The American Nurses Foundation, the philanthropic arm of the American Nurses Association, is launching an innovative web-based PTSD Toolkit for registered nurses. The toolkit provides easy to access information and simulation based on gaming techniques on how to identify, assess and refer veterans suffering from PTSD. www.nurseptsdtoolkit.org

American Osteopathic Association

The American Osteopathic Association (AOA) represents osteopathic physicians, many of whom are in primary care practice, and essentially all of whom treat America's veterans and their families. The AOA is raising awareness in the osteopathic community about the importance of having a comprehensive understanding of the unique physical and mental health care needs of our service members, veterans, and their families. The AOA is committed to ensuring that medical students, physicians, and other health care providers understand that an individual's physical and/or mental health condition may be linked to his or her military experience.

VA-18-0457-A-001399

Center for Deployment Psychology

The Center for Deployment Psychology of the Uniformed Services University of the Health Sciences, Department of Medical and Clinical Psychology offer a wide variety of on-line courses and other resources to help uniformed clinical providers, VHA providers, and community clinicians provide care consistent with the needs and experience of military service members, veterans and their families.

<http://deploymentpsych.org/online-courses>

<http://deploymentpsych.org/military-culture-course-modules>

Rural Clergy Training Program

The Rural Clergy Training Program, an initiative of the VHA National Chaplain Center and the Office of Rural Health, offers training and information to clergy providing pastoral services to veterans and their families.

http://www.ruralhealth.va.gov/docs/ruralclergytraining/The_Clergy_Connection_December_2015.pdf

Swords to Plowshares Combat to Community Training

Swords to Plowshares is nationally recognized for its expertise in providing comprehensive services and promoting and protecting the rights of veterans. Swords to Plowshares' *Combat to Community*® training is a series of accredited cultural competency curricula developed by its Institute for Veteran Policy team with the purpose of educating the community to address the reintegration challenges veterans face and the unique skill sets they acquire in service. The training was developed for law enforcement, first responder, mental health, and service professionals to teach:

- Commonly shared attitudes, values, goals, and practice that often characterize service in the military
- Recruitment and retention strategies for veteran employment
- How deployment, combat experience, service related injuries, and disability can impact veterans
- How veteran or military family status can inform interactions and services
- Potential resources to refer veterans and families to for supportive services

The training incorporates knowledge developed by experts in the fields of veteran culture and direct services with practical tools and resources to increase understanding and improve interactions with veterans.

COMMISSION ON CARE FINAL REPORT

VA Military Culture Training Courses on TMS

The resources below are available to VA employees and contractors. Versions of these courses should be made available to community providers through an alternative to TMS that allows outside providers to access the training.

- **Military Culture Training for Health Care Professionals – Organization and Roles (VA 19332)**

The first module of this online course provides an overview of the differences between the explicit and implicit features of military culture and describes the characteristics of implicit military culture. The next module identifies four sources of information about implicit military culture and describes six defining characteristics of warrior ethos. The learner is provided information about the influence of military guiding ideals and values on the lives of service members and veterans. The final module offers an overview regarding the connotations of implicit military culture on the health care professional.

- **Military Culture Training for Health Care Professionals: Self-Awareness and Military Ethos (VA 19333)**

This online course, sponsored by the Department of Veterans Affairs and Department of Defense, helps health care professionals understand the role that military culture plays in the lives of those they serve. The course is comprised of four modules: 1) Self-Assessment and Introduction to Military Ethos, 2) Military Organization and Roles, 3) Stressors and Their Impact, and 4) Treatment Resources and Tools.

- **Military Culture Training for Health Care Professionals: Stressors & Resources (VA 19334)**

This online course offers the learner an explanation of how stress can be either helpful or harmful depending on the nature of the provoking stressor and the availability of resources. The four phases of modern operational deployment cycles is presented in great detail in module 3. The next two modules describe the characteristic operational stressors and the spectrum of operational stress states and outcomes experienced by service members and their families during each deployment cycle phase.

- **Military Culture Training for Health Care Professionals: Treatment Resources, Prevention & Treatment (VA 19335)**

This online course in the military culture curriculum outlines the military culture impact on patient care and the health care professional's role and explains the range of DoD and VA psychological health services. The course also provides information on interpreting military culture knowledge into patient assessment and treatment. Finally, the learner is exposed to the military culture implications of VA/DoD clinical practice guidelines relevant to the care of service members and veterans and the strategies for identifying current military culture relevant patient and health care professional resources.

- **Military Cultural Awareness (NFED 1341520)**

This military cultural awareness online course provides a common foundation for all VA employees. This course offers an overview of common military culture and courtesies, roles and ranks within the military, differences between the branches of the armed services, some of the conflicts in which veterans have served, and why this information

VA-18-0457-A-001401

is important in helping VA employees better serve the needs of veterans and their families. After taking this course, participants will understand the perspective of the veterans they serve by having a greater awareness of the military experience, and the customs and courtesies that are common in the military environment.

- **PTSD 101: Understanding Military Culture When Treating PTSD (VA 9494)**
This online web-based course is part of the PTSD 101 education series which is presented by subject-matter experts to increase provider knowledge related to the assessment and treatment issues of PTSD. Each course specifically addresses trauma events, treatments, or special population issues, not normally addressed in general therapy protocols. This course is specifically designed to familiarize clinicians with military culture, terminology, demographics, and stressors. It also provides an overview of programs offered by DoD for managing combat or operational stress, as well as implications for assessment and treatment.
- **Why Military Culture Matters (Mobile Accessible) (VA 16353)**
This independent online study activity is designed to help the learner better connect with veterans and understand how veterans' military experiences influence their health. This course is formatted to be accessible using a VA networked mobile device.

APPENDIX I: ENABLING DOCUMENTS

Veterans Access, Choice, and Accountability Act of 2014

TITLE II—HEALTH CARE ADMINISTRATIVE MATTERS

SEC. 201. INDEPENDENT ASSESSMENT OF THE HEALTH CARE DELIVERY SYSTEMS AND MANAGEMENT PROCESSES OF THE DEPARTMENT OF VETERANS AFFAIRS.

(a) INDEPENDENT ASSESSMENT. —

(1) ASSESSMENT. — Not later than 90 days after the date of the enactment of this Act, the Secretary of Veterans Affairs shall enter into one or more contracts with a private sector entity or entities described in subsection (b) to conduct an independent assessment of the hospital care, medical services, and other health care furnished in medical facilities of the Department. Such assessment shall address each of the following:

(A) Current and projected demographics and unique health care needs of the patient population served by the Department.

(B) Current and projected health care capabilities and resources of the Department, including hospital care, medical services, and other health care furnished by non-Department facilities under contract with the Department, to provide timely and accessible care to veterans.

(C) The authorities and mechanisms under which the Secretary may furnish hospital care, medical services, and other health care at non-Department facilities, including whether the Secretary should have the authority to furnish such care and services at such facilities through the completion of episodes of care.

(D) The appropriate system-wide access standard applicable to hospital care, medical services, and other health care furnished by and through the Department, including an identification of appropriate access standards for each individual specialty and post-care rehabilitation.

(E) The workflow process at each medical facility of the Department for scheduling appointments for veterans to receive hospital care, medical services, or other health care from the Department.

(F) The organization, workflow processes, and tools used by the Department to support clinical staffing, access to care, effective length-of-stay management and care transitions, positive patient experience, accurate documentation, and subsequent coding of inpatient services.

VA-18-0457-A-001406

COMMISSION ON CARE FINAL REPORT

(G) The staffing level at each medical facility of the Department and the productivity of each health care provider at such medical facility, compared with health care industry performance metrics, which may include an assessment of any of the following:

(i) The case load of, and number of patients treated by, each health care provider at such medical facility during an average week.

(ii) The time spent by such health care provider on matters other than the case load of such health care provider, including time spent by such health care provider as follows:

(I) At a medical facility that is affiliated with the Department.

(II) Conducting research.

(III) Training or supervising other health care professionals of the Department.

(H) The information technology strategies of the Department with respect to furnishing and managing health care, including an identification of any weaknesses and opportunities with respect to the technology used by Department, especially those strategies with respect to clinical documentation of episodes of hospital care, medical services, and other health care, including any clinical images and associated textual reports, furnished by the Department in Department or non-Department facilities.

(I) Business processes of the Veterans Health Administration, including processes relating to furnishing non-Department health care, insurance identification, third-party revenue collection, and vendor reimbursement, including an identification of mechanisms as follows:

(i) To avoid the payment of penalties to vendors.

(ii) To increase the collection of amounts owed to the Department for hospital care, medical services, or other health care provided by the Department for which reimbursement from a third party is authorized and to ensure that such amounts collected are accurate.

(iii) To increase the collection of any other amounts owed to the Department with respect to hospital care, medical services, and other health care and to ensure that such amounts collected are accurate.

(iv) To increase the accuracy and timeliness of Department payments to vendors and providers.

(J) The purchasing, distribution, and use of pharmaceuticals, medical and surgical supplies, medical devices, and health care related services by the Department, including the following:

(i) The prices paid for, standardization of, and use by the Department of the following:

(I) Pharmaceuticals.

(II) Medical and surgical supplies.

(III) Medical devices.

(ii) The use by the Department of group purchasing arrangements to purchase pharmaceuticals, medical and surgical supplies, medical devices, and health care related services.

(iii) The strategy and systems used by the Department to distribute pharmaceuticals, medical and surgical supplies, medical devices, and health care related services to Veterans Integrated Service Networks and medical facilities of the Department.

(K) The process of the Department for carrying out construction and maintenance projects at medical facilities of the Department and the medical facility leasing program of the Department.

(L) The competency of leadership with respect to culture, accountability, reform readiness, leadership development, physician alignment, employee engagement, succession planning, and performance management.

(2) PARTICULAR ELEMENTS OF CERTAIN ASSESSMENTS. —

(A) SCHEDULING ASSESSMENT. — In carrying out the assessment required by paragraph (1)I, the private sector entity or entities shall do the following:

(i) Review all training materials pertaining to scheduling of appointments at each medical facility of the Department.

(ii) Assess whether all employees of the Department conducting tasks related to scheduling are properly trained for conducting such tasks.

(iii) Assess whether changes in the technology or system used in scheduling appointments are necessary to limit access to the system to only those employees that have been properly trained in conducting such tasks.

(iv) Assess whether health care providers of the Department are making changes to their schedules that hinder the ability of employees conducting such tasks to perform such tasks.

(v) Assess whether the establishment of a centralized call center throughout the Department for scheduling appointments at medical facilities of the Department would improve the process of scheduling such appointments.

(vi) Assess whether booking templates for each medical facility or clinic of the Department would improve the process of scheduling such appointments.

(vii) Assess any interim technology changes or attempts by Department to internally develop a long-term scheduling solutions with respect to the feasibility and cost effectiveness of such internally developed solutions compared to commercially available solutions.

(viii) Recommend actions, if any, to be taken by the Department to improve the process for scheduling such appointments, including the following:

COMMISSION ON CARE FINAL REPORT

(1) Changes in training materials provided to employees of the Department with respect to conducting tasks related to scheduling such appointments.

(II) Changes in monitoring and assessment conducted by the Department of wait times of veterans for such appointments.

(III) Changes in the system used to schedule such appointments, including changes to improve how the Department –

(aa) measures wait times of veterans for such appointments;

(bb) monitors the availability of health care providers of the Department; and

(cc) provides veterans the ability to schedule such appointments.

(IV) Such other actions as the private sector entity or entities considers appropriate.

(B) MEDICAL CONSTRUCTION AND MAINTENANCE PROJECT AND LEASING PROGRAM ASSESSMENT. – In carrying out the assessment required by paragraph (1)(K), the private sector entity or entities shall do the following:

(i) Review the process of the Department for identifying and designing proposals for construction and maintenance projects at medical facilities of the Department and leases for medical facilities of the Department.

(ii) Assess the process through which the Department determines the following:

(1) That a construction or maintenance project or lease is necessary with respect to a medical facility or proposed medical facility of the Department.

(II) The proper size of such medical facility or proposed medical facility with respect to treating veterans in the catchment area of such medical facility or proposed medical facility.

(iii) Assess the management processes of the Department with respect to the capital management programs of the department, including processes relating to the methodology for construction and design of medical facilities of the Department, the management of projects relating to the construction and design of such facilities, and the activation of such facilities.

(iv) Assess the medical facility leasing program of the Department.

(3) TIMING. – The private sector entity or entities carrying out the assessment required by paragraph (1) shall complete such assessment not later than 240 days after entering into the contract described in such paragraph.

(b) PRIVATE SECTOR ENTITIES DESCRIBED. – A private entity described in this subsection is a private entity that –

(1) has experience and proven outcomes in optimizing the performance of the health care delivery systems of the Veterans Health Administration and the private sector and in health care management; and

(2) specializes in implementing large-scale organizational and cultural transformations, especially with respect to health care delivery systems.

(c) PROGRAM INTEGRATOR. —

(1) IN GENERAL. — If the Secretary enters into contracts with more than one private sector entity under subsection (a), the Secretary shall designate one such entity that is predominately a health care organization as the program integrator.

(2) RESPONSIBILITIES. — The program integrator designated pursuant to paragraph (1) shall be responsible for coordinating the outcomes of the assessments conducted by the private entities pursuant to such contracts.

(d) REPORT ON ASSESSMENT. —

(1) IN GENERAL. — Not later than 60 days after completing the assessment required by subsection (a), the private sector entity or entities carrying out such assessment shall submit to the Secretary of Veterans Affairs, the Committee on Veterans' Affairs of the Senate, the Committee on Veterans' Affairs of the House of Representatives, and the Commission on Care established under section 202 a report on the findings and recommendations of the private sector entity or entities with respect to such assessment.

(2) PUBLICATION. — Not later than 30 days after receiving the report under paragraph (1), the Secretary shall publish such report in the Federal Register and on an Internet website of the Department of Veterans Affairs that is accessible to the public.

(e) NON-DEPARTMENT FACILITIES DEFINED. — In this section, the term “non-Department facilities” has the meaning given that term in section 1701 of title 38, United States Code.

SEC. 202. COMMISSION ON CARE.

(a) ESTABLISHMENT OF COMMISSION. —

(1) IN GENERAL. — There is established a commission, to be known as the “Commission on Care” (in this section referred to as the “Commission”), to examine the access of veterans to health care from the Department of Veterans Affairs and strategically examine how best to organize the Veterans Health Administration, locate health care resources, and deliver health care to veterans during the 20-year period beginning on the date of the enactment of this Act.

(2) MEMBERSHIP. —

(A) VOTING MEMBERS. — The Commission shall be composed of 15 voting members who are appointed as follows:

(i) Three members appointed by the Speaker of the House of Representatives, at least one of whom shall be a veteran.

COMMISSION ON CARE FINAL REPORT

(ii) Three members appointed by the Minority Leader of the House of Representatives, at least one of whom shall be a veteran.

(iii) Three members appointed by the Majority Leader of the Senate, at least one of whom shall be a veteran.

(iv) Three members appointed by the Minority Leader of the Senate, at least one of whom shall be a veteran.

(v) Three members appointed by the President, at least two of whom shall be veterans.

(B) QUALIFICATIONS. — Of the members appointed under subparagraph (A) —

(i) at least one member shall represent an organization recognized by the Secretary of Veterans Affairs for the representation of veterans under section 5902 of title 38, United States Code;

(ii) at least one member shall have experience as senior management for a private integrated health care system with an annual gross revenue of more than \$50,000,000;

(iii) at least one member shall be familiar with government health care systems, including those systems of the Department of Defense, the Indian Health Service, and Federally-qualified health centers (as defined in section 1905(l)(2)(B) of the Social Security Act (42 U.S.C. 1396d(l)(2)(B)));

(iv) at least one member shall be familiar with the Veterans Health Administration but shall not be currently employed by the Veterans Health Administration; and

(v) at least one member shall be familiar with medical facility construction and leasing projects carried out by government entities and have experience in the building trades, including construction, engineering, and architecture.

I DATE. — The appointments of members of the Commission shall be made not later than 1 year after the date of the enactment of this Act.

(3) PERIOD OF APPOINTMENT. —

(A) IN GENERAL. — Members shall be appointed for the life of the Commission.

(B) VACANCIES. — Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner as the original appointment.

(4) INITIAL MEETING. — Not later than 15 days after the date on which eight voting members of the Commission have been appointed, the Commission shall hold its first meeting.

(5) MEETINGS. — The Commission shall meet at the call of the Chairperson.

(6) QUORUM. — A majority of the members of the Commission shall constitute a quorum, but a lesser number of members may hold hearings.

(7) CHAIRPERSON AND VICE CHAIRPERSON. — The President shall designate a member of the commission to serve as Chairperson of the Commission. The Commission shall select a Vice Chairperson from among its members.

(b) DUTIES OF COMMISSION. —

(1) EVALUATION AND ASSESSMENT. — The Commission shall undertake a comprehensive evaluation and assessment of access to health care at the Department of Veterans Affairs.

(2) MATTERS EVALUATED AND ASSESSED. — In undertaking the comprehensive evaluation and assessment required by paragraph (1), the Commission shall evaluate and assess the results of the assessment conducted by the private sector entity or entities under section 201, including any findings, data, or recommendations included in such assessment.

(3) REPORTS. — The Commission shall submit to the President, through the Secretary of Veterans Affairs, reports as follows:

(A) Not later than 90 days after the date of the initial meeting of the Commission, an interim report on—

(i) the findings of the Commission with respect to the evaluation and assessment required by this subsection; and

(ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through the Veterans Health Administration.

(B) Not later than 180 days after the date of the initial meeting of the Commission, a final report on—

(i) the findings of the Commission with respect to the evaluation and assessment required by this subsection; and

(ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through the Veterans Health Administration.

(c) POWERS OF THE COMMISSION. —

(1) HEARINGS. — The Commission may hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Commission considers advisable to carry out this section.

(2) INFORMATION FROM FEDERAL AGENCIES. — The Commission may secure directly from any Federal agency such information as the Commission considers necessary to carry out this section. Upon request of the Chairperson of the Commission, the head of such agency shall furnish such information to the Commission.

(d) COMMISSION PERSONNEL MATTERS. —

(1) COMPENSATION OF MEMBERS. —

(A) IN GENERAL. — Each member of the Commission who is not an officer or employee of the Federal Government shall be compensated at a rate equal to the daily

COMMISSION ON CARE FINAL REPORT

equivalent of the annual rate of basic pay prescribed for level IV of the Executive Schedule under section 5315 of title 5, United States Code, for each day (including travel time) during which such member is engaged in the performance of the duties of the Commission.

(B) OFFICERS OR EMPLOYEES OF THE UNITED STATES. — All members of the Commission who are officers or employees of the United States shall serve without compensation in addition to that received for their services as officers or employees of the United States.

(2) TRAVEL EXPENSES. — The members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence, at rates authorized for employees of agencies under subchapter I of chapter 57 of title 5, United States Code, while away from their homes or regular places of business in the performance of services for the Commission.

(3) STAFF. —

(A) IN GENERAL. — The Chairperson of the Commission may, without regard to the civil service laws and regulations, appoint and terminate an executive director and such other additional personnel as may be necessary to enable the Commission to perform its duties. The employment of an executive director shall be subject to confirmation by the Commission.

(B) COMPENSATION. — The Chairperson of the Commission may fix the compensation of the executive director and other personnel without regard to chapter 51 and subchapter III of chapter 53 of title 5, United States Code, relating to classification of positions and General Schedule pay rates, except that the rate of pay for the executive director and other personnel may not exceed the rate payable for level V of the Executive Schedule under section 5316 of such title.

(4) DETAIL OF GOVERNMENT EMPLOYEES. — Any Federal Government employee may be detailed to the Commission without reimbursement, and such detail shall be without interruption or loss of civil service status or privilege.

(5) PROCUREMENT OF TEMPORARY AND INTERMITTENT SERVICES. — The Chairperson of the Commission may procure temporary and intermittent services under section 3109(b) of title 5, United States Code, at rates for individuals that do not exceed the daily equivalent of the annual rate of basic pay prescribed for level V of the Executive Schedule under section 5316 of such title.

(e) TERMINATION OF THE COMMISSION. — The Commission shall terminate 30 days after the date on which the Commission submits the report under subsection (b)(3)(B).

(f) FUNDING. — The Secretary of Veterans Affairs shall make available to the Commission from amounts appropriated or otherwise made available to the Secretary such amounts as the Secretary and the Chairperson of the Commission jointly consider appropriate for the Commission to perform its duties under this section.

(g) EXECUTIVE ACTION. —

(1) ACTION ON RECOMMENDATIONS. — The President shall require the Secretary of Veterans Affairs and such other heads of relevant Federal departments and agencies to

VA-18-0457-A-001413

implement each recommendation set forth in a report submitted under subsection (b)(3) that the President —

(A) considers feasible and advisable; and

(B) determines can be implemented without further legislative action.

(2) REPORTS. — Not later than 60 days after the date on which the President receives a report under subsection (b)(3), the President shall submit to the Committee on Veterans' Affairs of the Senate and the Committee on Veterans' Affairs of the House of Representatives and such other committees of Congress as the President considers appropriate a report setting forth the following:

(A) an assessment of the feasibility and advisability of each recommendation contained in the report received by the President.

(B) For each recommendation assessed as feasible and advisable under subparagraph (A) the following:

(i) Whether such recommendation requires legislative action.

(ii) If such recommendation requires legislative action, a recommendation concerning such legislative action.

(iii) A description of any administrative action already taken to carry out such recommendation.

(iv) A description of any administrative action the President intends to be taken to carry out such recommendation and by whom.

H.R. 4437: Extension of Deadline for Submittal of Final Report by Commission on Care

[114th Congress Public Law 131]

[[Page 130 STAT. 292]]

Public Law 114-131

114th Congress

An Act

To extend the deadline for the submittal of the final report required by the Commission on Care.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. 38 USC 1701; EXTENSION OF DEADLINE FOR SUBMITTAL OF FINAL REPORT BY COMMISSION ON CARE.

COMMISSION ON CARE FINAL REPORT

Section 202(b)(3)(B) of the Veterans Access, Choice, and Accountability Act of 2014, 128 Stat. 1775 (Public Law 113-146; 128 Stat. 1773) is amended by striking “Not later than 180 days after the date of the initial meeting of the Commission” and inserting “Not later than June 30, 2016”.

Approved February 29, 2016.

DEPARTMENT OF VETERANS AFFAIRS
CHARTER OF THE
COMMISSION ON CARE

1. OFFICIAL DESIGNATION: Commission on Care
2. AUTHORITY: The Commission on Care established as required by section 202 of the Veterans Access, Choice, and Accountability Act of 2014 (VACAA), Public Law 113-146, and operates under the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. App. 2.
3. OBJECTIVES AND SCOPE OF ACTIVITIES: The Commission on Care (the "Commission") is established to examine the access of Veterans to health care from the Department of Veterans Affairs (VA) and strategically examine how best to organize the Veterans Health Administration (VHA), locate health care resources, and deliver health care to Veterans during the 20-year period beginning on the date of the enactment of VACAA, August 7, 2014.
4. DUTIES OF THE COMMISSION:
 - A. Evaluation and Assessment: In accordance with section 202(b)(1), the Commission shall undertake a comprehensive evaluation and assessment of access to health care at VA.
 - B. Matters Evaluated and Assessed: In undertaking the comprehensive evaluation and assessment required by section 202(b)(1) of VACAA and paragraph (4)(A) above, the Commission shall evaluate and assess the results of the assessment conducted by the private sector entity or entities under section 201 of VACAA, including any findings, data, or recommendations included in such assessment.
 - C. Reports: In accordance with section 202(b)(3) of VACAA, submit an interim report not later than 90 days after the initial meeting of the Commission to the President, through the Secretary of Veterans Affairs, and a final report not later than 180 days after the initial meeting of the Commission. The reports shall include (i) the findings of the Commission with respect to the evaluation and assessment required by section 202(b)(1); and (ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through VHA.
5. OFFICIAL TO WHOM THE COMMISSION REPORTS: The Commission reports to the President, through the Secretary of Veterans Affairs.

VA is responsible for ensuring the reporting requirements of Section 6(b) of the FACA are fulfilled.

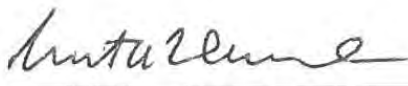

COMMISSION ON CARE FINAL REPORT

6. OFFICE RESPONSIBLE FOR PROVIDING THE NECESSARY SUPPORT FOR THE COMMISSION: VHA is responsible for providing support to the Commission.
7. ESTIMATED ANNUAL OPERATING COSTS AND STAFF-YEARS: Annual operating cost for the Commission is estimated at \$3,600,000 per year, including compensation of members and staff, in accordance with section 202(d) of VACAA. All members will receive travel expenses and a per diem allowance in accordance with the Federal Travel Regulations for any travel made in connection with their duties as members of the Commission. Approximately 15 FTE are anticipated.
8. DESIGNATED FEDERAL OFFICER: The Designated Federal Officer (DFO) or an Alternate DFO, full-time or permanent part-time VA employees, will be present at all meetings, including subcommittee meetings. The DFO will work with the Commission Chair to schedule the meetings and develop meeting agendas. The DFO is authorized to adjourn any meeting when he or she determines it is in the public interest to do so.
9. ESTIMATED NUMBER AND FREQUENCY OF MEETINGS: The Commission will meet at the call of the Chair for the duration of the Commission. The Commission may hold such hearings, sit and act at such times and places, and take such testimony, and receive such evidence as the Commission considers advisable to carry out its duties under section 202 of VACAA. A majority of the members of the Commission shall constitute a quorum, but a lesser number of members may hold hearings.
10. DURATION: The Commission is subject to the termination date as specified below in section 11.
11. TERMINATION: The Commission shall terminate 30 days after the date on which the Commission submits the final report required by section 202(b)(3)(B) of VACAA.
12. MEMBERSHIP: The Commission shall be composed of 15 voting members who are appointed as Special Government Employees and described in paragraph (A) below for the life of the Commission and have the qualifications described in paragraph (B) below:
 - A. APPOINTMENT AUTHORITY:
 - i. Three members appointed by the Speaker of the House of Representatives, at least one of whom shall be a Veteran.
 - ii. Three members appointed by the Minority Leader of the House of Representatives, at least one of whom shall be a Veteran.

- iii. Three members appointed by the Majority Leader of the Senate, at least one of whom shall be a Veteran.
 - iv. Three members appointed by the Minority Leader of the Senate, at least one of whom shall be a Veteran.
 - v. Three members appointed by the President, at least two of whom shall be Veterans.
- B. QUALIFICATIONS: Of the members appointed under 12(A) –
- i. At least one member shall represent an organization recognized by the Secretary of Veterans Affairs for the representation of Veterans under 38 U.S.C. 5902;
 - ii. At least one member shall have experience as senior management for a private integrated health care system with an annual gross revenue of more than \$50,000,000;
 - iii. At least one member shall be familiar with government health care systems, including those systems of the Department of Defense, the Indian Health Service, and Federally-qualified health centers (as defined by in section 1905(1)(2)(B) of the Social Security Act (42 U.S.C. 1396d(1)(2)(B));
 - iv. At least one member shall be familiar with VHA but shall not be currently employed by VHA; and
 - v. At least one member shall be familiar with medical facility construction and leasing projects carried out by government entities and have experience in the building trades, including construction, engineering, and architecture.
- C. CHAIRPERSON AND VICE CHAIRPERSON: The President shall designate a member of the Commission to serve as Chairperson of the Commission. The Commission shall select a Vice Chairperson from among its members.
- D. VACANCIES: If a vacancy occurs, it shall be filled in the same manner as the original appointment.
13. SUBCOMMITTEES: The Commission is authorized to establish subcommittees, with DFO approval, to perform specific projects or assignments as necessary and consistent with its mission. The Commission Chair shall notify the Secretary, through the DFO, of the establishment of any subcommittee, including its function, membership, and estimated duration. Subcommittees will report back to the Commission.
14. RECORDKEEPING: Records of the Committee shall be handled in accordance with General Records Schedule 26 or other approved agency records disposition schedules. Those records shall be available for public inspection and copying, subject to the Freedom of Information Act 5, U.S.C. 552.

COMMISSION ON CARE FINAL REPORT

15. DATE CHARTER IS FILED:

Approved:  Date 7/14/15
Robert A. McDonald
Secretary of Veterans Affairs

APPENDIX J:

COMPOSITION OF THE COMMISSION

Nancy M. Schlichting, Chairperson

Appointed by President Barack Obama

Nancy M. Schlichting is Chief Executive Officer of Henry Ford Health System (HFHS), a nationally recognized \$5 billion health care organization with 27,000 employees and recipient of the 2011 Malcolm Baldrige National Quality Award, 2011 John M. Eisenberg Patient Safety Quality Award, and 2004 Foster G. McGaw Award. She is credited with leading the health system through a dramatic financial turnaround and for award-winning patient safety, customer service and diversity initiatives.

Schlichting joined HFHS in 1998 as its Senior Vice President and Chief Administrative Officer, served as Executive Vice President and Chief Operating Officer, President and CEO of Henry Ford Hospital and was named President and CEO of the System in 2003. Her career in health care administration spans over 35 years of experience in senior level executive positions.

Schlichting serves on several national and community boards including The Kresge Foundation, Walgreens Boots Alliance, the Federal Reserve Bank of Chicago – Detroit Branch, the Detroit Regional Chamber, the Detroit Economic Club, and the Downtown Detroit Partnership. Nancy is also a Fellow of the American College of Healthcare Executives.

In 2015, Schlichting was honored as one of the 100 Most Influential People in Healthcare by Modern Healthcare magazine, the eighth time she received this recognition. She was also named to the Top 25 Women in Healthcare by Modern Healthcare, the fourth time she received this recognition and the only Michigander named to the list. Her other awards include: NCHL Gail L. Warden Leadership Excellence award, ACHE Senior-Level Healthcare Executive Regent's Award, AHA/HRET 2014 TRUST Award, Becker's Hospital Review "40 of the Smartest People in Healthcare-2014," Crain's Detroit Business "2012 Newsmaker of the Year," HealthLeaders Media "20 People Who Make Healthcare Better-2012," and most recently was named one of "Crain's 100 Most Influential Women in Michigan."

Author of the acclaimed book, *Unconventional Leadership*, Schlichting is a highly regarded expert and accomplished speaker on strategic leadership, quality, patient/family-centered care, and diversity.

Schlichting received her A.B. in Public Policy Studies, Magna Cum Laude from Duke University and her M.B.A. from Cornell University. She has also been the recipient of honorary doctoral degrees from Walsh College, Eastern Michigan University and Central Michigan University.

COMMISSION ON CARE FINAL REPORT

Delos M. (Toby) Cosgrove, MD, Vice Chairperson*Appointed by Speaker of the House John Boehner*

Toby Cosgrove, CEO of Cleveland Clinic, presides over a \$6.2 billion health care system comprising Cleveland Clinic, eight community hospitals, 16 family health and ambulatory surgery centers, Cleveland Clinic Florida, the Lou Ruvo Center for Brain Health in Las Vegas, Cleveland Clinic Toronto, and Cleveland Clinic Abu Dhabi. His leadership has emphasized patient care and patient experience, including the reorganization of clinical services into patient-centered, organ- and disease-based institutes. He launched major wellness initiatives for patients, employees, and communities. Under his leadership, Cleveland Clinic has consistently been named among America's top four hospitals by U.S. News & World Report and is one of only two hospitals named among America's 99 Most Ethical Companies by the Ethisphere Institute.

Cosgrove was a surgeon in the U.S. Air Force and served in Da Nang, Republic of Vietnam, as the chief of U.S. Air Force casualty staging flight. He received the Bronze Star and the Republic of Vietnam Commendation Medal.

He has published nearly 450 journal articles, book chapters, one book, and 17 training and continuing medical education films. He performed more than 22,000 operations and earned an international reputation for expertise in all areas of cardiac surgery, especially valve repair. As an innovator, Cosgrove has 30 patents filed for developing medical and clinical products used in surgical environments.

Cosgrove received his medical degree from the University of Virginia School of Medicine in Charlottesville, VA, and completed his clinical training at Massachusetts General Hospital, Boston Children's Hospital, and Brook General Hospital in London. He received a BA in biology from Williams College in Williamstown, MA.

Michael A. Blecker*Appointed by House Minority Leader Nancy Pelosi*

Michael Blecker has been associated with Swords to Plowshares since 1976 and has served as Executive Director since 1982. The agency was started in 1974 by returning Vietnam veterans and VISTA volunteers assigned to the VA regional office in San Francisco.

In the 1980s, when homelessness exploded, Swords to Plowshares started a transitional housing program with funding support from VA and the city and county of San Francisco. Swords to Plowshares continues to provide housing, employment, case management, and benefits advocacy for veterans from offices in San Francisco and Oakland. In 2005, the Iraq Vet Project (IVP) was established to help veterans of those wars and to shape policies affecting them. Recognizing Swords to Plowshares' long and effective history of challenging and shaping public policy with regard to veterans, in 2011, the IVP became known as the Institute for Veterans Policy.

Under Blecker's leadership, Swords to Plowshares' annual budget has grown from \$75,000 to nearly \$16 million. He has a nationwide reputation for dedicated service and as an authority on

VA-18-0457-A-001421

veterans' services and veterans' rights. He served on the Advisory Committee on Homeless Veterans (2002-2007), which advises the Secretary of Veterans Affairs. He is cofounder of both the National Coalition for Homeless Veterans and the California Association of Veterans' Service Agencies. He has served on the Congressional Commission on Service Members and Veterans Transition Assistance, the California Senate Commission on Homeless Veterans, the San Francisco Mayor's Homeless Planning Committee, the National Agent Orange Settlement Advisory Board, The Agent Orange Information Center, and the Veterans Speakers Alliance.

Blecker served in the U.S. Army as a combat infantryman in Vietnam in 1968-69 with the 101st Airborne Division, achieving the rank of E-5. He received an AB degree in criminology from University of California, Berkeley and a JD degree from New College of California Law School.

David P. Blom

Appointed by Speaker of the House John Boehner

David Blom has been instrumental in the development and growth of the OhioHealth system. He has served as president of OhioHealth's central Ohio hospitals – Grant Medical Center, Riverside Methodist Hospital, and Doctors Hospital – while also serving as executive vice president and chief operating officer of OhioHealth. He was named president and CEO of OhioHealth in March 2002. He has a track record of achievement with a solid understanding of complex issues facing health care delivery. He has expertise in leading strategic initiatives, managing and developing human capital, improving profitability, and improving quality of care and customer experience.

Blom maintains many professional and community affiliations, currently serving as a board member of the Voluntary Hospitals of America (VHA), a member and treasurer of Columbus' Downtown Development Corporation (CDDC), member of the Columbus Partnership, and member of the local World President's Organization (WPO). In 2001, he was named a Top 100 Business Leader by Smart Business and in 2012 CEO of the Year by Columbus CEO Magazine.

He received a BA from Ohio State University and an MA in health care administration from The George Washington University.

David W. Gorman

Appointed by President Barack Obama

David Gorman is a retired, combat-disabled veteran of the Vietnam War, who was appointed executive director of the Disabled American Veterans (DAV) National Service and Legislative Headquarters in Washington, DC in 1995. His responsibilities include oversight of the DAV National Service, Legislative, and Voluntary Service Programs. He is the organization's principal spokesperson before Congress, the White House, and the U.S. Department of Veterans Affairs.

Gorman entered the U.S. Army in 1969 and served with the 173rd Airborne Brigade, the famed "Sky Soldiers" of the Vietnam War. During a campaign to secure an area in Central Vietnam

COMMISSION ON CARE FINAL REPORT

where U.S. forces suffered extremely high casualties, Mr. Gorman was severely wounded. His wounds required amputation of both legs.

Discharged from the Army in 1970, he immediately joined the DAV and is currently a life member of the DAV's National Amputation Chapter and DAV Chapter 39 in Greer, SC.

Gorman retired from his post executive director at the Washington Headquarters for Disabled American Veterans and now resides in Simpsonville, SC. Gorman attended Cape Cod Community College.

The Honorable Thomas E. Harvey, Esq.

Appointed by Senate Majority Leader Mitch McConnell

Thomas Harvey is a Vietnam combat veteran whose decorations include the Silver Star, the Purple Heart and 12 others for valor and service. In Vietnam, he spent a year as a company commander with the 173rd Airborne brigade and a year and a half as an advisor with the Vietnamese Airborne Division.

A lawyer by training, Harvey has spent much of his professional career working with veterans and issues of concern to them. He has served as Chief Counsel and Staff Director of the Senate Veterans Affairs Committee, Deputy Administrator of the Veterans Administration, and Assistant Secretary for Congressional Affairs of the Department of Veterans Affairs. Following 5 years with a major Wall Street law firm, Harvey came to Washington, DC, in 1977 as a White House fellow, serving as an assistant to ADM Stansfield Turner, then director of the Central Intelligence Agency. He has also served in the Department of Defense and as General Counsel and Congressional Liaison of the United States Information Agency. For 5 years, he was Senior Counselor of the Institute of International Education, which administers the Fulbright Program on behalf of the U.S. Department of State, as well as a number of other international educational exchange programs.

He currently serves on the boards of the Milbank Memorial Fund, the focus of which is public health policy, and of the Art Students League of New York, where he studies watercolor painting. He holds both BA and JD degrees from the University of Notre Dame and a LLM degree from the New York University School of Law.

Maj. Stewart M. Hickey, USMC (ret.)

Appointed by Senate Majority Leader Mitch McConnell

Since 2011, Stewart Hickey has served as American Veterans (AMVETS) National Executive Director, operating the nation's fourth largest congressionally chartered veterans service organization and its subordinate organizations, and the daily advocacy of issues affecting veterans, national security, foreign affairs, and the economy.

Previously, Hickey was chief executive officer for the Hyndman (Pennsylvania) Area Health Center, a multisite community health center providing medical and dental services to several counties of Pennsylvania, West Virginia, and Maryland. His health care administration experience includes serving as chief human resources officer and chief operating officer of

VA-18-0457-A-001423

Western Maryland Hospital Center in Hagerstown, Maryland, a 123-bed Joint Commission on Accreditation of Healthcare Organizations accredited, long-term care and sub-acute hospital with rehabilitation, occupational therapy, physical therapy, and respiratory care.

Hickey enlisted in the U.S. Marine Corps Reserve in February 1977, in Cumberland, MD, as an infantryman, and transferred to platoon leaders class in the summer of 1978. He served in Operation Desert Storm and Desert Shield and was awarded a Bronze Star Medal with Combat "V" for his achievements as commanding officer, Company D, Third Tank Battalion, Task Force RIPPER, 1st Marine Division, I Marine Expeditionary Force, Saudi Arabia from September 1990 to February 1991. His military education includes the Basic School, Armor Officer Basic, Amphibious Warfare School, Armor Officer Advanced Course, and Marine Corps Command and Staff College.

Hickey resides on his family farm in Cumberland Valley Township in McConnellsburg, PA. He and his wife, Ellen, have five children: Monroe, Ali, Charles, Andrew, and Bryce. Three of his sons, Andrew, Monroe, and Charles, followed their father's path and currently serve in the U.S. military.

Hickey received a BA in history from Penn State University and an MA in management from Webster University.

Rear Adm. Joyce M. Johnson, DO, US PHS (ret.)

Appointed by President Barack Obama

Joyce Johnson is a physician with senior public health leadership experience in civilian and military sectors.

Johnson served in the U.S. Public Health Service (Rear Admiral, Upper Half). Her last active-duty assignment was with the U.S. Coast Guard as Director, Health and Safety ("surgeon general"). She managed the Coast Guard's health care system, including 150 sickbays and clinics, and coordinated both medical and behavioral health care for the beneficiary population. She also had responsibility for the Coast Guard's safety and work-life programs. She held a Top Secret security clearance.

Other government assignments included senior scientific and management positions with the Food and Drug Administration (pharmaceutical safety and post-market surveillance) and the Substance Abuse and Mental Health Services Administration. She has held clinical positions at the National Institute of Mental Health and the Department of Veterans Affairs. At the Centers for Disease Control and Prevention, she was an Epidemiologic Intelligence Service (EIS) Officer and staff epidemiologist in the Center for Infectious Disease.

In the private sector, Johnson served as vice president, health sciences and chief medical officer for a large research organization, where she managed a portfolio of government contracts, including laboratory and social sciences research, and held a top secret security clearance.

Johnson is an osteopathic physician board certified in psychiatry and public health/preventive medicine. She is also a certified clinical pharmacologist and certified addiction specialist. In

COMMISSION ON CARE FINAL REPORT

addition to her medical degree, she earned a master's degree in hospital and health administration. She has been conferred six honorary doctoral degrees. She is a Distinguished Life Fellow of the American Psychiatric Association.

Johnson has extensive international health experience on all seven continents. She has particular interests in global mental health, health systems development, infectious disease, and disaster relief. She has led five Flag Expeditions with the Explorers Club. For more than a decade she has been a consultant to the National Science Foundation on the health care system in Antarctica.

Johnson recently coauthored the book, *Lizard Bites and Street Riots, Travel Emergencies and Your Health, Safety and Security*, and writes a monthly medical column. She is a Clinical Professor and Adjunct Professor at Georgetown University. She has served on expert committees including the Committee on Substance Abuse in the Military, National Academy of Medicine. She is active in numerous professional associations including the American Psychiatric Association, serving on the Committee on Psychiatric Dimensions of Disasters; the American Osteopathic Association, serving on the Bureau of International Osteopathic Medicine; and the Explorers Club, serving on the Medical Committee.

The Honorable Ikram U. Khan, MD

Appointed by Senate Minority Leader Harry Reid

Ikram Khan currently, he is president and 50-percent partner of Quality Care Consultants, LLC, founded in March 1992. The company provides consultant services in health care strategy and policy development for employers and other health care organizations. The company assists clients in development and implementation of wellness and disease-management programs. The company also develops quality improvement initiatives and techniques and assists in development and implementation of programs for cost-effective utilization of medical resources. Major emphasis is on clinical outcomes and data monitoring analysis.

Khan is a member the United States Institute of Peace (USIP) Board of Directors; he was nominated by President George Bush, and confirmed by the U.S. Senate on June 5, 2008. He is also currently a member of the Nevada Homeland Security Commission, having been appointed by the Governor of Nevada.

He was nominated by President Clinton and confirmed by the U.S. Senate to serve as member of The Board of Regents Uniformed Services University of Health Sciences, an advisory board to U.S. Secretary of Defense (1999-2006).

Khan also served as Special Advisor on Healthcare to Former Nevada Governor Gibbons, was a member of the Nevada Academy of Health (appointed by Nevada Governor Gibbons), and is a past member of the Nevada Academy of Health Sciences (appointed by Nevada Governor Kenny Guinn). He is past member of Nevada Governor's Commission for Medical Education, Research and Training and was a member of the Nevada State Board of Medical Examiners for eight years. Dr. Khan received "Special Congressional Recognition" for invaluable community service in 1994 and a Congressional citation—"U.S. Senate - Honoring Dr. Ikram Khan"—on April 25, 1994.

VA-18-0457-A-001425

Khan currently serves as member on the board of trustees at Sunrise Hospital Las Vegas-a 600 bed hospital. He has received recognition as “Most Influential Man in Southern Nevada” in 2000. He is also a recipient of a Las Vegas Chamber of Commerce community achievement award (October 1999), and a “Distinguished Community Service Award” from Anti-defamation League of B’nai B’rith (1994).

November 30, 1999 was declared “Dr. Ikram U. Khan Day” by the Governor of the State of Nevada, Mayor of Las Vegas, and the Board of Commissioners of Clark County.

During the course of his practice as General Surgeon, Khan has served in multiple leadership positions at various hospitals in Las Vegas.

Ikram Khan is president of quality Care Consultants LLC in Las Vegas Nevada. He received a doctor of medicine and surgery (MBBS) degree from University of Karachi, Pakistan.

Khan received a Doctor of Medicine and Surgery (MB, BS) in August 1972 from the University of Karachi, Pakistan. He completed post-graduate surgical residency in General Surgery in New York from 1974 through 1978, and practiced as a General Surgeon in Las Vegas through 2005.

Phillip J. Longman

Appointed by Senate Minority Leader Harry Reid

Phil Longman is a director at New America, a public policy institute. He is also a senior editor at the Washington Monthly and a lecturer at Johns Hopkins University, where he teaches a course in health care policy.

Longman has written extensively on issues related to health care delivery system reform, including in his book *Best Care Anywhere* (currently in its third edition). The book chronicles the quality transformation of the Veterans Health Administration during the 1990s and applies its lessons to the broader U.S. health care system.

Longman received a BA in philosophy from Oberlin College.

Col. Lucretia M. McClenney, USA (ret.)

Appointed by House Minority Leader Nancy Pelosi

Lucretia McClenney is a consultant with the Department of Defense Vietnam War Commemoration Office and Executive Coach with the Brookings Institute Executive Education Program. Previously she served as director of the Department of Veterans Affairs Center for Minority Veterans. As director, she served as the principal advisor to the Secretary of Veterans Affairs on policies and programs affecting minority veterans. Prior to her appointment, she served as special assistant to the assistant secretary for policy, planning, and preparedness, Department of Veterans Affairs (VA). She led the department’s emergency exercise planning, training, and evaluation program, and served as liaison to other government agencies. She has served on numerous working groups to include the congressionally mandated National Commission on VA Nursing, Task Force on Employment of Women at VA, and as the Secretary

COMMISSION ON CARE FINAL REPORT

of Veterans Affairs' representative on the American Red Cross Board of Governors and Disaster and Chapter Services Committee.

Serving 30 years in the Army, McClenney retired as a colonel in November 2001. She served in various medical treatment facilities and on staffs worldwide serving as director, population health integration team, TRICARE management activity; chief nurse, European regional medical command and deputy commander for nursing, Landstuhl Regional Medical Command; deputy commander for nursing, Moncrief Army Community Hospital, Fort Jackson, South Carolina; assistant deputy for human resources, Office Of The Assistant Secretary Of The Army for Manpower and Reserve Affairs, the Pentagon; chief ambulatory nursing, Walter Reed Army Medical Center; senior policy analyst, Office of the Secretary of Defense (Health Affairs), The Pentagon; and member of the President's National Health Care Reform Task Force.

McClenney's military and civilian awards/decorations include the Legion of Merit (two oak leaf clusters), Defense Meritorious Service Medal, Meritorious Service Medal (seven oak leaf clusters), Army Commendation Medal (two oak leaf clusters), Navy Commendation Medal, Army Achievement Medal, Army Good Conduct Medal, the Army Staff Identification Badge, Office of the Secretary of Defense Staff Identification Badge, the coveted "9A" designator, in recognition of numerous achievements at the pinnacle of nursing excellence, and The Outstanding Civilian Service Medal for her significant contribution to the mission of the United States Army and Department of Defense in assisting with the production of the book, *For Children of Valor – Arlington National Cemetery*. Her professional affiliations include the Association of Military Surgeons of the United States, Sigma Theta Tau, National Nursing Honor Society, Alpha Kappa Alpha Sorority, Inc., Top Ladies of Distinction, Inc., The ROCKS, Inc., the Order of Military Medical Merit, Past President, Federal Health Care Executives Interagency Institute Alumni Association, and former Board Member of the Bon Secours Health Care System and Chair, Quality Committee.

She is a graduate of the Command and General Staff College and the United States Army War College Fellowship Program at George Washington University, Washington, DC. She is also a graduate of the Johnson & Johnson-Wharton's Fellows Program in Management for Nurse Executives, Wharton School of Business, University of Pennsylvania; Federal Health Care Executives Interagency Institute at George Washington University, Washington, DC; Leadership VA 2004; and Brookings Institute Executive Fellowship Program. She received a BSN from Murray State University and an MS in psychiatric/mental health nursing from Catholic University.

Capt. Darin S. Selnick, USAF (ret.)

Appointed by Speaker of the House John Boehner

Darin Selnick is an independent consultant who provides a variety of services to organizations in the areas of government and community relations, business development, and veterans' issues. He is currently the senior veterans affairs advisor for Concerned Veterans for America and served as executive director of the Fixing Veterans Health Care Bipartisan Taskforce. He also volunteers his time as Chairman of the West Los Angeles Veterans Home Support Foundation and as the Vice President of Development for the GI Film Festival.

VA-18-0457-A-001427

From 2001–2009, Selnick was an appointee at the Department of Veteran Affairs. From 2004–2009 he served as the director of the center for faith-based and community initiatives. In this role he was responsible for the management and operations of the Center and was the VA liaison to the White House Office of faith-based and community initiatives. From 2001–2004 he served as Special Assistant to the Secretary and Associate Dean, VA Learning University. In this role he was responsible for providing program and operational oversight of VA Learning University.

Selnick is a retired Air Force officer who attained the rank of Captain. He has been very active in veterans' issues and joined the Jewish War Veterans in 1994. Since that time he has taken various leadership positions and is the past department commander of the Department of California. Mr. Selnick is also a member of the American Legion, AMVETS, Air Force Association, and National Association of Uniformed Services.

Darin Selnick currently serves as senior veterans' affairs advisor for Concerned Veterans for America and served as executive director of the Fixing Veterans Health Care Bipartisan Taskforce. He lives in Oceanside, CA. Selnick is retired from the U.S. Air Force. He received a BS in health science from California State University, Northridge and an MA in political science/public management from Midwestern State University.

Lt. Gen. Martin Steele, USMC (ret.)

Appointed by Senate Majority Leader Mitch McConnell

Martin Steele enlisted in the Marine Corps in January 1965 and rose from private to three-star general, culminating his military career in August 1999 as the deputy chief of staff for plans, policies, and operations at Headquarters, U.S. Marine Corps, in Washington, DC. A decorated combat veteran with 34½ years of service, he is a recognized expert in the integration of all elements of national power (diplomatic, economic, informational, and military) with strategic military war plans and has served as an executive strategic planner/policy director in multiple theaters across Asia. His extraordinary career was chronicled as one of three principals in the award winning military biography, *Boys of '67*, by Charles Jones.

Upon his retirement from active duty in 1999, he served as president and CEO of the Intrepid Sea-Air-Space Museum in New York City. Currently, Steele serves as The Associate Vice President for Veterans Partnerships, the Executive Director, Military Partnerships, and Co-chair of the Veterans Reintegration Steering Committee at the University of South Florida in Tampa, Florida. Additionally, Steele is the chairman and CEO of Steele Partners, Inc., a strategic advisory and leadership consulting company. He has led a philanthropic transition program assisting exiting Marines into private-sector jobs throughout the country, at no cost to the Marine participants, the Marine Corps, or the companies that provide employment opportunities.

Steele serves proudly on several boards across the country. He is currently the Chairman of the Board, Marine Corps Scholarship Foundation. He was appointed to the Board of Directors of Florida is for Veterans, Inc., a not for profit, state legislated organization designed to assist both Veterans and businesses throughout Florida in not only hiring Veterans but also developing entrepreneurship programs designed for veterans. He is a member of Fisher House Foundation;

VA-18-0457-A-001428

COMMISSION ON CARE FINAL REPORT

chairman of the advisory committee, Stability Institute; advisory committee member, Call of Duty Endowment; advisory board member, Stay in Step Foundation; advisory council member, Operation Helping Hand; member, Veterans Advantage; board member, University of Arkansas Veterans Resource and Information Center; and advisory committee member, Jesse Lewis Choose Love Movement.

Steele is a graduate of the University of Arkansas where he obtained a bachelor's degree in history and was recognized as a distinguished graduate of the Fulbright College of Arts and Sciences. He is a recipient of the 2013 Arkansas Alumni Award Citation of Distinguished Alumni, which recognizes exceptional professional and personal achievement and extraordinary distinction in a chosen field. He also holds master's degrees from Central Michigan University, Salve Regina College, and Naval War College.

Charlene M. Taylor

Appointed by House Minority Leader Nancy Pelosi

Charlene Taylor joined Kaiser Permanente in 1997 as the director of specialty services for the Permanente Medical Group at South Sacramento. In 2002 she became the service director for Kaiser Foundation Hospitals, responsible for perioperative and perinatal services at South Sacramento. In 2008, she was promoted to chief nursing officer at the Sacramento Medical Center where she was responsible for a 287-bed tertiary acute care hospital that conducted more than 11,000 operations per year. There, she oversaw 800 full-time employees and a budget of \$150 million. Taylor was promoted to chief operating officer in 2010 and retired from Kaiser Permanente in 2013.

Before working for Kaiser Permanente, Taylor served as assistant hospital administrator for Sutter Health at the Sutter Amador Hospital from 1988 to 1997. She is a member of the Veterans of Foreign Wars, Reserve Officers Association, and the Society of Air Force Nurses.

Taylor's patriotic and adventurous nature led her to join the Air Force as a reserve officer at the age of 40, rising to the rank of Lieutenant Colonel. She was commissioned as a Captain in the United States Air Force (Reserve Command) in October 1993, earning her flight nurse wings in 1994. She subsequently was selected to be a flight nurse instructor followed by a promotion to evaluator status. Her last squadron assignment was that of chief nurse at the 349 AMDS, Travis Air Force Base.

In addition to years of experience conducting aeromedical evacuation missions throughout the world, Taylor was activated in support of Operation Enduring Freedom from March 2003 to March 2004. In January 2005 she was selected to be the chief nurse of the 379th Expeditionary Aeromedical Squadron in support of Operation Iraqi Freedom. While transporting the injured out of Mosul, Iraq in a C-130, the aircraft took enemy fire, landing without casualties. Due to the demands of her civilian position, Taylor transferred to inactive status in the Air Force Reserve Command. Taylor is the recipient of two Meritorious Service medals, Expert Marksmanship (2), and multiple other medals.

Taylor currently serves on the Veterans Board. In 2012 she was appointed to the Board by Gov. Jerry Brown and approved by the Senate. She became chair in 2014 and continues to serve

VA-18-0457-A-001429

in that role. The California Veterans Board serves as an advocate for veterans affairs, identifying needs and working to ensure and enhance the rights and benefits of California veterans and their dependents.

Taylor is a diploma nurse graduate from the Kaiser Foundation School of Nursing. She continued her education receiving a BSN from the State University of New York in Albany, New York. She earned a master's degree in nursing administration from the University of California, San Francisco.

Taylor lives in Elk Grove, CA.

Marshall W. Webster, MD

Appointed by Senate Minority Leader Harry Reid

Marshall Webster is a senior vice president of the University of Pittsburgh Medical Center (UPMC), and a distinguished service professor of surgery at the University of Pittsburgh. A graduate of Penn State University and the Johns Hopkins Medical School, he trained in surgery at the University of Pittsburgh, and subsequently served 2 years as a surgeon on active duty in the U.S. Navy.

Webster returned to the University of Pittsburgh as a faculty vascular surgeon, including initially, a part-time attending staff position at the Pittsburgh VA Medical Center for 3 years. He has held the Mark M. Ravitch Chair in Surgery, and has had a long academic career of clinical practice, research, and service in varied administrative leadership roles. From 2002–2012, he was an executive vice president of UPMC, president of UPMC's physician services division, and president of the University of Pittsburgh Physicians, the clinical practice plan of the university faculty.

His current focus is primarily strategic development: building clinical relationships and care models throughout the region with a large number of community hospitals and providers. Webster has oversight of UPMC's graduate medical education program, which sponsors a substantial number of resident rotations at the Pittsburgh VA Medical Center. He recently served for 2 years as the interim chair of the Department of Anesthesiology at UPMC. He has had a long-standing interest in patient safety and quality initiatives, and recently completed a 6-year term on the board of the Pennsylvania Patient Safety Authority.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Preface

Congress enacted and President Obama signed into law the Veterans Access, Choice, and Accountability Act of 2014 (Public Law 113-146) (“Veterans Choice Act”), as amended by the Department of Veterans Affairs (VA) Expiring Authorities Act of 2014 (Public Law 113-175), to improve access to timely, high-quality health care for Veterans. Under “Title II – Health Care Administrative Matters,” Section 201 calls for an Independent Assessment of 12 areas of VA’s health care delivery systems and management processes.

VA engaged the Institute of Medicine of the National Academies to prepare an assessment of access standards and engaged the Centers for Medicare & Medicaid Services (CMS) Alliance to Modernize Healthcare (CAMH)¹ to serve as the program integrator and as primary developer of the remaining 11 Veterans Choice Act independent assessments. CAMH subcontracted with Grant Thornton LLP, McKinsey & Company, and the RAND Corporation to conduct 10 independent assessments as specified in Section 201, with MITRE conducting the 11th assessment. Drawing on the results of the 12 assessments, CAMH also produced the Integrated Report in this volume, which contains key findings and recommendations. CAMH is furnishing the complete set of reports to the Secretary of Veterans Affairs, the Committee on Veterans’ Affairs of the Senate, the Committee on Veterans’ Affairs of the House of Representatives, and the Commission on Care.

¹ The CMS Alliance to Modernize Healthcare (CAMH), sponsored by the Centers for Medicare & Medicaid Services (CMS), is a federally funded research and development center (FFRDC) operated by The MITRE Corporation, a not-for-profit company chartered to work in the public interest. For additional information, see the CMS Alliance to Modernize Healthcare (CAMH) website (<http://www.mitre.org/centers/cms-alliances-to-modernize-healthcare/who-we-are/the-camh-difference>).

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Acknowledgments

Conducting this assessment on behalf of our nation’s Veterans has been an honor. A common theme emerged as we explored data, interviewed staff, reviewed prior assessments, and assembled this report—Americans take the care of our Veterans seriously.

We would like to acknowledge those who have enabled us to complete this assessment, which carries the promise of improving Veterans health care.

First and foremost, we want to thank the leadership and staff of the Department of Veterans Affairs (VA) who routinely and unselfishly shared their time, insights, perspectives, and data. Our assessment teams visited 87 Veterans Health Administration facilities, including VA Medical Centers, Veterans Integrated Service Network headquarters, acquisition centers, construction and facilities management offices, and pharmacies, where we observed staff working diligently to provide the best possible clinical care to Veterans. During these visits, assessment teams conducted multiple interviews of VA employees, including providers, clinicians, administrators, and senior leaders. VA also provided 560 requested data sets.

Second, we are grateful to the Blue Ribbon Panel members who served as our advisers. This panel brought together individuals with years of experience in successfully transforming and running health care systems. We turned to these experts for advice and to determine if our ideas were aligned with current industry wisdom and emerging health care trends. The panel meticulously examined the materials we presented, applied their experience and industry knowledge, and shared candid recommendations. They are identified in Appendix Q.

Third, we appreciate the support of the Veterans Service Organizations (VSOs) listed in Appendix M that shared their data, reports, and surveys and their understanding of their constituents’ health care needs. They provided the invaluable “Voice of the Veteran.”

Fourth, we engaged with U.S. health care industry leaders who gave their time and provided access to their organizations and senior leadership teams. They shared their experience, perspectives, health initiatives, and viewpoints of best practices in health care that could be adopted by the Veterans health care system. Several also supported on-site visits to examine their clinical and administrative operations. These organizations are listed in Appendix M.

Finally, on behalf of the CMS Alliance to Modernize Healthcare, we would like to thank the team members from The MITRE Corporation, McKinsey & Company, RAND Corporation, Grant Thornton LLP, the Institute of Medicine of the National Academies, and numerous smaller companies and consultants who dedicated their time and energy to gather data, conduct analyses, and develop the materials that have been assembled in these Assessments and the Integrated Report. Throughout the process, it was clear that every team member shared a common commitment—to improve the health care for Veterans “who shall have borne the battle.”²

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

September 1, 2015

The Honorable Robert A. McDonald
Secretary
U.S. Department of Veterans Affairs
810 Vermont Avenue, N.W.
Washington, D.C. 20420-0002

Dear Secretary McDonald:

To support the Independent Assessment required by Section 201 of the Veterans Choice Act, The MITRE Corporation created a Blue Ribbon Panel, composed of experts from diverse health care and stakeholder backgrounds, to fully engage with MITRE in producing the Integrated Report and its findings and recommendations. Although the Panel was not specifically required by the Veterans Choice Act, we were fully involved by MITRE from the onset of the study, with complete access to raw data, subcontractor consulting teams, and MITRE subject matter experts and senior management.

MITRE assured the Panel of our complete independence, meaning that there would be full disclosure of data and assessments; that the Panel could meet in executive session as often as necessary; that the Panel would provide candid feedback and advice on the final findings and recommendations submitted by MITRE; and that the Panel was under no obligation to endorse the final Integrated Report. In addition, following public submission of the report to Congress and the VA, Panel members would be free to independently express their personal opinions regarding the process or findings, while protecting the confidentiality and propriety of the information.

With independence and transparency, the Panel pursued this study with extraordinary energy and commitment, because we—like everyone involved—were passionate about improving the health and quality of care for our Veterans. Over the past months, we reviewed thousands of pages of drafts, engaged in numerous conference calls, and spent four 2-day sessions in lively meetings at MITRE headquarters near Washington, D.C. We facilitated data collection, provided frequent and timely feedback, and worked collaboratively with MITRE to develop final priorities and recommendations. MITRE was consistently responsive to the Panel, and incorporated our advice at all stages.

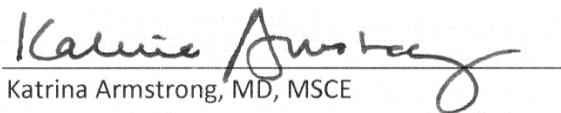

Now, we the members of the Panel unanimously endorse the Integrated Report and its findings and recommendations. The report provides not only operational, near-term strategies to improve clinical care for Veterans, but also details remedies for root-cause problems that must be addressed both by Congress and the VA before any long term, sustained improvement can be realized. Among these root issues are the need to prospectively and clearly define the role of the VHA within the modern health care ecosystem, including whether the VHA should become a comprehensive health care system for all health needs, or focus on specific areas of service-related conditions. In addition, the Congress and the VA must solve the VHA crises in leadership and culture, establish and empower the governance structure, and provide the VHA with core tools essential for any modern continuously-improving, value-based, health care system.

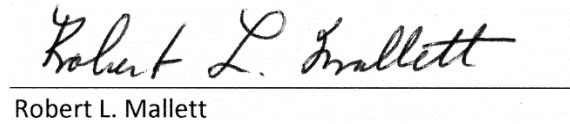

Finally, the Panel would like to express our appreciation to the hundreds of experts who have contributed to this report, and to the literally thousands of contributing Veterans and VHA employees who believed that this report would become a roadmap to achieve the highest quality of care for Veterans, at a cost we can afford, and in a culture that would be the envy of any health care system in the nation.

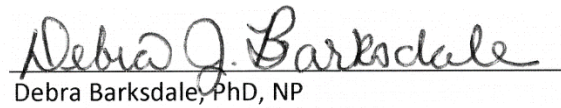

The views, opinions, and/or findings contained in this report are those of The MITRE Corporation and should not be construed as an official government position, policy, or decision.

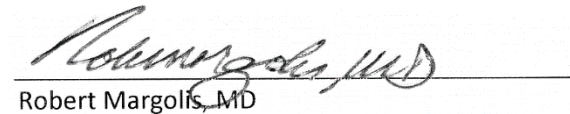

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Executive Summary

Background: Section 201 of the Veterans Access, Choice, and Accountability Act of 2014 required an Independent Assessment of the hospital care, medical services, and other health care furnished in medical facilities of the Department of Veterans Affairs (VA). The Act specifically directed that assessments be conducted in 12 areas, covering a broad spectrum of Veterans Health Administration (VHA) services, operations, and support (Figure ES-1). The findings and recommendations from these assessments revealed interrelationships that demand a holistic understanding of VHA.

VHA's health care delivery system is challenged by a unique combination of factors including its significant scale and scope, unique patient population, and congressionally mandated funding, governance, and oversight. VHA operates one of the country's largest and most complex organizations, with 1,600 care sites (including 167 medical centers) across 50 states, currently staffed by approximately 300,000 employees who cared for nearly six million Veterans last fiscal year. VHA is a major research and teaching organization, with a \$1.2 billion annual research budget. Its health professional education program is the nation's largest, clinically training nearly 120,000 individuals each year via affiliations with more than 1,800 educational institutions.

Approach: The Independent Assessment was performed by interviewing VA employees and outside observers, visiting 87 VA sites, conducting multiple surveys, analyzing 560 data sets provided by VHA and data from other sources, and performing literature reviews. In addition, best practices were gathered from the private sector through interviews with top health care executives, site visits to high-performing health care organizations, and consultation with an independent advisory panel of nationally recognized health executives and stakeholders (Appendix Q: Blue Ribbon Panel). This approach not only provided deep understanding of the 12 assessment areas, but additionally provided a comprehensive view of VHA. It is VHA's interdependent system that is the focus of the findings and recommendations in the Integrated Report.

The Independent Assessment: The Independent Assessment includes this Integrated Report and the 12 major assessment reports for the areas designated in ES-1. Each area is addressed in a separate assessment report that includes findings and evidence-based recommendations (Appendices A–L and Volume II). The Integrated Report builds upon the findings and recommendations of those reports and identifies the four systemic findings that must be addressed to enable a sustained transformation of VHA.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Significant Flaws: While VHA exhibits a deep commitment to serving Veterans, many of the assessment teams consistently found that VHA’s health care facilities deliver strikingly different patient experiences, apply inconsistent business processes, and differ widely on key measures of performance and efficiency. The assessments also provided evidence that the organization is plagued by many problems: growing bureaucracy, leadership and staffing challenges, and an unsustainable trajectory of capital costs. Other reports and assessments have pointed to local failures of access and quality. On the other hand, there are bright spots throughout VHA that illuminate best practices that work effectively within the VHA environment. Understanding the various aspects of these differences sets a context that can allow VHA to identify and act on opportunities for continuous sustained improvement.

Systems Approach: VHA must adopt systems thinking to address its most challenging problems, including access, quality, cost, and patient experience.³ Systems thinking is a framework for solving problems based on the premise that a component part of an entity can best be understood in the context of its relationships with the other components of the entity, rather than in isolation. It takes into account the interdependencies of the parts to find the best combination of strategies that meet the needs of the whole. This approach is required to address the interdependent nature of the people, processes, and technologies supporting VHA. This approach has been well established in many industries, including health care, and often enables leaders to reframe the problem into opportunities based on an appreciation of how components of the program should be working together, as opposed to how they are currently interacting. Systems thinking does not promote tackling individual problems independently because the solutions—more often than not—will be sub-optimal, non-scalable, and non-sustainable.

While complex problems benefit greatly by reframing problems in creative ways, systems solutions also work well for improving existing processes and motivating people to believe they can successfully change. Continuous improvement is one such approach that often uses a Plan-Do-Study-Act cycle that identifies, reduces, and eliminates suboptimal processes for continuous incremental or breakthrough improvements. This approach relies heavily on measuring, analyzing, and experimenting for successful innovations. The current culture in VHA would benefit greatly from instituting continuous improvement more effectively so that everyone participates, sees progress, and can build on the pride they have in being part of VHA. Some of VHA’s best performers already focus on continuous improvement, but it is not widely adopted as a standard way of operating. Transforming any organization, especially one the size of VHA, requires that everyone understands, feels accountable for, and acts daily on how to continuously improve the organization. It is as much about engaging the people as it is about fixing the processes.

Four Systemic Findings: A review of the extensive evidence, findings, and recommendations in the assessment reports—informed by an analysis of industry benchmarks and best practices, insights from health care executives and high-performing health care systems, and interactions

³ This information is informed by the Institute of Medicine Assessment D (Access Standards) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

with Veterans Service Organizations—enabled the identification of four systemic findings that impact mission execution.

- A disconnect in the alignment of demand, resources, and authorities
- Uneven bureaucratic operations and processes
- Non-integrated variations in clinical and business data and tools
- Leaders are not fully empowered due to a lack of clear authority, priorities, and goals.

The recommendations that will enable VHA to address these findings are discussed below. These recommendations are interdependent and must be coordinated and implemented via a systems approach to improve the VHA system overall.

Finding 1: A disconnect in the alignment of demand, resources, and authorities

VHA’s mission—“Honor America’s Veterans by providing exceptional health care that improves their health and well-being”⁴—is inspirational and widely accepted by VHA staff, but there are significant geographic variations with respect to how the mission is translated into action for individual Veterans. Complex eligibility rules make determining which Veterans are covered and which services those Veterans receive a challenge, and navigating VHA is often difficult for Veterans—a problem exacerbated by incomplete guidance and non-standardized business processes. Furthermore, the growing role of outside providers has not been effectively integrated into VHA’s operating model, which is based on providing direct care within VHA facilities.

At present, VHA is over-committed in some geographic areas, given its broad mission, an expanding list of automatic eligibility criteria, and limited resources. Matching supply and demand at the local level is challenging because supply is relatively fixed each year once service projection models allocate resources to each facility through the appropriation and budgeting process.

Although the population of Veterans is expected to decline by 19 percent over the next decade,⁵ the demand for health care services is expected to rise before it levels off in five years, based on demographic factors (primarily aging)—and likely will rise even more if access to VHA health care is improved (Assessment B [Health Care Capabilities]). On the other hand, in some areas and for some health conditions, VHA may not have a sufficient population of patients to sustain highly specialized service lines with enough volume to achieve and maintain clinical excellence.

Recommendation 1—GOVERNANCE: Align demand, resources, and authorities.

Congress, the Commission on Care, and VA leadership should address the misalignment of demand with available resources both overall and locally. They should align VHA’s goal to

⁴ U.S. Department of Veterans Affairs. Veterans Health Administration. “About VHA.” [Website]. Retrieved from <http://www.va.gov/health/aboutVHA.asp>

⁵ This information is presented in RAND Corporation Assessment A (Demographics) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

provide comprehensive health care to Veterans with VHA's capacity by adjusting capacity or reshaping the expected benefit—that is, the Veteran population to be served (eligibility) on the one hand, and the health care those Veterans will be provided (service lines) both by VHA and by community resources on the other.

Supporting Recommendations

- **Establish a governance board to develop fundamental policy, define the strategic path, insulate VHA leadership from direct political interaction, and ensure accountability for the achievement of established performance measures.**

Congress should consider the following alternatives for such a governance board:

- Charter a commission modeled after the 1955 U.S. President's Commission on Veterans' Pensions.
- Empower a board or commission to reshape geographic service areas and optimize facilities resourcing and lines of service (along the lines of the Defense Base Realignment and Closure Commission process used for military installations).
- Assign the definition of the governance board as a mission for the Commission on Care, established under Section 202 of the Veterans Choice Act.
- Whatever approach is selected, ensure that the solution focuses on governance, that members have sufficient longevity of term, and that the authorities of the board are fully endorsed by Congress.

- **Require a patient-centered demand model that forecasts resources needed by geographic location to improve access and to make informed resourcing decisions.**

VHA should:

- Effectively explore predictive tools to continually forecast local demand and fine-tune estimates of required resources.
- Reallocate and manage resources flexibly to meet national, regional, and local variations in patient-centered demand.

- **Clarify and simplify the rules for purchased care to provide the best value for patients.⁶**

VHA should:

- Develop a stronger management structure for purchased care and allocate responsibility and authority to the most appropriate levels.
- Establish an ongoing process for evaluating third-party administrator performance.
- Develop clear and consistent guidance and training on VA's authority to purchase care.
- Ensure that both new and existing purchased care contracts with outside providers and third-party administrators include appropriate requirements for data sharing, quality-of-care reporting, and care coordination.

⁶ This information is derived from RAND Corporation Assessment C (Care Authorities) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Finding 2—Uneven bureaucratic operations and processes

Several centralized operational and support functions appear to have lost customer focus and do not adequately support the needs of the medical centers. In response, individual VA Medical Centers (VAMCs) have adopted local implementations of certain processes, but many of these were found to be unnecessarily complex and, not surprisingly, inconsistent across VHA. In many cases, these centralized and local process issues have become inefficient or bureaucratic and have had a direct and negative impact on the overall Veteran experience and timely access to care.

These widely varying processes highlight the complexity of VHA within the larger, equally complex VA organization. Severe problems may manifest themselves at one facility, while another constantly receives tributes from Veterans and health care experts. The oft-quoted reminder, “if you’ve seen one VA hospital, you’ve seen ONE VA hospital,” captures this reality.

Recommendation 2—OPERATIONS: Develop a patient-centered operations model that balances local autonomy with appropriate standardization and employs best practices for high-quality health care.

As Assessment L (Leadership) suggests, VA and VHA should streamline their Central Offices and strengthen poor-performing support functions. VHA should adopt systemic means to identify, assess, disseminate, adapt, and scale best practices throughout the system—whether these practices originate inside or outside of VHA.

Supporting Recommendations

- **Right size and reorient the VHA Central Office to focus on support to the field in its delivery of care to Veterans.** This implies a series of actions to include reassessing all VHA Central Office-directed metrics and policies to ensure that they add sufficient value to patient outcomes and eliminate those that do not.
- **Fix substandard processes that impede the quality of care provided to the Veteran.** This is clearly dependent on, among other efforts, implementing an operating model that provides medical centers with the autonomy and flexibility to innovate and address local needs while also providing standardization across the system.
- **Design and implement a systematic approach to identify best practices and disseminate them appropriately across the enterprise.** This approach would include defining the role of the Veterans Integrated Service Network (VISN) to lead the best-practice identification and to share ideas within and across the enterprise, working collaboratively with VAMC leaders and staff.

Finding 3—Non-integrated variations in clinical and business data and tools

A lack of common, integrated VHA enterprise systems and tools negatively impacts VHA’s operations and resulting data. Inconsistent and ineffective data collection and analysis undermines rapid, evidence-based assessment and improvement of quality and customer satisfaction. VHA lacks a holistic, enterprise approach to collecting and leveraging its data. Data interchange with the Department of Defense (DoD) and external health care providers is

The views, opinions, and/or findings contained in this report are those of The MITRE Corporation and should not be construed as an official government position, policy, or decision. VA-18-0457-A-001455

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

limited, which creates unnecessary clinical risk. Since newly discharged Veterans often become VA patients, interoperability with DoD is necessary and expected. These shortfalls hinder using available data to support effective decision making and performance management.

Recommendation 3—DATA AND TOOLS: Develop and deploy a standardized and common set of data and tools for transparency, learning, and evidence-based decisions.

Supporting Recommendations

- **Use standardized clinical and administrative data for accuracy and interoperability.**
- **Implement a single, integrated set of system-wide tools centered on a common electronic health record (EHR) that is interoperable across VHA and with DoD and community providers.⁷**

Specifically, VHA should implement and integrate one system-wide:

- EHR system that is interoperable across the entire system and with DoD and community providers
- Electronic claims payment system to pay for outside services
- Billing system to collect from other payers
- Patient-friendly scheduling system with modern, single toll-free-number call-center support
- Set of electronic clinical decision-support tools describing standard work, protocols, and guidelines housed in an electronic medical library.
- **Transparently share performance metrics for leadership, clinical, and business functions across VHA to identify and adopt best practices for continuous improvement.**

Finding 4—Leaders are not fully empowered due to a lack of clear authority, priorities, and goals

As Assessment L indicates, VHA leaders operate within a challenging and disempowering environment that discourages emerging leaders from seeking promotion within the organization. While VHA has seen a 160-percent growth in headquarters program office staff in the past five years, key field leadership positions throughout the organization sit vacant or are staffed with acting leaders, and more than half of executives are eligible for retirement, potentially creating a larger number of vacant positions. Further, a misalignment of accountability and authority exists within a broader VHA culture characterized by risk aversion and lack of trust. Those leaders who are effective too often achieve outcomes despite the challenges of the organization within which they operate.

⁷ This information is derived from The MITRE Corporation Assessment H (Health Information Technology) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Recommendation 4—LEADERSHIP: Stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership, and accountability.⁸

VHA must resolve the leadership crisis by putting the right leaders in the right jobs with the right skills under an appropriate governance model for the appropriate amount of time.

Supporting Recommendations

- **Push decision rights, authorities, and responsibilities to the lowest appropriate level throughout the organization.**
- **Build on Veteran-centered behaviors to drive a culture of service excellence, trust, continuous improvement, and healthy accountability.**
- **Revitalize the leadership pipeline through establishment of enterprise-wide, comprehensive succession-management and leadership-development functions.**
- **Strengthen the appeal of senior leadership positions by pursuing flexibilities in hiring and compensation.**
- **Establish sustained leadership continuity by extending tenure for key positions.**

A Call for System-Wide Change: The Independent Assessment highlighted systemic, critical problems and confirmed the need for change that has been voiced by Veterans and their families, the American public, Congress, and VHA staff. Solving these problems will demand far-reaching and complex changes that, when taken together, amount to no less than a system-wide reworking of VHA.

Several high-performing health care organizations were examined by the study team, including Kaiser Permanente, Virginia Mason, Geisinger Health System, and the Cleveland Clinic. Although all of these are of a differing scale than VHA, all overcame significant clinical or economic troubles by making consistent, organization-wide changes that enabled them to transform themselves into organizations that now excel at their specific missions. Similarly, during 1994 to 1999, sustained leadership within VHA deployed system-wide changes that effected a major transformation of the agency's operations. VHA should once again commit to that level of systemic change.

A system-wide transformation is required, based on an integrated systems approach that acknowledges the interdependence of the four systems recommendations:

- 1) **Governance:** Align demand, resources, and authorities.
- 2) **Operations:** Develop a patient-centered operations model that balances local autonomy with appropriate standardization and employs best practices for high-quality health care.
- 3) **Data and Tools:** Develop and deploy a standardized and common set of data and tools for transparency, learning, and evidence-based decisions.

⁸ This recommendation and the ideas expressed in the supporting recommendations reflect information provided in McKinsey & Company Assessment L (Leadership) in Volume II.

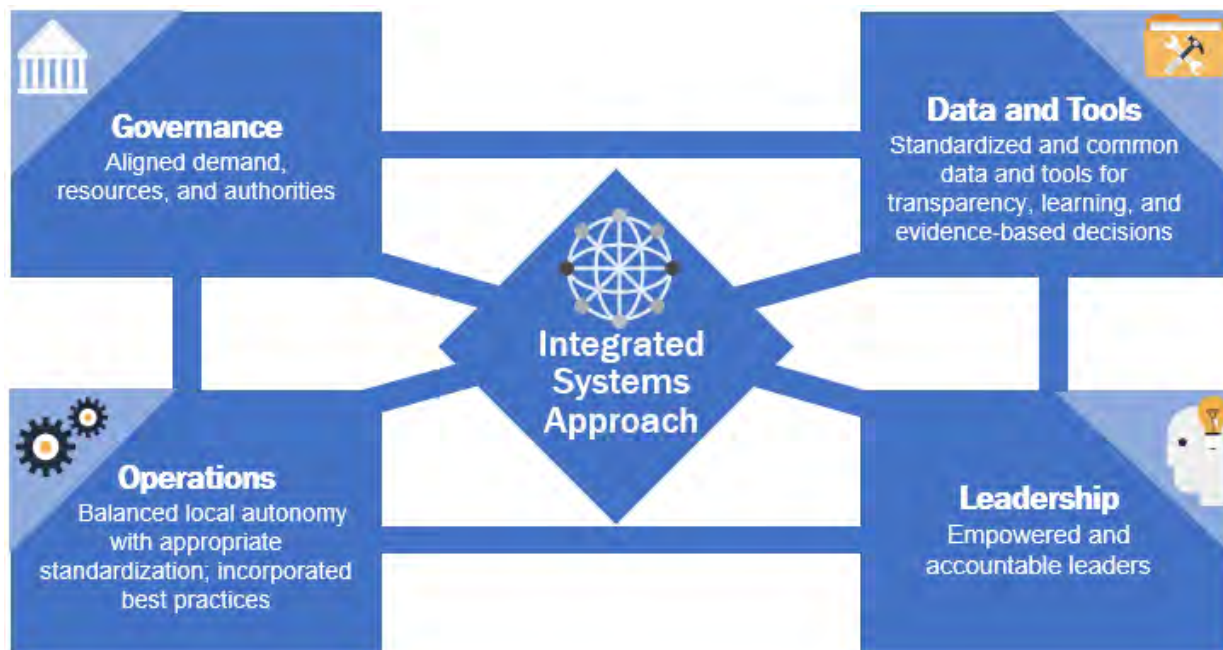

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- 4) **Leadership:** Stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership, and accountability.

These four recommendations create the integrated systems cornerstones, as shown in Figure ES-2.

With these four interdependent systems components successfully in place, VHA will have the opportunity to achieve a place among the highest performing health care systems in the world. As an example of the value of this systems approach, consider the challenges that VA faces in managing its capital program in facilities management. As Assessment K (Facilities) highlights, provided that average funding levels remain consistent over the next 10 years, the \$51 billion capital requirement would significantly exceed the anticipated funding level of \$16–26 billion.⁹ Not only would this shortfall jeopardize the capital program, it would also threaten the financial integrity of the entire VHA health care delivery system and, in turn, significantly impact the quality of health care provided to Veterans. Viewing this primarily as a funding problem would be shortsighted. Rather there are interdependent findings in each of the four cornerstones that need to be addressed in an integrated fashion to achieve a sustainable solution. In terms of governance, external constraints limit VHA's ability to deliver and operate medical facilities at the level of private-sector benchmarks; investments in facilities are not effectively linked to workload growth; existing space is not being used at its highest efficiency; and expected funding levels do not support identified capital needs.

ES-2. Integrated Systems Cornerstones

As Assessment K also reveals, for operations, total cost of ownership is not calculated or integrated into capital planning decisions; VHA has no integrated system to manage the entire

⁹ This information comes from McKinsey & Company Assessment K (Facilities) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

leasing process; comprehensive tracking or measurement of the leasing program and its outcomes is precluded; and a large majority of facilities noted challenges in hiring staff and filling vacant positions. For data and tools, data capture occurs at multiple levels and through multiple tools, generating multiple sources of truth about the status of the capital program; tools for developing Strategic Capital Investment Plan business cases rely on user creativity and capabilities to consider creative alternatives to capital solutions; and systems do not consistently capture key performance indicators, and the metrics are not standardized across all stakeholders. And for leadership, there are recognized shortfalls in overall accountability, role clarity, personal ownership, internal communication, and proactive problem-solving approaches that limit VA's and VHA's ability to deliver the correct projects on time and on budget; the broader culture of facilities functions is characterized by silos and risk aversion, resulting in an inability to consistently advance projects in an efficient manner; and competition for limited funds has led leaders to make a range of choices in developing projects that favor approval strategies over efficient project delivery.

Viewing these facilities challenges through the lens of the integrated systems approach begins to reveal the complexity of the problem, the integrated nature of the required transformation, and the opportunity to reframe the facilities challenges as part of a larger set of interdependent pieces of VHA's overall health care system. Facility challenges can be significantly mitigated by a transformative realignment throughout the capital program deploying best practices in leasing and contracting; realigning the strategy of the capital program to improve project selection, optimize the infrastructure portfolio, implement innovative care delivery models, understand demand-based needs, and explore and partner with purchased-care opportunities; and reevaluating funding requirements. In short, employing the systems view could help reframe the vision for future health delivery and significantly reduce VHA's current and future capital investment issues. It also positions VHA not to be burdened long term with hospital overcapacity as the nature of health care delivery trends toward smaller inpatient facilities, increasing outpatient care, and more virtualized health care delivery.

The richness of the systems approach extends not just to facilities, but across many of VHA's biggest challenges. Patient access to clinician appointments cannot be sustainably addressed by only focusing on increasing overtime in the near term without looking at demand modeling, improving scheduling processes and tools, and a number of other dependencies. Choice Card funding is critical to increase purchased care access, but will not succeed without strong Veteran navigational aids, clearer rules of use, and a number of other cultural and leadership changes to promote using health care services outside of VHA. Prioritizing these findings and then solving them individually is tempting, but such an approach would not guarantee a sustainable solution. As H.L. Mencken stated, "For every complex problem there is an answer that is clear, simple, and wrong."

There are clear obstacles. As the assessment reports reveal, the number of issues VHA currently faces appears overwhelming. In its current state, VHA is not well positioned to succeed in the transformation that this analysis suggests. Three essential actions are required to realize the recommendations inherent in this transformation. VHA must:

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Recognize that the four cornerstones are interdependent and the success of any one of the four overarching recommendations hinges on the implementation of the other three. These solutions must be coordinated and implemented via a systems approach to improve VHA overall.
- Establish a transformation program management office with authority and funding (redirected from current central and local funding mechanisms) to implement the system-wide reworking of VHA. This will include establishing priorities, defining timelines for execution, allocating resources, and instituting appropriate metrics for success. It should merge relevant components of MyVA, the *Blueprint for Excellence*, and other ongoing initiatives into one coherent, focused transformational approach.
- Require evidence-based systems models to inform and implement integrated solutions that balance governance, operations, data and tools, and leadership.

It will be the charge of Congress, the Commission on Care, and VA leadership to see that these recommendations and resulting transformation efforts are given the necessary attention and support that they—and our nation’s Veterans—deserve.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

1 Introduction

Requirements: Several congressional hearings in the spring and summer of 2014 attempted to explore the potential uneven access and quality in the Veterans Health Administration (VHA) health care system and to identify the sources of the problems that were dominating the press. In August 2014, Congress passed the Veterans Access, Choice, and Accountability Act of 2014 (Pub. L. No.113–146, 128 Stat. 1754), also known as the Veterans Choice Act. Section 201 of the Veterans Choice Act, Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs—hereafter called the Independent Assessment—calls for a private-sector entity or entities to “conduct an independent assessment of the hospital care, medical services, and other health care furnished in medical facilities of the Department.”¹⁰ The Act specifically directed that the assessments be conducted in 12 areas, covering a broad spectrum of VHA services, operations, and support. Eleven of these assessments were conducted under the auspices of the CMS Alliance to Modernize Healthcare (CAMH), a federally funded research and development center sponsored by the Centers for Medicare & Medicaid Services (CMS) and operated by The MITRE Corporation. MITRE entered into contracts with three organizations to help execute the required assessments, with the exception of Assessment D (Access Standards), which VHA separately contracted to the Institute of Medicine (IOM). Table 1 identifies the specific assessment areas and the organizations conducting the assessments.

Activities: For the 11 CAMH assessments, the assessment teams conducted numerous activities to better understand VHA processes, functions, and operations. As Table 2 illustrates, they captured and utilized a vast amount of information gathered through site visits, surveys, data requests, and focused interviews. All of the individual assessment reports, summarized in Appendices A through L and contained in Volume II, provide a comprehensive discussion of the analytical techniques that each team used to conduct its assessment. This Integrated Report was created by applying an integrated systems perspective across all of the individual assessments’ activities, findings, and recommendations.

Table 2. Data Collection, Assessment, and Integration Activities

Conducted 87 site visits to 38 VAMCs, 16 primary care community-based outpatient clinics, 7 multi-specialty community-based outpatient clinics, 1 health care center, 13 VISN headquarters, 4 construction and facilities management offices, 2 acquisition centers, 2 consolidated mail outpatient pharmacies, 3 consolidated patient account centers, 1 health administration center, and 6 active major construction sites.
Conducted numerous interviews and workshops with VA and VHA leadership, staff, and union representatives.
Conducted extensive literature reviews that included 137 previous assessments of the Veterans health care system.

¹⁰ United States. Congress. Veterans Access, Choice, Accountability, and Transparency Act, 38 U.S.C. § 1701 (2014) (Pub. L. No.113–146, 128 Stat. 1754).

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Met with 27 leading private health care organizations and obtained information from 10 Veteran Service Organizations (VSOs). Visited four health care systems that have undergone successful major transformations in the last 10 years.

Conducted 5 individual-level surveys to include leaders at VA administrative parent organizations, schedulers, providers and administrators, inpatient clinical staff members at all VAMCs, and VHA employees about its leadership beliefs and practices.

Received 560 data sets from VHA; received and analyzed more than 20,000 files.

Created an independent Blue Ribbon Panel consisting of 16 preeminent health care industry leaders to leverage their expertise in health care industry best practices and innovative practices. The panel members (listed in Appendix Q) remained engaged throughout the assessment process and provided advice and feedback on the integrated assessment approach and this Integrated Report.

Limitations: These efforts had certain limitations:

- The assessment teams assumed that the quality, reliability, and accuracy of the data provided by VHA were acceptable. Sometimes data were unavailable, used non-standard definitions, or appeared to have inconsistencies. Conducting audits was beyond the scope of this effort.
- The assessments did not include a survey of Veterans' experiences or perceptions. The defined time frame did not permit the design and implementation of a formal survey. We engaged Veterans Services Organizations (VSOs) to gain their perspective on the viewpoints of their membership.
- The assessments did not compare costs of VA and non-VA care because the Veterans Choice Act did not require cost comparisons. The Congressional Budget Office (CBO) has previously reported to Congress on the challenges of comparing the costs of VA and non-VA care, citing the scarcity of cost-accounting data for Veterans' care and the complete absence of data on non-VA care received by Veterans who are also treated by VA.¹¹ We do recognize that the value of Veterans' health care, defined as health care outcomes relative to costs, should inform efforts for improvement.
- Due to time constraints, the assessment teams did not visit every Veterans Affairs Medical Center (VAMC). Rather, the assessment team implemented a process that defined an appropriate sample of medical facilities to visit and used data calls and surveys to cover the remaining facilities that could not be visited. The sample included representation across all (Veterans Integrated Service Networks (VISNs); satisfied assessment requirements; and 87 site visits, including visits to 38 VAMCs, were conducted. To ensure consistency across each site visit, we also ensured that the same

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

population (i.e., roles and units) were used for observation and focus-group participation.

Organization: The results of these efforts are captured in two volumes:

- Volume I contains this Integrated Report and one appendix for each assessment, summarizing that assessment's findings and recommendations.
- Volume II contains the detailed and complete assessment reports.

Table 3 provides the major elements of this Integrated Report:

- Sections 1–3 include the Introduction, Context, and Systems and are intended to enable readers to understand the purpose of the effort, to capture VHA's state at the time of the assessment, and to introduce the need for an integrated system-level perspective to resolve identified systemic findings.
- Sections 4–7 discuss the four interrelated systemic findings of concern and respective system-wide recommendations.
- Section 8 describes the transformational journey that VHA must embark upon to become a high-performing health care system.

This Integrated Report provides an integrating perspective based on the findings and recommendations from across the independent assessment reports. It does not provide a summary of the individual findings or recommendations of the assessments; rather, readers are strongly encouraged to study those assessments in detail.

The findings and recommendations from all of the independent assessment reports revealed four systemic findings, defined in Section 3, that are clearly interrelated and underlie many of VHA's recurring problems. This Integrated Report concludes that solving VHA's more challenging problems requires VA leadership to adopt systems thinking, a framework for solving problems based on the premise that a component part of an entity can best be understood in the context of its relationships with the other components of the entity, rather than in isolation. This approach takes into account the interdependencies of the parts to find the best combination of strategies that meet the needs of the whole. Systems thinking has been well established in many industries, including health care, and requires leaders to understand how components of the system should be working together, as opposed to how they are currently interacting. Systems thinking does not promote tackling individual problems independently because the solutions, more often than not, will be sub-optimal, non-scalable, and non-sustainable. This Integrated Report also concludes that VHA should establish a transformation program management office with authority and funding necessary to effectively implement a system-wide reworking of VHA based on systems thinking and that VHA should exploit evidence-based systems models to enable informed decisions about integrated solutions.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

2 Context

The assessments focused on the care provided under the auspices of the U.S. Department of Veterans Affairs (VA). This care is primarily provided through the medical facilities operated by the Veterans Health Administration (VHA)—the VA organization directed by the Under Secretary for Health—and through health care funded by VA and provided outside of VHA facilities (i.e., purchased care or community care). Veterans also receive health care outside of VHA facilities that is not funded by VHA. Our focus excludes care that is not directly provided by or paid for by VHA.¹²

VHA is a multifaceted organization with several dynamics that impact how it operates. These include its mission, funding, size and scale, organizational construct, and an evolving patient population influenced by complex eligibility rules and multiple care options.

VHA Mission and Vision: VHA’s stated mission is “Honor America’s Veterans by providing exceptional health care that improves their health and well-being.”¹³ VHA aspires to the following vision:

VHA will continue to be the benchmark of excellence and value in health care and benefits by providing exemplary services that are both patient-centered and evidence-based.

This care will be delivered by engaged, collaborative teams in an integrated environment that supports learning, discovery and continuous improvement.

It will emphasize prevention and population health and contribute to the Nation’s well-being through education, research and service in national emergencies.¹⁴

Fiscal Resources: VHA estimates that its funding for fiscal year (FY) 2015 will total \$59 billion, including \$3 billion in third-party collections.¹⁵ Currently, VHA’s budget request is based on estimates developed two years prior and is constrained by overall federal budget growth. Thus, VHA may be limited in its ability to respond quickly to unexpected demand for health care, especially after changes in eligibility. This happened several times in the past: for example, after eligibility reform in 1996 and when certain diagnoses were designated presumptively service connected for Veterans who served in Vietnam, the Gulf War, and other situations.

Size and Scale: VHA has an extensive geographic presence across the United States and its territories and manages a significantly large number of facilities. It provides health care through 21 Veterans Integrated Service Networks (VISNs). In each VISN, hospitals known as VA Medical

¹² The terms VA and VHA are not interchangeable. Throughout this report, VA refers to the department and VHA refers to the administration within the department.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Centers (VAMCs) coordinate with smaller clinical sites known as community-based outpatient clinics (CBOCs) to care for Veterans in a specified geographic area. In addition to providing direct patient care to Veterans, VHA also provides medical education for physicians and other health care providers (it has been estimated that 70 percent of all U.S. physicians received some of their training from VHA),¹⁶ and conducts critical clinical, basic, and health services research.

Figure 2. U.S. Department of Veterans Affairs Organization Chart

Organization: As Figure 2 indicates, Veterans Health Administration is one of three administrations under the Secretary of Veterans Affairs. It is by far the largest administration, with 89 percent of the full-time equivalent (FTE)¹⁷ staff employed by VA and 87 percent of the fiscal year (FY) 2016 VA discretionary budget.

- All three administrations rely on the VA Central Office (VACO) to provide Information Technology (IT), Human Resources (HR), Contracting, Administration, Acquisition, Logistics, and Construction Services, among others.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- VHA also has a Central Office (VHACO) that includes offices for Operations and Management, Policy and Services, Nursing Services, Academic Affiliations, Business, Medical Inspector and Quality, Safety, and Value.
- The 167 VA Medical Centers (VAMCs) are distributed across 21 Veterans Integrated Service Networks (VISNs). These VAMCs and VISNs are nested within VHA under the direction of VHACO. VHA and VHACO are, in turn, nested under VA and the VA Central Office.

Evolving Population of Veterans:¹⁸ Figure 3 illustrates trends in the total Veteran population, enrollment, and use of VA care. In 2014, the Veteran population totaled 21.6 million who had served on active duty in the military; of these, 9.1 million were enrolled for VHA health care coverage. Among those enrolled, about 5.9 million Veterans used a VHA hospital or clinic at least once during the year. Historical data show that the number of Veterans peaked around 1980 at 30 million and has steadily declined since then, but the number of VHA health care enrollees and users has steadily increased over the 20 years for which data are available.

The Veteran population is projected to continue to decline over the next decade by an additional 19 percent to 17.5 million. The number of enrollees and patients is estimated to reach its peak level in 2019 before plateauing or possibly declining in future years, as the population decline begins to overtake the upward trend in use of VHA health care by eligible Veterans. Changes in access to VHA in-house or purchased care, enrollment eligibility, or external factors could result in a resumption of the upward trend or a more rapid decline.

Figure 3. Trends in the Veteran Population, Enrollment, and Use of VA Care

Source: Congressional Research Service, Assessment A Projections

¹⁸ This information is presented in RAND Corporation Assessment A (Demographics) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

In terms of geographic distribution, over the next decade, the Veteran population will become more concentrated in urban areas, and the relative share of the Veteran population in the Ohio River Valley region will diminish. However, migration is less frequent among Veterans than non-Veterans and will not play a substantial role in the geographic distribution of Veterans between 2014 and 2024. While migration rates vary with a range of demographic characteristics, the overall trend is one of slow decline in migration rates generally.

Health Conditions:¹⁹ Veterans are substantially older and therefore face more chronic conditions than the general civilian population. Approximately 50 percent of all Veterans are age 65 or older, compared to only 17 percent of the civilian population. Veterans report more health problems than civilians. Compared to Veterans who do not use VHA health care, VHA patients are older, less socio-economically well off, and experience a higher prevalence of common chronic conditions (such as diabetes and cancer). The prevalence of these conditions is expected to increase over the next 10 years.

The overall prevalence of mental health conditions is 56 percent higher among VHA patients than other Veterans. Twenty-five percent of all patients seen at VHA have a mental health condition, and the prevalence of post-traumatic stress disorder (PTSD) among VHA patients (at four percent) is 11 to 14 times the prevalence among Veterans not using VHA care. When combined with the otherwise rare conditions related to combat—amputation, traumatic brain injury, blindness, and severe burns—VHA handles a patient mix that is distinct from what civilian community providers typically treat. VHA also faces challenges, as do civilian providers, in treating patients who are homeless or have unstable living arrangements. An estimated 50,000 Veterans were homeless in 2014, and while overall homelessness among Veterans is declining, some areas still serve a large homeless population.

Complex Eligibility Rules: The Veterans Health Care Eligibility Reform Act of 1996 established the foundation for today's eligibility rules for Veterans' health care. The Act defined eligibility priority groups while mandating care for Veterans with service-connected health conditions, service-connected disabilities, exposure-related health conditions, and those without other means to pay for their care. However, health care for these Veterans is not an entitlement because it is limited by "the amount provided in advance in appropriations Acts for such purposes."²⁰ It is worth noting that VHA has discretion in the law over how to provide care, but it is required to maintain specialized treatment and rehabilitation programs for spinal injuries, blindness, amputations, mental illness, and other serious service-connected health conditions.

The threshold for enrollment eligibility has changed several times since 1996. After Congress expanded health care eligibility to all Veterans, the number of enrollees increased rapidly. By 2003, VHA found itself "unable to provide all enrolled Veterans with appointments within a reasonable time."²¹ To ensure quality and timeliness of care for higher priority Veterans, VHA

¹⁹ This information is presented in RAND Corporation Assessment A (Demographics) in Volume II.

²¹ Enrollment-Provision of Hospital and Outpatient Care to Veterans Subpriorities of Priority Categories 7 and 8 and Annual Enrollment Level Decision, 38 CFR 17 (2003)

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

terminated the enrollment of Veterans who do not have a compensable service-connected disability and do not have incomes below the threshold used to determine which Veterans cannot pay for their care. The income threshold was relaxed in 2009, opening enrollment to Veterans whose incomes are within 10 percent of the threshold. Finally, Veterans who deployed to a combat theater after November 2009 are automatically eligible to enroll for up to five years after leaving the military without having to first establish their priority group.

Multiple Sources of Health Coverage for Veterans: Health care planning for VHA must also consider the fact that most Veterans have at least one source of health insurance coverage other than VHA health care, and Veterans with other coverage have markedly different VHA use rates than Veterans without other sources of coverage. Slightly more than half of Veterans reporting to non-VA sources of coverage have used VA health care services in the past, and 43 percent report using VA health care services in the past six months. Only eight percent of Veterans using private coverage alone report using VA health care in the past six months.

Purchased Care:²² Historically, VHA treated Veterans almost exclusively in its own facilities. In recent years, the use of purchased care has increased rapidly and now accounts for about 10 percent of expenditures. The Veterans Choice Act guaranteed purchased care for enrolled Veterans who, under certain parameters, are unable to access care in VHA facilities. VHA has begun to develop a more robust purchased-care program, relying on a network of community providers who have agreed to treat Veterans and provide information about the care provided.

Quality of Care:²³ Although Congress did not specify quality of care as a specific assessment area, one assessment did characterize current VA quality of care by including a review of previous studies and new analyses that compared VA's quality with non-VA providers on a published set of quality measures. After a careful examination of many published, peer-reviewed studies, Assessment B (Health Care Capabilities) concludes that VHA health care quality is better on many measures than non-VA providers' care, while similar or worse on other measures. In new analyses comparing VHA's quality with non-VA providers, VHA performed the same or significantly better on average than the non-VA provider organizations on 12 of 14 effectiveness measures (providing recommended care) in the inpatient setting, and worse on two measures. On average, VHA performed significantly better on 16 outpatient Healthcare Effectiveness Data and Information Set® (HEDIS) measures of effectiveness compared with commercial health maintenance organizations (HMOs); on the 15 outpatient HEDIS measures of effectiveness that were available for Medicaid HMOs; and on 14 of 16 outpatient effectiveness measures compared with Medicare HMOs. On 6 of 10 patient-centeredness measures, on average, patients in VA hospitals reported significantly less favorable experiences with the care they received than did patients in non-VA hospitals. Assessment B observed marked differences between highest and lowest performing VA facilities for most quality measures—indicative of the uneven quality of care suggested in Section 1.

²² This information is presented in RAND Corporation Assessment C (Care Authorities) in Volume II.

²³ This information is presented in RAND Corporation Assessment B (Health Care Capabilities) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Shift from Inpatient to Outpatient Care: U.S. health care has been transforming from hospital-centric sick care to an outpatient model that emphasizes primary and preventive care. Data from the American Hospital Association reveals a decline in inpatient admissions since 2008, dropping from 35.8 million community hospital admissions to 34.4 million. Outpatient visits over the same period grew from 624 million visits in 2008 to 675 million visits in 2012 (Figure 4²⁴). These trends are traced to health care reform changes and the adoption of new models of care that accommodate more patients in an outpatient setting. More hospitals are establishing medical home programs. “In 2013, 20.4% of hospitals had a medical home program compared with 14.5% in 2011.”²⁵ A review of Medicare data from 2004 to 2011 reveals that inpatient admissions per Fee for Service (FFS) beneficiary declined by 7.8 percent while the number of outpatient services per FFS beneficiary increased by 33.6 percent across all types of insurance.²⁶ Within VHA, outpatient visits are increasing while inpatient Bed Days of Care has declined, with some VISNs experiencing more dramatic swings than others. These trends will eventually impact the number, size, and configuration of the health care facilities required to provide support to Veterans.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

3 Systems

Systems Thinking: A review of the findings included in the assessment reports indicates that each finding has an impact on patient care, and many findings have been recognized by previous studies.²⁷ Over the last 10 years, more than 15 studies and assessments have addressed scheduling issues alone. Prioritizing these findings and then solving them individually is tempting, but such an approach would not guarantee a sustainable solution. While focusing on one simple metric and attacking that measure is tempting, doing so may be transient and may fail to address the underlying problems. As H.L. Mencken stated, “For every complex problem, there is an answer that is clear, simple, and wrong.” Often, the simple answer is not sustainable, is not scalable, and can even create unintended consequences.

An analysis of the Veterans’ access issue illustrates this conclusion. Using wait times as the one metric for patient access, Assessment D (Access Standards) reports an average wait time of 43 days for new primary care appointments, with a range of 2–122 days across all VA facilities, based on an October 2014 VHA report. Comparison data from a review of Massachusetts physicians in the civilian sector showed average wait times of 50 days for internal medicine and 39 days for family medicine appointments. This suggests that, on average, VHA was not that different from the civilian sector. Assessment B (Health Care Capabilities) also “did not find evidence of a system-wide crisis in access to VA care.” But looking only at overall averages can mask troubling instances of poor access and can preclude the investigation of the underlying causes of those instances. Assessment D asserts that achieving sustainable access improvements requires a systems approach, incorporating multiple factors: systems strategies, supply and demand alignment, reframing the type of patient encounter, the need for standards, the need for evidence-based best practices, and leadership. Each of these will require its own evidence-based metrics and benchmarks. Taken together, they will provide a much more comprehensive and accurate assessment of access. Creating a locally tailored model of these pieces gives VHA the ability to understand how access varies from location to location. Local models can then be aggregated to provide understanding of overall system performance while still retaining local granularity to uncover previously hidden issues.

VHA must adopt a systems perspective to address its most challenging problems, including access. Systems thinking views problems within the context of the overall system and avoids isolated solutions to specific problems. It takes into account the interdependencies of the parts to find the best combination of strategies that meet the need of the whole.²⁸ This approach has

²⁷ This team reviewed 137 previous assessments of VHA, including reports by the Government Accountability Office, Veterans Administration Office of the Inspector General, and multiple other organizations. These assessments were conducted between 1998 and 2015. (Seventy-seven percent of the reports were conducted in the last five years.) They contain 790 findings about the state of VHA health care, many of which are overlapping. About 80 percent of the findings identified in this Integrated Report are aligned with or reflect those previous findings. The unique value of this report is not in the list of findings but in the recognition of the need for an integrated systems approach to address the underlying causes of those findings.

²⁸ Frank, M. (2000, March 31). Engineering systems thinking and systems thinking. *Systems Engineering*, 3(3), 163–168.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

been well established in many industries, including health care. This approach often enables leaders to exploit identified strengths and to reframe problems into opportunities based on an appreciation of how components of the program should be working together, as opposed to how they are currently interacting. As was stated in a recent Senate hearing on VHA, the tendency to chase “shiny objects”²⁹ must be avoided and replaced by focusing on an integrated process executed at the enterprise level. The Government Accountability Office (GAO) has also encouraged VA to address those systemic findings that will enhance the ability of VHA to provide high-quality health care to Veterans.³⁰

Systemic Findings: To understand the interdependence of issues and the potential causes of systemic problems in VHA, multiple reviews of all the findings across the assessment reports were conducted. Through an analysis of industry benchmarks and best practices, insights from health care executives and high-performing health care organizations, the perspective of our Blue Ribbon Panel, and interactions with Veterans Service Organizations, four systemic findings repeatedly emerged. Each of these systemic findings then motivates a cornerstone recommendation that should be integrated into a VHA systems approach.

Finding 1—A disconnect in the alignment of demand, resources, and authorities

VHA’s mission is inspirational and widely accepted by employees, but there are significant geographic variations with respect to how the mission is translated into action for individual Veterans. Complex eligibility rules make determining which Veterans are covered and what services they receive a challenge, and navigating VHA is often difficult for Veterans—a problem exacerbated by incomplete guidance and non-standardized business processes. Furthermore, the growing role of outside providers has not been integrated effectively into VHA’s operating model, which is based on providing direct care within VHA facilities.

At present, VHA is over-committed in some geographic areas, given its broad mission, an expanding list of automatic eligibility criteria, and limited resources. Matching supply and demand at the local level is challenging because supply is relatively fixed each year once service projection models allocate resources to each facility through the appropriation and budgeting process.

Recommendation 1—GOVERNANCE: Align demand, resources, and authorities.

Finding 2—Uneven bureaucratic operations and processes

Several centralized operational and support functions appear to have lost customer focus and do not adequately support the needs of the medical centers. Individual VAMCs have adopted

²⁹ Clark, C. (2015, April 30). Senators propose acting as “Board of Directors” for VA. Government Executive. Retrieved from: <http://www.govexec.com/management/2015/04/senators-propose-acting-board-directors-va/111613/>

³⁰ U.S. Government Accountability Office. (2015, February 11). *High-risk series: An update*. (GAO Publication No. 15-290). Washington, D.C.: U.S. Government Publishing Office. Retrieved from <http://www.gao.gov/assets/670/668415.pdf>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

local implementations of certain processes, but many of these were found to be unnecessarily complex and, not surprisingly, inconsistent across VHA. In many cases, these centralized and local process issues have become inefficient and bureaucratic, creating a direct negative impact on the overall Veteran experience and timely access to care.

These widely varying processes highlight VHA's complexity. Severe problems may manifest themselves at one facility, while another constantly receives tributes from Veterans and health care experts. The oft-quoted reminder, "if you've seen one VA hospital, you've seen ONE VA hospital," captures this reality.

Recommendation 2—OPERATIONS: Develop a patient-centered operations model that balances local autonomy with appropriate standardization and employs best practices for high-quality health care.

Finding 3—Non-integrated variations in clinical and business data and tools

A lack of common, integrated VHA enterprise systems and tools negatively impact VHA's operations and resulting data. Inconsistent and ineffective data collection and analysis undermines rapid, evidence-based assessment and improvement of quality and customer satisfaction. VHA lacks a holistic, enterprise approach to collecting and leveraging its data. Data interchange with the Department of Defense (DoD) and external health care providers is limited, which creates unnecessary clinical risk. Since newly discharged Veterans often become VA patients, interoperability with DoD is necessary and expected. These shortfalls hinder using available data to support effective decision making and performance management.

Recommendation 3—DATA AND TOOLS: Develop and deploy a standardized and common set of data and tools for transparency, learning, and evidence-based decisions.

Finding 4—Leaders are not fully empowered due to lack of clear authority, priorities, and roles

VHA leaders operate within a challenging and disempowering environment that discourages emerging leaders from seeking promotion within VHA. Key leadership positions remain vacant or are staffed with acting leaders, and more than half of executives are eligible for retirement, potentially creating a larger number of vacant positions. A misalignment of accountability and authority exists within a broader VHA culture that is characterized by risk aversion and lack of trust. Those leaders who are effective too often achieve positive outcomes despite the challenges of the organization within which they operate.

Recommendation 4—LEADERSHIP: Stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership, and accountability.³¹

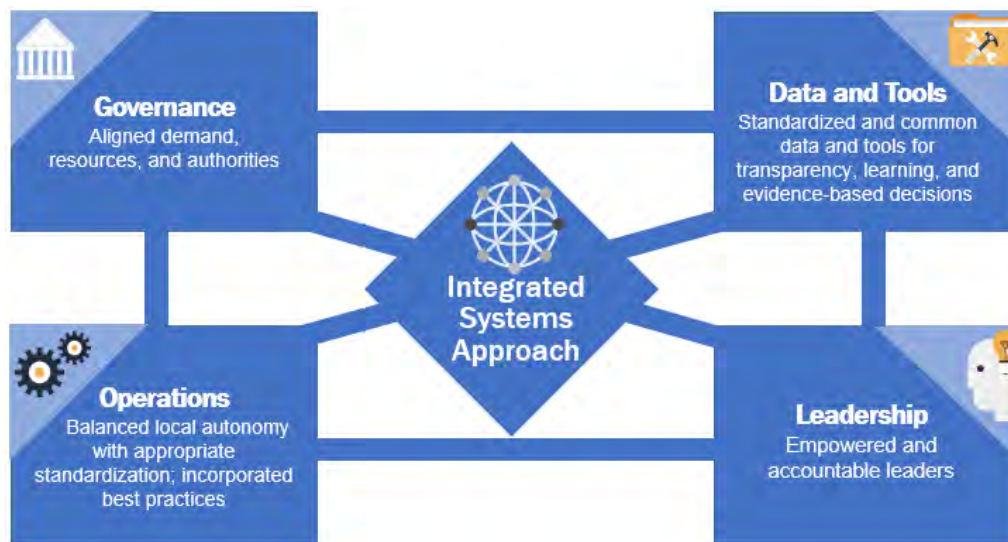

Integrated Systems Cornerstones: These four systemic findings in governance, operations, data and tools, and leadership all contribute to the critical problems that plague VHA. It should not

³¹ This information comes from McKinsey & Company Assessment L (Leadership) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

be surprising, then, that when addressing any one problem, the solution must integrate all of these systems cornerstones as part of a sustained solution. For example, improving access in a scalable and sustainable manner is more than just authorizing and funding temporary overtime to create more appointments; improving access must also include forecasting demand, streamlining scheduling processes, improving the efficiencies of existing hospital capacities, changing the way health delivery occurs to include telehealth, and having clarity and authority for using purchased care options. Similarly, even funding \$10 billion for Choice Cards without addressing the other parts of the system such as educating Veterans about their new options and changing the culture to embrace non-VHA providers can lead to poor results. Figure 5 illustrates the four integrated systems cornerstones that must be addressed together to enable enduring solutions in VHA.

Figure 5. Integrated Systems Cornerstones

Applications of the Integrated Systems Approach: Three examples emerge that demonstrate the value of the systems approach in addressing the significant challenges facing VA. These examples deal with facilities management, Veteran patient access, and health information technology.

Facilities³²: Consider the challenges that VA must resolve in managing its capital program in facilities management. Provided that average funding levels remain consistent over the next 10 years, the \$51 billion capital requirement would significantly exceed the anticipated funding level of \$16–26 billion.³³ Not only would this shortfall jeopardize the capital program, it would also threaten the financial integrity of the entire VHA health care delivery system and, in turn, significantly impact the quality of health care provided to Veterans. Viewing this primarily as a funding problem would be shortsighted. Rather, interdependent findings exist in each of the

³² This information comes from McKinsey & Company Assessment K (Facilities) in Volume II.

³³ This information comes from McKinsey & Company Assessment K (Facilities) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

four cornerstones that need to be addressed in an integrated fashion to achieve a sustainable solution, as shown in Table 4.

Table 4. Facilities Challenges Through the Lens of the Systems Approach

Governance
External and internal constraints limit VHA's ability to deliver and operate medical facilities at the level of private-sector benchmarks; to appropriately rebalance inpatient and outpatient facilities; and to accommodate future trends, including telehealth.
Investments in facilities are not effectively linked to workload growth; existing space is not being used at its highest efficiency; eliminating underutilized space is difficult.
Expected funding levels do not support identified capital needs.
Operations
Lengthy approval and funding timelines hinder VHA's ability to meet the identified space requirements to keep up with Veteran demand and invest in facilities updates that align with changing models of care.
VHA has no integrated system to manage the entire leasing process timelines, comprehensive tracking, or measurement of the impact of the leasing program.
A large majority of facilities noted challenges in hiring staff and filling vacant positions that were open and for which budget had been allocated.
Scope and design criteria for major projects are frequently subjected to major changes, especially during the design phase, affecting overall cost and schedule.
Data and Tools
Data capture occurs at multiple levels and through multiple tools, generating multiple sources of truth about the status of the capital program.
Tools for developing Strategic Capital Investment Plan business cases rely on individual effort versus a systematic process to consider creative alternatives to capital solutions.
Systems do not consistently capture key performance indicators. The metrics are not standardized across all stakeholders.
Leadership
There are recognized shortfalls in overall accountability, role clarity, personal ownership, internal communication, and proactive problem-solving approaches that limit VA's and VHA's ability to deliver the correct projects on time and on budget.
The broader culture of facilities functions is characterized by silos, risk aversion, and role ambiguity, resulting in an inability to consistently advance projects in an efficient manner.
Competition for limited funds has led leaders to make a range of choices in developing projects that favor approval strategies over efficient project delivery.

Viewing these facilities challenges through the lens of the integrated systems approach reveals the complexity of the problem; the integrated nature of the required transformation; and the

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

opportunity to reframe the facilities challenges as part of a larger set of interdependent pieces of VHA's overall health care system. Facility challenges can be significantly mitigated by a transformative realignment throughout the capital program deploying best practices in leasing and contracting; realigning the strategy of the capital program to improve project selection, optimize the infrastructure portfolio, implement innovative care delivery models, understand demand-based needs, and explore and partner with purchased-care opportunities; and reevaluating funding requirements. Closing or resizing facilities to match local demand and resizing to take into account inpatient and telehealth trends will avoid significant costs. Understanding local demand can lead to a smaller facility need with overflow arrangements with local private-sector options. Other key opportunities include improving contracting and leasing processes as well as considering when to outsource construction. In short, employing the systems view could help reframe the vision for future health delivery and significantly reduce VHA's current and future capital investment issues. It also enables VHA to avoid being burdened in the long term with hospital overcapacity as the nature of health care delivery trends toward smaller inpatient facilities, increasing outpatient care, and more virtualized health care delivery.

Access: As introduced earlier in Section 3, current VHA access challenges can be viewed through a systems perspective, as shown in Table 5. Multiple findings contribute to the access problem, and they are distributed among all four cornerstones, with clear interdependencies. Taken together, they provide a much more comprehensive understanding of the access problem, and demonstrate why point solutions will fail. Initial efforts to shorten wait times focused on a long-standing shortage of physicians.³⁴ However, this addresses only one issue in an integrated set of issues. A sustainable solution depends on a systems approach to the access challenge.

Table 5. Access Challenges Through the Lens of the Systems Approach³⁵

Governance
Congress stipulates appointment wait times as the access metric
Lack of governance commitment on basic access principles
Lack of governance to ensure system-wide standards are developed, proposed, tested and appropriately applied based on local conditions
Operations
Lack of identification and use of evidence-based best practices
Approaches do not balance supply and demand, limited ability to modulate capacity, or implement surge contingencies to include technology-based alternatives to in-person visits

³⁵ This information comes from the Institute of Medicine Assessment D (Access Standards) and McKinsey & Company Assessment E (Workflow – Scheduling) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Substandard processes in patient scheduling; lack of centralized call centers
Data and Tools
Lack of patient access metrics, including data on patient and family experience, scheduling practices, patterns and wait times, cycle times, and effective care continuity
Lack of real-time capacity data
Definition of a patient encounter precludes exploiting alternative engagement approaches, including non-physician clinicians and technology mediated consultations
Leadership
Lack of employment of and commitment to systems approach
Lack of accountability that would ensure delays in access are addressed by all relevant stakeholders across care continuum, rather than with piecemeal, independent process changes
Lack of facility leadership focused on continuous assessment and adjustment at each care site

Health IT: As another example of the value of the systems approach, Assessment H (Health Information Technology) discovered that few major improvements have been implemented to the primary health care software system (VistA) in the past 10 years. Many problems undermine deployment of new capabilities. Viewed through the lens of a system approach in Table 6, issues with governance, operations, data and tools, and leadership all contribute to the inability of VA to successfully implement and modernize VistA.

Table 6. Health IT Challenges Through the Lens of the Systems Approach

Governance
Inadequate collaboration between VA's centralized IT organization and VHA results in failure to prioritize IT capabilities that will support VHA health care needs
Lack of a robust, detailed strategy and roadmap for scheduling initiatives across VA to integrate Veteran scheduling via all modalities
Lack of dedicated VHA IT executives
Operations
Document-centric, schedule-focused project management and execution processes that preclude delivery of needed capabilities
Challenges in building and maintaining a skilled health informatics workforce
Lack of technical support to Veterans for home telehealth

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Data and Tools
Lack of standard clinical documentation impedes clinical research and electronic health record exchange with DoD and private sector health care providers
Inconsistent and ineffective data collection within and across VA medical facilities prevents evidence-based assessment and improvement of quality and customer satisfaction
Overly complex processes for system development impede cost-effective delivery of new health IT capabilities and limit VA's ability to measure the value of IT investments
Leadership
Internal project-focused central IT service management philosophy vice customer focused
Turnover in the VA CIO position (four in the last 10 years) has precluded an enduring focus on a coherent approach to consolidate new infrastructure technologies, resulting in even greater software complexity
Lack of organization and staffing in the VistA Evolution program preclude successful management, development, and integration of a large complex software program

Continuous Improvement: The richness of the systems approach extends not just to facilities, access, and IT, but across many of VHA's biggest challenges. While complex problems benefit greatly by reframing problems in creative ways, systems solutions also work well for improving existing processes and motivating people to believe they can successfully change. Continuous improvement is one such approach that often uses a Plan-Do-Study-Act cycle³⁶ that identifies, reduces, and eliminates suboptimal processes for continuous incremental or breakthrough improvements. This relies heavily on measuring, analyzing, and experimenting for successful innovations. VHA's current culture would benefit greatly from instituting continuous improvement more aggressively so that everyone participates, can see progress, and can build on the pride they have in being part of VHA. Some of VHA's best performers already focus on continuous improvement, but it is not widely adopted as a standard way of operating. Transforming any organization, especially one the size of VHA, requires that everyone understands, feels accountable for, and acts daily on how to continuously improve the organization. It is as much about engaging the people as it is about fixing the processes.

In summary, Table 7 shows each systemic finding, the associated recommendations to address each finding, and a short list of early actions to turn each weakness into a strength.

³⁶ Taylor, M.J., et al. (2013, August 12). Systematic Review of the Application of the Plan-Do-Study-Act Method to Improve Quality in Healthcare. *BMJ Qual Saf* 0:1-9. doi:10.1136/bmjqs-2013-001862

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Table 7. Systemic Findings and Recommendations

Finding 1: A disconnect in the alignment of demand, resources, and authorities
Recommendation 1—GOVERNANCE: Align demand, resources, and authorities
Establish a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.
Require a patient-centered demand model that forecasts resources needed by geographic location to improve access and to make informed resourcing decisions.
Clarify and simplify the rules for purchased care to provide the best value for patients.
Finding 2: Uneven bureaucratic operations and processes
Recommendation 2—OPERATIONS: Develop a patient-centered operations model that balances local autonomy with appropriate standardization and employs best practices for high-quality health care
Right size and reorient the VHA Central Office to focus on support to the field in its delivery of care to Veterans.
Fix substandard processes that impede the quality of care provided to the Veteran.
Design and implement a systematic approach to identify best practices and disseminate them appropriately across the enterprise.
Finding 3: Non-integrated variations in clinical and business data and tools
Recommendation 3—DATA and TOOLS: Develop and deploy a standardized and common set of data and tools for transparency, learning, and evidence-based decisions
Use standardized clinical and administrative data for accuracy and interoperability.
Implement a single, integrated set of system-wide tools centered on a common electronic health record (EHR) that is interoperable across VHA and with DoD and community provider systems.
Transparently share performance metrics for leadership, clinical, and business functions across VHA to identify and adopt best practices for continuous improvement.
Finding 4: Leaders are not fully empowered due to a lack of clear authority, priorities, and goals
Recommendation 4—LEADERSHIP: Stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership, and accountability
Push decision rights, authorities, and responsibilities to the lowest appropriate level throughout the organization.
Build on Veteran-centered behaviors to drive a culture of service excellence, trust, continuous improvement, and healthy accountability.
Revitalize the leadership pipeline through establishment of enterprise-wide, comprehensive succession management and leadership development functions.
Strengthen the appeal of senior leadership positions by pursuing flexibilities in hiring and compensation.
Establish sustained leadership continuity by extending tenure for key positions.

The views, opinions, and/or findings contained in this report are those of The MITRE Corporation and should not be construed as an official government position, policy, or decision.

4 Governance

Finding 1: A disconnect in the alignment of demand, resources, and authorities
Recommendation 1—GOVERNANCE: Align demand, resources, and authorities
Establish a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.
Require a patient-centered demand model that forecasts resources needed by geographic location to improve access and to make informed resourcing decisions.
Clarify and simplify the rules for purchased care to provide the best value for patients.

CURRENT STATE

VHA's primary function is clearly defined in Title 38 of the U.S. Code—to “provide a complete medical and hospital service for the medical care and treatment of Veterans.”³⁷ To implement that function, VHA has defined its mission as “Honor America’s Veterans by providing exceptional health care that improves their health and well-being.”³⁸

While this mission inspires and motivates VHA staff, it also creates a dilemma for those same individuals who are committed to its successful execution. It holds out the promise of unconstrained health care to all Veterans when, in reality, the capacity of VHA to meet that promise is constrained by the appropriated funding. While the mission captures the intent of comprehensive health care for all Veterans, VHA’s authorities, resources, and flexibility are less comprehensive. This dilemma was fueled in part by congressional actions, including the Veterans’ Health Care Eligibility Reform Act of 1996. This act mandates that VHA provides a broadly defined set of services for groups of prioritized Veteran populations, based on their eligibility, but “only to the extent and in the amount provided in advance in appropriations acts for such purposes.”³⁹

This prioritization approach was intended to provide VHA leadership with the flexibility to match the extent of care to annual budgets, and it has done just that. It has created a situation under which the organization manages to the budget, regardless of the level of demand envisioned by the aspirational mission statement. In addition, Congress appropriates VA’s budget as a nondefense discretionary program; thus, congressional priorities can influence both the level of money available and the way VA can spend the money once allocated. Funding for other large federal health programs differs in important ways. Medicare is considered an

³⁷ Title 38—United States Code Veterans’ Benefits and the Servicemembers Civil Relief Act, 38 U.S.C. § (2011) (Pub. L. No.112-7), Chapter 73, Subchapter 1, Section 7301.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

entitlement program; funding is provided from the Medicare Trust Fund, spending is mandatory, and the program's annual cost has no formal budget constraint. TRICARE funding is included in the U.S. Department of Defense (DoD) appropriation and is therefore discretionary, but the benefit is well defined, and DoD must cover any costs incurred beyond the appropriated funding. For VHA, congressional priorities can also direct money away from the overall budget for patient care toward specific programs through the special purpose funds. According to interviewees at VA medical facilities, these silos of money can make it difficult for facilities to efficiently and effectively use their entire budgets in any given year.⁴⁰

When demand exceeds capacity to deliver care within the budget, the inevitable result is a decrease in access to care and unmet demand for some Veterans. As this report is written, VHA is facing a potential crisis in its ability to provide care as the demand for Hepatitis C therapy grows.⁴¹

This approach for funding VA complicates the development of a coherent strategic direction and has hindered a consistent

interpretation of the mission across the enterprise. Local organizations interpret their expectations locally, leading at least one VAMC to promise excellent care to “every Veteran, every time!”⁴² In an interview, one VAMC leader described the challenge in terms of “double messaging” around “managing to a budget” and “managing to the need.” At present, VHA is over-committed in some geographic areas. Matching supply and demand at the local level is challenging because supply is relatively fixed each year once service projection models allocate resources to each facility through the appropriation and budgeting process.

Although the population of Veterans is expected to decline by 19 percent over the next decade, the demand for health care services is expected to rise before it levels off in five years, based on demographic factors (primarily aging)—and likely will rise even more if access to VHA health care is improved (Assessment B [Health Care Capabilities]). On the other hand, despite this possible growth in demand, in some areas and for some health conditions, VHA may not have a sufficient population of patients to sustain highly specialized service lines with enough volume to achieve and maintain clinical excellence.

“It appears that the culture of leadership, management, and accountability is focused on making the funding fit at every level. Leadership at every level must have the confidence that if they have a need, they can ask for that need to be addressed. VA, the Administration, and Congress must resolve to make the true need the priority, not the need to make budget lines fit.”

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Congress and VA leadership must address this challenge. They must work to align VHA's promise to provide comprehensive health care to Veterans with VHA's capacity by defining the expected benefit—that is, the Veteran population to be served and the health care those Veterans will be provided. This will drive the allocation of the funding adequate to meet this demand. VHA must broadly and transparently communicate the strategy for delivering that care to Veterans, VHA employees, other stakeholders, and the public. To start, the following policy questions must be addressed:

- Who will VHA serve? Is it truly all Veterans, or a subset of Veterans whose care is mandated?
- What health care services will VHA provide, and in what settings? Will it provide all care necessary to advance population health and desired outcomes for individual Veterans? How will it address the various social needs (e.g., caring for the homeless) that can complicate the provisioning of services for some Veterans?
- How will VHA provide care? How will VHA determine the appropriate balance between provided care and purchased care? How should this care be customized at the local level to reflect local issues?

The implications of developing answers to these policy questions are significant. All eligible Veterans have not enrolled for health care. The Veteran population is aging and developing conditions and ailments that are not necessarily service related. At the same time, the health care landscape is evolving, changing the manner in which health care is being provided. To address these policy questions and to leverage the answers to those questions, three recommendations are provided.

RECOMMENDATIONS

- Establish a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.
- Require a patient-centered demand model that forecasts resources needed by geographic location to improve access and to make informed resourcing decisions.
- Clarify and simplify the rules for purchased care to provide the best value for patients.

Establish a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.

The fundamental policy questions about who is eligible for benefits and for which benefits are truly difficult ones that may engender heated debate and emotional responses. But these issues only represent current critical problems; moving forward, other contentious issues will need to be addressed. For example, attempts to realign resources or close facilities have been met with vehement demands that the “public input needs to carry weight with any changes in the

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

system.”⁴³ Initiatives to close or eliminate older, often historic, VHA facilities can meet strong resistance from multiple groups. For example, some Veteran Service Organizations have objected to facility closures by suggesting that such closures would reduce the level of care to Veterans.

In the near term, several models could be tailored to address these policy issues in an objective and unbiased manner. Congress could charter a commission modeled after the 1955 U.S. President’s Commission on Veterans’ Pensions. This Commission studied different benefit packages that had been granted to Veterans, collected extensive information from various government agencies, and also surveyed randomly selected Veterans to develop statistical analyses of the use and effectiveness of various benefit programs. The studies compiled by the Commission were submitted to Congress and influenced subsequent legislative actions. A second model is the Defense Base Realignment and Closure (BRAC) Commission. That Commission was empowered to perform an independent analysis and evaluation of the Defense Department-proposed base closure list and present a report of its findings and its own suggestions to the President and to the American public. Once Congress received the presidentially endorsed report, it had a definitive suspense date to enact a joint resolution rejecting the report in full or the report became law. VA has already introduced this notion “in congressional hearings and has gotten very little pushback from authorizers and appropriators for a BRAC of its own.”⁴⁴

But these are short-term models that may not be able to provide the long-term oversight, guidance, and direction that is expected. VHA operates in a complex and dynamic environment, answering to a large number of stakeholders, sometimes with competing demands. It is a health care system managed as a government agency; some have suggested that Congress is VHA’s “board of directors.”⁴⁵ The long-term governance structure of a health care system can influence many aspects of that organization, to include capital investments, operations, staffing, and the definition and implementation of the strategic plan. Alternative governance models do exist. One was introduced by the Commission on the Future for America’s Veterans, which proposed that Congress “establish a new entity with characteristics not unlike a federal government ‘not for profit’ corporation” that would be empowered with “unencumbered” authority to use all the assets of VHA to “maximize benefits to Veterans.”⁴⁶ A second model, titled the “Independent Non-Taxing Unit of Government,” suggests a governance structure

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

under which a health care board and administrative leadership “still have accountability to elected officials” but are “much more insulated” from direct political interaction.⁴⁷ The New York City Health and Hospitals Corporation (HHC), the largest municipal hospital and health care system in the United States, operates under such a model, as do other municipal and state health care systems. HHC underwent a series of transformative efforts and links the success of those efforts to “a series of successful service and clinical improvements...while also emphasizing continuity of leadership, system wide strategic planning, and board-level accountability for achieving performance objectives.”⁴⁸

Congress and VA should charter the Commission on Care to explore and identify the governance model that would best enable VHA to complete the proposed transformative efforts and sustain its ability to provide the highest quality health care to Veterans. The model that is developed should clearly focus on governance. VA currently has 25 advisory committees, some of which are mandated by Congress, to assess specific VA policies or programs. But these committees are, by title, focused on advising, not governing, and should not be considered a solution to this recommendation. Congressional endorsement is perhaps the key enabler to effectively implementing a governance board.

VHA should charter a transformation program office that has the authority and resources to implement a system-wide reworking of VHA. This office should be provided sufficient and dedicated funding to enable the envisioned transformation’s execution without having to tax other offices or borrow from other initiatives. The office should act as the “guiding team,”⁴⁹ staffed by individuals with the right emotional commitment and core competencies in executing organizational change. The office should coordinate directly with the established governance body and should focus on establishing transformation priorities, defining timelines for execution, implementing both strategic and tactical initiatives, allocating resources, and instituting appropriate metrics and processes to measure progress and success. It should replace any ongoing change initiatives and merge the relevant components of MyVA, the *Blueprint for Excellence*, and other initiatives into one coherent, focused transformational approach.

Require a patient-centered demand model that forecasts resources needed by geographic location to improve access and to make informed resourcing decisions.

Assessment D (Access Standards) states that improvements in health care access will be underpinned by continuous assessment, monitoring, and realigning of supply and demand. The assessment also states that most clinical settings do not take a sufficiently broad view of the

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

various options to either increase supply or reduce demand, nor do they maintain the analytic capacity to observe, measure, and understand the dynamics involved. Without this information, patterns of variability will be unobserved, alternatives will go untapped, and a supply-demand mismatch—which is often unnecessary—will be inevitable and chronic.⁵⁰

VA data and analytical systems face these challenges. In addition to the need for fundamental policy guidance, VA data systems and U.S. data collection efforts have limitations that hinder planners' ability to assess how demand for VA services might change over time. For example, there has not been a full accounting of the U.S. Veteran population since the 2000 Census. Current VA data collection systems do not assess detailed information on Veterans' health care conditions and health care utilization patterns. Data are often completely unavailable for Veterans who are not currently eligible or enrolled in VHA health programs. Additional data collection would be needed to fully understand Veterans' total health care needs, including use of care currently covered by private insurance or Medicaid.

Assessment A (Demographics) also suggests the importance of developing methods and models that respond with speed and agility to policy changes. Two existing VA models—the Enrollee Health Care Projection model and the Veteran Health Care Scenario Model—can be used to estimate, for instance, how changes in demographic characteristics or economic conditions may affect demand for VA services and related costs. Expanding these models to address changes in the civilian health sector, unanticipated changes in perceptions about health care quality, and groundbreaking new technologies will enable VA to address the types of uncertainties that current models may not address.⁵¹

Other assessments identify additional demand modeling requirements that would enhance health care provided to Veterans. These requirements would address challenges in facility planning and supply-chain management. These models could answer the need for an enterprise-wide, timely, population-based ambulatory appointment demand modeling capability to forecast appointment demand. They also could provide the basis for staffing models that justify the number of resources needed to meet patient access standards and to proactively identify and forecast staffing needs.

VHA should expand its utilization of dynamic simulation modeling. The fundamental premise of the application for dynamic simulation modeling in health care is that “health care delivery systems are inherently complex, consisting of multiple tiers of interdependent subsystems and processes that are adaptive to changes in the environment and behave in a nonlinear fashion.”⁵² Traditional analytical methods might neglect the wider health system impacts that can be critical for achieving desired health system goals. VHA leadership could underestimate or ignore the interactions among the leadership, governance, operations, and data and tools. The literature is beginning to highlight the increasing application of dynamic simulation

⁵⁰ This information was presented in Institute of Medicine Assessment D (Access Standards) in Volume II.

⁵¹ This recommendation was derived from RAND Corporation Assessment A (Demographics) in Volume II.

⁵² Marshall, D.A. et al. (2015, January). Applying dynamic simulation modeling methods in health care delivery research—The SIMULATE checklist: report of the ISPOR simulation modeling emerging good practices task force. *Value Health*. 18(1):5-16. doi: 10.1016/j.jval.2014.12.001

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

modeling methods to health care delivery systems. These tools enable the decision maker to better understand the dynamics and complexities of the system under analysis and the consequences, both intended and unintended, of recommended changes.

In summary, VHA should use predictive tools and dynamic simulation modeling to continually forecast local demand and underpin decisions addressing resource allocation. These patient-centered demand models should enable the management of resources to meet national, regional, and local variations in patient-centered demand.

Two examples of dynamic simulation modeling methods applied to health care delivery:

- 1) “The Mayo Clinic’s Center for the Science of Health Care Delivery applied health care delivery systems thinking to predict the minimum number of beds needed to meet quality standards of care. The model incorporated assumptions about surgery growth and new patient recovery protocols, as well as smoothing surgery schedules and transferring long-stay patients from the ICU. The model predicted 30% lower bed supply requirements than did the traditional bed planning approach. System dynamics modeling was used for high-level planning of primary care staffing; allowing for ‘what-if’ scenarios to be evaluated, and showing projected access performance measures.
- 2) “The ReThink Health model simulates the behavior of a health system, tracking changes in health status, utilization, and costs and has been used to evaluate five different health reform policy proposals. The results demonstrated that certain options would improve health status but at higher cost and greater health care inequality. Other options were found to improve health status, reduce inequalities, and lower costs. Such divergent outcomes would be extremely difficult to anticipate or quantify without the aid of a simulation model.”

Applying Dynamic Simulation Modeling Methods in Health Care Delivery Research—The SIMULATE Checklist

Clarify and simplify the rules for purchased care to provide the best value for the patients.⁵³

One of VHA’s core responsibilities involves providing health care services to eligible Veterans. Although VHA has traditionally carried out its health care role primarily by operating a national network of hospitals and other facilities, the agency also administers a purchased-care function through which it pays for health care services from outside providers (sometimes referred to as purchased care or community care). VHA purchased care has evolved primarily to address situations in which VHA’s direct-care resources are unable to offer needed services to Veterans. Although purchased care has accounted for only a small fraction of VHA’s health care budget over the past decade, that fraction is growing. In the wake of the recent crises in access to care through VHA facilities, stakeholders and policy makers are revisiting the role and performance of VHA purchased care. Specifically, they are considering whether modifications to VHA’s purchased-care approach might be desirable, given broader goals of expanding access to care,

⁵³ This information was presented in RAND Corporation Assessment C (Care Authorities) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

enhancing trusted partnerships, and improving VHA operations to deliver seamless and integrated support for Veterans' health.

The purchased care landscape is already in the midst of a transformation. Numerous changes to VHA's authorities and mechanisms for purchasing care are being proposed, planned, or implemented. With so many facets of purchased care authorities and practice in flux, the full landscape of VHA purchase care is not just complicated, but dynamically so. Moreover, while the proposed policy changes aim at addressing many different problems and issues, their sheer multiplicity suggests the drawbacks of a piecemeal approach, absent a guiding orientation and strategy for VHA's purchased care enterprise as a whole. To enhance the availability of purchased care to the patient, VHA should:

- Develop a stronger management structure for purchased care and allocate responsibility and authority to the most appropriate levels. VHA purchased-care activities require improved program management, with responsibilities assigned to organizations at the appropriate level of VHA's administrative hierarchy.
- Establish an ongoing process for evaluating third-party administrator performance. VHA should also assess the adequacy of the provider networks, the efficiency of claims and other processes, and Veteran experiences with the programs.
- Develop clear and consistent guidance and training on VHA's authority to purchase care. Existing VHA guidance pertaining to purchased care is scattered, sometimes outdated, and inconsistent in setting clear standards, leaving local facilities to develop their own policies and procedures.
- Ensure that both new and existing purchased-care contracts with outside providers and third-party administrators include appropriate requirements for data sharing, quality-of-care reporting, and care coordination.

"Today we have seven different programs for providing community care. Each one has its own exclusions, each one has its own payment options. It's incredibly confusing."

House Veterans Affairs Committee Hearing on VA
Health Care Budget*

July 22, 2015

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

5 Operations

Finding 2: Uneven bureaucratic business operations and processes	
Recommendation 2—OPERATIONS: Develop a patient-centered operations model that balances local autonomy with appropriate standardization and employs best practices for high-quality health care	
Right size and reorient the VHA Central Office to focus on support to the field in its delivery of care to Veterans.	
Fix substandard processes that impede the quality of care provided to the Veteran.	
Design and implement a systematic approach to identify best practices and disseminate them appropriately across the enterprise.	

CURRENT STATE

There is recognized variability in the execution of business operations across VHA. Many VA Medical Centers implement operations differently, resulting in widespread inconsistencies across the organization. Multiple assessments, including Assessments E (Workflow – Scheduling), F (Workflow – Clinical), G (Staffing/Productivity), I (Business Processes), and J (Supplies), found differing approaches to staff management, scheduling, quality measurement, documentation and coding, patient flow, performance management, claims, and purchased care. Multiple assessments also found support functions (e.g., HR, IT, and Contracting) that do not adequately meet the needs of the medical centers in the delivery of patient-centered care. In some cases, the lack of standardization and local variations contribute to the direct and negative impact on the overall Veteran experience and timely access to care. In 2014, the VA OIG reported that a lack of common business rules “has resulted in quality of care deficiencies.”⁵⁴ In other cases, the assessments found local implementations and best practices that are creating positive outcomes (e.g., shorter length of time to hire); however, when process improvements occur at the local level, they are often not shared or do not scale across other facilities. These widely varying processes also highlight the complexity of the VHA system. Severe problems may manifest themselves at one facility, while another constantly receives tributes from Veterans and health care experts.

To operate effectively and provide the best care to Veterans, VHA needs to increase the empowerment of local leaders while simultaneously increasing the standardization of critical operations and processes. There is a need for greater support and flexibility for those providing care at the local level as well as a need for improved processes to more reliably support Veteran care across the system. Addressing these imperatives simultaneously is not simple. As one senior leader stated, “We can’t figure out what to standardize...We tend to standardize everything and nothing at the same time.” VHA needs an operating model that will encourage

⁵⁴ U.S. Department of Veterans Affairs. Office of Inspector General. (2014). Part II: Performance section. Major management priorities and challenges. Retrieved from: <http://www.va.gov/oig/pubs/VAOIG-2014%20MMC.pdf>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

both standardization and the appropriate level of local autonomy, focusing on providing Veterans with high-quality health care.

Some observed areas in which the current VHA operating model does not support well-defined, consistent, and standard processes—causing variability in the system and possibly resulting in a negative Veteran experience—include the following:

- The length of the HR-directed hiring process for all VHA staff was cited as a challenge in 100 percent of 19 staffing workshops conducted by Assessment F (Workflow – Clinical). The VHA hiring timeline significantly exceeds private-sector benchmarks, affecting VHA's ability to fill vacancies on patient care teams. VHA targets 60 days from receiving a request for a job posting to making a tentative offer, but it does not include the steps needed and time required to make a final offer. Interviewees and workshop participants consistently reported that hiring exceeds the 60-day target, reaching approximately six months for most clinical occupations.
- As Assessment E (Workflow – Scheduling) found, many private-sector systems have adopted larger, more centralized scheduling call centers that have lower per-unit costs; put less stress on space-constrained care facilities; and are able to offer more coaching, training, and career options to schedulers. Some of these have resulted in significant improvements. Since 2008, for example, Cleveland Clinic's centralized scheduling call center has enabled a 28-percent decrease in abandoned calls, a decreased scheduling error rate, increased physician utilization of scheduling templates, and a 12-percent increase in the number of patient visits. That organization believes it was "able to capitalize on economies of scale," scale that should be available to VHA.⁵⁵ But VHA scheduling call centers, where they exist, are operated at the VAMC level to address local needs. These call centers are not tracked or coordinated on a national scale, and there is no centrally available information about VHA's scheduling call centers, including how many call centers exist, what functions they serve, or how many schedulers they employ. As one interviewee suggested, "It would be nice to know where else there are [scheduling] call centers and talk to them." Since these centers are not tracked or coordinated, there is no effort to share best practices. In response to a data call generated by Assessment E, the vast majority of schedulers operate in clinics with only a small percentage actually operating in what VHA considers call centers. The call centers that do exist tend to be fairly small, with a median size of 12 schedulers, compared to most private-sector health systems that have an average of 28 agents. In response to the same data call, VA facilities reported that the average speed of answer (ASA) was 79 seconds and the average abandonment rate was 11 percent. In comparison, average private hospital call centers achieve a 32-second ASA and a 5.15-percent abandonment

⁵⁵ Rodak, S. (2013, August 8). Cleveland Clinic's call center improves care access. *Becker's Hospital Review*. Retrieved from <http://www.beckershospitalreview.com/capacity-management/cleveland-clinic-s-call-center-improves-care-access.html>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

rate.⁵⁶ On average, Veterans are waiting longer to reach a VHA scheduler and give up at a greater rate than private-industry patients.

- Assessment J (Supplies) indicates that the organizational structure of VA's supply chain enterprise is unduly complex and duplicative. VA and VHA both contain multiple organizations that play a role in managing VA's medical supply chain and, as a result, there are areas of overlap and tension between involved groups. There is a recognized stovepiped and fragmented structure with a lack of clarity on roles and responsibilities. VA's IT and data systems in the supply management area are also antiquated, not integrated, and they do not meet the needs of a modern health system. There are multiple instantiations of the underlying architecture for VA's clinical, procurement, and inventory management systems, each with its own product nomenclature and numbering system as well as extensive free-text entries. As a result, efficient and effective cross-site comparisons or regional and national rollups are not feasible. VA's current inventory management does not have a feedback loop that links inventory to product utilization, contracting, ordering, and vice versa. This prevents optimal use of the Medical Surgical Prime Vendor program and prohibits more effective volume-based national or regional contracts. VA has not taken full advantage of its scale or potential for product standardization to achieve optimal pricing and efficiency. An analysis of unit prices for facilities across two VISNs showed significant variation in price paid for identical items.⁵⁷ For example, the highest price paid for a commonly used disposable blood pressure cuff was more than twice the lowest price. An analysis of purchase order data shows that 38 percent of purchases are made on a government contract, with the remainder through open-market purchasing. VA's supply purchasing systems are not integrated with contract or pricing catalogs, requiring the buyer to research whether an item is on contract and, if so, through which contract a purchase should be made. Several buyers reported that they bypass this step and buy products through the channel that is most familiar and convenient rather than potentially exploiting new contracts and pricing arrangements. VA also has limited ability to monitor and drive compliance with contract requirements because the required data are not captured electronically. More than 60 percent of all clinical supply items do not have a contract number listed.⁵⁸ Finally, VA does not have a mechanism to identify products for which central contracts should be established.

Exacerbating these challenges is the recognition that, as Assessment L (Leadership) identifies, VHA Central Office (VHACO)—consisting of a series of individual, highly unintegrated program offices—does not yield the coordination and collaboration required to support the field in its delivery of care to Veterans and adequately address the variability in the system. VHACO has experienced dramatic growth in the number of program offices and staff over the past five years, with VHACO program office full-time equivalent (FTE) growth vastly outpacing the

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

growth of total VHA employee population and Veterans served (Figure 6).⁵⁹ However, in spite of program office growth, there is little systematic effort to coordinate or integrate efforts and initiatives, and there has been no discernible improvement in business or health outcomes in VHA as a result of this growth.⁶⁰ Instead of alleviating the administrative burden on the field, the growth of VHACO has had the inverse effect, creating an environment where the field is serving VHA Central Office.

Figure 6. VHACO Program Office FTE Growth

Further, the Central Offices—VACO and VHACO—are not playing a key and necessary integrator role to help spread best practices across the organization.⁶¹ While pockets of best practices and innovation exist, the assessments found the adoption of best practices to be isolated, sometimes even within the same facility. While in many cases local best practices and innovation are allowing specific VAMCs to maximize operational efficiency and positive Veteran experience, these best practices are not systematically shared and adopted across VAMCs.

⁶⁰ U.S. Department of Veterans Affairs (2015, February 28). Task Force on Improving Effectiveness of VHA Governance: Report to the VHA Under Secretary for Health.

⁶¹ The information in this section is derived from McKinsey & Company Assessment I (Leadership) in Volume II

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

“As best the Task Force could determine, the addition of new program offices occurred on the basis of ad hoc decisions by VHA leadership. There was no systematic review by an internal resource committee or by NLC [National Leadership Council] committees for which they were responsible and there was no systematic review to determine if they had been successful in improving organizational outcomes. Similarly, there was no process for systematically reviewing requests for additional [full-time equivalent] or resources for a given office. Finally, there was no process at the organizational level such as review by the collective senior VHA CO leadership, by the resource committee, or by the NLC itself for formulating clear recommendations on how much funding from the VHA budget was to be set aside for VHA CO program offices versus allocated to the field for providing direct care to Veterans.”

*Task Force on Improving Effectiveness Of VHA Governance:
Report to the Under Secretary for Health*

As one previous assessment of VHA points out, “There is no mechanism for sharing scheduler tips and best practices for using the systems or to improve scheduling activities. Seasoned schedulers share their insight and lessons learned by word-of-mouth.”⁶² A recently published internal VHA report titled “Task Force on Improving Effectiveness of VHA Governance—Report to the VHA Under Secretary for Health” reached a similar conclusion. As that report suggests, “there has been little or no ongoing effort to share best practices or standardize procedures among either VHACO program offices or VISN offices.”⁶³

RECOMMENDATIONS

- Right size and reorient the VHA Central Office to focus on support to the field in its delivery of care to Veterans.
- Fix substandard processes that impede the quality of care provided to the Veteran.
- Design and implement a systematic approach to identify best practices and disseminate them appropriately across the enterprise.

“I’m shameless about stealing what works at other places. The problem is, I don’t know what other places are doing. We need a way to connect, to learn from each other.”

Associate Director of Patient Care Services

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Right size and reorient the VHA Central Office to focus on support to the field in its delivery of care to Veterans.⁶⁴ As Assessment L (Leadership) concludes, VHA should adjust the balance of control and empowerment across all levels of the organization by clarifying decision rights, offering greater role clarity, empowering leaders, and encouraging appropriate risk taking. VHA should refocus the role of VHA Central Office to managing outcomes and providing support to the field. Specifically, VHA should clarify the roles and responsibilities of each major operating unit: VHACO, VISNs, VAMCs, community-based outpatient clinics (CBOCs), and other organizational units. Once this clarification is achieved, the VHA Central Office should focus on enhancing collaboration, supporting resource prioritization, executing certain centralized functions, ensuring alignment with strategic direction, and, most importantly, supporting the field. The intent of this is to move from a series of individual program offices issuing independent directives and action items, with few mechanisms to encourage coordination, to a much smaller number of coordinated primary strategic priorities, or lines of business, around which supporting program offices would be organized and through which supporting program office work would be conducted.

“Program offices should be a consultancy—a small group of people. There should be more oversight of the Program Offices, because there are turf issues that leave the Field constantly answering to everyone.”

VHACO Leader

In addition, VHA should:

- Reassess all VHA Central Office-directed metrics and policies to ensure that they add sufficient value to patient outcomes and eliminate those that do not.
- Release process guidance on a regular and routine schedule to medical centers to enhance coordination and to minimize the disruptive effect of new, frequent, and duplicative directives on existing guidance.
- Create policy communication standards that require that any new policy includes a clear rationale tied to desired outcomes, recommended approach, suggested local implementation plan, and sufficient time to implement.
- Increase alignment and coordination between the offices responsible for policy and the offices responsible for operations by actively eliminating the “artificial distinction between policy and ops”⁶⁵ that exists today.
- Clarify the decision rights of VACO, VHACO, VISN, and the Medical Center, to include clearly articulating decision rights by level, organization, and role and standardizing where appropriate while allowing for local flexibility based on local needs.
- Define the role and responsibilities of the VISN (or any other local structures being considered), the balance between empowerment and support of medical facilities, and

⁶⁴ The information in this section is derived from McKinsey & Company Assessment L (Leadership) in Volume II.

⁶⁵ (2015). Choice Act assessment interviews with VHA.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

the VISN role in coordinating, translating, communicating, and innovating across the system.

- Coordinate with VACO to select a chief information officer (CIO) for VHA to identify and advocate for health IT needs and to measure the value of IT services and capabilities for health care.
- Implement a more participative management approach that engages leadership at all levels in analyzing problems, developing strategies, implementing solutions, and measuring and tracking outcomes. Doing so would create a greater sense of ownership in VHA; instill a sense of commitment, safety, and pride among VHA leaders; create more receptive conditions for implementing change across the organization; and serve as a breeding ground for future leaders. In addition, as one journal suggests, “creativity and innovation are two important benefits of participative management.”⁶⁶

Fix standard processes that currently impede the quality of care provided to the Veteran.

The independent assessments provide substantive and detailed recommendations to address many of the operational challenges that impact VHA’s ability to provide timely and consistent patient-centric health care. At an overarching level, VHA needs an operating model that provides medical centers with the autonomy and flexibility to innovate and address local needs while also providing standardization across the system to allow for more consistent and efficient delivery of Veteran care. As one VHA senior leader stated, “We need to identify key business processes that have to be standardized, such as scheduling, and standardize those things ruthlessly. We need fidelity in the system to run the business.”

In addition to the need for more consistent and efficient key processes, findings support the need for a fundamental overhaul of the core support functions of HR, IT, and Contracting to increase responsiveness and efficiency and improve customer service. These functions should be aligned with the needs of the VHA organizations delivering care to Veterans and hold those organizations accountable to outcome-based metrics to enable timely and effective care. This is consistent with the recent guidance from the Office of Management and Budget (OMB) in response to the Federal Information Technology Information Reform Act (FITARA), which enhances agency CIO authority while requiring that officer to focus on and be explicitly accountable for assuring that agency IT resources support agency mission and programs (i.e., are aligned with requirements of VHA mission and programs). While the scope of the existing statutory provisions address IT, the intent can be extended to other support functions (e.g., Contracting, HR).⁶⁷

The department has already taken some action to address the current deficiencies in VA support functions. MyVA established as one of its five focus areas “Achieving Support Service Excellence,” with a stated mission to “optimize the organization, functions, and activities of VA’s core support functions that focus on delivery of world-class services to VA facilities and

⁶⁶ McMillan, A. (n.d.). Participative management. [Website]. Reference for Business. Retrieved from <http://www.referenceforbusiness.com/management/Or-Pr/Participative-Management.html>

⁶⁷ For more information on FITARA, see The MITRE Corporation Assessment H (Health Information Technology) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

organizations that directly serve Veterans.” The assessments’ findings and recommendations support the following aspects of the “vision of the future” for VA support services as stated in the MyVA Transformational Plan:

- A collaborative process that produces clear business requirements and processes as well as accountable service-level agreements (SLAs) for support services.
- Integrated contracting and supply-chain activities that directly support delivery of Veteran outcomes.
- HR functions aligned to support facility directors with timely hiring, benefits, and employee relations.
- Fully integrated VA-wide information capabilities, supported by IT operational capabilities optimized to meet expectations at point of service.⁶⁸

Design and implement a systematic approach to identify best practices and disseminate them appropriately across the enterprise. To improve overall operational performance, VHA must create a systematic way to identify, share, and scale the solutions and best practices achieved by its top performers and those of other organizations. Coordinated reviews and assessments of identified best practices should be conducted to determine if the practices are scalable across the organization. The VHA Central Office should provide strategic guidance and should support establishing and implementing the approach. It would then be an appropriate role of the VISN to lead the best-practice identification and to share ideas within and across the enterprise, working collaboratively with VAMC leaders and staff. A clear example of the impact of such an approach was observed in VISN 4 as described in Figure 7.

While VHA has numerous assets in place to identify and spread innovation and best practices, these resources have not taken hold. VHA’s current culture and organizational structure, which allows for differing VISN business models, do not support standardization or effectively leveraging best practices on an enterprise basis. VHA should strive to standardize when it can and enable variation and innovation when it should. The National Leadership Council, or another identified advisory board, must be empowered by senior leadership to systematically review and consider which best-practice assets support and align to strategic outcomes such as Veteran satisfaction and access. In performing this review, the advisory board should consider the following:

- Integrating best practices with performance management and encouraging collaboration across VAMCs; those medical centers that are not performing as well as others should be encouraged to adjust their processes by leveraging others’ approaches.
- Developing an implementation strategy that migrates best practices from high-performing to lower performing facilities.

⁶⁸ U.S. Department of Veterans Affairs. (2015, April 14–15). MyVA Advisory Committee: Inaugural meeting [PowerPoint slides].

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Evaluating the current use and efficacy of the Virtual Learning Center (VA's current online database with shared innovations, best practices, and lessons learned from VAMCs and CBOCs) for capturing and disseminating best practices.
- Developing criteria for rationalizing the best practices that should be performed at a local versus regional or enterprise level. For example, where national economies of scale can be achieved versus where local issues (e.g., demographics) prohibit broader application.

The above recommendations recognize that the best practices found in one facility or VISN will be an excellent source of inspiration and guidance for their peers, but it is important not to expect every best practice to be equally effective or implemented exactly the same way in every location.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

6 Data and Tools

Finding 3: Non-integrated variations in clinical and business data and tools
Recommendation 3—DATA and TOOLS: Develop and deploy a standardized and common set of data and tools for transparency, learning, and evidence-based decisions
Use standardized clinical and administrative data for accuracy and interoperability.
Implement a single, integrated set of system-wide tools centered on a common electronic health record (EHR) that is interoperable across VHA and with DoD and community provider systems.
Transparently share performance metrics for leadership, clinical, and business functions across VHA to identify and adopt best practices for continuous improvement.

CURRENT STATE

Multiple assessment efforts identified challenges in collecting, managing, and effectively using data:

- A lack of standard, interoperable enterprise VHA systems and tools negatively impacts VHA's operations and resulting data.
- The quality of data and multitude of metrics limit VHA's overall performance and continuous improvement efforts.
- VHA lacks a holistic, enterprise approach to managing, collecting, and leveraging its data.

In addition, Assessment H (Health Information Technology) identified several key challenges in VA's use of information technology. Inadequate collaboration between VA's centralized IT organization and VHA has precluded the implementation of capabilities that support VHA health care needs. Due to excessive project management overhead, a complex legacy IT infrastructure that is difficult to modernize, and more than 130 variations of the primary software system deployed across VHA medical facilities, the implementation of improved IT capabilities in the last 10 years has been extremely limited. During that time frame, VA applied the majority of its development resources to HealtheVet and the integrated EHR (iEHR) projects, both of which failed to provide the expected results. This delayed further development and improvement of VistA and CPRS so that they are no longer leading-edge products and are in danger of becoming obsolete. Scheduling, telephone, and billing systems have stagnated, and there is no strategy and roadmap for scheduling initiatives across VA that integrates Veteran access to scheduling via phone, telehealth, and mobile apps. Inconsistent and ineffective data collection across VA medical facilities has prevented evidence-based assessments that would inform capability improvements. VA is falling significantly behind the private sector in using data to improve all aspects of Veterans health care.

Enterprise Data: VHA's operational environment is plagued by a significant level of fragmentation and a lack of standards. Data aggregation across the entire VA system is problematic when each system either lacks standards or conforms to different, local data

The views, opinions, and/or findings contained in this report are those of The MITRE Corporation and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

standards.⁶⁹ This constrains VHA's ability to recognize organizational trends, identify best practices, and assess the effectiveness of health care delivery services across the entire VHA system. Efforts to access data in support of these assessments illustrated some of the issues plaguing the operational environment. Several data discrepancies and data quality issues were noted. Some data routinely maintained by other health care systems were simply not available.⁷⁰ Three different VHA sources had to be accessed to obtain lab data. Each source resulted in a different answer, and various groups within VHA did not know how to reconcile these three sources or which source provided the most accurate information.⁷¹

The impact of these enterprise data issues was evident across various assessments.

- VHA maintains several different systems to manage access and flow; however, a lack of integration across systems, inconsistent methods for tracking data, and gaps in key flow metrics results in highly variable, non-actionable demand and capacity data. While the National Bed Control Database showed that 81 percent of one VAMC's inpatient beds were operational, that facility reported that only 51 percent of its beds were available for patients due to unreported staffing and construction-related bed closures.⁷²
- Systems limitations often demand manual processes that can obviously reduce the timeliness and accuracy of data and obscure the true state of VHA's activities. In FY2014, 28.6 percent of claims for non-VHA-provided care were submitted via Electronic Data Interchange, versus a 94-percent benchmark for commercial claims in civilian practice.⁷³ Significantly relying on manual processes slows collections and payments activities and introduces errors and waste into the process.
- There is a lack of quality, system-wide data for developing predictive models to prospectively match provider availability with patient needs.⁷⁴ Such models are built on important inputs (such as aggregated views of provider availability) and allow

"Greater issue is lack of standardization of code sets. One aspect of data standardization is in lab tests—any given site may name it any number of ways, ex. hemoglobin tests. That site may know what it means. When you roll it up nationally—have a lot of variability. Reference ranges can be different. Different sites use different lab instances."

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

for important activities, including assessing the likelihood of patients missing appointments (so that they can be targeted for more proactive individualized appointment reminders or other interventions to increase likelihood of appointment completion); aggregated views of provider availability; and facility-centralized patient reminder systems across multiple modalities. Thus, this lack of data and data management systems compromises the ability to maximize provider availability for treating patients.

- Measuring each health care provider's productivity is challenged by several issues. First, while work Relative Value Units (wRVU) are "the current tool for physician productivity measurement in the clinical arena, a more complete productivity measurement would capture the sum total of a physician's contribution."⁷⁵ For example, the wRVU does not reflect patient satisfaction with the encounter or the provider's effectiveness in improving the patient's health outcomes. The accuracy of productivity, when measured by wRVUs, is dependent on accurate and thorough coding and documentation practices; during site visits, assessment teams observed a general lack of local infrastructure to assist providers and nurses in accurately and comprehensively documenting all encounters.⁷⁶ VHA does not capture FTE-level information for its fee-based care providers, which limits its ability to systematically track fee-based provider productivity. The proportion of clinical workload generated by fee-based physicians represents 13 percent of all physician workload and may be higher at smaller facilities where fee-based providers can be a greater proportion of specialty care provided. VHA uses multiple standards to measure its primary care panel size that rely on local interpretations of policy and a range of situational factors (for example, whether the panel is a specialized panel such as geriatric or home-based primary care, and adjustments for new providers based on start dates).
- VHA also lacks the data governance to define and implement standards and business rules to ensure consistent data definition, integrity, and documentation. During the course of our assessments, documentation related to VHA's data also presented issues. Dozens of sources of documentation describing the various types of data are scattered throughout VHA. This requires analysts to sift through many different intranet sites and encounter totally different documentation styles with varying levels of usefulness.

Enterprise Tools: Discussions with industry executives identified a number of system capabilities that are essential to operating a high-performing health care system, to include a common electronic health record (EHR) and tools that enable scheduling, billing, claims payment, and patient-centered navigational tools.⁷⁷ Standardizing these capabilities and implementing them at an enterprise level results in information and care continuity, cost

⁷⁵ Reddy, V. Seenu & Johnston, Ben. (2012). Surgeon productivity: are RVUs the end all, be all? The Society of Thoracic Surgeons. Retrieved from <http://www.sts.org/news/practice-management-pearls-surgeon-productivity-are-rvus-end-all-be-all>

⁷⁶ This information is presented in Grant Thornton Assessment G (Staffing/Productivity) in Volume II.

⁷⁷ Several health executives also highlighted the need for an Electronic Medical Library (EML) that includes a single set of clinical care protocols. VHA's EML was not assessed as part of this effort.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

savings, and consistent care delivery and business processes. The strategy should be standard across the enterprise wherever and whenever possible, and vary locally when needed. The timely and accurate enterprise data produced through these system capabilities are of particular importance as they provide the means to optimize the overall performance of the health care system. In addition, the potential of dynamic simulation modeling to underpin decisions enabling the delivery of health care is increasingly being realized and should be exploited. Our findings related to each of these important components is discussed below.

- Electronic Health Record:** An EHR represents the core of VHA's VistA system. As outlined in Assessment H (Health Information Technology), customized implementations of VistA at the VAMC level that do not all employ standard data elements and algorithms has resulted in approximately 130 instances of VistA across VHA, leading to a complex, heterogeneous mix of hardware and software, which impedes developing and deploying system changes and new capabilities and raises operations and maintenance (O&M) costs. Those instances are not well documented, further complicating efforts to upgrade and maintain the system and to conduct end-to-end testing outside of the operational environment. VHA's EHR issues stymie interoperability between VHA facilities as well as with DoD and non-VA providers. Multiple assessments noted the lack of interoperability resulted in incomplete patient records with potentially significant implications for the Veteran and VHA. This is not a trivial issue, and multiple solutions have been attempted over the last several years without success. Nevertheless, it remains a crucial issue. Incomplete records introduce unnecessary clinical risk, complicate the transition from DoD to VHA care, and inhibit VHA's ability to bill and collect revenue accurately and timely.⁷⁸
- Scheduling:** VistA is also VHA's primary scheduling tool. As highlighted in Assessment E (Workflow – Scheduling), VHA scheduling tools do not provide facility staff with the capability to effectively match patient requirements to provider availability. In addition, the tools do not provide information that allows clinic management to improve scheduling performance. For example, because providers operate across multiple and sometimes overlapping clinic schedules, also known as "profiles," calculations of aggregate appointment slot supply and therefore appointment slot utilization rates are not always correct in clinic access reports. VHA has created additional operational processes to address the recognized state of imbalance for supply and demand for appointments. Essentially, staff had to employ additional processes to work around system limitations. Current processes and infrastructure concerning the scheduling systems reduce the ability of clinics to maximize the use of provider time.
- Billing:** Assessment I (Business Processes) noted significant shortcomings in the systems and tools supporting VHA's billing and collections activities. Technical capabilities typically seen in private health care systems are lacking or absent in VHA. For example,

⁷⁸ On July 29, 2015, the Department of Defense awarded a contract to a commercial team for "an electronic health record off-the-shelf solution, integration activities and deployment across the Military Health System." See <http://www.defense.gov/News/Contracts>.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

automated tools for providing real-time estimates of out-of-pocket expenses, electronic submission of Veteran payment plan forms, and automated first-party claims matching do not exist at VHA. In addition, Assessment I lists more than 10 systems and tools used to support VHA's billing process. Lack of integration and interoperability between billing systems and tools (e.g., VistA and Nuance) slow billing activities and introduce potential errors in data as staff are required to enter redundant data into different systems. In fact, VA billing staff are manually reviewing 100 percent of claims subsequent to automated claim edits. This manual process is typically limited to 10–20 percent for industry.

- Claims Payment:** VHA's claims payment activities are similarly burdened by lack of automation, multiple systems that are not integrated, and a significant amount of manual work. Specifically, automation is lacking in VHA's primary claims system, Fee Basis Claims System (FBCS), requiring VHA staff to scan the majority of the paper claims into FBCS and manually adjudicate claims. In addition, non-VA providers do not have visibility into the status of their claims. FBCS does not support certain types of claims for non-VA care, and these claims must be processed through VistA. Overall, the high reliance on manual processes slows payments activities, introduces potential errors (e.g., lost claims and misrouting of claims), and introduces waste into the process (e.g., providers filing duplicate claims due to delays in payment and a lack of easy visibility into their status). In addition, such reliance on these manual processes reduces the timeliness and accuracy of data and obscures the true state of VHA's financial activities.

"As a service-disabled Veteran, I know first-hand the challenges women face during military service and when they return home. I, like many women who served, did not understand on leaving military service the benefits and services to which I was entitled, despite the fact that I suffered an injury during my service as an Army medic."

*Disabled American Veterans Deputy National
Legislative Director Before the Committee on
Veterans' Affairs*

U.S. House of Representatives

April 30, 2015

- Patient-Centered Navigational Tools:** The *Voices of Veterans* report, published by VA's Center for Innovation in November 2014, lists two of its key themes as "Many Veterans don't know what benefits are available to them, or how to access them" and "Utilizing VA

"Almost everything I find out is either from another Vet or by accident."

*2014 Wounded Warrior Project Survey Report of
Findings*

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

technology has severe limitations with some bright spots.”⁷⁹ The benefits available to the Veteran can be complex and difficult to understand. Making matters worse, the current suite of options and the navigational tools to explore available benefit options have proven challenging. Data presented by the MyVA initiative provide some perspective on the magnitude of this challenge, identifying more than 1,000 VA websites and more than 900 1-800 numbers. Further, Assessment A (Demographics) found that “among respondents of the National Survey of Veterans who report not using VA services, 12.4 percent (1.8 million) report that the barriers to access are a reason for non-use. If these obstacles are addressed, that assessment estimates that an additional 492,000 new patients will use VA for some of their health care needs.”⁸⁰

Metrics for Performance Management: VHA lacks a clear strategy to effectively apply its data and metrics to performance improvements, including distilling and prioritizing metrics to drive patient-centered outcomes. As Assessment B (Health Care Capabilities) notes, VHA has more than 500 quality measures to monitor quality of care regionally and locally, concluding that the proliferation of measures creates burdens on staff and resources and can lead to an emphasis on the measures rather than improving areas of care that are more likely to improve patient outcomes. One VACO leader stated, “Our problem is that we’re awash in data and don’t do anything with it.”

The Centers for Medicare & Medicaid Services defines quality measures as “tools that help us measure or quantify healthcare processes, outcomes, patient perceptions, and organizational structure and/or systems that are associated with the ability to provide high-quality health care and/or that relate to one or more quality goals for health care. These goals include: effective, safe, efficient, patient-centered, equitable, and timely care.”⁸¹ Among quality metrics, only a subset should be considered performance measures—those quality metrics with attributes rendering them suitable for explicit comparisons of care between institutions or health care providers.⁸² Rather than adopting the practice of many high-performing health care systems—where targets are balanced in support of the mission, and a limited number of key metrics are used to measure performance and drive outcomes—VHA has adopted a catch-all approach to performance management. As Assessment L (Leadership) notes, with 382 measures today in its 10-N National Performance Measures Report provided by interviewees, VHA is not setting clear, actionable organizational targets (10N NPRM, 2015). Further, there is widespread recognition of the overabundance of metrics and the need to simplify, with one VAMC director

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

describing his perception of VHA's approach to setting performance measures as, "If 50 metrics are good, 100 must be better."

Ironically, the sheer number of performance measures and the limitations of the current performance management process make effectively tracking performance difficult. One of the VISN's roles is to ensure that performance targets are negotiated with VHACO and are being met at the VAMC level. This leads to regularly scheduled meetings with VAMC leadership to review binders of performance reports and requests for detailed corrective action plans when a measure needs improvement. These progress reviews generally focus on the weakest performance measures, contributing to a commonly held perception that metrics are used to identify weak performers rather than to help drive performance excellence.⁸³

"Moving away from blame allows an organization to learn from mistakes and conduct systematic improvement efforts based on that knowledge."

Bringing a Systems Approach to Health

This emphasis on those not meeting performance targets extends to reviews conducted by multiple internal and external organizations. The bureaucratic and highly politicized environment within which VHA operates has led to a dramatic increase in the number of assessments, administrative investigation boards, and root cause analyses of VAMC performance. This focus has led many of those interviewed to describe VHA's culture as "punitive" rather than constructive or incentivizing. While understanding where VAMCs are not working well is important, this focus on poor performers is limiting from a systems perspective because it does not expose the systemic findings or potential solutions. It is equally important to understand where things are going well and the lessons that can be drawn from those high-performing sites, where successful systematic improvements and best practices are taking place.

RECOMMENDATIONS

- Use standardized clinical and administrative data for accuracy and interoperability.
- Implement a single, integrated set of system-wide tools centered on a common EHR that is interoperable across VHA and with DoD and community providers.
- Transparently share performance metrics for leadership, clinical, and business functions across VHA to identify and adopt best practices for continuous improvement.

Use standardized clinical and administrative data for accuracy and interoperability. VHA must take a more comprehensive approach toward managing its data. A key prerequisite for an effective data management strategy is clarifying the demand expectations to inform the direction and priorities of the data strategy. With that direction in place, VHA's data management strategy should include:

⁸³ This information is presented in McKinsey & Company Assessment L (Leadership) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Identifying, rationalizing, and prioritizing VHA's data needs and uses enabled by common definitions and document templates
- Identifying the internal and external data sources and analytical products required to address these needs and assessing the sources and analytical products relative to users' requirements (timeliness, accuracy, completeness, volume)
- Implementing more formal management structures and tools to bring control to VHA's data environment (governance, standards, documentation repositories)
- Identifying potential resources to support the effort (budget, staff, tools)
- Defining an implementation strategy that sets a realistic path toward improving VHA's data environment—acknowledging and working within VHA's current challenges (existing issues with enterprise data).

Implement a single, integrated set of system-wide tools centered on a common electronic health record (EHR) that is interoperable across VHA and with DoD and community providers. Specifically, VHA should implement one-system wide:

- EHR system that is interoperable across the entire system and with DoD and community provider systems, beginning with a cost-versus-benefit analysis performed by VHA between a commercial off-the-shelf (COTS) EHR and the current VistA EHR
- Electronic claims payment system to pay for outside services
- Billing system to collect from other payers
- Patient-friendly scheduling system with modern, single toll-free-number call-center support
- Set of electronic decision support tools describing standard work housed in an electronic medical library.

Along with standardizing VHA processes as discussed in Section 5, a single, integrated set of common system-wide tools centered on an EHR will substantially help address the above issues. In addition, well-designed and developed systems and tools will help VHA enforce and automate business rules, allowing for greater process standardization and reducing variation across VHA. The VA and VHA CIOs should transform the VA IT strategy to a model based on best practices for enterprise IT services that will provide the capabilities that support improved governance, operations, leadership, health care quality, and patient satisfaction. VHA should consider the following recommendations:

- **In partnership with the VA CIO, the VHA CIO should oversee a comprehensive cost-versus-benefit analysis between a COTS EHR and continued in-house custom development of the VistA EHR currently in use.** As Assessment H (Health Information Technology) noted, the analysis should take into account all the complexities of the VistA and CPRS architecture and infrastructure and known issues with performance, scalability, extensibility, interoperability, and security. It should also address full life-cycle costs, including development time (based on recent delivery trends), availability of development resources, maintenance and licensing costs, and infrastructure costs. The VA and VHA CIOs should conduct site visits and review the successful IT practices

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

implemented at high-performing health care organizations (including VISN 4) to inform their strategies for effective approaches and potential contributions that IT can provide to improve the treatment of Veterans today. Those approaches would address the challenge of providing billing and claims processing capabilities beyond what the existing VistA and CPRS currently provide.

- Focus on automation, integration, and interoperability for billing and claims.** As outlined in Assessment I (Business Processes), VHA initiated its Health Care Payment System (HCPS) as a replacement for FCBS to serve as VHA's centralized claims processing system and to address many of the issues outlined above. The system is approximately two-thirds complete; however, further development has been stalled by funding issues. VHA should resolve the HCPS funding issue to ensure that this needed functionality is delivered. An effort similar to HCPS is also necessary for VHA's billing process. Assessment I identifies a number of specific capabilities required for VHA's billing system, such as integration across patient intake, medical records, coding, and billing systems; single sign-on capability; automated first-party claims matching; real-time estimate of out-of-pocket patient expenses; and automation to support algorithmic edits and claims correction.
- Align patient-centered navigation efforts to the MyVA initiative.** In November 2014, VA announced the MyVA initiative to reorganize VA to better serve its Veterans. As stated by Secretary McDonald, "The reorganization, to be known as 'MyVA,' is designed to provide veterans with 'a seamless, integrated and responsive customer service experience—whether they arrive at VA digitally, by phone or in person.'"⁸⁴ Central to this theme is enhancing the Veteran experience, approaching the Veteran holistically (e.g., as one VA organization versus three administrations, independent of the channel used) and simplifying and facilitating their use of VA services. From a technology perspective, VHA currently supports its Veterans through a variety of channels, including kiosks located at facilities, call centers, web portals such as My HealtheVet, and mobile applications. VHA must identify and review the tools and channels used to support its Veterans and determine how these tools align with the MyVA initiatives and principles. Based on this assessment, VHA may need to drop, enhance, or expand VHA systems and tools or potentially adopt systems and tools being developed as a part of MyVA.

Transparently share performance metrics for leadership, clinical, and business functions across VHA to identify and adopt best practices for continuous improvement. VHA lacks a clear strategy for its performance measures.⁸⁵ As with its enterprise data management strategy, VHA must align its performance management strategy with its clarified mission. As VHA clarifies and focuses its mission, VHA must revisit its performance management approach to ensure that metrics are strategically aligned to the organization's outcomes and that timely and accurate

⁸⁴ Daly, M. (2014, November 10). VA announces "MyVA" plan, largest reorganization in department's history. PBS. Retrieved from <http://www.pbs.org/newshour/rundown/va-announces-myva-plan-largest-reorganization-departments-history>

⁸⁵ These recommendations are derived from McKinsey & Company Assessment L (Leadership) and several other assessments.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

data are available to support those metrics. VHA should consider the following in its performance management strategy:

- Focus and simplify metrics to clarify accountability and mission alignment. VHA should develop an integrated and balanced performance scorecard for VAMCs, focusing on a smaller number of core metrics that roll up to support the broader enterprise view. These metrics should focus on the mission, encourage cross-functional collaboration, and be carefully cascaded. This requires eliminating obsolete metrics while continuing to exploit the progress achieved with the Strategic Analytics for Improvement and Learning (SAIL) initiative.
- Evolve performance management along with enterprise data improvements. Given current data limitations, an effective performance management system will be limited in its ability to support leadership. Performance management relies on data that is trusted by those being measured. As the timeliness, accuracy, and consistency of VHA's data evolves, so can VHA's performance measures.
- Monitor the impact of the performance management strategy and the behaviors it promotes. Unrealistic performance targets may disengage staff or worse—they could result in unintended consequences or undesirable behaviors. At the high-performing health care systems that were visited, the use of performance management metrics that were aggressive and frequently not being met was discussed. Rather than apply punitive measures, these health care systems focused on achieving an overall trend in increasing organizational performance or operations within a specific range. The organizational performance metrics also served as an effective means of identifying those best practices that were enabling these organizations to demonstrate continuous improvement.
- Review industry standards to provide further transparency. Ultimately, VHA is responsible to the Veterans it serves and the public that funds its operations. In developing its performance management approach, VHA must also consider how it can further its accountability and transparency. VHA's SAIL data are a positive start, as they do align with nationally accepted metrics that provide for facility-level, industry comparisons. However, VHA must go further and should review industry benchmarks with the intent of more fully aligning its metrics with industry standards. This would provide greater transparency and would highlight opportunities to adopt industry best practices.

"Performance goes down when there are more measures. We need to get away from the spreadsheet and closer to the action. Facilities need coaches—not just shaking a finger and saying, 'Can't miss this.'"

VHACO Leader

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

7 Leadership⁸⁶

Finding 4: Leaders are not fully empowered due to lack of clear authority, priorities, and roles
Recommendation 4—LEADERSHIP: Stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership and accountability
Push decision rights, authorities, and responsibilities to the lowest appropriate level throughout the organization.
Build on Veteran-centered behaviors to drive a culture of service excellence, trust, continuous improvement, and healthy accountability.
Revitalize the leadership pipeline through establishment of enterprise-wide, comprehensive succession management and leadership development functions.
Strengthen the appeal of senior leadership positions by pursuing flexibilities in hiring and compensation.
Establish sustained leadership continuity by extending tenure for key positions.

CURRENT STATE

VHA is in the midst of a leadership crisis. Through the course of more than 300 leadership-focused interviews and the analysis of multiple employee survey instruments, Assessment L (Leadership) developed a picture of an environment that is challenging and disempowering for current leaders. (A full treatment of VHA's leadership issues is provided in Assessment L.) This environment discourages emerging leaders from seeking promotion within the system. And while there are many resilient leaders working to make a positive impact on our nation's Veterans, they too often achieve desired outcomes despite the challenges of the system within which they operate. The VA staff assessment of their work environment is reflected in the federal government's "Best Places to Work Survey." Since 2010, both VA and VHA have scored lower than the large agency median and both received particularly low ratings in 2014 during the height of the scheduling crisis. Consider the following:

Mission: The lack of clarity of mission expectations, as discussed in Section 4, has resulted in confusion around leadership priorities and VHA's strategic direction. As one VHACO leader expressed, "We need to first figure out what business we want to be in...[and] choose leaders specifically for the need, change, strategy [we've] decided on." Clarifying the mission and expectations serves as a precursor to many critical leadership decisions.

Misaligned Accountability and Authority: VAMC leaders clearly understand that they are accountable for every aspect of a Medical Center as experienced by patients, employees,

⁸⁶ The information in this section is drawn primarily from McKinsey & Company Assessment L (Leadership) in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

oversight entities, and external stakeholders; however, they do not feel they have the authority required to fully perform their role in the current environment. A standard VA Medical Center Director position description includes the provision that a

Director “operates on a broad delegation of authority with independence of action to manage the Medical Center.”⁸⁷ In both perception and practice, however, this written expectation of delegated authority does not match reality; instead, it is replaced by a fragmented environment with numerous internal and external entities possessing or competing for control. Internally, the VHA organization is viewed as being intensely, unnecessarily complex due to a lack of a clear operating model (as highlighted in Section 5), limited role clarity, fragmented authority, and overlapping responsibilities. This lack of clarity around operating model, roles, and responsibilities extends across VAMCs, the VISNs, and VHACO.

“It is very much a rule by ‘You shall’ edicts—I am told the exact number of people I will hire and the jobs that they need to do—even if I don’t have a need for the policy or the people.”

Physician Leader

“...nobody feels safe, including us. How am I supposed to role model psychological safety when I don’t feel safe myself?”

VAMC Leader

A complicated external environment exists for VHA, as the organization is treated by oversight entities and external stakeholders as both a hospital system and a traditional government agency, and Congress sees itself in the role of the VHA Board of Directors.⁸⁸ An increase in centralized control intended to mitigate risk has in fact constrained leaders’ authority. Communications from Congress, VACO, VHACO, and VISNs tend to be overly prescriptive directives governing many aspects of operating a Medical Center. A general lack of clarity around roles and responsibilities contributes to poor coordination across entities and levels, resulting in duplication, communication breakdowns, and functional responses too slow to meet mission needs.

Culture and Environment: Although the broader VHA culture includes a deep commitment to mission at all levels of the organization, it is also characterized by risk aversion and distrust, resulting in an inability to improve performance consistently and fully across the system. At almost every facility visited, at least one leader interviewed mentioned that risk aversion and a reluctance to “speak up” were a significant issue. Three out of every four leaders interviewed at

⁸⁷ U.S. Department of Veterans Affairs. Veterans Health Administration. Job Announcement: Health System Administrator (Medical Center Director) (VA Job Announcement Number: VASES151407823LR). Retrieved from <https://www.usajobs.gov/GetJob/ViewDetails/403947600>

⁸⁸ Clark, C. (2015, April 30). Senators Propose Acting as “Board of Directors” for VA. Government Executive. Retrieved from <http://www.govexec.com/management/2015/04/senators-propose-acting-board-directors-va/111613/>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

VISNs echoed this concern.⁸⁹ This culture permeates across all levels—from the front lines to Medical Center leaders to people at the VHA Central Office—and it contributes to a lack of innovation and best-practice dissemination across the organization. VHA’s *Blueprint for Excellence* lists *Provide a Psychologically Safe Environment for Employees* as a key transformational action.⁹⁰ However, although psychological safety is acknowledged as a challenge, the broader culture of distrust and risk aversion will not improve until leaders themselves feel safe and can actively demonstrate the desired behaviors.

Leader Preparation: Mission focus alone is insufficient to attract top-notch leaders to the organization or motivate high potentials to seek promotion to senior leadership positions in the current environment. In fact, many current VHA leaders perceive the risk of advancing to significantly outweigh the potential reward. The lack of a comprehensive approach to leadership development and a complete lack of formalized succession planning results in an inability to identify potential leaders and prepare them to assume their future roles.

Compensation is clearly a disincentive for many experienced senior medical health leaders to enter the VHA system,⁹¹ and it remains a point of contention among those leaders who are already in VHA. Some leaders spoke freely about their current salary and how it compares to their peers’ salaries in medical centers outside VHA. Ironically, there is a perceived disincentive for Chiefs of Staff and other clinical leaders to aspire to VAMC Director or any other Title 5 (non-clinical) leadership positions, as clinical leaders hired under existing Title 38 authority are granted more flexibility in hiring, compensation, and performance evaluation in their current positions.⁹² A VAMC Chief of Staff echoed his peers and offered, “If I became the Director, I would take a \$100K cut.”⁹³

“The salary is \$187,000 [sic] for a medical center director. In private industry, a director could get \$600,000. They don’t do it for the money, but they need some reward for doing well.”

Acting VAMC Associate Director

All of these factors have contributed to an anemic leadership pipeline that does not support VHA’s existing or future needs. Assessment L (Leadership) paints a dire picture of the current vacancy situation:

⁸⁹ This information is derived from McKinsey & Company Assessment L (Leadership) in Volume II.

⁹⁰ U.S. Department of Veterans Affairs. (2014, September 21). *Blueprint for Excellence: Veterans Health Administration*. Retrieved from http://www.va.gov/HEALTH/docs/VHA_Blueprint_for_Excellence.pdf

⁹¹ This information is derived from RAND Corporation Assessment B (Health Care Capabilities) and Grant Thornton Assessment G (Staffing/Productivity), both in Volume II.

⁹² Under the Title 38 employment system, VA has considerable hiring flexibility. It can hire professional employees directly and has flexibility to remunerate Title 38 employees at levels that are consistent with such staff’s professional qualifications. Promotions under the Title 38 system are awarded by review panels comprised principally of clinical peers having similar credentials and experience.

⁹³ The current salary cap for a VA Medical Center Director paid under the SES pay scale is \$183,300. Currently, seven Medical Center Directors are compensated under Title 38.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- 39 percent of Quadrad or Pentad senior leadership teams⁹⁴ at VHA Medical Centers have at least one current vacancy
- 43 percent of Network Directors are fulfilling the duties of that position in an “acting” status
- 16 percent of VHA Medical Centers do not have a permanent Director (i.e., Acting, Interim, or vacant).

And VHA has been unable to fill these field leadership gaps in a timely manner. The length of time that these openings have been unfilled stretches for greater than seven months on average, with more than half currently open for longer than six months.⁹⁵ The tactical, short-term solution to filling VAMC Director positions has been to fill them with Acting or Interim Directors. However, this revolving door of Acting VAMC Directors prevents sustainable change, hurts employee morale, and compromises delivery of care to Veterans in these facilities. One VAMC leader expressed frustration with this current practice, saying “We’ve had no consistency at the top. We’ve had Acting

Directors. There is no permanent body. We need that consistency. The Directors come in with new ideas, but they don’t have the time to implement anything.”

Complicating this challenge is the realization that VHA faces a large and widespread number of potential retirements in key field leadership roles. Fifty-seven percent of leaders in key positions are eligible for retirement.⁹⁶ More than two thirds of Network Directors, Nurse Executives, and Chiefs of Staff are also eligible for retirement, as well as 47 percent of Medical Center Directors. There are indications that this retirement threat is beginning to be realized; in FY2014, retirements by VHA employees GS-13⁹⁷ and higher increased by 37 percent over the previous five-year average.⁹⁸

“Accountability is tough when the leadership is rotating (i.e., Acting Director is here 90 days to six months)...There’s a perception of ‘who’s the Director today?’”

VAMC Leader

⁹⁴ A Quadrad leadership team consists of a Medical Center Director, an Associate Director, an Associate Director for Patient Care Services/Chief Nurse Executive, and a Chief of Staff. A Pentad leadership team consists of a Medical Center Director, an Associate Director, an Associate Director of Clinical Operations, an Associate Director of Patient Care Services, and a Chief of Staff.

⁹⁵ (2015). Choice Act assessment interviews with VHA.

⁹⁶ “Key positions” are defined as VISN Network Director and Medical Center Quadrad leaders (Medical Center Director, Associate Director, Associate Director for Patient Care Services/Chief Nurse Executive, and Chief of Staff).

⁹⁷ The general schedule (GS) is the predominant pay scale within the United States civil service, with 15 levels. GS-15 has the highest base salary.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

RECOMMENDATIONS

As outlined in Assessment L (Leadership), VHA must stabilize, grow, and empower leaders; galvanize them around clear priorities; and build a healthy culture of collaboration, ownership, and accountability.

- Push decision rights, authorities, and responsibilities to the lowest appropriate level throughout the organization.
- Build on Veteran-focused behaviors to drive a culture of service excellence, trust, continuous improvement, and healthy accountability.
- Revitalize the leadership pipeline through establishment of enterprise-wide, comprehensive succession management and leadership development functions.
- Strengthen the appeal of senior leadership positions by pursuing flexibilities in hiring and compensation.
- Establish sustained leadership continuity by extending tenure for key positions.

Push decision rights, authorities, and responsibilities to the lowest appropriate level throughout the organization. Clarifying decision rights is a critical factor in empowering leaders in the field. VHA should articulate decision rights clearly by level, organization, and role, standardizing where appropriate while also allowing for local flexibility based on local needs. Clarifying the role of the VISN is particularly important as this role has become unclear over time. This clarification should define key roles and responsibilities, particularly with the local realignment in progress. It must address the necessary balance between empowerment and support between medical facility leaders and VISN leaders. This must be done in the context of overarching systems and clear standard performance goals and outcomes.⁹⁹

Build on the existing commitment to Veteran-centered care to drive a culture of service excellence, trust, continuous improvement, and healthy accountability. Research suggests that “most people won’t change their behaviors until they observe the role models in their organization acting differently, and when they see this new behavior positively recognized and rewarded—a clear promotion, a plum assignment, a change in authority or responsibility, or simply praise from the top of the organization.”¹⁰⁰ VHA leaders will need to demonstrate desired behaviors with the understanding that culture change will not occur until employees are motivated and feel supported to act differently.

VHA must reinvigorate its mission-driven culture through greater employee collaboration and ownership and by creating a unified organization in support of mission, strategic direction, and a goal of integrated patient care. To do this, VHA will need to foster a culture of continuous improvement and learning, spur collaboration, encourage innovation (within and across the system, and beyond), and connect all employees to the mission. Communications should make

⁹⁹ See McKinsey & Company Assessment L (Leadership) in Volume II for more detail on the role of the VISN.

¹⁰⁰ The Bridgespan Group. (2011). *Strategies for Changing Organizational Culture*. Retrieved from <http://www.bridgespan.org/Publications-and-Tools/Leadership-Effectiveness/Lead-and-Manage-Well/Strategies-for-Changing-Organizations-Culture.aspx>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

clear how activities performed by employees support the mission and strategic direction and how measures, directives, and requests directed by VHA Central Office align with and advance the mission.

Culture is often described simply as “how things are done around here,” and changing the VHA culture will need to happen at all levels—VHACO, VISN, and the VAMC level. VHACO should consider how to integrate its efforts so that the workforce is involved and experiences a coherent set of messages, policies, and support. The VISNs should support the VAMC leaders by sharing best practices, demanding steady improvement, and encouraging innovation. VAMC leaders will need to role model the change, describe why the culture must change, reinforce desired behaviors, and provide leaders and employees alike with the coaching, training, and tools they will need to succeed. As stated in Assessment D (Access Standards), leadership at every level of the health care delivery system is essential to steward and sustain cultural and operational changes needed to reduce wait times. Leadership must be devoted to reflecting, sustaining, and enhancing patient-centered care in scheduling and access, and the results must be continually gathered, assessed, made available, and deployed to drive and reward improvement.

VHA must shift its thinking to acceptance, and in fact encouragement, of risk taking and even smart failures. A cultural and leadership emphasis on healthy risk taking was adopted across all of the high-performing health care systems we studied and should be emulated by VHA. VHA should

“Cleveland Clinic has always had a high tolerance for renegades—the kind of people who are dissatisfied with the status quo and are always looking for better ways of doing things. Because no organization can be successful unless its people are free to learn from their mistakes, Cleveland Clinic allows ample room for failure.”

Toby Cosgrove
The Cleveland Clinic Way

strike a risk-reward balance that enhances the organization’s ability to reward senior leaders for the risk they assume in this increasingly politicized environment, while also making it easier to usher poor performers out of VHA. Leaders’ performance plans should not only focus on compliance requirements, administrative investigation boards, root cause analyses, and peer reviews¹⁰¹ but should also emphasize trends that are improving, best practices that are shared, risks taken, and accomplishments achieved. VHA must hold leaders accountable for rebuilding a culture of trust that is patient centered, streamlines processes, and expects best practices to be adopted.

Revitalize the leadership pipeline through establishment of enterprise-wide, comprehensive succession management and leadership development functions. As Assessment L (Leadership) concludes, a system as large, complex, and unique as VHA requires an enterprise-wide, highly coordinated succession management function, beyond traditional workforce planning. A comprehensive and enterprise-wide program to identify high-potential candidates, provide

¹⁰¹ United States. Congress. Veterans Access, Choice, Accountability, and Transparency Act, 38 U.S.C. § 1701 (2014) (Pub. L. No.113–146, 128 Stat. 1754).

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

development in core health care administration competency functions, and connect these individuals with leadership opportunities is critical to moving VHA forward. A formal candidate identification, preparation, and placement program is required to identify and promote the next generation of leaders. Policy changes and congressional action, including expanding hiring authorities, should be sought to change or grant temporary exceptions to alleviate any constraints. The succession planning function should be coupled with development programs that strengthen VHA's leadership foundation. Current leadership development offerings should be rationalized, eliminating existing programs that do not reinforce or build on the behaviors expected of VHA leaders. Development programs should provide current and future leaders with the appropriate strategic, operational, and leadership skills to drive and implement change in this complex system and challenging environment. VHA should also attract and recruit leaders from outside the organization with deep health care management expertise who have demonstrated the behaviors and possess the competencies desired within VHA. These leaders would be expected to leverage and share their knowledge gained outside the organization while acting as catalysts for change within VHA.

Strengthen the appeal of senior leadership positions by pursuing flexibilities in hiring and compensation. The role of senior leaders within VHA should be strengthened by pursuing regulatory or legislative changes that expand or create a new federal classification for VHA Pentad leaders and other critically needed and vacant positions. These changes should enable the flexibility that exists in other federal positions (e.g., Title 38,¹⁰² Senior Executive Service, Excepted Service¹⁰³) to address compensation and benefits, hiring decisions, promotion process, and performance management. It should be noted that VA is pursuing a legislative remedy in its most recent federal budget request to expand Title 38 salary flexibility to non-clinical leadership positions, although at the time of this report Congress has yet to act on this request.

Establish sustained leadership continuity by extending tenure for key positions. Building sustained leadership continuity will be critical to successfully transforming culture and will give leaders the authority, accountability, ownership, and time needed to stabilize the organization, strengthen its health and performance, and shepherd change efforts. To build this continuity, VHA and Congress should consider longer terms for critical leadership positions such as the Under Secretary for Health. Extending the tenure of the Under Secretary so that it spans presidential administrations and election cycles would increase leadership stability and resilience in political headwinds. This top leadership position in one of the nation's largest health care systems could be considered akin to the Internal Revenue Service (IRS) Commissioner position. Congress passed the U.S. Internal Revenue Service Reform and Restructuring Act of 1998. That legislation allowed the IRS Commissioner a five-year term that crossed administrations and provided the opportunity to fully implement the IRS

¹⁰² Title 38 is a federal classification for health care professionals and covers a range of clinical professions at VHA.

¹⁰³ There are four schedules (A, B, C, and D) of Excepted Service that fall under OPM regulations. Agencies may make Excepted Service appointments upon specific authorization by OPM.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

transformation.¹⁰⁴ Extending the assignments of Medical Center Directors would also increase organizational stability and continuity at the facility level by ensuring that each leader is present long enough to build a rapport with the facility and his or her leadership team and see significant efforts through to completion or sustainable implementation. These extended assignments would reduce the frequency of geographic displacement, a dynamic that is becoming increasingly unattractive to many facility leaders.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

8 Transformation

Taken together, the 12 assessments found numerous, critical shortfalls validating the many calls for change made by Veterans, the American public, Congress, and VHA staff and leaders.¹⁰⁵

These shortfalls should not be viewed as individual anomalies, but rather manifestations of the systemic findings that plague VHA:

- A disconnect in the alignment of demand, resources, and authorities that impacts mission execution
- Uneven bureaucratic business operations and processes
- Non-integrated variations in clinical and business data and tools
- Leaders are not fully empowered due to a lack of clear authority, priorities, and roles; they work in a culture of growing risk aversion and distrust.

To successfully and sustainably address these systemic findings, a system-wide transformation is required¹⁰⁶ based on an approach that acknowledges the interdependency among the four cornerstones as depicted in Figure 5 in Section 3.

Transformation is Hard but Possible. Transformation is not easy, nor is success guaranteed. Successful, sustained transformation requires unwavering persistence, enduring attention, committed leadership, and the sustained cooperation and commitment of those calling for change, as well as new approaches and capabilities. Across many industries, longitudinal research has found that only about 30 percent of attempted transformations succeed for the long term.¹⁰⁷ Employee resistance, a lack of engagement by organization leadership, scarce resources, and other organizational issues (including poor accountability and misalignment between organizational aspirations and individual and team goals and targets) are major reasons why transformational efforts fall short of their goals. Unless VHA makes major changes from its current state, it is unlikely to successfully transform.

As difficult as a major transformation is, it is still achievable. In the course of conducting the assessments and performing research for these assessments, we visited four highly regarded health care institutions that have successfully undergone transformations and emerged as high-

¹⁰⁵ A Gallup poll from June 9-10, 2014, on Americans' issue priorities found that 87 percent of Americans polled thought that improving the way in which health care services are provided to U.S. military Veterans was extremely/very important, topping the list. Retrieved from: <http://www.gallup.com/poll/171596/prioritize-improving-veterans-health.aspx>

¹⁰⁶ In his statement before the Senate Committee on Appropriations, Subcommittee on Military Construction, Veterans Affairs, and Related Agencies, on April 21, 2015, Secretary of Veterans Affairs Robert A. McDonald said, "We are implementing an historic department-wide transformation, changing VA's culture, and making the Veteran the center of everything we do." Retrieved from <http://www.appropriations.senate.gov/sites/default/files/hearings/042115%20Secretary%20McDonald%20Testimony%20-%20MilCon-VA.pdf>

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

performing health care systems (Kaiser Permanente, Cleveland Clinic, Virginia Mason, and Geisinger). We also interviewed more than 27 health care executives and experts from industry, academia, and government. From these experiences, six themes enabling the successful transformations emerged:

- A shared sense of urgency
- Empowered leaders and new mission
- Recognition of the journey through a sustained and time-consuming process
- Patient-centric culture and value system
- Supportive and knowledgeable governance
- Transparent data-driven management system.

These themes reflect the systemic findings and recommendations provided in this report and reinforce the conclusion that a systems approach is essential to a successful VHA transformation.

VHA has also seen major transformation occur from 1994 to 1999. In 1994, care was fragmented and uncoordinated, hospital centric, specialist based, and episodic and reactionary. It was often difficult to access, with long waiting times and long distances to hospitals for some patients. The system was plagued with irregular and unpredictable quality and rapidly rising costs. Management was highly bureaucratic, centralized, and hierarchical. Organizational leadership changed frequently, and governance issues and capital investment decisions were highly politicized. Patients were unsatisfied, and staff demoralized.

After a careful, major transformational effort, there were many quantifiable examples of positive impact at the end of five years. VHA:

- Treated 24 percent more patients
- Implemented universal primary care
- Improved access with 302 new community-based outpatient clinics
- Markedly reduced waiting times
- Closed 29,000 acute-care hospital beds
- Reduced bed days of care per 1,000 patients by 68 percent
- Reduced annual hospital admissions by 350,000
- Merged 52 hospitals into 25 locally integrated multi-campus facilities
- Decreased staffing by 12 percent (25,867 FTE positions) while concomitantly increasing the number of caregivers
- Substantially decreased annual operating costs
- Decreased annual expenditures per patient by more than 25 percent in constant dollars
- Improved patient satisfaction and achieved higher aggregate patient satisfaction ratings than in the private sector (in 1998, 80 percent of patients thought that care was “definitely better” than two years before)

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Markedly improved quality of care according to standardized performance measures for a wide array of conditions.¹⁰⁸

Transforming VHA to a High-Performing Health Care System: In its *Blueprint for Excellence*, VHA has captured its aspirations and goals citing the IOM’s “Six Aims for High Performance Healthcare” as a framework underpinning its “clinical performance improvement and measurement for comparison with non-VA care.”¹⁰⁹

“The goal of a learning health care system is to deliver the best care every time, and to learn and improve with each care experience. This goal is attainable only through system-wide changes of the sort that have been successfully undertaken in certain activities of the manufacturing sectors. In these cases significant benefits have been realized through organization wide transformations guided by principles of systems and process engineering and the practices of structured data feedback for process improvement.”¹¹⁰

Although the goals of VHA already echo many of the system findings of our assessments, the keys to future success are effective execution and implementation. All leaders and staff must be engaged and empowered to assist overcoming challenges in the transition from strategy to execution. Most transformations take at least 12 to 18 months for initial impact, and transformations of the magnitude needed at VHA may take 5 to 10 years to fully take hold. To avoid change fatigue and loss of focus, VHA leadership must set appropriate expectations with clear milestones, but also make visible early changes to demonstrate commitment and promote front-line acceptance. To this end, as Section 4 recommends, VHA must establish a new Program Management Office staffed by individuals with the right emotional commitment and core competencies in executing organizational change. This office should answer directly to the Office of the Undersecretary for Health. This team should create the strategy and roadmap for the implementation of this transformation, with the requisite

“Minor tweaks to the current system may incrementally improve health care in the near term, but the monopolistic VHA bureaucracy is likely to return to a standard operating model heavily influenced by the desires and concerns of the institution and its employees. Only fundamental reform will break the cycle and empower Veterans.”

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

metrics, milestones, and timelines. This roadmap should set reasonable timelines, strive for early wins, and be willing to wait for major impact. Most importantly, VHA leadership must provide and Congress must endorse funding to enable this transformation—funding that is separate from the annual budget cycle; funding that is protected; and funding that has special rules for allocation. “A best practice is to establish an independent budget that’s distributed when—and only when—the kinds of milestones”¹¹¹ that measure success have been achieved.

With this multi-dimensional systems approach to complex problems, VHA will be able to successfully tackle its most complex problems in innovative, sustainable ways. Facility challenges can be significantly mitigated by a transformative realignment throughout the capital program deploying best practices in leasing and contracting; realigning the strategy of the capital program to improve project selection, optimize the infrastructure portfolio, implement innovative care delivery models, understand demand-based needs, and explore and partner with purchased-care opportunities; and reevaluating funding requirements. Such an integrated approach would proactively position VHA for the health care delivery model of the future. Similarly, the problems of access addressed by the Choice Card should, as noted in Appendix D, integrate multiple factors—systems strategies, supply and demand alignment, reframing the type of patient encounter, the need for standards, the need for evidence-based best practices, and leadership. This holistic approach is the heart of our proposed systems solution with its four systemic cornerstones. A systems approach to solving large scale health care delivery issues has been suggested by experts at IOM, the National Academy of Engineering, and the President’s Council of Advisors on Science and Technology.^{112,113,114} Approaching all of the recommendations in the 12 individual assessments with a systems solution that is scalable and sustainable will provide a pathway for enduring transformation.

Conclusion: Veterans, the American public, Congress, and VHA staff and leadership all want to see and support VHA returning to a high-performing health care system. Deputy Secretary Sloan D. Gibson stated, “We know that unacceptable, systemic problems and cultural issues within our health care system prevented some Veterans from receiving timely care.” We believe this Integrated Report describes a scalable and sustainable way to create the environment for enduring solutions.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

But there are clear obstacles. The number of issues VHA currently faces appears overwhelming. The overlap of our individual assessment recommendations with those of past reports is troubling. The success rate of successful transformations is not encouraging.¹¹⁵

In its current state, VHA is not well positioned to succeed in such a transformation. As already discussed in the Integrated Report, three essential actions are required to realize the recommendations inherent in this transformation. VHA must:

- Implement a systems approach that recognizes and embraces that the four cornerstones are interdependent and the success of any one of the four overarching recommendations hinges on the implementation of the other three. These solutions must be coordinated and implemented via a systems approach to improve VHA overall.
- Establish a transformation program management office with the authority and funding (redirected from current central and local funding mechanisms) to implement the system-wide reworking of VHA. The office should be staffed by individuals with the right emotional commitment and core competencies in executing organizational change. The office should focus on confirming and communicating the aspirational state, establishing transformation priorities, defining timelines for execution, implementing both strategic and tactical initiatives, allocating resources, and instituting appropriate metrics and processes to measure progress and success. It should replace any ongoing change initiatives and merge the relevant components of MyVA, the *Blueprint for Excellence*, and other initiatives into one coherent, focused transformational approach.
- Require evidence-based systems models to inform and implement integrated solutions that balance governance, operations, data and tools, and leadership.

“Implementing systems approaches in health care, including strategies to address scheduling and access issues, requires changes not only in operational processes, but also a fundamental shift in thinking. All members of a health care organization must transition from the siloed, independent, and fragmented mentality of traditional health care culture to a culture of service excellence, an integrated approach with shared accountability in which physicians, employees, and patients treat one another with respect and as partners and patient satisfaction and employee engagement are high.”

*Institute of Medicine of the National Academies
Assessment D (Access Standards)*

VHA has the opportunity to achieve a place among the highest performing health care systems in the world. It will be the charge of Congress, the Commission on Care, and VA leadership to see that these recommendations and resulting transformation efforts are given the necessary attention and support that they—and our nation’s Veterans—deserve.

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix A Demographics

Scope

Assessment A examined the “current and projected demographics and unique health care needs of the patient population served by the Department.” The assessment described characteristics of the current and projected population of U.S. Veterans and patients of the U.S. Department of Veterans Affairs (VA) health care system. In addition, the assessment examined the characteristics of Veterans who are most likely to rely on VA for their health care, described the unique health care needs of the patient population currently served by VA, and projected the health care needs of Veterans who might become patients in the future. The assessment also examined the potential impact of future policy changes, such as broader eligibility for VA care, and other events, such as a major conflict, on demand for VA health care services.

Findings

The population of U.S. Veterans will decrease by 19 percent over the next 10 years. The Veteran population has been decreasing for the past two decades, and this trend will continue. In 1990, there were 27.5 million Veterans; in 2014, there were 21.6 million. Over the next 10 years, our projections, drawing on VA and Department of Defense (DoD) data, show that the Veteran population will decline to 17.5 million, a decrease of 19 percent.

Geographically, the Veteran population will shift from the Ohio River Valley and upper Midwest to the Southwest and Mountain regions and concentrate further in urban areas. Over the next 10 years we estimate that the share of female Veterans will increase from 8 to 11 percent, while the share of non-Hispanic white male Veterans will fall from 80 to 75 percent. Mean age will increase slightly as the population will have a higher proportion of both older and younger Veterans.

Veterans generally enjoy favorable socioeconomic outcomes relative to their non-Veteran counterparts. Veterans are more likely to be employed and have health insurance, and also have higher median incomes, than non-Veterans, on average. Despite the overrepresentation of Veterans in the U.S. adult homeless population, the rate of homelessness is still low among Veterans and has been declining over time.

The VA patient population will increase through 2019 and then plateau. While the Veteran population is projected to decline by 19 percent over the next 10 years, we estimate that the number of VA patients will reach its peak level in 2019 before plateauing or possibly declining in future years. The increase in the size of the patient population relative to the Veteran population is related to recent trends in eligibility, enrollment conditional on eligibility, and use of VA health care among those eligible, particularly among younger Veterans.

The number of Veterans who use VA health care is dependent on eligibility criteria, access constraints, and other factors. For example, our scenario analysis found that expanding eligibility for VA health care to currently excluded groups of Veterans could lead to over 4.8 million newly eligible Veterans, and as many as 2.1 million new VA patients, amounting to a 35.1 percent increase in the size of VA’s patient population.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Lower income Veterans, those in rural areas, Veterans without other access to health insurance coverage, and Veterans with poorer self-reported health status rely more on the VA than other Veterans. Most Veterans have health care options other than VA, such as employer provided health insurance or Medicare, and use VA for only part of their overall health care needs. Our estimates of the extent to which Veterans rely on VA for health care versus other sources of care are lower than VA estimates. For example, our estimates indicate that VA patients obtain 30 percent of their prescription drugs through the VA. In contrast, VA estimates that enrollees obtain 66 percent of their prescription drugs through VA. Because the VA estimates are in part based on proprietary methods, the reasons for these differences could not be fully determined.

Veterans have higher *unadjusted* rates of many key health conditions than non-Veterans. Unadjusted results show how Veterans differ from non-Veterans at the population level. Some of these differences are related to the fact that Veterans are older and more likely to be male than non-Veteran civilians, and therefore disappear when we adjust for these factors. At the population level, the prevalence of diabetes and gastroesophageal reflux disease (GERD) disorders among Veterans is substantially higher than for non-Veterans. Veterans are more likely than non-Veterans to be diagnosed with cancer, hearing loss, and posttraumatic stress disorder (PTSD). Mental health conditions, however, are equally prevalent in the Veteran and non-Veteran populations.

Veterans have a higher *adjusted* prevalence of key health conditions than non-Veterans. Adjusted results characterize how Veterans differ from non-Veterans with similar demographic characteristics, including age, sex, and race. While Veterans continue to have a higher prevalence of many chronic conditions, most differences are smaller, relative to unadjusted estimates. For example, in the unadjusted models Veterans are almost twice as likely to have diabetes; after adjusting for demographic characteristics, the relative difference is only 13 percent. An important exception is that, after adjusting for demographics, Veterans have higher prevalence of mental health conditions than non-Veterans. Differences between Veterans and non-Veterans are particularly large for PTSD, where Veterans are 13.5 times more likely than non-Veterans to be diagnosed with the condition.

VA patients are typically less healthy than Veterans who do not use VA health care. VA patients—defined as Veterans who obtained care from a VA provider or had any payment by VA for health care services used in the past year—are in poorer health than Veterans who had not used VA health care. Partly these differences in prevalence are inevitable, because Veterans with disabilities and service-connected conditions have prioritized access to VA care relative to other Veterans. Among VA patients, the unadjusted prevalence of common chronic conditions (such as diabetes and cancer) is 51 to 96 percent higher than for Veterans who do not use VA care. Approximately 25 percent of all patients who received care paid for by VA have a mental health condition and three percent have PTSD. When combined with the otherwise rare conditions related to combat—amputation, traumatic brain injury, blindness, and severe burns—VA handles a patient mix that is distinct from what community providers typically see.

The prevalence of many common conditions is projected to increase among Veterans over the next 10 years. As the Veteran population ages, they will face higher rates of conditions such

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

as hypertension, diabetes, and mental health. VA patients are projected to experience relatively steeper increases in many conditions relatively to the overall Veteran population. As a result, the gap in prevalence rates between VA patients and Veterans who do not use VA health care is projected to increase over time.

In the event of a hypothetical future conflict, even moderate levels of deployment could substantially increase the size of the incoming cohort of VA patients. However, previous cohorts of Veterans, especially the Vietnam cohort, were much larger than recent cohorts, so the difference would be small relative to the entire VA patient population.

Recommendations

Prepare for a changing Veteran landscape. After increasing for decades, the VA patient population is projected to level-off or even begin to decrease after 2019, a trend that is likely to continue over an even longer time horizon. While demand for VA services during this time period will be influenced by utilization patterns, there is a possibility that demand for services will decrease for the first time in several decades once the size of the Veteran population begins to plateau after 2019. The VA has been, and continues to be, responsive to increasing demand for services, but once population growth slows, VA may be left with a larger footprint than needed in the longer-term. Increasing the use of care purchased from the civilian sector may enable VA to meet short-term increases in demand without requiring costly investment in facilities, infrastructure, and personnel that could become less needed in the future.

Anticipate potential shifts in the geographic distribution of Veterans, and align VA facilities and services to meet these needs. Given projected declines in the size of the Veteran population living in the Ohio River Valley and upper Midwest, it may be possible to consolidate relatively proximal VA facilities in those regions. At the same time, some areas of projected Veteran population growth—including Montana, Wyoming, Colorado, and much of the Southwest—are not currently well covered by VA facilities. Some regions, such as Washington D.C., Los Angeles, Dallas, and northern New Jersey, may experience growth in the Veteran population under age 35.

Improve collection of data on Veterans. Because the 2010 Census did not capture information on Veteran status, there has not been a full-scale accounting of the U.S. Veteran population since 2000. Since then, there have been surveys of representative samples of Veterans that provide useful counts and information about the Veteran population, but they are only estimates. An updated census of the Veteran population would enable a definitive count of all Veterans, while also helping to refine the sampling procedures for the yearly surveys of samples of the population.

Improve collection of data on Veteran health care utilization and reliance. To gain a clearer understanding of Veterans' health care use, VA should collect data on all sources of health care that are used by Veterans—including where care is delivered, what diagnoses are recorded and procedures performed, and who pays for the services—as well as what needs for care are unmet, and why. Creating these data would enable an analysis of the extent to which Veterans currently rely on the VA for health care, and how that reliance may change as a result of internal VA policies or external factors. It would also provide insight into where the VA succeeds

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

in meeting the health care needs of its patient population and what obstacles exist in delivering needed care.

Monitor use of VA health care by younger cohorts and Iraq and Afghanistan Veterans. Iraq and Afghanistan Veterans are more likely to have service-connected disabilities than other Veterans, and are automatically eligible for VA health care for five years after leaving the military. Historically, Veterans have relied less on VA health care as they age, gain access to other health insurance (e.g., through an employer), and start families. However, it is not clear the extent to which these patterns will hold for newer Veterans who have different exposures and enhanced eligibility relative to previous cohorts. Understanding how patterns for these Veterans will evolve may inform future planning.

The complete Assessment A is available in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix B Health Care Capabilities

B.1 Scope

Access to quality health care is a central part of our nation's commitment to Veterans. However, concerns about access to VA care, including long wait times for appointments, lack of available appointments within certain clinical specialties, and problems with care transitions for patients discharged from mental health services, led to the passage of the Veterans Choice Act in 2014. Section 201 of the Veterans Choice Act includes a requirement for an independent assessment of VA health care. Assessment B provided "an independent assessment of the current and projected health care capabilities and resources of the VA, including hospital care, medical services, and other health care furnished by non-VA facilities under contract with the VA, to provide timely and accessible care to Veterans" (Veterans Choice Act, Section 201). Assessment B also explored how selected policies could affect Veterans' access to high-quality care. Volume II contains the full Assessment B report.

B.1.1 Findings

VA operates a unique health care system with broad and deep resources and capabilities. However, VA faces a number of barriers in planning for and using its resources effectively:

- **Fiscal resources:** We identified concerns about the data used for VA's budget planning, inflexibility in budgeting stemming from congressional appropriation processes, and challenges in VA's allocation processes.
- **Workforce and human resources:** VA has an extensive health care workforce, but VA capacity may not be sufficient to provide timely care to Veterans across a number of key specialties as well as primary care. VA faces shortages of physicians in some geographic areas and of certain physician specialists. These constraints are influenced by low salaries, a slow credentialing process, and infrastructure constraints. Variations in coding, inconsistently entered workload data, and incomplete physician encounter data make it difficult to measure productivity.
- **Physical infrastructure:** VA operates one of the most extensive systems of health care infrastructure in the country, but the need for additional physical space is a limiting factor in improving access, and it is sometimes difficult to update the physical space in older buildings to accommodate new technology and equipment.
- **Purchased care:** VA has many outside options for providing care to Veterans, including several programs and various types of payment or contractual arrangements, although managing these overlapping resources can be challenging.
- **Informational resources:** VA has been and continues to be an innovator and leader in IT, although there is room for improvement in some areas, including issues related to the management and planning of its IT systems. VA's electronic health record technologies suffer from aging architecture and 10 years of limited development. However, interviews suggest strong support for renewed investment in a modern, home-grown product rather than transitioning to a commercial alternative.

The views, opinions, and/or findings contained in this report are those of RAND Corporation and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

VA does not currently face an overall crisis in access to care; however, we found considerable variability across the dimensions of access (geographic, timely, financial, digital, and cultural).

There is wide variation in access: For example, at 91 top-performing VA facilities, over 96 percent of new primary care patients receive appointments within 30 days of the preferred date. However, 14 VA facilities were far below this benchmark, with less than 84 percent of patients receiving appointments within 30 days of the preferred date. At top-performing VA facilities, more than 60 percent of Veterans report that they “always got urgent care appointments as soon as needed.” At the worst-performing VA facility, this rate was closer to 20 percent. On patient surveys, Veterans are substantially less likely than private-sector patients to report getting appointments, care, and information as soon as needed.

Geographic access is another challenge for VA. Veterans are highly dispersed throughout the United States, and ensuring nearby access to needed services is difficult. Many Veterans have access to VA care by a general standard of less than 40 miles distance from any facility (measured either using a straight line or driving distance), not considering the services available. Geographic access is worse when using different types of access standards. Veterans who must rely on public transportation, for example, have much lower levels of access than other Veterans. Geographic access to specialized facilities and providers is also lower.

There is substantial variation in quality measure performance across VA facilities, indicating that Veterans in some areas are not receiving the same high-quality care that other VA facilities are able to provide. For example, there was a 21-percentage-point difference in FY 2014 performance between the lowest- and highest-performing VA facilities on the rate of eye exams in the outpatient setting for patients with diabetes.

VA uses many systems for monitoring quality. On most quality measures for outpatient care, VA outperformed other health care systems, while the performance on quality measures of inpatient care was mixed, with some better and others worse. On average, VA hospitals performed the same or significantly better than non-VA hospitals on 12 inpatient effectiveness measures, all six measures of inpatient safety, and three inpatient mortality measures, but significantly worse than non-VA hospitals on two effectiveness measures and three readmission measures..

Changes in policy can help ensure continued access to VA care. If no substantial changes are made, projections indicate that it could be more difficult in 2019 for VA to provide accessible and timely care for Veterans than it was in 2014. However, we identified several policy options to ensure that Veterans have continued access to care, including formalizing full nursing practice authority, increasing the number of VA physicians, and expanding virtual access to care.

The impact and feasibility of increasing purchased care would be highly dependent on the scope of the change. Shifting a greater share of services from VA to purchased care would require more fundamental changes to VA. We did not find evidence of a current system-wide crisis in access to VA care that would indicate that such a change is necessary, but it is possible that such a reorientation would improve both access and the quality of care. However, our analyses indicate that many Veterans without access to VA health care also face significant barriers to accessing purchased care, including distance and cultural barriers. Thus, the option

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

to transform VA from a provider to a purchaser of health care would not necessarily have a significant positive impact on access.

B.1.2 Recommendations

Based on the findings of Assessment B, we make several recommendations to improve access to care for Veterans:

Use a systematic, continuous performance improvement process to improve access to care.

Although many VA facilities achieve very high levels of performance on key access and quality measures, there is also a great deal of variation across the system. A systematic effort is needed to identify unwarranted variation, identify and develop best practices to improve performance, and embed these practices into routine use across the VA system. Some of the best solutions may be developed locally to reflect local needs and contexts. Solutions should be designed to be responsive to Veterans' preferences, needs, and values.

Consider alternative standards of timely access to care. Timeliness standards should be reexamined. VA should examine the utility of existing alternative benchmarks, such as same-day availability or the third next available appointment. Access standards for other dimensions, such as cultural access, should also be developed and used in performance monitoring and improvement. VA should develop methods to routinely compare the timeliness of VA care with non-VA benchmarks and publish these comparisons for transparency.

Develop and implement more sensitive standards of geographic access to care. VA should compare the "one-size-fits-all" approach of driving distance to alternative standards that are more sensitive to differences between Veteran subgroups, clinical populations, geographic regions, and individual facilities. This assessment highlighted the importance of time spent driving, mode of transportation, traffic, and availability of needed services as key considerations in assessing geographic access to care.

Continue moving toward using a smaller number of quality metrics in quality measurement and improvement activities. VA maintains an extensive set of quality measures. Although use of these measures has led to improvements in care, the proliferation of measures creates burdens on staff and resources and can lead to emphasis on the measures rather than improvement in areas of care that are more likely to improve patient outcomes. VA has already moved toward reporting systems that rely on a smaller number of measures, such as Strategic Analytics for Improvement and Learning (SAIL).¹¹⁶

Take significant steps to improve access to VA care. Our projections indicate that increases in both VA resources and the productivity of resources will be necessary to meet increases in demand for health care over the next five years. The options we considered that have the highest estimated potential impact are formalizing full nursing practice authority, increasing physician hiring, and increasing the use of virtual care. These are commonly proposed options for increasing access to VA care. In addition, new models of health care delivery are emerging

¹¹⁶ Although SAIL uses fewer measures to simplify reporting, they are composite measures which still incorporate numerous individual performance measures.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

rapidly in the U.S. health care system that could improve access to care. VA should seek to be an early adopter of these new models and should build a strategy that enables and supports such innovation.

Establish VA as a leader and innovator in health care redesign. As a large integrated delivery system, VA is well-placed to innovate in comparison with many U.S. health care delivery systems. It should endeavor to maximize this opportunity, given the constraints associated with being a public entity (for example, hiring processes, salaries, budgeting). VA should also endeavor to learn from current leaders in areas where its leadership position has eroded, particularly in health IT, and seek to reestablish its leading position.

Streamline programs for providing access to purchased care and use them strategically to maximize access. Currently available programs are overlapping and confusing to Veterans and VA employees as well as non-VA providers. VA should clearly identify the objectives of purchased care access and streamline programs to meet those objectives.

Systematically study opportunities to improve access to high-quality care through use of purchased care. Some types of care may be more effectively and efficiently delivered by non-VA providers. Identification of these types of care and the impact of shifting care to non-VA providers requires an in-depth systematic analysis that was beyond the scope of this assessment.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix C Care Authorities

Scope

Assessment C examined the “authorities and mechanisms under which the Secretary may furnish hospital care, medical services, and other health care at non-Department facilities, including whether the Secretary should have the authority to furnish such care and services at such facilities through the completion of episodes of care.” The Assessment C team reviewed the history of VA purchased care authorities and the programs through which VA has carried out these activities nationally and at the local level, related challenges and opportunities for VA purchased care in the future, and the ways in which varying definitions of “episodes of care” affect VA authorities and strategies for purchasing health care services.

Findings

VA has a complex set of authorities to purchase care, reflecting tension among implicit aims.

Prior to the passage of the Veterans Choice Act in 2014, the Secretary of VA had longstanding authority to furnish purchased care if VHA facilities could not provide the needed services directly. Although the basic grant of authorities to the Secretary is expansive in some respects, it is not unlimited. It involves significant controls on when, how, and for whom medical care may be purchased. These controls implicitly reflect several competing aims beyond simply making outside care available, including restricting costs and maintaining a balance between VA’s provider and payer functions. In sum, not only are VA’s authorities for furnishing purchased care complex and scattered, but they also embody more than one aim, and those aims may operate partly in tension with each other.

The episode of care defines the “unit” of VA authorization and may help shape purchased care in practice. The authorities for purchasing care tie into “episodes” primarily through program requirements for authorization (for example, as specified under the Veterans Choice Act). However, in principle, an episode conceptually bounds a clinical problem for which a Veteran might require outside services, so it might therefore make sense to outsource care as a coherent “unit.” Future refinements in defining episodes of care, and an authority framework that allows the Secretary to adopt such refinements, may be critical to supporting VA’s adoption of bundled payment and value-based purchasing mechanisms in the future.

The purchased care landscape is in the midst of transformation. Numerous changes to VA’s authorities and mechanisms for purchasing care are being proposed, planned, or implemented. These developments have included new administrative pilots for administering the Choice and Patient-Centered Community Care (PC3) initiatives, modifications to the eligibility criteria under Choice, revisions to VA’s procurement authority for purchased care, the extension of the Choice program and reallocation of funding, and the consolidation of existing purchased care mechanisms and initiatives under a unified programmatic umbrella. With these facets of purchased care authorities and practice in flux, the full landscape of VA purchase care is not just complicated, but dynamically so. Moreover, while the proposed policy changes seek to address many different problems and issues, their sheer multiplicity suggests the drawbacks of a piecemeal approach to reform and the lack of guiding orientation and strategy for VA’s purchased care enterprise as a whole.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Recommendations

VA and Congress should articulate a clear strategy governing the use of purchased care. Such a strategy should clearly explain how purchased care fits into VA's broader health care mission and establish benchmarks for success in the adoption of purchased care reforms. The strategy should provide structure for purchased care authorities and procedures, as well as flexibility to support surge needs and Veteran-centered care.

VA and Congress should address cost control explicitly and systematically to guide consistent utilization and decision-making. Existing purchased care authorities establish an indirect set of cost controls through a discretionary health benefit funded by annual appropriations. VA should address cost control in purchased care explicitly and directly through a rigorous performance evaluation of existing purchased care contracts, better and more systematic collection of data on purchased care costs, and stronger cost-control mechanisms, such as co-pays, deductibles, and utilization reviews.

VA should collect better data to accurately estimate the demand for and use of purchased care. VA lacks systematic data on various facets of purchased care, particularly at the local facility level. It needs a strong base of data and analysis to monitor purchased care costs and processes and improve outcomes for Veterans.

VA should develop a stronger program management structure for purchased care and allocate responsibility and authority to the most appropriate levels. For example, referrals should be managed locally, while large contracts (such as those under Choice and PC3) should be managed centrally. VA leadership should issue clear policy and procedural requirements while facilitating appropriate flexibility in the field at the local level.

VA should evaluate the third-party contractors administering its managed purchased care programs. As the PC3 and Choice programs are fully implemented and continue to grow, VA should establish an ongoing process for evaluating the performance of third-party administrators. It should also assess the adequacy of the provider networks, the efficiency of claims processing and other activities, and Veterans' experiences with the programs.

VA should develop clear, consistent guidance and training on its authority to purchase care. VA should create a consolidated manual on purchased care, together with associated training and messaging that explains VHA's authority to purchase care and clarifies eligibility standards and processes.

VA purchased care contracts should include requirements for data sharing, quality monitoring, and care coordination. In its contracts with outside providers and third-party administrators, VA should require routine reporting of quality measures to ensure that the quality of care Veterans receive through non-VA providers is equivalent to the quality of care offered by VA. Such contracts should also include provisions for how non-VA providers will communicate and coordinate with VA counterparts.

VA should consider adopting innovative, but tested, ways to purchase care. TRICARE and Medicare offer useful lessons in how to purchase care. VA should incorporate some of these

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

strategies, including outsourcing administrative functions and offering performance incentives to contractors.

VA and Congress should eliminate inconsistencies in current authorities and provide VHA with more flexibility to implement a purchased care strategy. There are several points of tension and confusion within existing authorities, including inconsistencies in standards for episodes of care, the subjective nature of some elements of 38 U.S.C. 1703 (the core statutory authority for VA purchased care), different definitions of geographic inaccessibility and wait times, and conflict between the language and intent of the rule specifying that the Choice program can be used if there is not a VA facility within 40 miles of the Veteran's residence. Congress and VA should also consider the more ambitious step of simplifying purchased care authorities and mechanisms generally, by seeking to consolidate and harmonize them. At least in principle, such a step could help reduce the complexity and ambiguity now associated with purchased care authorities and mechanisms.

VA and Congress should revise the definition of episode of care to better accommodate Veterans' needs. Under the Veterans Choice Act, VA must allow Veterans who use the Choice program to seek outside services through the completion of an episode of care, "but for a period not in excess of 60 days." The legal requirement for a fixed-term reauthorization of an episode runs contrary to evolving clinical practice and standards in the broader health care sector. A revision of this authority would improve monitoring of episodes of care and reduce the administrative burden on VA staff and Veterans.

VA and Congress should adopt a consistent strategy for setting reimbursement rates across purchased care initiatives. Such a strategy should balance cost and access considerations. In setting reimbursement rates, VA mechanisms and contracts for purchasing care should reflect the reality of local competitive market conditions.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix D Access Standards

Scope

Assessment D responded to language in Title II, Section 201, of the Veterans Choice Act of 2014 that mandated an independent assessment of “the appropriate system-wide access standard applicable to hospital care, medical services, and other health care furnished by and through the Department, including an identification of appropriate access standards for each individual specialty and post-care rehabilitation.”

To address the requests in Assessment D, the Department of Veterans Affairs, Veterans Health Administration contracted the Institute of Medicine (IOM). The IOM formed an ad hoc Committee and instructed it to conduct a study and prepare a report directed at exploring appropriate access standards for the triage and scheduling of health care services for ambulatory and rehabilitative care settings to best match the acuity and nature of patient conditions.

Convened at the request of VA/VHA, the committee was charged with the following tasks: (1) review the literature assessing the issues, patterns, standards, challenges, and strategies for scheduling timely health care appointments; (2) characterize the variability in need profiles and the implications for the timing in scheduling protocols; (3) identify organizations with particular experience and expertise in demonstrating best practices for optimizing the timeliness of scheduling matched to patient need and avoiding unnecessary delays in delivery of needed health care; (4) consider mandates and guidance from relevant legislative processes, review wait time proposals from the VA/VHA Leading Access and Scheduling Initiative, and evaluate all evidence indicated above, along with input and comment from others in the field; (5) organize a public workshop of experts from relevant sectors to inform the committee on the evidence of best practices, their experience with acuity-specific standards, and the issues to be considered in applying the standards in various health care settings; and (6) issue findings, conclusions, and recommendations for development, testing, and implementation of standards, and the continuous improvement of their application. Throughout its work, the committee has been guided by its view that health care must always be patient and family-centered and implemented as a goal oriented partnership.

To do so, the committee:

1. Reviewed the literature assessing the issues, patterns, standards, challenges, and strategies for scheduling timely health care appointments
2. Characterized the variability in need profiles and the implications for the timing in scheduling protocols
3. Identified organizations with particular experience and expertise in demonstrating best practices for optimizing the timeliness of scheduling matched to patient need and avoiding unnecessary delays in delivery of needed health care
4. Organized and held a public workshop of experts from relevant sectors to inform the committee on the evidence of best practices, their experience with acuity-specific

The views, opinions, and/or findings contained in this report are those of The Institute of Medicine and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

standards, and the issues to be considered in applying the standards under various circumstances

5. Issued findings, conclusions, and recommendations for development, testing, and implementation of standards, and the continuous improvement of their application.

In the course of its work, the committee considered mandates and guidance from relevant legislative processes, reviewed VA wait time proposals from the Leading Access and Scheduling Initiative, and evaluated all evidence indicated above, along with input and comment from others in the field.

Findings

The committee summarized its findings as follows:

- **Variability:** Timeliness in providing access to health care varies widely.
- **Consequences:** Delays in access to health care have multiple consequences, including negative effects on health outcomes, patient satisfaction with care, health care utilization, and organizational reputation.
- **Contributors:** Delays in access to health care have multiple causes, including mismatched supply and demand, a provider-focused approach to scheduling, outmoded workforce and care supply models, priority-based queues, care complexity, reimbursement complexity, financial barriers, and geographic barriers.
- **Systems strategies:** Although not common practice, immediate engagement for patients is achievable through queue streamlining and related systems strategies to access and scheduling.
- **Supply and demand:** Continuous assessment, monitoring, and realigning of supply and demand are basic requirements for improving health care access.
- **Reframing:** Alternatives to in-office physician visits, including the use of non-physician clinicians and technology-mediated consultations, can often meet patient needs.
- **Standards:** Standardized measures and benchmarks for timely access to health care are needed for reliable assessment and improvement of health care scheduling.
- **Evidence:** Available evidence is very limited on which to provide setting-specific guidance on care timeliness.
- **Best Practices:** Emerging best practices have improved health care access and scheduling in various locations and serve as promising bases for research, validation, and implementation.
- **Leadership:** Leadership at every level of the health care delivery system is essential to steward and sustain cultural and operational changes needed to reduce wait times.

In addition to the significant variability in wait times among care settings, among specialties, and over time, there is a lack of national standards and benchmarks for appropriate wait times. While references to timely care appear regularly in legislative proposals, a prevailing definition of timeliness has not yet emerged. While national standards for access and wait-times do not presently exist, the committee did also identify examples of organization-specific benchmarks

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

within various health care settings. For example, some organizations set internal benchmarks of same-or next-day engagement for new and returning patients in primary care (Southcentral Foundation's Alaska Native Medical Center) or first time appointments of newly diagnosed cancer patients (Dana-Farber/Brigham and Women's Cancer Center in Boston); internal benchmarks guide door to provider times within emergency departments (Virginia Mason Hospital), wait times for specialty new visits (Cincinnati Children's Hospital), and primary care backup practices for urgent services (Tufts Health Plan Network Health). The Joint Commission has also developed standards pertaining to emergency department boarding times and hospital discharge risk assessments. Organization-specific benchmarks, such as these, serve as promising reference points for future research and validation.

Recommendations

The committee issued four recommendations for health care delivery systems leadership, leading to: 1) front-line scheduling practices anchored in the basic access principles, 2) governance commitment to leadership on basic access principles, 3) patient and family participation in designing and leading change, and 4) continuous assessment and adjustment at every care site.

Specifically, the committee recommended that:

1. The front-line scheduling practices of primary, specialty, hospital, and post-acute care appointments should be anchored in basic access principles, including: supply matched to projected demand, immediate engagement, patient preference, care tailored to need, surge contingencies, and continuous assessment.
2. The leadership and governing bodies at each level of the health care delivery sites should demonstrate commitment to implementing the basic access principles through visible and sustained direction, workflow and workforce adjustment, the continuous monitoring and reframing of supply and demand, the effective use of technology throughout care delivery, and the conduct of pilot improvement efforts.
3. Decisions involving designing and leading access assessment and reform should be informed by the participation of patients and their families. The potential ways that patients could provide their expertise through informal or formal channels (e.g., patient and family advisory councils, surveys, and focus groups) include contributing input on their expectations, experiences, and preferences for scheduling practices and wait times; helping representatives of health systems explore alternative access strategies; contributing to the design of pilot improvement efforts; helping to shape communication strategies; and interfacing with governance and leadership.
4. Care delivery sites should continuously assess and adjust the match between the demand for services and the organizational tools, personnel, and overall capacity available to meet the demand, including the use of alternate supply options such as alternate clinicians, telemedicine consults, patient portals, and web-based information services and protocols.

The complete Assessment D report is available in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This page intentionally left blank.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix E Workflow – Scheduling

E.1 Scope

Health systems across the United States have struggled with ensuring optimal patient access to the services they provide, and VHA is no exception. Although the Veterans Health Administration (VHA) has faced public concerns about access to outpatient care for several decades, many factors that influence access have been only partially analyzed to date at VHA and were called out in the Choice Act as areas for independent assessment. The Choice Act tasked Assessment E with assessing “the workflow process at each medical facility of the Department for scheduling appointments for Veterans to receive care, medical services, or other health care from the Department.” The assessment was also asked to address several supplemental areas related to provider scheduling templates, scheduler training, the use of call centers and the appointment scheduling system. All of these factors—as well as others explored in Choice Act assessments such as overall health care capabilities (Assessment B) and clinical staffing (Assessment G)—are critical to ensuring that our Veterans receive improved access to care. Volume II contains the full Assessment E report.

E.1.1 Findings

In this assessment, we have reviewed VHA performance in the scheduling workflow areas against best practices from both within VHA and across the private sector. The major finding of this assessment is that VHA is not fully leveraging provider resources, scheduling best practices, or scale to deliver the best possible scheduling experience and access for Veterans. These shortcomings have a negative impact on both patient access to outpatient appointments (in terms of total number of appointments available and the matching of patients to those available appointments) and the patient experience of scheduling an appointment with VHA. It is likely that, with improved data visibility, more streamlined processes and performance management, VHA could expand the supply of appointments even with its existing provider base, as well as improve overall utilization of appointment supply and patient experience.

More specifically, we observed the following challenges that reduce the overall effectiveness of VHA scheduling today:

- System limitations prevent accurate visibility into the supply of available appointments, inhibiting VHA’s ability to understand the gap between total appointment supply and demand and to effectively manage current performance and plan for the future.** Due to system design limitations, some providers operate across multiple, potentially overlapping, booking templates or “clinic profiles” for any given day or session. As a result, these profiles, when aggregated, provide an inaccurate picture of total available appointment supply and make it challenging to easily understand whether appointment supply matches the quantity VHA should expect given the number of providers. The issue of overlapping profiles not only affects centralized calculations of overall and provider-level appointment supply, but also makes it challenging to calculate provider utilization rate, which is an essential metric for

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

managing access to care. These limitations mean VHA cannot determine how much patient demand its current provider capacity can meet in a timely manner.

- **Imbalance between supply and demand has led to policies that add responsibilities for schedulers and administrators.** Because VHA has a persistent backlog of patient demand, VHA created additional policies that do not exist in the private sector, such as the capture of patient desired date and the use of the Electronic Wait List (EWL). These policies for measuring wait times and managing waitlists have resulted in a significant number of additional activities required within the scheduler's day-to-day workflow. Further, the implementation of these policies is left largely to frontline interpretation, which may also result in inconsistent experience for patients across clinics or facilities. For example, use of the EWL varies across clinics; some clinics use it solely to measure backlog while others use it to highlight patients who may be willing to take an appointment that becomes available at the last minute (Choice Act site visits, interviews 2015). Veterans may then experience variation in when they are removed from the waitlist depending on how their clinic has implemented EWL.
- **Clinics do not consistently employ standard industry practices related to schedule setup and other scheduling processes.** VHA clinics are inconsistent in their use of industry and VHA best practices in scheduling, resulting in a fewer appointment slots available than may be possible within existing provider capacity and a significant number of booked appointments not being completed as originally scheduled. On schedule setup, examples of these practices in common use in industry and within certain services (such as Primary Care) within VHA include using standard appointment lengths within a sub-specialty and determining appointment mix (for example, number of new patient slots) based on patient demand (Institute for Healthcare Improvement (IHI), "Reduce Scheduling Complexity," n.d.; Primary Care Clinic Profile Standardization Guide, 2014). Similarly, inconsistent scheduling practices, such as the ways in which appointment reminders are used, exist across facilities and clinics. For example, a patient could expect a reminder from a clinic and not receive it (and potentially not go to the appointment as a result). Ultimately, the variability in these practices may result in reduced appointment availability and utilization as well as inconsistent patient experience.
- **Facility-level differences in performance management and accountability limit system-wide improvements in access.** VHA facilities lack consistent organizational structures for managing scheduling or access and, in many cases, lack dedicated resources to manage performance and outcomes for these activities. Given structural differences, formal monitoring of schedules is not a clearly defined duty for any staff members at the facility level, which hinders cross-system sharing of best practices, policy dissemination, and process standardization. In addition, this lack of consistency in organizational structure and accountabilities limits VHA performance management of facilities, as no one individual is specifically accountable and data analysis is

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

cumbersome.¹¹⁷ The Veterans Choice Act (Section 303) identified this lack of accountability and aims to assign management of access responsibilities to a particular role within each clinic and to provide tools and processes to help perform this duty (“Veterans Access, Choice, and Accountability Act of 2014,” 2014). VHA plans to fulfill this mandate without any new facility hires; instead, the organization will designate current FTEs as owners of these responsibilities at the clinic and facility levels (Access and Clinic Administration Program [ACAP], interviews, 2015).

- VHA-specific processes paired with a scheduling system that does not simplify processes leads to a greater reported need for scheduler training.** In response to a survey, 90 percent of schedulers noted the need for additional training in at least one area (for example, wait times and wait list policies) to become proficient at executing their basic responsibilities (Assessment E VHA Employee Survey, 2015). This perceived need for enhanced training may be due to systems and processes that do not simplify scheduler responsibilities, a common focus among private sector health system executives we interviewed. For instance, scheduling systems of private sector health systems have more user-friendly interfaces, fewer unique programs, and more automated processes (Private sector health system, interviews, 2015). As a result of greater complexity, VHA schedulers must receive additional training (on wait times and wait list policies, for example) to become proficient at executing basic VHA scheduler responsibilities.
- Scheduling call centers are not maximizing their performance due to their small scale and disparate service offerings.** VHA call centers are smaller than industry standard (median size of 12 agents within VHA compared to 28 agents in private sector health systems and 110 agents across other industries) (Assessment E national data call, 2015; Belfiore et al., 2015). The scheduling call centers that do exist provide different services and support different specialties depending on the facility. Due to efficiencies in managing call demand that can lead to service improvement for patients, other provider systems have, in some cases, moved to pooling call volumes in more central locations. Larger scale call centers can also have lower per-unit costs and put less stress on space-constrained facilities than facility- or clinic-based operations. Further, larger call centers may be able to offer more coaching, training and career options to schedulers.

E.1.2 Recommendations

VHA has received significant feedback on ways to improve its scheduling and access performance. In fact, since 1999, more than 35 reports by the Government Accountability Office, VA itself, VA Office of the Inspector General (OIG), and independent contractors have commented on possible approaches for VHA to improve scheduling and access. Despite the number of reviews, there has been little articulation of the fundamental need for VHA to solve its ability to manage provider appointment slot supply until the Institute of Medicine’s February

¹¹⁷ For example, at present, there is no easy or automated way to consistently and accurately monitor provider schedules.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

2015 “Innovation and Best Practices in Health Care Scheduling” white paper, which recommended that VHA get “back to the basics” to understand provider supply vis-a-vis patient demand and ultimately design schedules that optimize the two. With the access crisis and subsequent Choice Act in 2014, VA/VHA have accelerated several efforts to address issues raised in past reports, including funding provider hiring and non-VA care, initiating the procurement of a commercial off-the-shelf (COTS) scheduling system referred to as the Medical Appointment Scheduling System (MASS), and designing a clinic manager training program to better manage the scheduling process. However, to drive overall improvement to scheduling and address the specific challenges described above, we recommend that VA and VHA successfully complete in-flight initiatives and consider additional actions, which would be most effective if executed in an integrated manner. These actions include the following:

- Address system limitations to provide visibility into aggregate appointment supply, alternative measures of wait times, and provider-level performance data.** VHA providers can operate across multiple and sometimes overlapping clinic schedules (also known as “profiles”),¹¹⁸ which can result in double-counting of appointment slots when aggregated. VHA has a current initiative to clean-up overlapping schedules and unused clinic profiles that should result in a more accurate view of each clinic’s appointment slot supply. Although this is an important first step, the effort may not eliminate all overlap in schedules and will not by itself allow understanding of appointment supply and utilization. One consolidated schedule for each provider would allow VHA to capture total appointment supply and measure the industry-standard wait time metric. With VA OI&T’s current procurement of a new scheduling system (discussed in detail in section 7, Scheduling System), VHA may be on the path to addressing system limitations. Of course, when updating or acquiring a system to support scheduling, it is important to understand the business case relative to modifying the existing system or locally sourcing solutions at the facility / regional level.
- Codify proven scheduling practices and empower clinics to improve appointment utilization and deliver a consistent patient experience.** Several pockets of scheduling best practice exist within VHA, such as the predictive missed opportunity model. However, many of the best practice VHA tools and processes are not widely disseminated nor utilized. The VHA ACAP Office reported that it is beginning to codify system-wide knowledge of scheduling best practices, but there is also an opportunity to ensure that these practices are consistently utilized in the field (ACAP, interviews, 2015). This will require addressing the lack of clinic management resourcing, addressing scheduler vacancies and ensuring that providers have an understanding of why certain practices (for example, overbooking) may be necessary to provide access.
- Streamline scheduling policy implementation with supporting tools and implementation guidance; where possible, utilize technology to support.** The current Scheduling Directive policy is designed to aid VHA facilities in managing in an environment of excess demand relative to the appointment supply it is offering. This has

¹¹⁸ Described in Provider Availability Section 5 of this report

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

resulted in policy steps, such as wait time capture and wait list management being added to the scheduling process, which can result in inconsistent patient experience due to discrepancies in policy interpretation and implementation in the field. For instance, to adhere to the policy regarding the Electronic Wait List, the scheduler will place a patient scheduled outside of 90 days on a wait list, an additional step in the scheduling process (Choice Act site visits, interviews, 2015). Further, while the EWL prioritizes Veterans to be scheduled based on policy, schedulers can find it challenging to use the list in conjunction with other policies (e.g., how many times the patient should be called before moving to the next patient on the list). In contrast, an ideal system would automatically place relevant patients on the EWL, provide a manager with a comprehensive dashboard for monitoring the waitlist demand, and prioritize which patients should get the first available appointments based on additional parameters. As a result, these changes would improve schedulers' efficiency and improve consistency of policy implementation.

- Improve scheduler training by sharing local best practices and increasing experiential and on-the-job training, while also minimizing the need for training by simplifying policy implementation and improving system functionality.** Currently VHA's need for scheduler training is exacerbated by its scheduling software, policies (like EWL), and clinic- and provider-specific scheduling rules. Improvements to the scheduling systems, streamlining policy implementation, and minimizing unnecessary clinic-specific rules would reduce demands for schedulers' training and create more consistent patient scheduling experience. To optimize its training program, VHA should also leverage local best practices to create an improved and standardized curriculum for training and minimize duplication of materials development at the facility-level. In addition, training should be delivered using more experiential training methods to increase its effectiveness and information retention by schedulers.
- Design scheduling call centers that can provide expanded services for Veterans relative to current state.** Currently, VHA scheduling call centers are managed locally at the facility level. As a result, most are small (median size of 12 schedulers, based on facilities that responded to our data call) and each call center varies in regards to the responsibilities and specialties for which it is responsible (Assessment E national data call, 2015). Decentralized call centers are difficult to centrally monitor and manage with regards to patient experience. Through the new myVA effort, the organization is examining how it interacts with Veterans across various channels (such as, web, call centers, mail). This includes a VA-wide Call Center Task Force that may ultimately address scheduling; however, the scope does not yet appear to be clearly defined. VA has an opportunity to evaluate its current call center use for scheduling and develop an approach based on existing VHA call centers in other areas (like Health Resource Centers) and leading private sector scheduling call centers. VHA can then evaluate which responsibilities and specialties should be handled at larger scheduling call centers. Additionally, VHA should analyze the appropriate degree of centralization (for example, regional or virtual call center) and the call center locations.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Ensure that the clinic manager training program and subsequent implementation are appropriately scoped and resourced to drive access and clinic management.** Different roles, accountabilities and levels of expertise exist across facilities for managing access and scheduling, which affects how access and scheduling is managed and prioritized at different facilities. Via the Choice Act, VHA was directed to develop a clinic management training program to address these gaps within the system. While many important scheduling functions are reported to be addressed in the training curriculum as it is currently envisioned, resourcing and accountability for these activities will be equally important in ensuring that VHA is able to fully utilize its provider capacity and the appointment supply made available to Veterans. Further, tools need to be developed and distributed to ensure that these new clinic managers are successful.

Despite many of its broader organizational and operational challenges, VHA can leverage multiple positive aspects of its current scheduling and access management practices in the future. For instance, VHA's scheduling policy has created the mechanism to identify potential supply-demand imbalances by tracking patients waiting for care at the clinic level. Similarly, VHA's efforts to encourage patient appointment adherence through a multi-pronged patient reminder approach, coordination of transportation and efforts to coordinate multiple services, where possible, demonstrate a commitment to supporting Veterans receiving care. Additionally, locally developed scheduling innovations demonstrate the potential for new scheduling tools and practices within the organization. For example, several VA Medical Centers (VAMCs) have developed home-grown "best practice" tools, including the predictive missed opportunity model, aggregated views of provider availability, and facility-centralized patient reminder systems across multiple modalities. In addition, VHA can build on its early efforts to modernize its patient-facing scheduling capabilities, such as online self-scheduling. This foundation suggests that VHA can draw on experience and assets within the organization, as well as on external best practices, to improve its scheduling processes.

In summary, if VA / VHA were to continue to build on existing assets, execute on its in-flight initiatives and supplement them by executing on the recommendations above, it may be able to offer a more consistent experience across clinics and facilities, expand appointment supply with existing provider resources and ensure better utilization of its supply. The impact of this for Veterans could come in the form of both improved experience and improved access.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix F Workflow – Clinical

F.1 Scope

Assessment F (Inpatient Clinical Workflow), Section 201 of the Veterans Access, Choice, and Accountability Act of 2014 (“The Choice Act”) mandates an assessment of the “organization, workflow processes, and tools used by the Department to support clinical staffing, access to care, effective length-of-stay management and care transitions, positive patient experience, accurate documentation, and subsequent coding of inpatient services.” Pursuant to this language, Assessment F focused on the organization, workflow processes, and tools (i.e., structural components and approaches) in place within acute care hospitals to facilitate the five identified sub-assessments as both individual components as well as part of the interdependent continuum of inpatient care. Comparison of current VHA practices to accepted best practices (drawn from literature and professional associations), as well as standard practices (drawn from public and private sector benchmarks) provided insight into alternative approaches and recommendations. While selected performance outcomes were used to prioritize areas of focus, a complete analysis of clinical, performance, operational, or other outcomes associated with the employed approaches was not in scope for this assessment. Volume II contains the full Assessment F report.

F.1.1 Findings

Our assessment identified both cross-cutting strengths and opportunities for improvement as well as findings and recommendations specific to each of the five sub-assessment areas reviewed.

F.1.1.1 CROSS-CUTTING FINDINGS

We observed three common themes supported by findings across sub-assessment areas.

- Ineffective data collection and management drives a lack of transparency into many key aspects of clinical operations, hindering VHA’s ability to effectively manage inpatient care.** Despite having a well-regarded EMR system and the capability of tracking extensive clinical data, poor data collection and management of operational metrics was a consistent theme heard during site visits. Furthermore, it was clearly evident from our central and local requests for specific information. Data that is standard in private sector hospitals was frequently inaccessible in a timely manner or not tracked in a usable format by VHA. For example, VHA FTE and payroll data includes information by clinical occupation but not by department, which prevented planned analysis of the appropriateness of staffing, since needed staffing levels vary considerably by department (e.g., the ICU requires more concentrated nursing attention than med/surg floors; see Volume II, Assessment F, Section 5 for more detail). We observed data integrity and availability issues significantly affecting VHA’s visibility into clinical operations in four of our five sub-assessment areas and believe that this likely affects VHA’s ability to manage operations at the local and national levels.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- VHA resources (e.g., staff, beds) do not always match Veterans’ care needs.** The practical allocation and prioritization of resources across the VHA system may not be consistently aligned to meeting the broader health needs of the Veteran patient population. Mis-match of resources to patient care needs manifests itself in three ways: hiring that does not consistently match staffing needs; allocation of staff to tours (“shift”) that do not consistently match Veteran demand; and limited access to appropriate outpatient and post-/sub- acute care options. An example of the impact limited outpatient and post-acute care options has on Veterans can be seen in the abundance of inpatient admissions and continued stays that do not meet admission and continued stay criteria. National Utilization Management (NUMI) data¹¹⁹ indicates that 23 percent of inpatient admissions (see Volume II, Assessment F, Section 6 for more detail) and 34 percent of inpatient stays overall do not meet admission and continued stay criteria (see Volume II, Assessment F, Section 7 for more detail). Many are admitted to, or remained in the hospital, due to challenges in accessing the appropriate level or type of care (e.g., primary care, detoxification center, post-acute rehabilitation). The disconnect between resources and demand has clear implications on VHA’s ability to effectively and efficiently provide the care needed to improve the health and well-being of Veterans.
- While best practices exist in selected pockets, communication and support for implementation at scale appears to be a challenge.** Our site visits revealed several clear best practices in place at various VAMCs; however, adoption of these practices was isolated even within the facility. Case studies of particularly strong programs are included in all sub-assessments. Despite successfully adopting best practices in some units, however, facilities appeared to struggle to implement programs house-wide. Moreover, information-sharing between VAMCs appears to be limited and ad hoc. As one Assistant Director of Patient Care Services described, “I’m shameless about stealing what works at other places, the problem is, I don’t know what other places are doing. We need a way to connect, to learn from each other”¹²⁰. This sentiment was echoed by many staff across all of the facilities we visited.

SUB-ASSESSMENT FINDINGS

In addition to the broad cross-cutting findings, a review of each sub-assessment identified specific strengths and opportunities for improvement within their areas of focus.

- Clinical staffing:** Siloed resource management (e.g., limited coordination across service lines on FTE requests), poor data management, and limited guidance on staffing methodology result in staffing practices that are seldom evidence-based, outside of a few best practice areas (such as nursing). This prevents VHA from knowing whether staffing

¹¹⁹ NUMI (National Utilization Management Integration): supports national utilization management agenda by providing a common tool for tracking performance on utilization management metrics across facilities

¹²⁰ Facility interview

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

allocations are appropriate. Furthermore lengthy hiring timelines and inconsistent alignment of staff to patient care needs have downstream implications.

- **Access:** Best practices exist at disparate facilities however, their lack of systemic adoption combined with an inaccurate understanding of patient demand and available capacity and inconsistent admission and bed assignment practices hinder inpatient access.
- **Length-of-stay and care transitions:** National efforts to improve length-of-stay have been hampered by challenges meeting discharge needs of patients requiring specialized post-acute care (e.g., homeless, psychiatric diagnoses), inefficiencies in care delivery practices (e.g., limited availability of weekend consults), and inconsistent approaches to discharge planning often delay care transitions and discharge beyond private sector benchmarks.
- **Patient experience:** Best practice innovations are evident at the national and local levels, but challenges with patient satisfaction data transparency and national implementation support limit system-wide adoption.
- **Documentation and coding:** Limited understanding by providers and coders of the link between coding and resource allocation, coupled with limited performance management, likely contribute to sub-optimal documentation practices yielding lost revenues and misaligned resources. Despite these challenges, coding performance is a relative strength and comparable with industry standards.

F.1.2 Recommendations

Across sub-assessments, our recommendations also fall under three major themes:

- **Improve clinical management through establishing clear operational metrics, and streamlining data collection focused on clinical priorities, monitoring, and performance management.** Appropriately defining standards for high performance and having accurate information on how departments and facilities measure against defined targets is the foundation of managing operations. Site visits, data analysis, and comparison against best and standard practices suggest that VHA lacks such visibility into clinical operations, significantly reducing its ability to address challenges and innovate (see Volume II, Assessment F, Section 3.1). We believe that improving transparency is critical to ensuring effective, timely, and efficient delivery of care to Veterans, across many of our sub-assessment areas. In part, transparency could be improved through enhanced data management, meaning both better data integrity and sharper focus on a targeted set of key metrics needed to assess performance. Equally important, VHA should ensure that facilities have clear operational guidelines on how to set and track appropriate performance goals (e.g., by providing comprehensive staffing methodologies for service lines with no national guidance).
- **Realign resourcing (for example, staff, facilities) to allow VHA to serve patients at the appropriate level of care (such as, increase Veteran access to sub-acute and post-acute care to reduce clinically inappropriate admissions and prolongation of acute inpatient stays).** We observed many instances in which VHA resources were not appropriately matched to patient demand. As described in Volume II, Assessment F, Section 3.2, there is a disconnect between resources and demand in delayed hiring of staff needed to

The views, opinions, and/or findings contained in this report are those of the assessment team and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

support patient care, mis-allocation of staff to tours (i.e., shifts), and limited outpatient and post-acute care options needed to ensure treatment at the appropriate level of care. In order to provide high quality care that promotes the health and well-being of Veterans in a cost efficient manner, VHA should ensure that resourcing allows the system to serve patients at the appropriate level of care. Broadly, we see three categories of changes that could help effect this recommendation: improve hiring, allocate staff to match patient demand (e.g., align that staffing on weekend, holiday, and evening hours is sufficient to meet patient need), and increase access to outpatient and post-acute care options.

- Scale existing best practices and support further innovation at the local and national levels.** A consistent theme during our site visits and interviews was that the opportunity to build off of existing strengths within the system was encumbered by limited sharing of best practices across VAMCs (see Volume II, Assessment F, Section 3.3). In instances where best practices have been developed nationally, challenges appear to exist due to unclear guidance on implementation, occasional flaws in the design of programs, and lack of VAMC adoption. In instances where best practices have been developed locally, scaling seems to be inhibited by limited infrastructure for information-sharing and lack of resources. To address both sets of challenges and fully leverage and build off of institutional strengths, we suggest improving practices through a combination of targeted national guidance (e.g., streamline Veteran-centered care initiatives and mandates) and nationally-supported local best practice-sharing and innovation (e.g., build infrastructure to promote cross-facility sharing of patient flow best practices).

Several recommendations will require national coordination, while others could be implemented in the near-term at the facility level. We have provided additional tactical steps, titled near-term actions, for associated recommendations at the sub-assessment level and encourage facilities to review these and take action quickly at the local level where appropriate. Additionally, several pre-conditions for implementation (see Section II, Assessment F, Section 4.2.1) have been identified for prioritization by Congress and VACO to support a successful and sustainable system-wide transformation.

Implementing solutions to long-standing challenges will require collaboration among Congress and the Executive Branch, VA leadership (VACO, VISN, and VAMC) and staff, as well as the unions and external stakeholders. We see this assessment as an opportunity for improvement, to be achieved by all stakeholders through a combination of local, regional, and national action. Addressing these challenges will require sustained commitment as a part of an integrated transformation effort for the system as a whole.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix G Staffing/Productivity

Scope

Assessment G (Staffing/Productivity) examined “the staffing level at each medical facility of the Department and the productivity of each health care provider at such medical facility, compared with health care industry performance metrics, which may include an assessment of the case load and number of patients treated by each health care provider, time spent by health providers on matters other than caseload, including time spent at an affiliate, conducting research, training or supervising other health care professionals of the department.”

Findings

The Assessment G team had several key findings and observations pertaining to the core assessment objectives: staffing, productivity, and time allocation.

The Assessment G team analyzed VHA provider staffing levels and compared them to the private sector (using physician per population ratio industry comparisons) and identified some of the challenges VHA faces in ensuring it has sufficient providers to meet demand. With respect to provider staffing levels, the Assessment G team found that:

- **VHA specialties with the highest provider full time equivalent (FTE) levels include medicine specialties, mental health, and primary care, consistent with VHA’s care model and the needs of the Veteran population.** Social Workers also represent a significant portion of provider FTEs. VHA does not systematically track fee-basis provider productivity, and does not capture FTE level information for fee-basis care providers.
- **VHA physician staffing levels per population are, in most specialties, lower than industry ratios.** These ratios are not sufficient to establish whether VHA is staffed to meet demand. One factor to consider is that even industry physician supply is not sufficient to meet demand in many specialties. Another factor to consider is that VHA uses Advanced Practice Providers (APPs) extensively, but APPs are not included in industry ratios.

The Assessment G team also assessed the productivity of VHA providers in comparison to providers in the private sector. With respect to provider productivity, the Assessment G team found that:

- **VHA measures the performance of its primary care providers (PCPs) using panel size.** VHA calculates a modeled panel size for providers based on a variety of factors at each facility. The model was developed based on research into the appropriate panel size for the unique needs of Veterans.
- **In accordance with policy, VHA facilities establish a maximum panel size for each primary care provider which is often lower than the modeled panel size.** The maximum figure takes into account specialized panel needs (for example, a geriatric population) and other factors deemed appropriate by the facility.
- **The actual panel size of VHA primary care providers is lower than internal and external benchmarks.** The actual panel size for VHA general practice physicians is 13 percent

The views, opinions, and/or findings contained in this report are those of Grant Thornton LLP and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

below the VHA modeled panel size, 12 percent below the external benchmark, and 5 percent below the facility maximum.

- **When compared to the private sector using wRVUs, there is a productivity gap in VHA specialty care.** When encounters (visits) are used as a measure, the gap shrinks and VHA specialty care compares more favorably to the private sector. VHA mental health providers are more productive than academic medical center (American Medical Group Management Association [AMGMA]) benchmarks, as measured by both wRVUs and encounters.
- **Overall, VHA specialty care providers are producing fewer wRVUs than private sector benchmarks; however, VHA specialty care providers at the highest complexity facilities are more productive than their peers.** Further, the most productive VHA providers (those at the 75th percentile of VHA providers) are often more productive than the private sector.
- **Productivity and access are important measures in population based health models like VHA that focus on patient outcomes, rather than volume.** VHA's Office of Productivity, Efficiency, and Staffing (OPES) reports on productivity and access offer tools for use by medical facilities. With some improvements to expedite adoption and regular use by medical centers, these tools could become key resources in optimizing productivity and maximizing access to care.
- **VHA dentists see fewer patients on average than private sector benchmarks, but serve a population with special needs.** The dentistry patient population of VHA generally has a compensable service-connected dental disability, is older, has more complex injuries, and may present for dental care following years of dental neglect.

The Assessment G team identified several barriers which limit provider productivity and may explain the differences between VHA provider productivity and that of the private sector, especially in specialty care. These include:

- A shortage of examination rooms and poor configuration of space
- Insufficient clinical and administrative support staff ratios
- Providers may not fully document and accurately code all of their clinical workload, which may impact the accuracy of wRVU productivity measurement

We noted the insufficient clinical and administrative support staff ratios as a key barrier to optimizing productivity and studied this more closely. More specifically, we found that:

- While there has been widespread implementation of the Patient Aligned Care Team (PACT) model in primary care clinics and the National Nurse Staffing Methodology in many areas of inpatient care, **there are no current VHA standards for staffing levels and/or mix in specialty clinics**, with the exception of eye clinics. Furthermore, VHA OPES has developed state of the art tools for managing staffing and productivity, but these tools will require improvements for leaders to more effectively leverage them in resource decisions.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- **Organizational siloes and separate reporting lines exist for physicians, nurses and medical service administrators at a majority of VA Medical Centers (VAMCs).** As a result, service chiefs do not have control over the resourcing and performance of their clinical support staff (nurses) or clerical and administrative support staff.
- **Many facilities do not have a centralized staffing office or nurse float pool to address daily staff variances or absences.**

With respect to how providers spend their time, the Assessment G Team observed that:

- **VHA physicians spend a comparable proportion of total time devoted to clinical activities as private sector physicians.** There is some potential difference in the definition of direct patient care used by the private sector, specifically with respect to training, teaching and research, but we believe this represents only a small proportion of a provider's direct patient care time.
- **Across all VHA providers, less than two percent of time is devoted to research.** Since provider time spent devoted to clinical care activities is comparable to the private sector, it does not appear that research activities reduce providers' time spent treating patients. Despite the overall low proportion of time spent on research, the accomplishments of VHA's research program, and contributions to advancing care for Veterans, are numerous.

Recommendations

Taking the above findings into consideration, the Assessment G Team offers five cross-cutting recommendations:

VHA should improve staffing models and performance measurement. VHA should conduct an evaluation of the design and implementation of current VHA staffing models to determine the extent to which they are sufficient to meet the goals of VHA's population health focused model and ensure all eligible Veterans have access to high quality, timely care. VHA should conduct a program review of the implementation of the PACT staffing model in primary care to identify the causes of the gaps between actual, facility maximum, modeled and external benchmarks, the impacts of these performance gaps on access to quality care, the appropriateness of current guidelines and performance standards, and determine areas for improvement. VHA should develop and implement staffing models for outpatient specialty care services and improve existing performance measurement systems to realize the benefits of specialty care staffing models. VHA should refine and implement the National Nurse Staffing Methodology across inpatient services and improve the performance measurement system to realize the benefits of the methodology. We further recommend that VHA mandate all VAMCs adopt and report nursing quality metrics to a national database to compare VHA to other external health organizations.

To improve staffing and productivity measurement and better determine the capacity of VHA specialty clinics, this assessment recommends that VHA gather data and assess the productivity of fee-based providers, as well as conduct a work measurement study (or confirm existing workload data) to determine the volume and distribution of workload annually to better match staffing requirements to demand. For future reporting, OPES should complete the development

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

of the APP productivity cube, to include completion of business rules that would allow APPs to be mapped to a specialty designation and included in OPES specialty group practice and facility productivity reports to accurately reflect care teams' overall effort and present a combined provider (doctor of medicine [MD] and APP) productivity view.

VAMCs should create the role of clinic manager and drive more coordination and integration among providers and support staff. We identify recommendations for increasing the level of teamwork and accountability among all outpatient clinic staff, especially in specialty care services. This might be achieved by creating multidisciplinary management teams for specialty clinics that include a physician leader, nurse leader, and business administrator. Alternatively, specialty clinics might establish a single or dual reporting line and operating a model for providers and their clinical and non-clinical support staff, so that all of the members of the specialty clinic team have more accountability to each other and the Service Chief of the specialty.

VA Medical Centers should implement strategies for improving management of daily staff variances, and include a replacement factor for all specialties, including PACT. With respect to managing staff absences, we make recommendations for improving the management of daily staffing variances by implementing several strategies that include intermittent float pools of support staff and the inclusion of a replacement factor across all staffing methodologies/models, to include PACT.

VA Medical Centers should implement local best practices that mitigate space shortages within specialty clinics. We identify recommendations to help VA medical facilities mitigate space shortages within specialty clinics. These include strategies such as: standardized schedule templates, expanded clinic hours, increased use of non-face-to-face encounters for follow-up consults by specialty care, and system redesign initiatives to improve patient flow within clinics.

VHA should improve the accuracy of workload capture. We recommend that VHA conduct an audit of health record documentation and current procedural terminology (CPT®) coding accuracy and reliability to validate physician productivity measurement and that if the results support it, evaluate the ability of commercially available computer assisted coding (CAC) applications to assist providers with coding. The creation of the role of clinic manager for Specialty Care clinics should also be used to improve clinic management and coding practices.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix H Health Information Technology

Scope

Assessment H responded to language in Title II, Section 201, of the Veterans Choice Act of 2014 that mandated an independent assessment of “the information technology strategies of the Department with respect to furnishing and managing health care, including an identification of any weaknesses and opportunities with respect to the technology used by the Department, especially those strategies with respect to clinical documentation of episodes of hospital care, medical services, and other health care, including any clinical images and associated textual reports, furnished by the Department in Department or non-Department facilities.” The recognition that Veteran health and satisfaction constitute important measures of information technology (IT) effectiveness guided the assessment team’s investigations and the resulting recommendations.

To gain comprehensive insight into Department of Veterans Affairs (VA) health IT and the strategies that guide its implementation, the Assessment H team conducted 185 interviews in the course of site visits to Veterans Integrated Service Networks (VISNs), VA Medical Centers (VAMCs), and Community Based Outpatient Clinics (CBOCs), as well as VA’s Office of Information and Technology (OI&T). The team also reviewed plans, reports, audits, and protocols procured from OI&T and VHA, as well as external reports and journal articles relevant to health IT and complex system development. Further, the team compared its observations and findings against lessons learned and best practices identified by executives, administrators, clinicians, and IT professionals at high-performing private health systems. Because IT touches nearly every aspect of operations at VHA, the data gathered by Assessment H generally supports the qualitative evidence related to IT collected by the other assessments.

Findings

Several decades ago VA led the development of electronic health record (EHR) technology with its Veterans Health Information Systems and Technology Architecture (VistA) system and Computerized Patient Record System (CPRS) systems. Most VHA clinicians have a high opinion of the clinical applications and databases enabled by VistA and CPRS, as well as VA’s newer technologies such as telehealth and mobile applications (apps). Several Assessment H interviewees attributed the success of the early VistA and CPRS development efforts to the close working relationship between VistA/CPRS developers and clinicians. This collaboration seems to have disappeared with the centralization of IT in 2006, resulting in uncoordinated execution of health IT strategy and limited development of new and improved capabilities for VistA/CPRS. During the past decade, VistA and CPRS development has been confined to point solutions and minor enhancements.

Clinical users have become increasingly frustrated by the lack of any clear advances during the past decade. Numerous VHA clinicians have experience with commercial EHR systems and want the same level of features, modern clinical capabilities, integration, and mobility they see emerging in the commercial marketplace.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

VHA and OI&T do not collaborate effectively with respect to the planning and execution of IT strategies for managing and furnishing health care. Although the goals of OI&T and VHA do not conflict at the strategic planning level, the organizations often do not agree on priorities for executing the strategic plans.

During the past decade, VA's ability to deliver new capabilities for its VistA system to meet changing Veteran health care needs has stalled. As a result, VA/VHA health care systems are in danger of becoming obsolete. The VistA/CPRS systems are based on a tightly integrated, monolithic architecture and design with numerous and diverse functional components and associated interdependencies. These characteristics impose significant barriers to modernizing these systems. In addition, the high cost of infrastructure operation and maintenance (85 percent of the total IT budget) reduces funding available for new development efforts. Maintenance and data sharing are further complicated because most VAMCs have customized their local versions of VistA, leading to approximately 130 different instances of VistA across the country.

Overly demanding processes for system development, as defined by OI&T's Project Management Accountability System (PMAS), impede cost-effective delivery of new health IT capabilities and limit VA's ability to measure the value of IT investments. The PMAS process is schedule driven and risk averse, leading many project managers to limit the amount of functionality in each release, thereby increasing the total time for any useful capability to be released.

The lack of standard clinical documentation has made it harder to develop effective clinical decision support systems and hinders EHR information exchange among VAMCs, between VA and non-VA facilities (including those of the Department of Defense [DoD]), and between VA and the individual Veteran. The lack of data standards presents challenges to using comparable data for analysis and disparities among the 130 tailored local instances of VistA complicating information sharing, data aggregation, and analytics. The outdated technology underlying VistA weakens VHA's ability to leverage powerful new technologies for extracting information from free-form text, processing genomic data and images, and extracting and analyzing data from personal health monitoring devices.

While VA has successfully developed and deployed telehealth capabilities and mobile apps, it does not effectively assist end users of these technologies and it does not match the pace of the commercial marketplace. VA's support for telehealth users (patients and clinicians) is weak, understaffed, and poorly integrated with IT systems. In addition, barriers associated with providing VISN-to-VISN telehealth make optimizing the caseload across VISNs more difficult, creating unnecessarily long waits for care in certain regions. VA has the opportunity to apply mobile technology at a low price point, but until VA improves its IT development process to emphasize delivery instead of process, it cannot match the pace of the commercial marketplace with respect to delivery and improvement of mobile apps. These limitations prevent VA from realizing the strategic value of mobile technologies as an enabler of both Veteran access and Veteran satisfaction.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Recommendations

VA/VHA must resolve IT challenges comprehensively, targeting solutions to the entire system rather than seeking to solve isolated problems. To their credit, many leaders within OI&T and VHA, as well as administrators, health information management and IT professionals, and users at the facility level, recognize the need to address these issues. This report describes a future vision for VA/VHA as a high-performing health care system and a continuously learning health system that implements enterprise IT service management best practices.

At the strategic level, VA and VHA need to transform IT strategy, planning, and execution in a systematic manner with dedicated executive-level leadership. Specifically:

The VA chief information officer (CIO) should select a CIO for VHA to manage and advocate for VHA's IT needs and assist in transforming the VA IT strategy to a model based on enterprise IT service model standards and best practices. This involves taking the following actions, explained in more detail in this report:

- Establish mutually acceptable IT service level agreements and optimize them for effectiveness.
- Refine the planning and budgeting process to ensure that business needs are effectively identified, prioritized, funded, and used to drive health IT investments.
- Develop a governance policy to ensure the strategic plans are executed well and in a timely manner.
- Establish product (capability)-focused teams to ensure delivery of needed capabilities to users.
- Refine VA's agile development process from a document-and-schedule focus to a delivery focus.

The VHA CIO, in partnership with the VA CIO, should oversee a comprehensive cost-versus-benefit analysis between a commercial off-the-shelf (COTS) EHR and continued in-house custom development of the VistA EHR currently in use. The analysis should take into account all the complexities of the VistA/CPRS architecture and infrastructure and known issues with performance, scalability, extensibility, interoperability, and security. It should also address full life-cycle costs, including development time (based on recent delivery trends), availability of development resources, maintenance and licensing costs, and infrastructure costs. VIS

The VA and VHA CIOs should conduct site visits and review the successful IT practices implemented at high-performing health care systems (including VISN4), to inform their strategies for effective approaches and potential contributions that IT can provide to improve the treatment of Veterans today.

The VA CIO and VHA CIO should report to Congress at the end of fiscal year 2016:

- Evidence that the VHA CIO serves as an effective advocate for the IT needs for health care delivery. This should include, but not be limited, to a description of the requirements for an effective health care management system to provide a basis for comparing VistA and COTS EHRs.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

- Actions taken and evidence that OI&T acts as a service provider and delivers IT capabilities and IT services that improve health care delivery to Veterans. Evidence should include results of clinician and Veteran surveys confirming the quality of and satisfaction with the newly delivered capabilities and services.
- Results of the cost-versus-benefit analysis between a COTS EHR and continued in-house custom development of the VistA EHR.

VA should implement a broad process, inclusive of clinicians, to pursue requirements that support clinical documentation best practices and improved functionality and usability while considering the positive aspects of existing systems. Although providers can continue to leverage the free text capability available in the current EHR, it must be augmented with discrete, structured data capture using industry standard definitions to increase the interoperability with other systems inside and outside of VHA. This is especially critical due to the increased use of non-VA care.

VHA should accelerate efforts to establish semantic definitions for data elements through the use of standard nomenclatures, terminologies, and code sets. By doing so, VA can ensure consistency and integration across multiple systems, leverage follow-on IT products, and facilitate analytics for clinical decision making.

VA/VHA should assess the effectiveness of analytical products in driving health and business outcomes. They should identify and recommend improvements needed in the information systems that serve as the sources of the data to improve the reporting capabilities. VA/VHA should track actions taken as a result of the analytical products and quantify how effective those actions were in improving health and business outcomes.

To reduce the number of Veterans who abandon telehealth, VA should offer technical support to Veterans, should make testing a connection between Veterans and providers easier for all parties, and should better integrate telehealth technologies across VA medical facilities and VISNs. Assisting Veterans with use of this technology should improve the Veteran experience and reduce health care costs. VA should also address the challenges that complicate telehealth appointments between VISNs.

VA should explicitly identify mobile applications as a strategic enabler to increase Veteran access and satisfaction and help VHA transition to a data-driven health system. Mobile technology could effectively leverage patient-generated data to augment the data captured in the EHR to feed the learning health system.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix I Business Processes

Scope

Assessment I reviewed the “business processes of the Veterans Health Administration, including processes relating to furnishing non-Department health care, insurance identification, third-party revenue collection, and vendor reimbursement, including an identification of mechanisms as follows:

- To avoid the payment of penalties to vendors.
- To increase the collection of amounts owed to the Department for hospital care, medical services, or other health care provided by the Department for which reimbursement from a third party is authorized and to ensure that such amounts collected are accurate.
- To increase the collection of any other amounts owed to the Department with respect to hospital care, medical services, and other health care and to ensure that such amounts collected are accurate.
- To increase the accuracy and timeliness of Department payments to vendors and providers.”

I.1 Summary of Findings

VHA Revenue—VHA is Not Optimizing Revenue Due to Ineffective Veteran Insurance Identification, Clinical Documentation and Coding, and Cultural Barriers.

Ineffective Veteran-facing (front-end) VAMC processes for insurance identification, and clinical documentation, and outpatient coding issues result in CPAC staff members having to address issues “after-the-fact.” The issues correspond to \$581 million in denials from insurance companies in 2014.

For first-party (Veteran) co-payments, VAMC staff members are not collecting the co-payments at the point-of-service and CPACs must collect the co-payments weeks to months after the date of service. Further, based on feedback from VAMC leadership, Veterans do not always understand the need to provide insurance information and VHA staff can be reluctant to ask for it.

Revenue processes span across VAMCs and CPACs; however, only the CPACs are accountable for revenue collection and the associated performance outcomes. VAMC commitment is required to monitor and correct issues early in the process to reduce collections delays and denials.

Non-VA Care Payments—VHA Does Not Have Adequate Infrastructure and Streamlined Processes to Pay Non-VA Care Claims Timely and Accurately.

VHA’s complex and disparate processes for paying Non-VA Care claims are confusing to Non-VA providers and VHA staff, resulting in inconsistencies in authorization and payment practices. VHA’s mechanisms to pay Non-VA claims timely and avoid delinquent payments, particularly at

The views, opinions, and/or findings contained in this report are those of Grant Thornton LLP and should not be construed as an official government position, policy, or decision. VA-18-0457-A-001563

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

select VISNs. However, inadequate data analytics indicate the issues could be more widespread. VHA mechanisms to avoid delinquent payments to external providers are inadequate putting VHA at risk for significant interest penalties.¹²¹

Inadequate claims submission guidance discourages widespread use of electronic claims submission. VHA receives only a small percentage of non-VA claims electronically, which increases workload, manual processing, and the likelihood for payment errors. Low staff retention and a 20 percent vacancy rate further exacerbate delays and errors in claims payments.

VHA established Patient Centered Community Care (PC3) to expand Non-VA care access by entering into national contracts with Healthnet and TriWest to provide Veteran health care on a fee for service basis. Feedback from VA employees interviewed indicate that PC3 is experiencing challenges due to gaps in the non-VA provider network.

Information Technology—Lack of Automation and Integration Prevent VHA from Optimizing Performance in both Collections and Payments.

VHA will not be able to make necessary improvements in their billing and collection processes without modern, automated technology. Antiquated systems used to support the revenue collection processes for third-party reimbursements and first-party (Veteran) co-payments do not provide needed functionality. These systems require significant manual intervention and processing that creates an environment prone to human error and delayed claims payments from insurers.

VHA software tools and functions do not interoperate across clinical and revenue management systems and their limited interoperability with other internal and external systems inhibits VHA's ability to bill and collect revenue accurately and rapidly.

Few Non-VA providers submit their claims to VHA electronically, relying instead on paper claims, which reduces payment timeliness and accuracy. In addition, staff members process claims manually compared to private-sector benchmarks of 79 percent automation.

Oversight and Metrics—VHA Lacks Certain Performance Reporting to Provide Effective Oversight and Proactive Process Improvements for Collections and Payments.

VHA lacks standard national reporting of key performance metrics for timely insurance identification and verification across VHA, inhibiting visibility into VAMC insurance capture performance of VAMCs. In addition, VHA cannot establish effective productivity standards and monitor Non-VA Care staff performance because processes are inconsistent across VAMCs and VISNs. Current decision support capabilities are not sufficient to provide oversight and management of Non-VA Care claims processing and payment. Proactive and retrospective processes are in place to find inaccurate payments, but these practices are highly manual.

¹²¹ There is an ongoing VA Office of General Counsel review of the universe of payments to which the Prompt Payment Act applies.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

I.2 Summary of Recommendations

Recommendation 1—VHA: Develop a long-term comprehensive plan for provision of and payment for non-VA health care services.

The expansion of Non-VA Care over the last decade has resulted in a combination of programs that lack sufficient infrastructure to successfully perform the business functions today or meet the demands of the future. The demand for Non-VA Care will be determined, in large part, by the decisions made regarding VHA care and, in turn, by VHA's capacity to meet demand for services. For example, decisions about VHA facilities and workforce will affect demand for Non-VA Care, as will changes in the demographics and clinical needs of Veterans. VHA should adjust the plan as necessary depending on ongoing studies regarding VHA's capacity.

Recommendation 2—VHA: Establish a formal governance model that allows CBO and VISN leadership to converge, aligning interests and accountability.

The growth of both VHA and Non-VA Care requires an increased focus on business processes to sustain care for an increasing Veteran population. An organizational structure that balances central management with local autonomy is vital to VHA. VHA must align accountability and interests at the leadership level of CBO and the VISNs. Under the current alignment, CBO is dependent upon the VAMCs and VISNs to execute core business functions. With CBO and VISNs reporting separately to the VHA Office of the Under Secretary, VAMC priorities do not always align with CBO's. Placing both organizations under a single governance structure will promote convergence of interests, accountability, cooperation, and coordination.

Recommendation 3—VHA: Standardize policies and procedures for execution of Non-VA Care, particularly the Choice Act, and communicate those policies and procedures to Veterans, VHA staff, VHA providers, and Non-VA providers.

Examination of the claims processing protocols and operations revealed opportunities to standardize the manner in which VHA implements Non-VA Care and the Veterans Choice Act across the organization. Standardization will enable VHA to communicate processes and benefits effectively to both patients and Non-VA providers.

Recommendation 4—VHA: Employ industry standard automated solutions to bill claims for VHA medical care (revenue) and pay claims for Non-VA Care (payment) to increase collections, to improve payment timeliness and accuracy.

The growth of both VHA and Non-VA Care over the last decade has produced a combination of programs that lack sufficient technology to support the execution of routine business functions. In large part, these deficiencies result in a high degree of manual intervention required to bill and pay claims. The focus on automation should expand to include integration with front-end processes such as scheduling, insurance identification and verification, medical records, and coding.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Recommendation 5—VHA: Consider and further evaluate aligning the Patient Intake and Health Information Management Service (to include Coding) functions under CBO.

An emerging practice in private-sector health care is to align all components of the revenue cycle under the Chief Financial Officer (CFO) linking job responsibilities to financial performance. VHA's revenue cycle activities currently owned by the VAMC/VISN are Scheduling, Pre-Registration, Registration and Coding—all primary functions for identifying and verifying insurance, and ensuring accurate and timely first- and third-party collections. The private sector has recognized that aligning these functions under a single organization improves accountability and revenue cycle performance. Our findings indicate that the separation between business process and organizational structure within the VHA revenue cycle processes has resulted in a lack of coordination and consistency in these functional areas. Given the size and complexity of VHA compared to the private sector, any realignment needs to be carefully considered. Added to this, the VHA CBO recently completed a very large organizational consolidation of Non-VA Care employees and adding significantly more responsibility to the CBO at this time may be difficult for the CBO to absorb in the near-term.

Recommendation 6—VHA: Align performance measures to those used by industry, giving VHA leadership meaningful comparisons of performance to the private sector.

VHA should continue its progress toward implementation and management reporting of common industry performance measures. Once these practices are in place, VHA should identify performance standards that balance meeting VHA requirements with achievable, incremental performance improvements. This approach would immediately allow VHA to leverage common industry measures and benchmarks to conduct analysis, make informed decisions, and help to bring VHA performance into congruence with private-sector benchmarks.

Recommendation 7—VHA: Simplify the rules, policies, and regulations governing revenue, Non-VA Care, eligibility, priority groups, and service connections, educate all stakeholders, and institute effective change management.

Simplifying the rules, policies, and regulations will allow VHA to execute business processes uniformly, and to communicate clearly with all stakeholders.

Recommendation 8—VHA: Identify, share and institutionalize best practices across the agency.

There are numerous examples of business practices in VHA (as described in section 4 of this report) that produce results that significantly exceed VHA averages. VHA should develop a recurring process to examine these peer organizations' "positive deviants" and determine where successful practices apply to VHA business processes. Doing so will enable VHA to not only standardize, but also improve upon current best practices.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix J Supplies

J.1 Scope

Assessment J examined the “purchasing, distribution, and use of pharmaceuticals, medical and surgical supplies, medical devices, and health care related services by the Department.” In line with the language of the legislation, pharmaceuticals, medical and surgical supplies (hereafter referred to as clinical supplies), and medical devices are considered within the scope of this assessment. In addition, services directly related to the purchasing, distribution, and use of these products are also considered, such as third party distributors and inventory management services. As the strengths and opportunities related to pharmaceuticals are quite distinct from clinical supplies and medical devices, the assessment is structured in two parts: (1) pharmaceuticals and related services, and (2) clinical supplies, medical devices and related services. Findings and recommendations are outlined below and described in more detail in the full report found in Appendix J.

J.2 Findings

J.2.1 FINDINGS RELATED TO PHARMACEUTICALS AND RELATED SERVICES

VA pays low prices for pharmaceuticals overall but several factors limit its ability to consistently access the lowest price available. Through mandated price concessions and national contracting, VA has relatively low pricing overall for pharmaceuticals. However, pharmaceuticals are not always bought at the lowest price available for a number of reasons, including inconsistencies between Federal Acquisition Regulations (FAR) and VA Acquisition Regulations (VAAR), contract lapses, national drug shortages, and requirements to buy from countries that are compliant with the Trade Agreements Act (TAA).

VA’s distribution of pharmaceuticals to Veterans and to facilities is efficient and effective:

VA’s pharmaceutical prime vendor (PPV) is a distributor that sources pharmaceuticals and delivers them to VA facilities. The PPV model ensures efficient delivery of pharmaceuticals to facilities and Consolidated Mail Order Pharmacies (CMOPs) and supports a just-in-time inventory management approach. It received unanimous support from the pharmacists, pharmacy managers, and CMOP leaders interviewed during this assessment.

Supporting distribution directly to Veterans, VA’s seven CMOPs deliver 80 percent of outpatient prescriptions directly to Veterans’ homes, and they do so efficiently and cost effectively at \$1.53 per prescription¹²². The CMOP program also achieved the highest overall customer satisfaction scores of any U.S. mail order pharmacy in a recent J.D. Power customer survey.¹²³

VA has developed effective mechanisms to drive appropriate utilization such as its formulary, clinical use guidelines, and involvement of clinical pharmacists: Physicians and pharmacists

¹²² VHA Pharmacy Benefits Management. CMOP Overview for the Secretary. Filename: CMOP Info 4-1-15.pptx

¹²³ J.D. Power (2014) U.S. Pharmacy Study

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

believe the VA formulary helps guide good clinical decisions, and they express strong buy-in to the formulary process. Veterans have access to medications based on clinical need regardless of their formulary status. Standardized processes enable off-formulary prescribing, including electronic submission of clinical justification by physicians and review by clinical pharmacists. Around 80 percent of off-formulary requests are approved and five percent of outpatient prescriptions are for non-formulary drugs.¹²⁴

High generic drug use supports delivery of high quality, FDA-approved medications to Veterans while ensuring efficient use of taxpayers' dollars. While VA does not measure generic use as industry does, VA purchases 97 percent of its drugs (by volume) as a generic when a generic exists¹²⁵ – similar to health care leader Kaiser Permanente which claims 99 percent generic prescription dispensing when a generic exists¹²⁶. However, there are pockets of opportunity to use a higher share of generics within certain drug classes in some geographies.

VA has implemented policies and processes to improve patient transitions from the Department of Defense (DoD) to VA but challenges remain: Prior reports have highlighted challenges to Veterans' transitions directly from DoD to VA care, particularly related to medication continuity. VA has taken steps to improve this process in recent years, including the release and implementation of a January 2015 directive. However, three key challenges remain in the transition: timely access to primary care before existing prescriptions run out, limited mobility of health information between DoD and VA, and some differences in the DoD and VA formularies (see Appendix J, Section 3.2.4 for more detail).

VA has successfully implemented programs to reduce utilization of high-risk medications and early results are promising: For example, VA's opioid reduction program has cut the share of patients prescribed opiates by almost three percentage points since 2012. However, there are opportunities to improve the current measurement approach by taking into account the type, strength, and dosage frequency of opioids dispensed.

J.2.2 FINDINGS RELATED TO CLINICAL SUPPLIES, MEDICAL DEVICES, AND RELATED SERVICES

The organizational structure of the VA's supply chain enterprise is unduly complex and duplicative: VA and VHA both contain organizations that play a role in the management of VA's medical supply chain. There are several areas of overlap between VA and VHA overall, between national and regional contracting organizations, and between the four VA-level contracting organizations. Senior leaders in VA's and VHA's supply chain organizations who were interviewed unanimously said that the current organizational structure is too complex and should be simplified to improve collaboration, ownership and accountability.

VA's current IT systems, data systems, and analytical capabilities related to finance, inventory management, and purchasing are major impediments to effective supply chain management:

¹²⁴ VHA Pharmacy Benefits Management. 2014 Outpatient dispensing data

¹²⁵ VHA Pharmacy Benefits Management. 2014 PPV purchase data

¹²⁶ Kaiser Permanente, <http://businesshealth.kaiserpermanente.org/manage-costs/pharmacy/> accessed June 2015

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

VA's IT and data systems in these areas are antiquated, not integrated, and do not meet the needs of a modern health system. Health, procurement, finance, and contracting systems do not communicate needed information seamlessly, requiring manual manipulations leading to data inaccuracies and tracking problems. VA has at least 130 separate instances of its clinical, procurement, and inventory management systems, each with its own product nomenclature and numbering for items. As entries are mainly free text, data from each instance can be quite different and cross-site comparisons or regional/national roll-ups are almost impossible. This situation is a major impediment to effective management of VA's medical supply chain.

The performance of VA's contracting organization does not meet customers' expectations, so frontline staff have developed workarounds: Users are not satisfied with the communication, responsiveness, and time it takes for contracting requests. At one facility, data showed it took on average 21-39 days from the date of initial submission to receive the first response from contracting¹²⁷ requesting, for example, additional information or paperwork. Conversely, individuals in contracting reported VAMC requests submitted to them were often incomplete or unclear, and facilities were poor at forecasting demand for items, leading to unpredictable peaks in demand for contracting services that exceeded their capacity.

Two interrelated workarounds avoid delays from contracting: (1) staff buy the majority of their clinical supplies and devices on VA-issued purchase cards to enable greater autonomy to choose products and buy through preferred suppliers; and, (2) staff mainly place orders below the \$3,000 micro purchase threshold. As a result, approximately 98 percent of VA's purchases of clinical supplies are made on purchase cards¹²⁸, which can limit VA's ability to ensure compliance with regulations because purchase card holders are responsible for identifying appropriately priced goods and contracted vendors, and VA's current systems do not support these tasks with integrated catalogs and controls. This likely leads to higher prices paid for goods. Purchase card processes are also inefficient when compared with modern alternatives, such as electronic order transmission and funds transfer.

VA has not taken full advantage of its scale or potential for product standardization to achieve optimal pricing and efficiency: Unit prices showed significant variation in the price paid for identical items. In addition, at least 27 percent of clinical supply purchases were made at open market prices¹²⁹. Unlike pharmaceutical purchasing, VA's supply purchasing systems are not integrated with contract or pricing catalogs. This results in limited ability to monitor and drive compliance with contract usage. In fact, over 60 percent of all clinical supply items have no contract number listed.¹²⁸

VA has achieved limited product standardization leading to a fragmented supplier network and a high number of items managed by the logistics organization. Despite some efforts, there is no routine mechanism to identify products for which central contracts should be established.

¹²⁷ VAMC IFCAP/eCMS communications log

¹²⁹ VHA Procurement and Logistics Office. Four months FY2015 system-wide clinical supply orders with IMF numbers

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Inventory management process, practices, and systems are neither integrated nor optimized:

VA has contracts with six Medical/Surgical Prime Vendors (MSPVs) – distributors like the PPV that provide services supporting purchasing, distribution, and use of clinical supplies. To date, VA takes limited advantage of services offered such as electronic ordering platforms or lean delivery models, resulting in suboptimal utilization of the MSPV program. There is also no robust feedback loop linking inventory to product utilization, contracting, and ordering, which leads to fluctuating demand for contracting services that can overwhelm its capacity.

VA struggles to attract, hire, and retain high caliber supply chain talent: Interviewees estimated 20-30 percent of positions were currently unfilled. As an example, VA had 563 open positions for medical supply aides and technicians¹³⁰ – 20 percent of all those positions or almost four vacancies per facility. Supply chain leaders perceive three factors contribute to recruitment and retention challenges: recent position downgrades, long lead times to fill positions, and lack of a clear career path. Moreover, competition for supply chain talent in health care is also high and organizations are paying more to attract and retain the highest performers.

There are pockets of good performance and innovation across VA's supply chain that could be replicated across VA: The Denver Acquisition and Logistics Center (DALC) is a bright spot within VA's supply chain organization in its acquisition and distribution of select devices such as hearing aids to Veterans. It has developed an integrated operating model that brings together clinicians, contracting, finance, logistics, and program management to create a holistic view of what is best for Veterans. Another VA strength is the autonomy VAMCs and VISNs have to test and pilot new processes, management approaches, and technologies. Several innovations were observed during this assessment that could be scaled across VA to improve service to Veterans.

J.3 Recommendations

J.3.1 RECOMMENDATIONS RELATED TO PHARMACEUTICALS AND RELATED SERVICES

Establish mechanisms to ensure VA secures a reliable supply of pharmaceuticals and accesses the lowest possible pricing more consistently. The largest hurdle to accessing favorable pricing more consistently, is its management of suppliers and at-risk supplies. To that end, VA should improve lifecycle management of contracts to prevent lapses, and identify drugs at highest risk of shortages and price spikes, and develop specific strategies to limit impact. VAAR and FAR conflicts are also likely to cause confusion among VA contracting officers. VA should consider updating the VAAR, including options to ensure fair competitive prices are obtained when only a single supplier is on the Federal Supply Schedule.

Continue driving efficiency through VA's CMOP network. VA should drive more volume to CMOPs, increase automation of packing and shipping to improve throughput and quality, and optimize the network's footprint to improve utilization of fixed assets and reduce costs.

¹³⁰ VHA Office of Workforce Services May 2015 staffing update

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Develop strategies to improve the transition of patients from DoD to VA care. Access to primary care during a transition and better interoperability between DoD and VA are key improvements for ensuring continuity of care and clinical management. Improvements for access can be found in Assessment B and Assessment E, while recommendations for improving IT strategy can be found in Assessment H. VA should also explore opportunities to align or integrate formularies taking into account clinical evidence and economic impact. As differences are likely to remain because of different Departmental strategies, VA should develop drug-class-specific guidance for medication changes related to transitions and explore opportunities to improve communication with Veterans about their medications during transitions.

Build sophisticated approaches to drive appropriate utilization of pharmaceuticals. VA has the opportunity to be a health care leader with respect to pharmaceutical use. To that end it should incorporate evidence-based prescribing guidelines into clinical protocols and pathways, building upon recommendations in Assessment F. Enabling these developments will require investment in IT and analytic capabilities to support outcomes-based data analysis. Ensuring compliance and changing physician behaviors should be driven with appropriate data interpretation and utilization through peer review, and by building utilization rules into prescribing systems to reduce inappropriate use.

J.3.2 RECOMMENDATIONS RELATED TO CLINICAL SUPPLIES, MEDICAL DEVICES, AND RELATED SERVICES

Transform and consolidate VA's entire supply chain organization. VA should rationalize the organizational structure by consolidating VA and VHA entities into one integrated supply chain organization. Guiding principles should include a single accountable leader for policy and end-to-end effectiveness, governance including all supply chain elements, clear expectations for supporting functions and users, and alignment of personnel by product categories. In making changes, VA should ensure the pharmaceutical supply chain is not negatively impacted; rather its practices are incorporated to improve clinical supply and medical device management.

Performance management focused on Veteran outcomes should be supported by service level agreements between supply chain functions and its end users, based both on end users' expectations and what is feasible within the constraints in which VA operates. Enhancing VA's performance management system will require a level of standardized data capture and reporting that is not possible with VA's current data systems. Therefore, system upgrades and/or replacements should be considered as per the recommendation below.

Improve key enablers required to support the organizational transformation, including IT systems, data standardization, and talent management. VA should update or replace supply chain IT systems to make them fit for purpose. Any decisions made should be in line with VA's overarching IT strategy and in full consideration of the interoperability and interdependencies between supply chain, financial, and clinical systems.

VA's lack of data standardization is a major impediment to effective monitoring and management of its supply chain. It should be a high priority to standardize supply chain data and overlay user-friendly interfaces that enable robust and timely decision-making across the enterprise. As a first step, VA should evaluate near-term options to standardize critical data

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

elements to enable some level of cross-comparability. This should include establishing a central item master file with standardized nomenclature and numbering of VA's commonly used items.

The future of VA's supply chain rests on the talent that can drive these changes, therefore professionalizing the supply chain workforce by creating clear opportunities for training and advancement within the organization should be a priority.

Streamline, standardize, and integrate key supply chain management processes. VA should expedite product standardization in key categories by prioritization. The approach should build upon learnings from VA's pharmacy committee structure, with its integrated cascade of testing, review, feedback, and decision-making related to selection and use of pharmaceuticals.

VA should expedite its process mapping initiative and also look holistically at acquisition policies and regulations to streamline contracting and purchasing processes. Electronic and automated purchasing processes should be improved and encouraged. Additionally, VA should build upon its ability and willingness to experiment by establishing an approach to more systematically capture, codify, prioritize, and if appropriate, scale innovations across VA.

The complete Assessment J report is available in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix K Facilities

Scope

Assessment K examined “the process of the Department for carrying out construction and maintenance projects at medical facilities of the Department and the medical facility leasing program of the Department.” Specifically, the team was required to (i) review the processes for identifying and designing proposals for leases and capital projects, (ii) assess the process for determining the necessity and size of a lease or capital project, (iii) assess the processes and project management of the design, construction, leasing, and activation of medical facilities, and (iv) assess the medical facility-leasing program of the department. The Assessment K team also considered two additional areas that are critical to addressing VHA’s facility needs, facility management and the long term capital funding needs of VHA.

Findings

We have found that VHA is expected to face accelerating and likely unfunded capital requirements driven by maintenance to aging infrastructure, projected workload needs to serve the Veteran population, and inefficient capital management. Moreover, we observed that VA performance in capital management, design and construction, leasing, and facilities management is on par with public sector performance in most cases, yet well below private sector performance, particularly in the cost to deliver major construction projects. Consistently deploying world class practices in capital management has the potential to improve performance significantly and address some of the capital constraints VA faces, but would require a further overhaul of VA’s capital program and supporting organization. However, even if VA is able to meet the significant challenge of achieving best practice performance in capital management, VA would still likely experience a significant capital funding gap that will require strategic changes in operations and additional funding to close the gap.

The capital requirement for VHA to maintain facilities and meet projected growth needs over the next decade is two to three times higher than anticipated funding levels, and the gap between capital need and resources could continue to widen.

VA has identified more than \$51 billion in total capital needs over the next 10 years through its capital planning methodology.¹³¹ These requests cover current ten-year projections; however, new projects may be added as needs change and could change the total capital requirement. Provided that average funding levels remain consistent over the next 10 years, the \$51 billion

¹³¹ The \$51 billion capital requirement combines \$46 billion in projects submitted through the Strategic Capital Investment Plan (SCIP) and \$5 billion in anticipated outstanding funding needs for on-going major projects projected in the FY2016 VA Budget Submission. While our team did not independently verify the cost estimates for the 8,038 capital requests that make up the \$46 billion requests through SCIP, we did review the process by which these requests are identified and developed. See Section 3.1 and Appendix B.3 for additional detail.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

capital requirement would significantly exceed the anticipated funding level of \$16–26 billion.¹³²

Multiple factors drive the scale of the capital need. VHA facilities are older buildings, with significant repair needs, and some are poorly suited to emerging models of care. The average VHA building is 50 years old, five times older than the average building age for not-for-profit hospital systems in the United States.¹³³ While many facilities have been extensively renovated, the renovations themselves have aged, and the condition of buildings shows this strain. Independent assessments of infrastructure and facilities through the VHA Facilities Condition Assessment (FCA) found that VHA facilities average a “C minus” score, meaning that much of the total facilities portfolio is nearing the end of its useful life.¹³⁴ More than 70 percent of VHA facilities correction costs result from infrastructure and facilities that are D rated, meaning that they are at the end of their useful life.

Current facilities, whether they have been maintained adequately or not, often do not match current models of care. The overwhelming majority of VHA hospitals were designed when care was focused more heavily around inpatient hospital treatments. Over the past eight years, Veteran inpatient bed days of care have declined nearly ten percent while outpatient clinic workload has increased more than 40 percent.¹³⁵ Space for outpatient care is typically housed in converted inpatient spaces or VHA’s growing number of clinics. As a result, VHA’s capital needs fall into a broad range of categories, including ensuring adequate facility condition, providing sufficient and appropriate space for Veteran care, and upgrading infrastructure. As facilities age further and care continues to shift to the outpatient setting, the size of the capital need could continue to grow.

Shortfalls in overall accountability, role clarity, personal ownership, internal communication, and proactive problem solving approaches limit the ability of VA and VHA to deliver the correct projects consistently on time and on budget. Facilities functions are dispersed through VA, resulting in a lack of accountability for facilities outcomes, a mismatch between planning efforts and funding decisions, and the separation of project execution and facilities management. Additionally, internal VA directives, federal procurement requirements, and stakeholder involvement impact VHA’s ability to deliver and operate medical facilities at the level of private sector benchmarks.

¹³² Over the last four years, VA’s capital funding budget has ranged from \$1.6 billion to \$2.6 billion each year, averaging \$2 billion.

¹³³ The age of VHA facilities is calculated by taking the year built recorded in the Capital Asset Inventory and weighting it by the gross square footage of each property. 2013 analysis of 139 not-for-profit hospital systems in US, encompassing 1,362 hospitals (Soule & Keller, 2013). See Section 5.2.1.4 for additional detail.

¹³⁴ FCA assessments are conducted by independent evaluators at each facility every three years. More than 180,000 individual items are scored across VHA facilities, using a scale of A (like new) to F (critical condition) scale. Average score was calculated using the aggregated reports in VA’s Capital Asset Database, accessed March 2015.

¹³⁵ Workload reported by VAMCs in the 2015 VSSC Trip Packs, aggregated by VISN.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Capital is not being consistently allocated to projects that address the greatest areas of Veteran need in the most cost effective and timely manner. Lengthy approval and funding timelines hinder the ability of VHA to meet the identified space requirements to keep up with Veteran demand and invest in facilities updates that align with changing models for care. VA has recently established the Strategic Capital Investment Plan (SCIP), a systematic approach to approve capital projects and allocate funding. However, the process does not yet ensure full alignment with VA strategy, include rigorous business case scrubbing, or incorporate feedback on past project outcomes into the capital program assessment.

VA construction costs are similar to other public agencies in most cases, but double private industry best practice, and VA time-to-complete exceeds both public and private peers. Increased design requirements resulting from resilience, energy, security and community mandates increase the initial cost of projects over the private sector. Frequent design changes driven by users before construction contract award and during construction further increase the costs of projects and contribute to construction delays. Additionally, project teams are designed and staffed to support compliance requirements but these structures have resulted in reduced accountability for project delivery outcomes and a limited ability to develop solutions to manage cost overruns and schedule delays.

The leasing program is not effectively enabling VHA to provide facilities where and when they are required or at a reasonable cost for major leases. Lease timelines preclude VHA from benefitting from the speed and flexibility that leasing typically provides, often taking more than twice as long as private sector benchmarks. The leasing program typically achieves per square foot costs comparable to market prices for small and medium sized facilities, however, for larger build-to-suit facilities which are impacted by the same type of design and construction challenges seen in owned facilities we observed rents clustered at 40 to 50 percent higher than private sector benchmarks.

Facility management costs across VHA exceed those at comparable medical facilities. Facility management costs, including recurring maintenance and environmental services, are on the average two to three times higher than comparable private medical facilities, largely due to in-house management of these services rather than utilization of lower cost external service contracts. Facility management costs and practices are also highly variable across VHA facilities, with little incentive for individual stations to adopt cost effective measures.

Recommendations for consideration

Achieving best practice levels of performance in each of the assessment areas would require an overhaul of VA's capital program and supporting organization. Through our research, we have identified best practices from capital management organizations around the world that could be deployed to improve the total performance of capital programs of the scale and complexity of VA's. The cumulative improvement value of deploying all of these best practices in a single

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

organization could result in savings up to 40 percent.¹³⁶ However, even world class capital management organizations do not succeed in deploying all of these best practices consistently across their organizations, which illustrates the scale of the challenge. Shifts in the model of care delivery, lengthy approval processes, organizational health concerns, and strained budgets have combined to make capital management and delivery a formidable task for VA, and even the most ambitious transformation effort at VA may not achieve this total potential. As a result, we have estimated the total potential improvement opportunity for VA to be up to 25–35 percent.

Detailed recommendations for improving the capital program can be found in Sections 5 through 9, for each of the deep dives on core assessment areas. These recommendations fall into the following main opportunity areas:

VA should improve project selection and refine its project portfolio. VA should refine the SCIP process to rationalize and prioritize capital requirements by ensuring that space, energy, and condition criteria are reflective of the most critical items that contribute to Veteran care. The SCIP process, initiated four years ago, advanced VA capital project selection by creating a standardized methodology to review and approve projects which did not previously exist, but further steps are needed to improve the approach. These include a careful assessment of standards and a modification of the criteria for project selection. By focusing the criteria and approval processes for capital projects, VA could concentrate capital spending on strategic priorities and accelerate approval timelines. Capital project planning should also incorporate feedback on performance and outcomes from past projects to determine which capital programs respond to Veteran needs in the most cost effective manner possible. This would help enable a vital link between portfolio planning, project execution, and achievement of the desired outcomes in Veteran care.

VA should streamline project delivery across all construction types and leasing. VA should comprehensively address the root causes (for example, specifications, approval processes, project governance structures, team capabilities and composition) currently leading to consistent overruns in cost and schedule for construction projects and lengthy timelines for leases. This begins with modernizing and rationalizing design standards in keeping with current innovations in health care. A clear stage-gate process should be implemented to manage scope and design changes in the planning and design phases of projects and to limit scope and design changes that occur after a project receives funding and during construction. The recently launched Capital Program Requirements Management Process (CPRMP) introduced reviews during the design process to manage scope changes, another positive step which should be further developed and rolled out. To increase ownership and accountability, project delivery teams should be restructured with clear roles and responsibilities, well-defined handoffs, and adequate staffing levels. Additionally, contracting and other supporting entities should be

¹³⁶ “Infrastructure Productivity How to save \$1 trillion a year,” by McKinsey & Company (January 2013). This report includes more than 400 case examples from around the world. For this assessment, estimated savings have been adjusted to reflect requirements and constraints specific to VA.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

accountable and equipped to support a fast-paced project environment and facilitate the needs of construction projects and leases.

VHA should ensure proposed projects make the most of existing infrastructure. VHA could improve the effectiveness of its infrastructure through incorporating a total cost of ownership assessment approach into design, capital planning, and facility management. This requires evaluating the operational cost implications of design choices and pursuing opportunities to optimize capital and operating costs simultaneously. Space planning programs should regularly evaluate underutilized and vacant space to identify opportunities for increased utilization or to actively divest unusable properties.

In addition to taking steps to address the above recommendations, VHA should consider more transformative options as needed to address the remaining unfunded capital requirement. If VA is able to successfully implement current improvement initiatives, act on the additional recommendations listed above, and demonstrate best practice performance, VA could potentially reduce its total capital need to \$33 to \$38 billion over the next 10 years. Based on average funding of \$16–26 billion over 10 years, an unfunded gap of \$7 to 22 billion would still exist. To close this remaining gap, funding would have to increase and VA will need to consider more transformative options. When other institutions have faced similar capital shortfalls, they have considered a range of strategic and business model redesign options in addition to implementing best practices in capital project delivery. This report lays out several strategic approaches for further consideration by VHA, including:

- *Maximize operational efficiency.* Operating improvements, such as extending operating hours, improving scheduling efficiency, increasing tele-health options, and reducing average length of stay, can provide non-capital solutions to meeting workload needs. The operating recommendations in Assessments E, F, G, and H may contribute to addressing VHA's capital need.
- *Reassess how and where to best serve Veterans.* When facing similar circumstances to VA, other health care organizations have considered strategic operating changes that result in a realignment in their capital portfolios. This could potentially include geographic realignment, community partnerships, or a shift in service offerings. Assessments B and C may offer some further insights.
- *Explore alternative vehicles for capital delivery.* Alternative models of providing facilities have proved productive for some organizations. These models include contracting out capital investment, outsourcing facility management, and establishing innovative public-private partnerships.

In summary, VA has taken steps to improve its capital program, but much more is required given the scale of the capital need and the gap between current performance and best practice. Even with the most ambitious expectations for improving the capital program, VA will likely face a major funding gap over the next decade that will require a combination of additional funding and transformative changes to operations in order to ensure that Veterans receive the level and quality of care VA has committed to provide.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix L Leadership

L.1 Scope

Part L (“Assessment L”), Section 201 of the Veterans Access, Choice, and Accountability Act of 2014 (“The Veterans Choice Act”) required an independent assessment of how leadership influences the Veterans Health Administration’s (VHA’s) ability to accomplish its mission. The law required an assessment of:

“(L) The competency of leadership with respect to culture, accountability, reform readiness, leadership development, physician alignment, employee engagement, succession planning, and performance management.”

Congress has thus directed that VHA leadership be viewed in the context of the eight separate but related elements of leadership, each of which is addressed in detail in the assessment, as summarized below.

The broad scope of the law’s mandate represented an important opportunity to understand leadership at VHA, including its executive organization, Medical Center facility leaders, and regional network administrators. The scope of this assessment focuses on the senior leadership of VHA at each VA Medical Center (VAMC), Veterans Integrated Service Network (VISN), VA Central Office (VACO), and VHA Central Office (VHACO). The senior leadership at the VAMC and VISN are defined as the “Quadrad” or “Pentad” leaders: Director, Associate Director, Chief of Staff, Associate Director for Patient Care Services, and Assistant Director for Operations, if applicable.¹³⁷

The assessment utilizes data and analysis from a survey of all VHA employees about its leadership beliefs and practices, 39 site visits and more than 300 interviews with VHA leaders across the country and analysis of existing VHA and other federal data. We then synthesized the findings and recommendations across the eight elements to identify patterns, points of interaction, and interdependencies, resulting in seven cross-cutting themes and six overarching recommendations.

L.1.1 Findings

Reviewing all eight elements described in Section 201 Assessment L provides an opportunity to create an integrated perspective of leadership at VHA. The scale of VHA is vast, and it is difficult to fully capture all the nuances and variability that exist throughout the system. Areas of excellence exist across the system, including some inspiring and resilient leaders, front-line systems redesign teams, and homegrown innovation. We touch on these throughout the full report. However, most areas of the organization show a highly risk-averse culture; lack of role clarity; fragmentation and organizational silos; and breakdowns in communication, accountability, and key processes that impair the organization’s ability to deliver the mission.

¹³⁷ The terms Quadrad and Pentad are used interchangeably throughout this report as they are at VHA.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Our efforts have yielded a complex portrait of leadership practices reflecting leaders at VHA who are diverse in their approach, experience, skill, and effectiveness. They are operating in a system without common agreed upon leadership goals, methods and processes. Examining each of the eight elements, we identified the following seven themes about leadership today at VHA:

1. **An expanding scope of VHA activities has led to confusion around leadership priorities and the strategic direction of VHA.** The organization's focus has expanded and shifted over time, and it is unclear what the priorities are, and unclear when they will shift again. Over time, VHA has expanded into the delivery of a wide range of clinical services, as well as various social pursuits. The organization is not configured or resourced to deliver this expanding scope of activities, and it is unclear where the boundaries of the mission lie. VHA is also treated by oversight entities and external stakeholders as both a hospital system and a traditional government agency. This unique complexity of VHA is not supported by equally unique performance expectations, operational flexibility, and supporting tools.
2. **From the point of view of leaders and employees, the VHA organization is intensely, unnecessarily complex due to lack of a clear operating model, limited role clarity, fragmentation of authority, and overlapping responsibilities.** This lack of clarity around operating model, roles and responsibilities extends across VAMCs, the VISNs, and Central Office. The issue is exacerbated by a cultural context that is often unable to work effectively across chains of command, except where all parties concur. Fragmentation and silos exist across the system and within each tier of the organization. Many key support functions, such as human resources or contracting, suffer from this, resulting in service too slow to meet the needs of the mission. Meanwhile, the sheer number of operational performance measures in many cases overwhelms and makes it difficult to know and focus on what is most important.
3. **The broader VHA culture is characterized by risk-aversion and distrust, resulting in an inability to improve performance consistently and fully across the system.** At almost every facility visited, at least one leader interviewed mentioned that risk-aversion and a reluctance to "speak up" were significant issues. Three out of every four leaders interviewed at VISNs in which site visits were conducted echoed this concern (VHA interviews, 2015). A general aversion to speak up or take risks originates from: a) trying to perform in a heavily siloed organization; b) fear that raising issues will result in punitive actions toward the individual or addition of significant workload with no additional support; and c) insufficient reward for those trying to make improvements. This culture permeates across all levels of the organization – from the front-lines, to Medical Center leaders, to people at Central Office. This culture of risk aversion also hinders great ideas from spreading. A lack of enterprise-wide incentives and mechanisms for knowledge-sharing within or across the system yields pockets of innovation but not broader system-wide adoption (VHA interviews, 2015; VHA OHI survey, 2015).

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

4. **VHA leadership faces a workforce that appears to be steadily losing its motivation.** Caring for Veterans is a value that powerfully motivates VHA leaders and employees alike – however, this commitment alone is insufficient to fuel the organization’s motivation and performance. Other sources of motivation such as a great work environment, job satisfaction, or working with an inspiring team have eroded in recent years (VHA interviews, 2015). Physicians are only partially aligned with the various demands put on them. In a changing environment in which VHA competes with other health care organizations for top talent, a value proposition that relies primarily on the intrinsic reward of caring for Veterans cannot make up for the erosion of other sources of employee motivation to meet the VHA mission.
5. **The performance of a particular VAMC hinges to a large degree on the capability of its Director and the executive leadership team; yet these leaders are “on their own” in many ways.** VAMC Directors often lack competent and timely assistance from support functions (including HR for disciplining, hiring employees, planning for succession; construction; IT; and contracting). Support from VISN and VHACO is variable and often limited. Directors are left to navigate their own career progression and development (VHA interviews, 2015).
6. **VHA leadership attention is consumed by addressing crises that have occurred in the past, at the expense of preparing for tomorrow’s opportunities.** The number of directives for which leaders are accountable, coupled with heightened scrutiny from internal and external sources, compels leaders to spend much of their time reacting to crises and completing action items from above. Bottom-up innovation and consultative leadership are not well-developed, and there is a heavy reliance on top-down directives, exacerbated by the growth of Central Office Program Offices (VHA OHI survey, 2015; VHA interviews, 2015).
7. **The leadership pipeline is not robust enough to meet VHA’s current and future needs, a function both of inadequate succession planning and unfocused leadership development efforts.** As of March 2015, 16 percent of VAMC Quadrad and VISN Network Director positions are vacant or have acting leaders. Twenty-three VA Medical Centers (16 percent) do not have a permanent Director. Nine VISN Network Directors (43 percent) are Acting (VHA Office of Workforce Services, 2015). Leadership positions are increasingly unattractive to the next generation of VHA leaders, which contributes to the difficulty in filling leadership openings (VHA interviews, 2015). VHA is currently experiencing a large and widespread number of current vacancies and upcoming retirements in key leadership roles, and open positions remain unfilled due to a lack of qualified candidates. Meanwhile, VHA’s lack of a comprehensive approach to leadership development—experiential, relational, and training—has resulted in leaders with uneven preparation for their future roles. Multiple competency models and frameworks are in use, and VHA’s formal programs are not linked to career paths, not well-coordinated, and thus do not effectively bolster VHA’s talent pipelines (VHA Office of Workforce Services, 2015; VHA interviews, 2015).

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

This report's findings indicate that immediate action is required. The challenges of the current culture and operating environment, the deteriorating atmosphere for leaders, and the intense public scrutiny suggest that sustaining an effective operation and an engaged employee and leadership base to serve six million Veteran enrollees each year will require a fundamental shift achieved through a bold, integrated, multi-year transformation.

L.1.2 Recommendations

The scale of the transformation needed to address the findings above has few precedents in the private or public sector. VHA employs one in nine federal civilian employees (OPM, Historical Federal Workforce Tables and FedScope, 2015). It is both the largest hospital system and the largest training ground for health care providers in the country, training tens of thousands of clinicians each year (VA, Office of Academic Affiliations, 2015). And the nature of the current system – with hundreds of unique locations, partnerships, and performance measures – only increases the complexity of the opportunity.

Given this challenge, the recommendations summarized below should not be approached like a checklist of individual and incremental performance improvements. Most transformations treated in this manner fail (Keller and Price, 2011). Instead, VHA should systematically implement these recommendations in a comprehensive, multi-year transformation program. The transformation program needs to clearly define its aspiration state, determine what is needed to meet this state, be housed in a formal change program, protect or build on best practices and high performing pockets, and ensure timely implementation faithful to the original aspiration.

These recommendations fall into six main opportunities:

1. **Galvanize VHA leaders around a clear strategic direction.**

Decide and communicate the strategic direction of VHA going forward. The strategy could take a variety of forms, but there needs to be clarity within VHA of where the organization is headed, and this needs to be communicated throughout the organization and understood by all leaders and employees. We do not seek to define the strategic direction here, but clear strategic direction will be critical as the organization moves forward and works to implement the recommendations laid out herein.

2. **Stabilize, grow, and empower leaders.**

VHA should strengthen its leadership foundation, both today's and tomorrow's. VHA should focus in the near term on increasing leadership stability and readiness by filling vacancies with high-quality leaders, improving the attractiveness of the role to prospective leaders, and ensuring leaders are ready to assume their roles. In the medium term they should build a coordinated people development strategy that connects top performers with the right opportunities and generates a robust pipeline of leaders through a formal succession planning program and a coordinated set of development opportunities. Efforts should be made to build sustained leadership continuity across the system, including considering longer tenures for key leaders, such as Medical Center Directors and select roles at VHACO. This is necessary to have the

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

authority, accountability, ownership and time needed to stabilize the organization, strengthen its health and performance, and shepherd the transformation.

3. Redesign VHA's operating model to create clarity for decision-making authority, prioritization, and long-term support.

VHA should immediately lead an effort to clearly define roles and decision rights at each level and increase coordination within Central Office, refocusing the role of Central Office to managing outcomes and providing “corporate center”-like support to the field. The Central Office should prioritize, integrate, and actively provide support to the various initiatives and policies being implemented by the field. The net effect of the redesign should be a Central Office that is highly valued by the field for the expertise, services, and strategic direction it provides.

4. Focus and simplify performance management to clarify accountability and actively support the mission.

Within six months, VHA should complete an effort to develop an integrated and balanced performance scorecard for VAMCs focusing on a smaller number of core metrics that roll up to support the broader enterprise view. These metrics should be designed to focus more on the mission and encourage cross-functional collaboration and should be carefully cascaded. This requires moving from hundreds today (over 382 alone in the National Performance Measures Report) to no more than 20 that cover quality, safety, patient experience, operational efficiency, finance, and human resources. The resulting data should be made readily available and accessible agency-wide with proper procedures in place to ensure quality.

5. Rebuild a high-performing, healthy culture by cultivating greater employee collaboration, ownership, and accountability to accomplish the mission.

Culture is often described simply as “how things are done around here,” and changing the VHA culture will need to happen at all levels of VHA: VHACO, VISN, and the VAMC level, as well as within the context of VA broadly. VHACO should consider how to integrate their efforts so the workforce is involved and experiences a coherent set of messages, policies, and support from VHACO. The VISNs should lead the VAMC leaders by sharing best practices, demanding steady improvement, and encouraging innovation. VAMC leaders will need to role model the change, describe why the culture must change, reinforce desired behaviors (and discourage unhelpful ones), and provide leaders and employees alike with the coaching, training and tools they will need to succeed. In our experience this is feasible, but there is no simple or fast way, and it will require a dedicated performance transformation effort.

6. Redesign the human resources function as a more responsive customer service-focused entity.

VHA, with the full support and backing of VA, should begin an effort in the next 12 months to transform the human resources (HR) function to be more responsive to meeting the needs of VAMC leadership, more efficient, and more customer service-

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

focused. Although a comprehensive examination of HR was not within scope of Assessment L, systematic HR challenges were identified that need to be addressed through a transformation of the HR function. Such a transformation will likely require redesigning key processes (e.g., hiring), shifting the mindsets of HR cadre from compliance to effectiveness, training HR and its customers on key roles and responsibilities, and rationalizing its technology systems.

The complete Assessment L report is available in Volume II.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix M Outreach

Over the past 10 years, many assessments of VHA have been conducted from different points of view, and many thoughtful solutions by experts from inside and outside the department have been provided. However, while some incremental changes may have been made, the real desired impact of a highly coordinated, enterprise-level, successful transformation of VHA has not been achieved.

MITRE conducted an analysis of selected health care systems that successfully transformed into high-functioning and performing health care systems. This effort included interviews with executive teams from 27 large U.S. health systems and also included visits to selected health systems.

Some of the lessons learned from these engagements include:

A sense of urgency: Many of the largest health systems faced financial crises in the late 1990s and early 2000s due to a dramatically changed medical payment landscape. Several leaders of the selected health care systems found their institutions were not profitable, and they faced a critical decision: either change management models from a fee-for-service model or go out of business. Within this crucible, new leaders often emerged. They recognized both the need for change and the importance of communicating the urgency of that change to all levels of the organization and to organizational stakeholders.

Empowered visionary leaders and new missions: The individuals who emerged to lead these institutions had similar characteristics. They were visionary and charismatic leaders who were fully committed to the new mission and exemplified the behaviors required to achieve that mission. Their leadership teams described them as actively shaping the culture, and they provided focus on change and freedom to fundamentally alter processes. They consistently were “hard on processes, not on people,” meaning they built a culture that was developmental and transparent rather than punitive. Employee morale, motivation, and retention improved as they were empowered to remove non-mission essential burdens and increase time and resources for core mission activities. Leaders were routinely seen on the front lines of care and in regular meetings with cross-functional teams to resolve barriers to mission success and reinforce the vision and culture.

Sustained and time-consuming process: The institutions that were visited consistently pointed out that what they are doing to realize change is not a special project; rather, it is a management system. Each found that it took about three years for physicians and staff to recognize that the changes occurring were not the “change du jour.” They also shared that after five to six years, staff and providers within the health systems felt the changes were successful and enduring. Along the way, it was important to experiment, tolerate mistakes, and learn from them and encourage employee engagement to instill a new culture within the organization.

A new management system that adheres to a patient-centric culture and value system: The new management models were patient centered and required working with physician leadership and payers to reshape clinical and operational processes around the patient. Leaders were selected carefully for performance, not on résumés. Leadership and staff were

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

empowered, recognized, and rewarded for challenging care decisions and modifying processes that did not add value to patients care.

Supportive and knowledgeable governance: The leaders of these high-performing systems often had a supportive and knowledgeable Board of Trustees. Some trustees had led similar successful transformations in other industries. This type of governance structure ensured adherence to a single clear architecture and the ongoing integrity of the health care system’s mission and operating principles. The board also often had compacts with practicing physicians, leadership, and management. In addition, the leaders were given a wide berth and sufficient time (more than five to seven years) to execute needed reforms.

Transparent data-driven management system: The systems consistently demonstrated transparent use of data that was shared from the chief executive officer to front-line staff, clarifying how performance is measured and ensuring that everyone worked from the same accurate information. Many compared the performance data of similar teams and staff members to promote sharing best practices. Most health care systems focused on continuous improvement that originated within teams rather than setting team targets from higher levels in the organization. Lastly, “red” metrics were used as an opportunity for management to focus and fix, rather than blame and punish.

Methodology: In January 2015, CAMH gathered publicly available listings of the largest U.S. health care systems (by number of employees), health insurers (by market share), and organizations representing medical device manufacturers and pharmaceutical companies. CAMH leveraged its network of health care executives to add additional prominent health care systems with national reputations and then generated a convenience sample of 37 private-industry institutions to use for data collection. Upon inquiry, executive leaders from 27 of the selected U.S. health care organizations were available to be interviewed.

MITRE Officers and leaders conducted 30–60 minute interviews with the executives from selected health care systems to inform them of the Veterans Choice Act 201 assessments and to gain their insight, experience, and recommendations of best practices that, if adopted, would positively impact the Veterans health care delivery system. An interview guide was developed for each institution that targeted the Veterans Choice Act 201 assessment topic areas and was tailored to center on strengths (by reputation) of the institution being interviewed.

From March to June 2015, CAMH Choice Act Program Teams conducted site visits to selected health systems. Teams of 5–18 members from CAMH’s Choice Act Program attended these one-to three-day site visits; participated in the discussions with executive leaders, administrators, and clinicians; and completed facility tours and observations. These site visits have included:

- Kaiser Permanente
- Cleveland Clinic
- Virginia Mason Hospital and Medical Center
- Geisinger Health System.

U.S. Health Care Industry Leaders: The following organizations gave freely of their time and provided access to their systems and their senior leadership teams for in-depth discussions.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

During those conversations, they shared their experience, perspectives, health initiatives, and viewpoints of best practices in health care that could be adopted by the Veterans health care system. Several also provide on-site visits to examine their clinical and administrative operations. Many spoke of their thankfulness for our nation's Veterans and their pleasure to support the VA in making improvements to Veterans' care.

- Adventist Health System
- Aetna, Inc.
- American Pharmacists Association
- Anthem, Inc.
- Ascension Health
- Blue Cross Blue Shield of Massachusetts
- Blue Shield of California
- Cleveland Clinic
- Geisinger Health System
- Hospital Corporation of America, Inc.
- Humana Subsidiaries: Government Business - Humana Veterans (subsidiary of Humana Government Business) and Concentra
- Intermountain Health care
- Independence Blue Cross Group
- New York City Health and Hospital Corporation
- Johns Hopkins Medicine
- Kaiser Permanente
- Medical Device Manufacturers Association
- New York-Presbyterian Health care System
- NYU Langone Medical Center
- Partners Health care, including executives from Brigham and Women's Hospital and Mass General Hospital System
- Pharmaceutical Research and Manufacturers of America
- Providence Health & Services
- Tenet Health care Corporation
- ThedaCare Center for Health care Value
- University of California Health Sciences and Services
- University of Texas System
- Virginia Mason Hospital & Medical Center

Veterans Service Organizations (VSOs): The VSOs listed below shared with us data, reports, surveys, and their understanding of their constituents' health care needs. They provided the voice of the Veterans that the health care system serves. We are grateful to them for their support and for their daily commitment and service to Veterans.

- The American Legion
- American Veterans
- Disabled American Veterans
- Iraq and Afghanistan Veterans
- Military Officers Association of America
- Military Order of the Purple Heart of the U.S.A., Inc.
- Paralyzed Veterans of America
- Veterans of Foreign Wars of the United States
- Vietnam Veterans of America
- Wounded Warrior Project

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix P Section 201 of the Veterans Choice Act

Section 201: Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs.

(a) INDEPENDENT ASSESSMENT.—

(1) ASSESSMENT.—Not later than 90 days after the date of the enactment of this Act, the Secretary of Veterans Affairs shall enter into one or more contracts with a private sector entity or entities described in subsection (b) to conduct an independent assessment of the hospital care, medical services, and other health care furnished in medical facilities of the Department. Such assessment shall address each of the following:

(A) Current and projected demographics and unique health care needs of the patient population served by the Department.

(B) Current and projected health care capabilities and resources of the Department, including hospital care, medical services, and other health care furnished by non-Department facilities under contract with the Department, to provide timely and accessible care to veterans.

(C) The authorities and mechanisms under which the Secretary may furnish hospital care, medical services, and other health care at non-Department facilities, including whether the Secretary should have the authority to furnish such care and services at such facilities through the completion of episodes of care.

(D) The appropriate system-wide access standard applicable to hospital care, medical services, and other health care furnished by and through the Department, including an identification of appropriate access standards for each individual specialty and post-care rehabilitation.

(E) The workflow process at each medical facility of the Department for scheduling appointments for veterans to receive hospital care, medical services, or other health care from the Department.

(F) The organization, workflow processes, and tools used by the Department to support clinical staffing, access to care, effective length-of-stay management and care transitions, positive patient experience, accurate documentation, and subsequent coding of inpatient services.

(G) The staffing level at each medical facility of the Department and the productivity of each health care provider at such medical facility, compared with health care industry performance metrics, which may include an assessment of any of the following:

(i) The case load of, and number of patients treated by, each health care provider at such medical facility during an average week.

(ii) The time spent by such health care provider on matters other than the case load of such health care provider, including time spent by such health care provider as follows:

(I) At a medical facility that is affiliated with the Department.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

(II) Conducting research.

(III) Training or supervising other health care professionals of the Department.

(H) The information technology strategies of the Department with respect to furnishing and managing health care, including an identification of any weaknesses and opportunities with respect to the technology used by the Department, especially those strategies with respect to clinical documentation of episodes of hospital care, medical services, and other health care, including any clinical images and associated textual reports, furnished by the Department in Department or non-Department facilities.

(I) Business processes of the Veterans Health Administration, including processes relating to furnishing non- Department health care, insurance identification, third-party revenue collection, and vendor reimbursement, including an identification of mechanisms as follows:

(i) To avoid the payment of penalties to vendors.

(ii) To increase the collection of amounts owed to the Department for hospital care, medical services, or other health care provided by the Department for which reimbursement from a third party is authorized and to ensure that such amounts collected are accurate.

(iii) To increase the collection of any other amounts owed to the Department with respect to hospital care, medical services, and other health care and to ensure that such amounts collected are accurate.

(iv) To increase the accuracy and timeliness of Department payments to vendors and providers.

(J) The purchasing, distribution, and use of pharmaceuticals, medical and surgical supplies, medical devices, and health care related services by the Department, including the following:

(i) The prices paid for, standardization of, and use by the Department of the following:

(I) Pharmaceuticals.

(II) Medical and surgical supplies.

(III) Medical devices.

(ii) The use by the Department of group purchasing arrangements to purchase pharmaceuticals, medical and surgical supplies, medical devices, and health care related services.

(iii) The strategy and systems used by the Department to distribute pharmaceuticals, medical and surgical supplies, medical devices, and health care related services to Veterans Integrated Service Networks and medical facilities of the Department.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

(K) The process of the Department for carrying out construction and maintenance projects at medical facilities of the Department and the medical facility leasing program of the Department.

(L) The competency of leadership with respect to culture, accountability, reform readiness, leadership development, physician alignment, employee engagement, succession planning, and performance management.

(2) PARTICULAR ELEMENTS OF CERTAIN ASSESSMENTS.—

(A) SCHEDULING ASSESSMENT.—In carrying out the assessment required by paragraph (1)(E), the private sector entity or entities shall do the following:

(i) Review all training materials pertaining to scheduling of appointments at each medical facility of the Department.

(ii) Assess whether all employees of the Department conducting tasks related to scheduling are properly trained for conducting such tasks.

(iii) Assess whether changes in the technology or system used in scheduling appointments are necessary to limit access to the system to only those employees that have been properly trained in conducting such tasks.

(iv) Assess whether health care providers of the Department are making changes to their schedules that hinder the ability of employees conducting such tasks to perform such tasks.

(v) Assess whether the establishment of a centralized call center throughout the Department for scheduling appointments at medical facilities of the Department would improve the process of scheduling such appointments.

(vi) Assess whether booking templates for each medical facility or clinic of the Department would improve the process of scheduling such appointments.

(vii) Assess any interim technology changes or attempts by Department to internally develop a long-term scheduling solutions with respect to the feasibility and cost effectiveness of such internally developed solutions compared to commercially available solutions.

(viii) Recommend actions, if any, to be taken by the Department to improve the process for scheduling such appointments, including the following:

(I) Changes in training materials provided to employees of the Department with respect to conducting tasks related to scheduling such appointments.

(II) Changes in monitoring and assessment conducted by the Department of wait times of veterans for such appointments.

(III) Changes in the system used to schedule such appointments, including changes to improve how the Department—

(aa) measures wait times of veterans for such appointments;

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

(bb) monitors the availability of health care providers of the Department; and

(cc) provides veterans the ability to schedule such appointments.

(IV) Such other actions as the private sector entity or entities considers appropriate.

(B) MEDICAL CONSTRUCTION AND MAINTENANCE PROJECT AND LEASING PROGRAM ASSESSMENT.—In carrying out the assessment required by paragraph (1)(K), the private sector entity or entities shall do the following:

(i) Review the process of the Department for identifying and designing proposals for construction and maintenance projects at medical facilities of the Department and leases for medical facilities of the Department.

(ii) Assess the process through which the Department determines the following:

(I) That a construction or maintenance project or lease is necessary with respect to a medical facility or proposed medical facility of the Department.

(II) The proper size of such medical facility or proposed medical facility with respect to treating veterans in the catchment area of such medical facility or proposed medical facility.

(iii) Assess the management processes of the Department with respect to the capital management programs of the Department, including processes relating to the methodology for construction and design of medical facilities of the Department, the management of projects relating to the construction and design of such facilities, and the activation of such facilities.

(iv) Assess the medical facility leasing program of the Department.

(3) **TIMING.**—The private sector entity or entities carrying out the assessment required by paragraph (1) shall complete such assessment not later than 240 days after entering into the contract described in such paragraph.

(b) **PRIVATE SECTOR ENTITIES DESCRIBED.**—A private entity described in this subsection is a private entity that—

(1) has experience and proven outcomes in optimizing the performance of the health care delivery systems of the Veterans Health Administration and the private sector and in health care management; and

(2) specializes in implementing large-scale organizational and cultural transformations, especially with respect to health care delivery systems.

(c) **PROGRAM INTEGRATOR.**—

(1) **IN GENERAL.**—If the Secretary enters into contracts with more than one private sector entity under subsection (a), the Secretary shall designate one such entity that is predominately a health care organization as the program integrator.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

(2) RESPONSIBILITIES.—The program integrator designated pursuant to paragraph (1) shall be responsible for coordinating the outcomes of the assessments conducted by the private entities pursuant to such contracts.

(d) REPORT ON ASSESSMENT.—

(1) IN GENERAL.—Not later than 60 days after completing the assessment required by subsection (a), the private sector entity or entities carrying out such assessment shall submit to the Secretary of Veterans Affairs, the Committee on Veterans' Affairs of the Senate, the Committee on Veterans' Affairs of the House of Representatives, and the Commission on Care established under section 202 a report on the findings and recommendations of the private sector entity or entities with respect to such assessment.

(2) PUBLICATION.—Not later than 30 days after receiving the report under paragraph (1), the Secretary shall publish such report in the Federal Register and on an Internet website of the Department of Veterans Affairs that is accessible to the public.

(e) NON-DEPARTMENT FACILITIES DEFINED.—In this section, the term “non-Department facilities” has the meaning given that term in section 1701 of title 38, United States Code.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Appendix Q Blue Ribbon Panel

The Blue Ribbon Panel members are listed here, along with their biographies.

Dr. Brett Giroir (Panel Chair)	
Dr. Gail Wilensky (Panel Co-Chair)	
Dr. Katrina Armstrong	Dr. Debra Barksdale
Dr. Ronald R. Blanck	Prof. W. Warner Burke
Dr. Christine Cassel	GEN(R) Peter W. Chiarelli
Mr. George Halvorson	Mr. Robert L. Mallett
Dr. Robert Margolis	Dr. George Poste
Dr. Robert C. Robbins	Dr. Mark D. Smith
Dr. Glenn D. Steele, Jr.	Dr. Beth Ann Swan

Dr. Katrina Armstrong

Katrina Armstrong, M.D., MSCE, a world-renowned investigator in the areas of medical decision-making, quality of care, and cancer prevention and outcomes, is Physician-in-Chief of the Massachusetts General Hospital Department of Medicine, and Professor of Medicine at Harvard Medical School. Focusing at the interface of genomics, cancer and social policy, she has translated genomics advances into improvements in cancer control and identified novel mechanisms underlying cancer disparities. She leads one of the premier departments of medicine in the U.S. today, and has a deep understanding of what is needed to deliver exemplary clinical care.

Dr. Debra Barksdale

Dr. Debra J. Barksdale is Professor and Director of the DNP program at the University of North Carolina at Chapel Hill (UNC-CH). She is certified as a family nurse practitioner (NP), an adult NP, and a nurse educator. She is a Fellow of the American Academy of Nurse Practitioners and the American Academy of Nursing. She has over 20 years of NP experience and has been a NP in urgent care, primary care, home care and care of the underserved. On September 23, 2010, Dr. Barksdale was one of 19 members appointed to the 21 member Board of Governors for the new Patient-Centered Outcomes Research Institute (PCORI) by the U.S. Government Accountability Office under the Obama Administration. She is the only nurse appointed to the PCORI Board.

Dr. Ronald R. Blanck

Lt. Gen. Ronald R. Blanck, D.O., USA (Ret.), was the 39th Surgeon General of the United States Army, from 1996–2000. He was president of the University of North Texas Health Science

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Center at Fort Worth from 2000 to 2006. He currently serves as Chairman of the Board of Regents of the Uniformed Services University of the Health Sciences. He began his military career in 1968 as a medical officer and battalion surgeon in Vietnam. He retired 32 years later as the Surgeon General of the U.S. Army and commander of the U.S. Army Medical Command, with more than 46,000 military personnel and 26,000 civilian employees throughout the world.

Prof. W. Warner Burke

Warner Burke, Ph.D., is the E. L. Thorndike Professor of Psychology and Education and Editor of the Journal of Applied Behavioral Science at Teachers College, Columbia University. A social-organizational psychologist (Ph.D., University of Texas, Austin), Dr. Burke is currently engaged in teaching, research, and consulting. He teaches leadership and supervision and organization change. His research focuses on leadership, multirater feedback, organization change, and learning agility. Prof. Burke co-directs the Eisenhower Leader Development Program, an MA degree for Army officers jointly sponsored by Teachers College, Columbia University and the US Military Academy at West Point. He is the former Chair of the Department of Organization and Leadership at Teachers College, Columbia University. Among his many awards is the Public Service Medal from the National Aeronautics and Space Administration.

Dr. Christine Cassel

Christine K. Cassel, M.D., President and CEO of the National Quality Forum, is a leading expert in geriatric medicine, medical ethics, and quality of care. She is one of the world's leading experts on clinical quality. Dr. Cassel previously served as President and CEO of the American Board of Internal Medicine (ABIM), the ABIM Foundation, and Dean of the School of Medicine at Oregon Health Sciences University. Dr. Cassel is one of 20 scientists (and the only M.D.) chosen by President Obama to serve on the President's Council of Advisors on Science and Technology (PCAST), which advises the President in areas where an understanding of science, technology, and innovation is key to forming responsible and effective policy. She is the co-chair and physician leader of PCAST working groups that have made recommendations to the President on issues relating to health information technology and ways to promote scientific innovation in drug development and evaluation. In addition to having chaired influential Institute of Medicine (IOM) reports on end-of-life care and public health, she served on the IOM's Comparative Effective Research Committee mandated by Congress to set priorities for the national CER effort (PCORI).

Gen. Peter W. Chiarelli

Peter W. Chiarelli is a retired United States Army general who served as the 32nd Vice Chief of Staff of the U.S. Army from August 4, 2008 to January 31, 2012. As former vice chief of staff of the Army, Gen Chiarelli understands the needs of the Veteran, understands the issues of the hand-off from DoD care to VHA care for the Veterans, and has a deep personal interest in improving care for those Veterans who have experienced traumatic brain injury and post-traumatic stress.

Dr. Brett Giroir (Panel Chair)

The views, opinions, and/or findings contained in this report are those of The MITRE Corporation and should not be construed as an official government position, policy, or decision.

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Brett Giroir, M.D., is currently Senior Fellow at the Health Policy Institute of the Texas Medical Center, and former CEO of the Texas A&M Health Science Center, a premier assembly of colleges devoted to educating health professionals and advancing research in medicine, dentistry, public health, nursing, and pharmacy. He is a global authority on health care and life sciences innovation, having served diverse roles including Director of the Defense Science Office at DARPA, Principal Investigator of the DHHS Center for Innovation responsible for producing 50 million doses of vaccine against pandemic influenza, and Director of the Texas Task Force on Infectious Diseases chartered to lead the state's Ebola response and recommend policy changes within the state.

Mr. George Halvorson

Mr. George Halvorson served as chairman and chief executive officer of Kaiser Permanente from 2002–2013. Prior to serving as Kaiser Permanente CEO, Mr. Halvorson was the president and CEO of Health Partners in Minnesota for 17 years. He brings world-class leadership experience and expertise to the Panel, particularly in terms of leading a very large vertically integrated health care delivery system. He also brings connectivity to, and relationships with, many other expert health care leaders.

Mr. Halvorson currently serves as the Chair and CEO for the Institute of InterGroup Understanding and has a four year appointment to Chair the State of California Commission for Children and Families.

Mr. Robert L. Mallett

Robert L. Mallett is currently a board member and President and CEO of Accordia Global Health Foundation, an organization dedicated to health systems strengthening in Sub-Saharan Africa. For much of his professional career, Mr. Mallett has served in the health sector as a board member of health centered nonprofit organizations and at industry-leading health care companies. He is formerly Executive Vice President & General Counsel, Public and Senior Markets Group, a division of United Health Group. Immediately prior to joining United Health Group, Mr. Mallett served as Senior Vice President, Worldwide Policy & Public Affairs, Pfizer Inc. At Pfizer, among other things, he co-led the company's efforts on enhancing global access to medicines and served as President of the Pfizer Foundation. Mr. Mallett has also enjoyed a stimulating career as a chief operating officer in both federal and local government. During the Clinton Administration, he served as Acting Secretary and Deputy Secretary of the U.S. Department of Commerce, and he was City Administrator and Deputy Mayor for Operations for the District of Columbia. He has been the Peter P. Mullen Visiting Professor of Law at Georgetown University, and a Visiting Professor at the John F. Kennedy School of Government at Harvard University. Mr. Mallett is a member of the Council on Foreign Relations and an elected Fellow of the National Academy of Public Administrators.

Dr. Robert Margolis

Robert Margolis, M.D., is former Co-Chairman of the Board, DaVita HealthCare Partners and CEO Emeritus of HealthCare Partners, LLC. Dr. Margolis served as the managing partner and CEO of HealthCare Partners from the formation of the company in 1992 through February 2014. Under Dr. Margolis' leadership, HealthCare Partners became a highly respected and innovative

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

physician-owned and operated medical group, independent physician association, and management services organization. Dr. Margolis has been on the leading edge of the managed care industry for more than 30 years.

Dr. George Poste

Dr. George Poste is the Del E. Webb Professor of Health Innovation and Chief Scientist of the Complex Adaptive Systems Initiative (CASI) at Arizona State University (ASU). This program integrates research in genomics, synthetic biology and high performance computing to study the altered regulation of molecular networks in human diseases to develop new diagnostic tests for precision (personalized) medicine and the remote monitoring of health status using miniaturized body sensors and mobile devices. From 1992–1999, he was Chief Science and Technology Officer and President, R&D, of SmithKline Beecham (SB). During his tenure at SB, he was associated with the successful registration of multiple drug, vaccine, and diagnostic products. He has served as a member of the Defense Science Board of the U.S. Department of Defense and currently serves on advisory committees for several U.S. government agencies in defense, intelligence, national security and health care.

Dr. Robert C. Robbins

Robert C. Robbins, M.D., became President and Chief Executive Officer of Texas Medical Center on November 5, 2012. Prior to that, he was professor and chairman of the Department of Cardiothoracic Surgery at Stanford University School of Medicine, where he served as a member of the faculty since 1993. He served as director of the Stanford Cardiovascular Institute, of the Heart- Lung and Lung Transplantation Programs, and of the Cardiothoracic Transplantation Laboratory. Dr. Robbins is an internationally recognized cardiac surgeon who has focused his clinical efforts on acquired cardiac diseases with a special expertise in the surgical treatment of congestive heart failure. His research work includes the investigation of stem cells for cardiac regeneration, cardiac transplant allograft vasculopathy, bioengineered blood vessels, and automated vascular anastomotic devices. As the CEO of the largest medical complex in the world, he brings world class expertise from a senior leadership perspective for all of the areas covered by the 12 assessments.

Dr. Mark D. Smith

Mark D. Smith, M.D., is founder and former President and Chief Executive Officer of the California HealthCare Foundation, an independent philanthropy in Oakland California, dedicated to improving the health of the people of California, particularly the underserved. He chaired the IOM's Committee on the Learning Healthcare System, which produced the widely publicized 2012 report Best Care at Lower Cost.

Dr. Glenn D. Steele, Jr.

Glenn D. Steele, Jr., M.D., Ph.D., is Chairman of xG Health Solutions and immediate past President and Chief Executive Officer of Geisinger Health System. Under his leadership from 2001–2015, this vertically integrated health care system has risen to be one of the most cost-effective, high quality provider organizations in the country. Prior to Geisinger, he was at the University of Chicago, where he served as Richard T. Crane Professor in the Department of

VETERANS CHOICE ACT INDEPENDENT ASSESSMENT (SECTION 201)—INTEGRATED REPORT

Surgery, Vice President for Medical Affairs, and Dean of the Biological Sciences Division and the Pritzker School of Medicine. Prior to that, he was the William V. McDermott Professor of Surgery at Harvard Medical School, President and Chief Executive Officer of Deaconess Professional Practice Group and Chairman of the Department of Surgery at New England Deaconess Hospital. Widely recognized for his investigations into the treatment of primary and metastatic liver cancer and colorectal cancer surgery, Dr. Steele is past Chairman of the American Board of Surgery. He serves on the editorial board of numerous prominent medical journals. His investigations have focused on the cell biology of gastrointestinal cancer and pre-cancer. Most recently, he has concentrated on innovations in health care delivery and financing.

Dr. Beth Ann Swan

Beth Ann Swan, Ph.D., CRNP, FAAN, is Dean and Professor, Jefferson College of Nursing, Thomas Jefferson University. An acknowledged leader in nursing and ambulatory care, she has deep expertise and research experience in technology applications for practice-based research; client outcomes, especially symptom distress and functional status following ambulatory surgery; post-acute care coordination and transition management; and dissemination of evidence, based on accessibility and usability of web-based evidence resources.

Dr. Gail Wilensky (Panel Co-Chair)

Gail Wilensky, Ph.D., is an economist and senior fellow at Project HOPE, an international health foundation. She directed the Medicare and Medicaid programs from 1990–1992 and served in the White House as a senior health and welfare adviser to President GHW Bush. Dr. Wilensky currently serves as a trustee of the Combined Benefits Fund of the United Mine Workers of America and the National Opinion Research Center, is on the Board of Regents of the Uniformed Services University of the Health Sciences (USUHS), the Visiting Committee of the Harvard Medical School, and the Geisinger Health System Foundation. She recently served as president of the Defense Health Board, a Federal advisory to the Secretary of Defense, was a commissioner on the World Health Organization's Commission on the Social Determinants of Health, and co-chaired the Dept. of Defense Task Force on the Future of Military Health Care. She is an elected member of the Institute of Medicine and has served two terms on its governing council. She is a former chair of the board of directors of Academy Health, a former trustee of the American Heart Association and a current or former director of numerous other non-profit organizations.

Last Modified: Sun Feb 19 10:31:47 CST 2017

MVAC: ideas for reconstituting

Principles for choosing members:

Embrace critics – make sure we have differing points of views

Mix of VSOs/advocates, people that are influential on Capitol Hill and media, cutting-edge thinkers with big ideas, and people who have specific skillsets/experiences that could be valuable (healthcare transformation, healthcare IT, customer service, driving government transformation)

Diversity of gender, ethnicity, generation (e.g. post 9/11, Vietnam Veterans), and perspectives

Perhaps start with a smaller group and then ask them for ideas on who else should be included.

Notional slate (thought starters for brainstorming):

1. Traditional VSO – (b) (6), American Legion (already on the committee)
2. Traditional VSO – (b) (6), DAV; (b) (6), PVA; or (b) (6) VVA
3. Post 9/11 VSO/influencer – (b) (6), IAVA
4. Veteran thought leader – (b) (6), CNAS; (b) (6) IVMF
5. Iconic military leader (possibly pick 2) – **Stanley McCrystal**; **Mike Mullen**; David Petraeus; Martin Dempsey; Richard Myers; John Abrams; Pete Charelli
6. Influential Republican – **Jeff Miller**; Steve Buyer; Newt Gingrich; Scott Brown
7. Influential Democrat - ???
8. Healthcare leaders (possibly pick 2 or 3) – (b) (6), Cleveland Clinic; (b) (6) Mayo Clinic; (b) (6), Virginia Mason; (b) (6), Henry Ford
9. Experienced government change leader – **Robert Mueller**, FBI; Charles Rossotti; Tom Ridge
10. Former VA leaders – Leo McKay; Scott Gould; **Anthony Principi**

Other ideas

1. CVA – Pete Hegseth, Dan Caldwell
2. DoD health care connections - Patty Horoho; Doug Robb
3. Post 9/11 influencer - (b) (6), Team Rubicon (I might suggest him for Suicide Prevention)

Subject: LPMHC's in the VA

Good afternoon Dr. Shulkin,

I watched your confirmation and the Town Hall this afternoon. I hope that you will read my letter and help get the answers I would like to have regarding the use of Licensed Professional Mental Health Counselors and Licensed Marriage and Family Therapists in the VA. The letter and the questions documents pertain to my concerns. The RAND report and Commission on Care are supplemental evidence to support my argument. Thank you for your consideration.

Regards,

COMMISSION ON CARE

1575 I Street, NW ▪ Washington, DC 20005

June 30, 2016

We are honored to submit to the President, through the Secretary of Veterans Affairs, in accordance with the Veterans Access, Choice, and Accountability Act of 2014 (VACAA), the enclosed recommendations for transforming veterans' health care. We believe these recommendations are essential to ensure that our nation's veterans receive the health care they need and deserve, both now and in the future.

We worked with an absolute commitment to putting veterans at the heart of our deliberations, and believe our recommendations will create an integrated, community-based health care system for veterans that will be sustainable for the long term. During the term of the Commission on Care, we evaluated the 4,000-page *Independent Assessment Report*; held public meetings; listened to a broad range of stakeholders, including veterans and leaders of veterans service organizations; made site visits to Veterans Health Administration (VHA) facilities; and exchanged ideas with individual veterans, VA and VHA leaders, VHA employees and health care providers, members of Congress, economists, and health care experts.

Overall, the Commissioners agree with the findings of the *Independent Assessment Report*, which are consistent with the expansive body of other evidence the Commissioners have reviewed. This evidence shows that although care delivered by VA is in many ways comparable or better in clinical quality to that generally available in the private sector, it is inconsistent from facility to facility, and can be substantially compromised by problems with access, service, and poorly functioning operational systems and processes. The Commissioners also agree that America's veterans deserve much better, that many profound deficiencies in VHA operations require urgent reform, and that America's veterans deserve a better organized, high-performing health care system.

The most public and glaring deficiency was access problems. Congress attempted to solve this problem through a provision in VACAA that directed VHA to implement a temporary program allowing for greater choice. The Commission finds, however, that the design and execution of the *Choice Program* are flawed. In its place, we offer specific recommendations for standing up integrated veteran-centric, community-based delivery networks that will optimize the balance of access, quality, and cost-effectiveness.

The Commission also finds that the long-term viability of VHA care is threatened by problems with staffing, facilities, capital needs, information systems, health care disparities and procurement. Fixing these problems requires deliberate, concurrent, and sequential actions. It also requires fundamental changes in governance and leadership of VHA to guide the organization during the next two decades through the rapid changes coming in demographics, technology, and in the structure of the overall U.S. health care system.

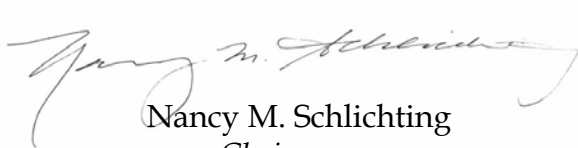

VHA has many excellent clinical programs, as well as research and educational programs, that provide a firm foundation on which to build. As the transformation process takes place, VHA must ensure that the current quality of care is not compromised, and that all care is on a trajectory of improvement. VHA has begun to make some of the most urgently needed changes outlined in the *Independent Assessment Report*, and we support this important work.

Implementing the recommendations in this report will greatly enhance VHA's ongoing reform efforts by providing both a systems-oriented framework and vitally needed changes in organizational structure. Foundational among these changes is forming a governing board to set long-term strategy and oversee the implementation of the transformation process, and building a strong, competency-based leadership system.

The remaining recommendations work in harmony to ensure veterans receive timely access to care, have options for where and how they receive care, are cared for in an environment that embraces diversity and inclusion, and are supported in making informed decisions about their own health and well-being. These recommendations are

not small-scale fixes to finite problems. Instead, they constitute a bold transformation of a complex system that will take years to fully realize, but that our country must undertake to provide our veterans with the high-quality health care they richly deserve.

Respectfully Submitted,

COMMISSION ON CARE FINAL REPORT

THIS PAGE INTENTIONALLY LEFT BLANK

EXECUTIVE SUMMARY

Two years ago, a scandal over VHA employees' manipulation of data systems to cover up long appointment scheduling delays made headlines and left the veterans' health care system reeling. The White House and Congress investigated the situation and identified chronic management and system failures, along with a troubled organizational culture. The White House appointed new leadership, including the secretary of veterans affairs (SECVA) and the undersecretary of health (USH), and Congress enacted substantial legislation that established a temporary program, the *Choice Program*, to fund expanded community care to alleviate wait times; directed a comprehensive independent assessment of VHA care delivery and management systems; and established this commission to review that assessment, examine access to care, and look more expansively at how veterans' care should be organized and delivered during the next 2 decades.

The independent assessment included an examination of the hospital care, medical services, and other health care provided in VA medical facilities.¹ The legislation identified 12 specific areas for in-depth evaluation:

- Demographics
- Health Care Capabilities
- Care Authorities
- Access Standards
- Workflow–Scheduling
- Workflow–Clinical
- Staffing/Productivity
- Health Information Technology
- Business Processes
- Supplies
- Facilities
- Leadership

The *Independent Assessment Report* provided a detailed analysis of the assessment and associated findings. The Commission work during the past 10 months was informed by the *Independent Assessment Report*, as well as by 26 days of public meetings (held in 12 sessions) with testimony by a broad range of experts and stakeholders, intensive deliberations, site visits to VHA facilities, and very importantly by the wide-ranging experience and expertise of commission members appointed by congressional leaders and the President.

In an effort to focus the Commission's recommendations and set the tone for subsequent change, the Commissioners developed a vision, a mission, and a set of values to drive reform as shown below. The vision provides the conceptual framework for the model of veterans' health care put forth in this report, and the mission and values shape the content of the recommendations.

Vision

Transforming veterans' health care to enhance quality, access, choice, and well-being.

- *Quality: Provide community-based, innovative care that drives improved outcomes.*
- *Access: Ensure timely access to the best providers for meeting veterans' health care needs.*

¹ Veterans Access, Choice, and Accountability Act of 2014, Pub. L. No. 113–146, § 201(a)(1).

COMMISSION ON CARE FINAL REPORT

- *Choice: Integrate health care within communities to foster convenience and efficiency.*
- *Well-Being: Support veterans in achieving optimal physical and mental health.*

Mission

Provide eligible veterans prompt access to quality health care.

Values

- Provide veteran-centric care.
- Involve all stakeholders, and especially veterans and their families, in designing the evolving future health care for veterans.
- Assimilate veterans into the greater community.
- Create community-based integrated networks to improve health care access and choice for veterans.

The recommendations in this report acknowledge that although VHA provides health care that is in many ways comparable or better in clinical quality to that generally available in the private sector, it is inconsistent from facility to facility, and can be substantially compromised by problems with access, service, and poorly functioning operational systems and processes.

Some of these challenges are not exclusive to VHA, and reflect large-scale problems in the U.S. health system in general, such as acute shortages of primary care doctors and lack of health care capacity in poor and rural areas. Other challenges reflect deficiencies within VHA itself, in areas such as staffing, facilities, capital needs, information systems, healthcare disparities and procurement.

It is important to understand VA's long history as a health care provider, which has included previous cycles of crisis and renewal that offer lessons for the present. It is also important to consider how VHA can implement major reform in a manner that is sustainable. This report addresses both of these issues.

The Commission's focus on access to care clearly highlighted the need for a long-range strategic evaluation of the veterans' health system. Access problems were the primary catalyst for the law establishing this body, and an examination of access has necessarily been central to the commission's work; however, Congress wisely directed the Commission to undertake a strategic examination as well.

The report begins with an *Introduction* that addresses the controversy over veterans' health care and gives a brief description of the Commission's vision for improving it. There are three main recommendation sections: *Redesigning the Veterans' Health Care Delivery System*; *Governance, Leadership, and Workforce*; and *Eligibility*. Each section includes detailed discussions of the high-level areas in which change must occur in the respective areas to facilitate bold reform. The format for each discussion includes identification of the problem, the Commission's recommendations for addressing the problem, background information, analysis, and implementation steps for Congress, VA, and other agencies. This executive summary provides a brief overview of each of the recommendations.

For the ease of our readers, the appendices contain all additional content. Of particular interest are appendices on *Financing the Vision and Model*, *Leadership Implementation*, *History as a Context for Systemic Transformation*, *Veteran Feedback*, and *Additional Resources*. These and other appendices provide policymakers and those charged with implementing the plan with a clear picture of the rationale for the recommendations and the context that frames them.

Recommendations

The Commission does not intend for these recommendations to be piecemeal fixes to everyday problems. Instead, they are presented as the foundation for far-reaching organizational transformation that adheres to a systems approach. The Commission's recommendations comprise the essential elements for such transformation.

Redesigning the Veterans' Health Care Delivery System

The VHA Care System

Recommendation #1: Across the United States, with local input and knowledge, VHA should establish high-performing, integrated community health care networks, to be known as the VHA Care System, from which veterans will access high-quality health care services.

Due to changing veteran demographics, increasing demand for VHA care in some markets and declining demand in other markets, more veterans being adjudicated as having service-connected conditions, aging facilities, provider shortages and vacancies, and other factors, VHA faces a misalignment of capacity and demand that threatens to become worse over time. Some facilities and services have low volumes of care that can create quality concerns, and in high demand areas, VHA often lacks the capacity to avoid lengthy wait times and other access issues.

With passage of the Veterans Access, Choice, and Accountability Act of 2014 (VACAA), Congress tasked VHA with creating the temporary *Choice Program*. It was designed to alleviate access issues by allowing for greater use of community care for enrolled veterans who meet the law's wait-time or distance-to-a-VHA-facility requirements.

Both the design and implementation of the law have proven to be flawed. VHA must instead establish high-performing, integrated, community-based health care networks, to be known as the VHA Care System.

The Commission Recommends That . . .

- VHA Care System governing board (see recommendation on p. 94) develop a national delivery system strategy, including criteria and standards for creating the VHA Care System, comprising high-performing, integrated, community-based health care networks, including VHA providers and facilities, Department of Defense and other federally-funded providers and facilities, and VHA-credentialed community providers and facilities.

COMMISSION ON CARE FINAL REPORT

- Integrated community-based health care networks be developed with local VHA leadership input and knowledge to ensure their composition is reflective of local needs and veterans' preferences.
- Integrated, community-based health care networks must include existing VHA special-emphasis resources (e.g., spinal cord injury (SCI), blind rehabilitation, mental health, prosthetics, etc.). In areas for which VHA has special expertise, VHA should also play the role of enhancing care in the local communities by collaborating with community care providers to implement services that may not exist, focused on the needs of veterans (e.g., expansion of integrated primary care/mental health care).
- Networks be built out in a well-planned, phased approach, overseen by the new governing board, which determines the criteria for the phases to ensure effective execution of the strategy.
- VHA credential community providers. To qualify for participation in community networks, providers must be fully credentialed with appropriate education, training, and experience, provide veteran access that meets VHA standards, demonstrate high-quality clinical and utilization outcomes, demonstrate military cultural competency, and have capability for interoperable data exchange.
- Providers in the networks should be paid using the most contemporary payment approaches available to incentivize quality and appropriate utilization of health care services (i.e., using Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) physician payment methodology being proposed by CMS).
- The highest priority access to the VHA Care System be provided to service-connected veterans, and low-income veterans also be of high priority.
- The current time and distance criteria for community care access (30 days and 40 miles) be eliminated.
- Veterans choose a primary care provider from all credentialed primary care providers in the VHA Care System.
- All primary care providers in the VHA Care System coordinate care for veterans.
- VHA Care System provide overall health care coordination and navigation support for veterans.
- Veterans choose their specialty care providers from all credentialed specialty care providers in the VHA Care System with a referral from their primary care provider.

The recommendations above work together to support the VHA Care System, as outlined in Table 1 below.

Table 1. VHA Care System Operations

Key Component	Expectations
Choice	<ul style="list-style-type: none"> ▪ Veterans can choose a primary care provider from all credentialed primary care providers in the VHA Care System. ▪ Veterans can receive their care at any VHA Care System location across the country with coordination by their primary care provider.
Care Coordination	<ul style="list-style-type: none"> ▪ All primary care providers in the VHA Care System must coordinate care for veterans. Specialty care is exclusively accessed through referrals from primary care providers. ▪ Veterans can choose their specialty care providers from all credentialed specialty care providers in the VHA Care System with a referral from their primary care provider. ▪ Although primary care is traditionally defined as internal medicine or family practice, VHA may designate other specialty providers as primary care coordinators based on veterans' specific health needs (e.g., endocrinologists for diabetic patients, neurologists for patients with Parkinson's disease, OB/GYN for female patients). ▪ VHA will have overall responsibility of ensuring care coordination for veterans, including complex care navigation.

Clinical Operations

Recommendation #2: Enhance clinical operations through more effective use of providers and other health professionals, and improved data collection and management.

A shortage of providers and clinical managers, combined with inadequate support staff and policies that fail to optimize the talents and efficiency of all health professionals, detract from the effectiveness of VHA health care.

The problem starts with inadequate numbers of providers. Ninety-four percent of VHA sites with clinically meaningful access delays indicated that increasing the number of licensed independent practitioners was critical or very important to increasing access.²

At the same time, ineffective use of providers and other health professionals contributes to suboptimal productivity. Highly trained clinical personnel are often unable to perform at the top of their license, meaning they spend much of their time performing tasks that should be done by support staff.³ For example, doctors and nurses often escort patients; clean examination rooms; take vital signs; schedule; document care; and place the orders for consultations, prescriptions, or other necessary care that could be done more cost effectively by support staff. Twenty-three percent of VHA providers identified “not working to top of provider licensure” as a barrier in health care provision.⁴

² RAND Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment B (Health Care Capabilities)*, 95, accessed June 3, 2016, http://www.va.gov/opa/choiceact/documents/assessments/assessment_b_health_care_capabilities.pdf.

³ Grant Thornton, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment G (Staffing/Productivity/Time Allocation)*, ix, accessed June 3, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_G_Staffing_Productivity.pdf.

⁴ Ibid., 95.

COMMISSION ON CARE FINAL REPORT

VHA is also currently failing to optimize use of advanced practice registered nurses (APRNs). APRNs are clinicians with advanced degrees who provide primary, acute, and specialty health care services.

The Commission Recommends That. . .

- VHA increase the efficiency and effectiveness of providers and other health professionals and support staff by adopting policies to allow them to make full use of their skills.
- Congress relieve VHA of bed closure reporting requirements under the Millennium Act.
- VHA continue to hire clinical managers and move forward on initiatives to increase the supply of medical support assistants.

Recommendation #3: Develop a process for appealing clinical decisions that provides veterans protections at least comparable to those afforded patients under other federally supported programs.

All federal providers and most health insurers have processes to ensure that beneficiaries have enforceable protections that allow them to obtain medically necessary care within their health benefits package.⁵ Such processes are imperative, particularly for care plans using capitated payment models for which there are incentives to conserve resources. Most veterans, and even their advocates, are unsure of VHA's process for resolving clinical disputes. This may be because there is not one policy in place for VHA, but 18 (one for each Veteran Integrated Service Network [VISN]).⁶

As part of the MyVA initiative, the Secretary of Veterans Affairs has set a goal of world-class service for veterans, including a proactive patient advocacy team that is integrated into patient-centered care and cultural transformation plans.⁷ The processes in place for patient grievances and central protections to ensure access to medically necessary care remain poorly understood despite these efforts. Also, they may be less comprehensive and fair than appeals processes private health insurers and other federal payers are required to provide.⁸

The Commission Recommends That . . .

- VHA convene an interdisciplinary panel to assist in developing a revised clinical-appeals process.

⁵ MaryBeth Musumeci, *A Guide to the Medicaid Appeals Process*, accessed June 3, 2016, <https://kaiserfamilyfoundation.files.wordpress.com/2013/01/8287.pdf>.

⁸ MaryBeth Musumeci, *A Guide to the Medicaid Appeals Process*, accessed June 3, 2016, <https://kaiserfamilyfoundation.files.wordpress.com/2013/01/8287.pdf>. VHA Clinical Appeals, VHA Directive 2006-057 (2006).

Recommendation #4: Adopt a continuous improvement methodology to support VHA transformation, and consolidate best practices and continuous improvement efforts under the Veterans Engineering Resource Center.

VHA has not effectively empowered its staff to identify problems and make changes to improve the overall quality of care.

Best practices exist in pockets of VHA; however, communication and support for implementation appear to be challenges. Various facilities indicate best practices are in place but seem isolated rather than widely adopted. Facilities often struggle to implement best practices, and information sharing is limited and ad hoc.⁹

VHA has a program of system engineering — Veterans Engineering Resource Center (VERC) — that can assist with transformation efforts, but it is not well known throughout VHA and until recently has been underutilized.

The Commission Recommends That . . .

- The Veterans Engineering Resource Center (VERC) be tasked to assist in transformation efforts, particularly in areas such as access and in areas that affect systemwide activities and require substantial change, such as human resources management, contracting, purchasing, and information technology.
- The many idea and innovation portals within VHA be consolidated under VERC.
- A culture to inspire and support continuous improvement of workflow processes be developed and fully funded.
- VHA's reengineering centers be enabled to identify proactively problem areas within the system and offer assistance.

Health Care Equity

Recommendation #5: Eliminate health care disparities among veterans treated in the VHA Care System by committing adequate personnel and monetary resources to address the causes of the problem and ensuring the VHA Health Equity Action Plan is fully implemented.

The Office of Health Equity (OHE), tasked with eliminating health disparities by building cultural and military competence within VHA, has not been given the resources or level of authority needed to be successful. Until VHA leadership establishes the elimination of health care disparities as a critical strategic priority and commits the resources required to address this problem, health care disparities will continue to persist among veteran patients.

⁹ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs*, Assessment F (Workflow—Clinical), 14 and A-2, accessed January 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_F_Workflow_Clinical.pdf.

COMMISSION ON CARE FINAL REPORT

A systematic review of VHA in 2007 identified the existence of racial and ethnic health inequalities. Health care disparities exist among veterans and especially among minority and vulnerable veterans.¹⁰ VHA cannot transform veterans' health care to enhance quality, access, choice, and well-being unless these health care disparities are addressed and eliminated. VHA has a plan for addressing these issues – the Health Equity Action Plan (HEAP) – but it has not been fully implemented.

The Commission Recommends That . . .

- VHA work to eliminate health disparities by establishing health care equity as a strategic priority.
- VHA provide the Office of Health Equity adequate resources and level of authority to successfully build cultural and military competence among all VHA Care System providers and employees.
- VHA ensure that the Health Equity Action Plan is fully implemented with adequate staffing, resources, and support.
- VHA increase the availability, quality, and use of race, ethnicity, and language data to improve the health of minority veterans and other vulnerable veteran populations with strong surveillance systems that monitor trends in health status, patient satisfaction, and quality measures.¹¹

Facility and Capital Assets

Recommendation #6: Develop and implement a robust strategy for meeting and managing VHA's facility and capital-asset needs.

Veterans who turn to VHA to meet health care needs should expect that its facilities have been designed and equipped to provide state-of-the-art care. As health care continues to move to ever greater use of ambulatory care delivery, VHA not only lacks modern health care facilities in many areas, but generally lacks the means to readily finance and acquire space, to realign its facilities as needed, or even to divest itself easily of unneeded buildings. Many of those barriers are statutory in nature, although VA's own internal processes compound its capital asset challenges. Establishing integrated care networks holds the promise of markedly improving veterans' access to care. That promise cannot be realized without transformative changes to VHA's capital structure. Political resistance doomed previous attempts to better align VHA's capital assets and veterans' needs. It is critical that an objective process be established to streamline and modernize VHA facilities in the context of building out the VHA Care System's integrated networks to ensure the ideal balance of facilities within each network. VHA needs as

¹⁰ Somnath Saha et al., *Racial and Ethnic Disparities in the VA Healthcare System: A Systematic Review*, U.S. Department of Veterans Affairs, Health Services Research & Development Service, June 2007, accessed June 22, 2016, <http://www.hsrd.research.va.gov/publications/esp/RacialDisparities-2007.pdf>.

¹¹ Kathleen G. Sebelius, Secretary, Department of Health and Human Services, *HHS Action Plan to Reduce Racial and Ethnic Health Disparities: A Nation Free of Disparities in Health and Health Care*, accessed March 30, 2016, http://www.minorityhealth.hhs.gov/npa/files/Plans/HHS/HHS_Plan_complete.pdf.

much control as possible to drive the process to ensure that all facility plans are fully integrated with the strategic vision for the VHA Care System.

The Commission Recommends That . . .

- VA leaders streamline and strengthen the facility and capital asset program management and operations.
- The VHA Care System governing board be responsible for oversight of facility and capital asset management.
- Congress provide VHA greater budgetary flexibility to meets its facility and capital asset needs and greater statutory authority to divest itself of unneeded buildings.
- Congress enact legislation to establish a VHA facility and capital asset realignment process based on the DoD Base Realignment and Closure Commission (BRAC) process to be implemented as soon as practicable. The Commission recommends the VHA Care System governing board subsequently make facility decisions in alignment with system needs.
- New capital be focused on ambulatory care development to reflect health care trends.
- VHA move forward immediately with repurposing or selling facilities that have already been identified as being in need of closing.

Information Technology

Recommendation #7: Modernize VA's IT systems and infrastructure to improve veterans' health and well-being and provide the foundation needed to transform VHA's clinical and business processes.

To operate a high-performing VHA Care System, VA requires a comprehensive electronic health care information platform that is interoperable with other systems; enables scheduling, billing, claims, and payment, and provides tools that empower veterans to better manage their health. Creating a single, uniform, integrated IT platform will promote care continuity, cost savings, and consistent care delivery and business processes.¹² VA's antiquated, disjointed clinical and administrative systems cannot support these essential clinical and business processes and consequently are unable to support the Commission's transformation vision for VHA. In addition, VHA lacks an experienced senior health care IT leader focusing on the strategic health care IT needs of veterans.

The Commission Recommends That . . .

- VHA establish a Senior Executive Service (SES)-level position of VHA Care System chief information officer (CIO), selected by and reporting to the chief of VHA Care System (CVCS) with a dotted line to the VA CIO. The VHA CIO is responsible for developing

¹² The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 43-44, accessed February 25, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

and implementing a comprehensive health IT strategy and developing and managing the health IT budget.

- VHA procure and implement a comprehensive, commercial off-the-shelf (COTS) information technology solution to include clinical, operational and financial systems that can support the transformation of VHA as described in this report.

Supply Chain

Recommendation #8: Transform the management of the supply chain in VHA.

Effective management of all aspects of the supply chain has become a competitive differentiator for health care delivery systems. Modernization and automation of the supply chain in health care have the potential to save hundreds of millions of dollars, if done well. VHA cannot modernize its supply chain management and create cost efficiencies because it is encumbered with confusing organizational structures, no expert leadership, antiquated IT systems that inhibit automation, bureaucratic purchasing requirements and procedures, and an ineffective approach to talent management.

The problems are systemic. The organizational structure is chaotic, contracting operations are not aligned to business functions, and processes are poorly constructed, lacking standardization across the organization. Information technology infrastructure is inadequate, and it lacks appropriate interoperability among IT systems. VHA is unable to produce high-quality data on supply chain utilization and does not effectively manage the process using the insights such data could provide.¹³

The Commission Recommends That . . .

- VHA establish an executive position for supply chain management, the VHA chief supply chain officer (CSCO), to drive supply chain transformation in VHA. This individual should be compensated relative to market factors.
- VA and VHA reorganize all procurement and logistics operations for VHA under the CSCO to achieve a vertically integrated business unit extending from the front line to central office. This business unit would be responsible for all functions in a fully integrated procure-to-pay cycle management that includes policy and procedures, contract development and solicitation, ordering, payment, logistics and inventory management, vendor relations and integration, data analytics and supply chain visibility, IT alignment, clinician engagement and value analysis, and talent management across all these supply chain functions.
- VA and VHA establish an integrated IT system to support business functions and supply chain management; appropriately train contracting and administrative staff in supply chain management; and update supply chain management policy and procedures to be consistent with best practice standards in health care.

¹³ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, vi, accessed April 29, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

- VHA support the Veterans Engineering Resource Center (VERC) Supply Chain Modernization Initiative including consistent support from leadership, continued funding and personnel, and the alignment of plans and funding within OIT to accomplish the modernization goals.

Governance, Leadership, and Workforce

Board of Directors

Recommendation #9: Establish a board of directors to provide overall VHA Care System governance, set long-term strategy, and direct and oversee the transformation process.

The existence—and concealment—of unacceptably long delays in care at the Phoenix VA Medical Center, and similar problems at multiple other VA medical centers, had both direct and indirect causes. Weak governance was found to be among those indirect causes.¹⁴ As the authors of a root-cause analysis of the Phoenix scandal highlighted, “a governance gap in leadership continuity and strategic oversight from one executive leadership team to another” contributed to the wait-time problems.¹⁵ The report authors observed, “Unlike other health care systems, VHA does not have a governance mechanism to fill the role of a board of directors.”¹⁶ The governance limitations made evident in the Phoenix scandal have profound implications for the long term. As discussed in this report, the Commission believes VHA must institute a far-reaching transformation of both its care delivery system and the management processes supporting it. Changes of the magnitude facing VHA would be difficult for any health care system to achieve. A transformation will take years to accomplish and must be sustained over time. Yet the short tenure of senior political appointees, each administration’s expectations for short-term results,¹⁷ and VHA’s operating in a “dynamic environment [in which it is] answering to a large number of stakeholders, sometimes with competing demands”¹⁸ offer little reason for optimism that real transformation could take hold without fundamental changes in governance.

The Commission Recommends That . . .

- Congress provide for the establishment of an 11-member board of directors accountable to the President, responsible for overall VHA Care System governance, and with decision-making authority to direct the transformation process and set long-term strategy. The Commission also recommends the governing board not be subject to the Federal Advisory Committee Act (FACA) and be structured based on the key elements included in Table 5.

¹⁴ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, xvi, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

¹⁶ Ibid.

¹⁷ Ibid.

¹⁸ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, xiv, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

- The Board recommend a chief of VHA Care System (CVCS) to be approved by the President for an initial 5-year appointment. Additionally, the Commission recommends the governing board be empowered to reappoint this individual for a second 5-year term, to allow for continuity and to protect the CVCS from political transitions. If necessary, the CVCS can be removed by mutual agreement of the President and the governing board.

Leadership

Recommendation #10: Require leaders at all levels of the organization to champion a focused, clear, benchmarked strategy to transform VHA culture and sustain staff engagement.

High-performing organizations have healthy cultures in which diverse staff feel respected and engaged at work. These workers, in turn, are better able to demonstrate compassion and caring toward customers in their delivery of high-quality services. Leaders at all levels of the organization are responsible for promoting a positive organizational environment and culture through how they treat staff and the systematic approach they take to decision making and management. VHA has among the lowest scores in organizational health in government. For the past decade, VHA's executives have not emphasized the importance of leadership attention to cultural health, and it has not been well integrated in training, assessments, and performance accountability systems.

The Commission Recommends That . . .

- VHA create an integrated and sustainable cultural transformation by aligning all programs and activities around a single, benchmarked concept.
- VHA align leaders at all levels of the organization in support of the cultural transformation strategy and hold them accountable for this change.
- VHA establish a transformation office to drive progress of this transformation and report on it to the CVCS and the new VHA Care System board of directors (see governance discussion in the previous section).

Recommendation #11: Rebuild a system for leadership succession based on a benchmarked health care competency model that is consistently applied to recruitment, development, and advancement within the leadership pipeline.

VHA, like any large organization, requires excellent leaders to succeed. Succession planning and robust structured programs to recruit, retain, develop, and advance high potential staff are essential to maintaining a pipeline of new leaders. In health care, leadership programs must prepare candidates with the specialized knowledge and skills required of health care executives, while also helping to mature their leadership traits. VHA does not use a single leadership competency model, and what it does use is not specific to health care or benchmarked to the private sector. VHA also does not use competency models as a tool to establish standards for hiring, assessment, and promotion. As a result, executive leaders and

promising staff members do not have the tools they need to guide career transitions and ensure VHA has the leaders it needs for the future.

The Commission Recommends That . . .

- VA establish, as an OMB management priority for VHA, the goal of implementing an effective leadership management system in the agency.
- VHA executives prioritize the leadership system for funding, strategic planning, and investment of their own time and attention.
- VHA adopt and implement a comprehensive system for leadership development and management that includes a strategic priority of diversity and inclusion.
- Congress create more opportunities to attract outside leaders and experts to serve in VHA through new and expanded authority for temporary rotations and direct hiring of health care management training graduates, senior military treatment facility leaders, and private not-for-profit and for-profit health care leaders and technical experts.

Recommendation #12: Transform organizational structures and management processes to ensure adherence to national VHA standards, while also promoting decision making at the lowest level of the organization, eliminating waste and redundancy, promoting innovation, and fostering the spread of best practices.

Leadership structures and processes should be organized to promote agile, clear decision making, the free flow of ideas, and identification of organizational priorities, as well as make clear reporting relationships and lines of accountability within the organization. VHA currently lacks effective national policies, a rational organizational structure, and clear role definitions that would support effective leadership of the organization. The responsibilities of VHA Central Office (VHACO) program offices are unclear, and the functions overlap or are duplicated. The role of the VISN is not clear, and the delegated responsibilities of the medical center director are not defined.

The Commission Recommends That . . .

- VHA redesign VHACO to create high-performing support functions that serve VISNs and facilities in their delivery of veteran-centric care.
- VHA clarify and define the roles and responsibilities of the VISNs, facilities, and reorganized VHA program offices in relation to one another, and within national standards, push decision making down to the lowest executive level with policies, budget, and tools that support this change.
- VHA establish leadership communication mechanisms within VHACO and between VHACO and the field to promote transparency, dialogue, and collaboration.
- VHA establish a transformation office, reporting to the CVCS with broad authority and a supporting budget to accomplish the transformation of VHA and manage the large-scale changes outlined throughout this report.

COMMISSION ON CARE FINAL REPORT

Recommendation #13: Streamline and focus organizational performance measurement in VHA using core metrics that are identical to those used in the private sector, and establish a personnel performance management system for health care leaders in VHA that is distinct from performance measurement, is based on the leadership competency model, assesses leadership ability, and measures the achievement of important organizational strategies.

To achieve the Commission’s vision of quality, access, and choice for veterans, VHA must effectively measure outcomes and hold leaders accountable for improvement. VHA can measure itself against internal best practices, but veterans deserve care that uniformly meets or exceeds private-sector quality standards. A clear, concise, balanced measure set—identical to private-sector standards—will give leadership, staff, and administrators focus and direction for their work. VHA leaders are responsible for delivering these quality outcomes to veterans. They do so by exercising leadership skills and traits in their management and direction to staff. Short-term gains can be realized at the expense of staff morale and well-being, but the long-term health of the organization cannot. Therefore, organizations must be sure to assess leaders’ performance not just on *what* they achieve but *how* they achieve it.

The Commission Recommends That . . .

Organizational Performance Measurement

- VHA streamline organizational performance measures, emphasize strategic alignment and meaningful effect, and use benchmarked measures that allow a direct comparison to the private sector.
- The new Office for Organizational Excellence work with experts to reorganize its internal structure to align business functions with field needs and consolidate and eliminate redundant or low-priority activities.

Personnel Performance Management System

- VHA create a new performance management system appropriate for health care executives, tied to health care executive competencies, and benchmarked to the private sector.
- The CVCS and all secondary raters hold primary raters accountable for creating meaningful distinctions in performance among leaders.
- VHA recognize meaningful distinctions in performance with meaningful awards.

Diversity and Cultural Competence

Recommendation #14: Foster cultural and military competence among all VHA Care System leadership, providers, and staff to embrace diversity, promote cultural sensitivity, and improve veteran health outcomes.

The VHA Care System must implement a systemic approach to developing the cultural and military competence of its leadership, staff, and providers, as well as measure the effects of

VA-18-0457-A-001642

these efforts on improving health outcomes for vulnerable veterans. Although VHA has made some strides in specific program areas, cultural competency is an essential part of providing effective care to veterans because of the unique needs military service, and especially participation in combat operations, may cause.

The Commission Recommends That . . .

- VHA implement a systemic approach to establishing cultural and military competence across VHA and its community providers, and provide the resources required to fully integrate the related strategy into veterans' care delivery.
- Cultural and military competency training be required on a regular basis for VHA Care System leadership, staff, and providers.
- Cultural and military competency be criteria for allowing community providers to participate in the VHA Care System.

Workforce

Recommendation #15: Create a simple-to-administer alternative personnel system, in law and regulation, which governs all VHA employees, applies best practices from the private sector to human capital management, and supports pay and benefits that are competitive with the private sector.

VHA has staffing shortages and vacancies at every level of the organization and across numerous critical positions, including facility leadership, clinical staff, supply chain personnel, and customer service staff. VHA lacks competitive pay, must use inflexible hiring processes, and continues to use a talent management approach from the last century. A confusing mix of personnel authorities and position standards make staffing and management a struggle for both supervisors and human resources personnel. Title 5 was not created with a modern health care delivery system in mind and falls short of offering what is needed to create a high-performing health care system.

The Commission Recommends That . . .

- Congress create a new alternative personnel system that applies to all VHA employees and falls under Title 38 authority. The system must simplify human capital management in VHA; increase fairness for employees; and improve flexibility to respond to market conditions relating to compensation, benefits, and recruitment.
- VHA write and implement regulations for the new alternative personnel system, in collaboration with union partners, employees, and managers, that does all of the following:
 - Meets benchmark standards for human capital management in the health care sector and is easy for HR professionals and managers to administer.
 - Promotes veteran preferences and hiring.

COMMISSION ON CARE FINAL REPORT

- Embodies merit system principles (merit-based, nonpartisan, nondiscrimination, due process) through simplified, sensible processes that work for managers and employees.
 - Creates one human capital management process for all employees in VHA for time and leave, compensation, advancement, performance evaluation, and disciplinary standards/processes.
 - Provides due process and appeals standards to adverse personnel actions.
 - Allows for pay advancement based on professional expertise, training, and demonstrated performance (not time-in-grade).
 - Promotes flexibility in organizational structure to allow positions and staff to grow as the needs of the organization change and the success of each individual merits.
 - Establishes simplified job documentation that is consistent across job categories and describes a clear path for staff professional development and career trajectories for advancement.
 - Eliminates most distinctions (except for benefits) between part-time and full-time employees.
 - Grandfathers current employees with respect to pay and benefits.
- VHA ensure all positions, to include human resources management staff, are adequately trained to fulfill duties.

Recommendation #16: Require top executives to lead the transformation of HR, commit funds, and assign expert resources to achieve an effective human capital management system.

Effective planning for and management of human capital are core enabling requirements for any business: If the system that supports the employees fails, then the organization fails. Executive leaders must ensure the success of human capital management; however, for too long in VA, human capital management has not been a top priority for leadership time, attention, and funding support. Human capital management personnel must be equal members of the leadership team, contributing fully to strategic decisions and planning for future initiatives.

The Commission Recommends That . . .

- VHA hire a chief talent leader who holds responsibility for the operation's entire HR enterprise, is invested with the authority and budget to accomplish the envisioned transformation, and reports directly to the chief of VHA Care System.
- VA and VHA prioritize the transformation of human capital management with adequate attention, funding, and continuity of vision from executive leaders.
- VA align HR functions and processes to be consistent with best practice standards of high-performing health care systems.

VA-18-0457-A-001644

- VA Human Resources and Administration and the Office of Information and Technology should create an HR information technology plan to support modernization of the HR processes and to provide meaningful data for tracking, quality improvement, and accountability.

Eligibility

Recommendation #17: Provide a streamlined path to eligibility for health care for those with an other-than-honorable discharge who have substantial honorable service.

Addressing access issues is at the core of the Commission's charge. Veterans face a range of barriers to care, from geographic barriers to facility-specific problems, such as long wait times for an appointment or lack of evening or weekend hours. These barriers, which affect even those with service-incurred health conditions, can be overcome. Some former service members, however, have encountered a more fundamental barrier when applying for care. Because of the character of their discharge, they are not considered veterans, and thus are not eligible for VA care.

In some cases, individuals have been dismissed from military services with an other-than-honorable (OTH) discharge because of actions that resulted from health conditions (such as traumatic brain injury [TBI], posttraumatic stress disorder [PTSD], or substance use) caused by, or exacerbated by, their service. Under VA regulations, these individuals do not meet the definition of a veteran, and are therefore ineligible for VHA medical care. This situation leaves a group of former service members who have service-incurred health issues (namely mental health issues) unable to receive the specialized care VHA provides.

The Commission Recommends That . . .

- VA revise its regulations to provide tentative eligibility to receive health care to former service members with an OTH discharge who are likely to be deemed eligible because of their substantial favorable service or extenuating circumstances that mitigate a finding of disqualifying conduct.

Recommendation #18: Establish an expert body to develop recommendations for VA care eligibility and benefit design.

Although VHA continues to offer the promise of health care to all eligible veterans, its capacity to meet that promise is constrained by appropriated funding.¹⁹

The Commission Recommends That . . .

- The President or Congress task another body to examine the need for changes in eligibility for VA care and/or benefits design, which would include simplifying eligibility criteria, and may include pilots for expanded eligibility for nonveterans to use

¹⁹ The MITRE Corporation, *Independent Assessment of the Health care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 24, accessed April 11, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

underutilized VHA providers and facilities, providing payment through private insurance.

- The SECVA revise VA regulations to provide that service-connected-disabled veterans be afforded priority access to care, subject only to a higher priority dictated by clinical care needs.

Conclusion

The next 20 years will see continued dynamic change in health care, well beyond the Commission's capacity to forecast the future. What is clear, though, is that the concept of access to care is itself undergoing marked change. The potentially explosive growth of telemedicine, increasing emphasis on preventive care, and likely proliferation of technologies that permit routine home-based health monitoring and care of patients with chronic illnesses will dramatically affect access needs. We are also witnessing profound changes in the nature of patient-provider engagement and in where and how care is delivered. VHA must keep pace with, and even be a leader in, these changes.

Patient-access is a sharp lens through which to gauge how well a health system is functioning, particularly if we understand access to reflect not only timeliness, but care quality, and patient expectations. Providing veterans timely care remains a challenge today, notwithstanding establishment of the *Choice Program* and VHA leadership's focus on improving access. Access is not a problem for VHA alone: Delivering timely care is challenging for many providers and health systems, in part due to the unavailability of providers in some communities and national shortages of some categories of health professionals.

For VHA, an important conclusion is that providing timely access to care is not simply a matter of increasing staffing, modernizing IT systems, installing new leadership, or any other single effort, although all of these changes are needed. As the *Independent Assessment Report* emphasized, multiple systemic problems have contributed to VHA's access problems, and an integrated systems approach is essential to address the myriad issues affecting access to care and the service veterans receive.

The Commission's report underscores the importance of transforming VA health care delivery and the systems that underlie it. In employing the term transformation, the Commission means fundamental, dramatic change—change that requires new direction, new investment, and profound reengineering. Some will question that view, and perhaps challenge the notion that the nation should invest further in the VA health care system. None, however, should question the nation's obligation to those who sustained injury or illness in service, or who are at increased health risk as a result of deployments to combat zones or other service-related experiences.

In this report, the Commission fully acknowledges the deep problems the *Independent Assessment Report* described. Importantly, though, the Commission recognizes the VA health care system has valuable strengths, including some unique and exceptional clinical programs and services tailored to the needs of the millions of veterans who turn to VA for care. For

VA-18-0457-A-001646

example, VHA's behavioral health programs, particularly with their integration of behavioral health and primary care, are largely unrivalled, and profoundly important to many who have suffered from the effects of battle and for whom VHA is a safety net. Even considering these strengths, some may question how a system beleaguered with the problems VHA faces can achieve lofty transformation goals. This is not the first time VHA has faced challenges; however, and history has demonstrated that with appropriate structure and strategies in place, transformation can be achieved and sustained.

Transformation is a difficult process that will require careful stewardship, sustainable leadership, and unwavering focus and commitment to the long-term vision and strategy. The Commission's recommendations in some areas acknowledge VHA's efforts to begin the transformation process and suggest that where these efforts align with the Commission's recommendations, they should be sustained. Reaping the fruits of transformation will take more than a single Congress or a single 4-year administration. For this reason, the Commission strongly recommends a new governance model and an extended term for the leader of the VHA Care System to sustain a continuing transformation. Even should VHA implement all the Commission's recommendations, it will not succeed in transforming on its own; it will require the full support from both the White House and Congress. Our nation's veterans deserve no less.

COMMISSION ON CARE FINAL REPORT

THIS PAGE INTENTIONALLY LEFT BLANK

INTRODUCTION

Two years ago, a scandal over VHA employees manipulating data systems to cover up long delays in scheduling care left the veterans' health care system reeling. The White House and Congress investigated the situation and identified chronic management and system failures, along with a troubled organizational culture. In response, the White House appointed new leadership, including the secretary of veterans affairs (SECVA) and undersecretary of health (USH), and Congress enacted substantial legislation that established a temporary program, the *Choice Program*, to fund expanded community care to alleviate wait times; directed a comprehensive independent assessment of VHA care delivery and management systems; and established this commission to review that assessment, examine access to care, and look more expansively at how veterans' care should be organized and delivered during the next 2 decades.

The Commission on Care's work during the past 10 months was informed by the *Independent Assessment Report*, as well as by 26 days of public meetings (held in 12 sessions) with testimony by a broad range of experts and stakeholders, intensive deliberations, site visits to VHA facilities, and very importantly by the wide-ranging experience and expertise of commission members appointed by congressional leaders and the President.

The charge given this Commission, with its emphasis on access to care, reflects the need for a long-range strategic evaluation of the veterans' health system. Access problems were the primary catalyst for the law establishing this body, and an examination of access has necessarily been central to the Commission's work; however, Congress wisely directed the Commission to undertake a strategic examination as well.

The next 20 years will see continued dynamic change in health care, well beyond the Commission's capacity to forecast the future. What is clear, however, is that the concept of access to care is itself undergoing marked change. The potentially explosive growth of telemedicine, increasing emphasis on preventive care, and likely proliferation of technologies that permit routine home-based health monitoring and care of patients with chronic illnesses will dramatically affect access needs. We are also witnessing profound changes in the nature of patient-provider engagement, and in where and how care is delivered. VHA must keep pace with, and even be a leader, in these changes.

Patient-access is a sharp lens through which to gauge how well a health system is functioning, particularly if we understand *access* to reflect not only timeliness, but care quality and patient expectations. Providing veterans timely care remains a challenge today, notwithstanding establishment of the *Choice Program* and VHA leadership's focus on improving access. Access is not a problem for VHA alone; Delivering timely care is challenging for many providers and health systems, in part due to the unavailability of providers in some communities and national shortages of some categories of health professionals.

For VHA, an important conclusion is that providing timely access to care is not simply a matter of increasing staffing, modernizing IT systems, installing new leadership, or any other single effort, although all of these changes are needed. As the *Independent Assessment Report*

VA-18-0457-A-001649

COMMISSION ON CARE FINAL REPORT

emphasized, multiple systemic problems have contributed to VHA's access problems, and an integrated systems approach is essential to address the myriad issues affecting access to care and the service veterans receive.

The commission's report underscores the importance of transforming VA health care delivery and the systems that underlie it. In employing the term *transformation*, the commission means fundamental, dramatic change—change that requires new direction, new investment, and profound reengineering. Some will question that view, and perhaps challenge the notion that the nation should invest further in the VA health care system. None, however, should question the obligation owed those who sustained injury or illness in service, or who are at increased health risk as a result of deployments to combat zones or other service-related experiences.

In this report, the Commission acknowledges the deep problems the *Independent Assessment Report* described. Importantly, though, the commission recognizes the VA health care system has valuable strengths, including some unique and exceptional clinical programs and services tailored to the needs of the millions of veterans who turn to VA for care. For example, VHA's behavioral health programs, particularly with their integration of behavioral health and primary care, are largely unrivalled, and profoundly important to many who have suffered from the effects of battle and for whom VHA is a safety net.

Others may question how a system with the range of problems VHA faces can meaningfully improve, let alone realize a transformation. Mindful of its 20-year charge, the Commission notes that VA health care faced similar challenges 20 years ago and underwent a historic transformation. The long history of the VA health care system has seen highs and lows. Among the lessons in that history is that the mission—to care for those who have borne the battle—is not only powerful, but enduring. History has demonstrated that transformation can be achieved, but also that structures and strategies for sustainability must be built into the framework.

As the commission report emphasizes, transformation is difficult. It is a process that will require careful stewardship, sustainable leadership, and unwavering focus and commitment to the long-term vision and strategy. VHA has begun some of this work; our recommendations in some areas acknowledge VHA's efforts and suggest that where they are aligned with the Commission's recommendations, they should be sustained. The fruits of the transformation, though, will not be realized over the course of a single Congress or a single 4-year administration. For this reason, the Commission, strongly recommends a new form of governance and an extended term for the leader of the VHA Care System to sustain a continuing transformation. Even should VHA implement all the Commission recommends, it will not succeed in transforming on its own; it will require the full support from both the White House and Congress. Our nation's veterans deserve no less.

COMMISSION RECOMMENDATIONS

Redesigning the Veterans' Health Care Delivery System

The VHA Care System

Recommendation #1: Across the United States, with local input and knowledge, VHA should establish high-performing, integrated community-based health care networks, to be known as the VHA Care System, from which veterans will access high-quality health care services.

Problem

Due to changing veteran demographics, increasing demand for VHA care in some markets, and declining demand in other markets, more veterans being adjudicated as having service-connected conditions, aging facilities, provider shortages and vacancies, and other factors, VHA faces a misalignment of capacity and demand that threatens to become worse over time. Some facilities and services have low volumes of care that can create quality concerns, and in high demand areas, VHA often lacks the capacity to avoid lengthy wait times and other access issues.

With the passage of the Veterans Access, Choice, and Accountability Act of 2014 (VACA), Congress tasked VHA with creating the temporary *Choice Program*. It was intended to alleviate access issues by allowing for greater use of community care for enrolled veterans who meet the law's wait-time or distance-to-a-VHA-facility requirements.

The Commission Recommends That . . .

- VHA Care System governing board (see Recommendation #9) develop a national delivery system strategy, including criteria and standards for creating the VHA Care System, comprising high-performing, integrated, community-based health care networks, including VHA providers and facilities, Department of Defense and other federally-funded providers and facilities, and VHA-credentialed community providers and facilities.
- Integrated, community-based health care networks be developed with *local* VHA leadership input and knowledge to ensure their composition is reflective of local needs and veterans' preferences.
- Integrated, community-based health care networks must include existing VHA special-emphasis resources (e.g., spinal cord injury (SCI), blind rehabilitation, mental health, prosthetics, etc.). In areas for which VHA has special expertise, VHA should also play the role of enhancing care in the local communities by collaborating with community care providers to implement services that may not exist, focused on the needs of veterans (e.g., expansion of integrated primary care/mental health care).
- Networks be built out in a well-planned, phased approach, overseen by the new governing board, which determines the criteria for the phases to ensure effective execution of the strategy.

Recommendations continue on next page. =>

COMMISSION ON CARE FINAL REPORT

Both the design and implementation of the law have proven to be flawed. VHA must instead establish high-performing, integrated, community-based health care networks, to be known as the VHA Care System.

Background

VHA has long had authority to purchase hospital care and medical services based on geographic inaccessibility or VHA's lack of a required service.²⁰ In 2013, VA moved beyond the use of individual purchased-care authorizations to regional contracting under the Patient-Centered Community Care (PC3) Program.²¹ In all cases, purchased care was a secondary means of providing care, to be used "when VA health care facilities are not feasibly available."²² Even before the creation of the *Choice Program* in 2014, some 10 percent of VHA medical spending went for purchased-care services.

When Congress enabled what became known as the *Choice Program*, it tasked VHA with implementing a fundamentally new mechanism for purchasing care. Unlike traditional purchased-care authority (which still exists), the *Choice Program* promises veterans who meet specific geographic or wait-time-related criteria that they can elect to receive treatment from within a network of a community providers.²³

Under the current *Choice Program*, however, most VHA patients are promised little or no actual choice of providers outside VHA. To be eligible for the program, VHA patients must meet the following criteria:²⁴

The Commission Recommends That . . .

<= Recommendations continued from previous page.

- VHA credential community providers. To qualify for participation in community networks, providers must be fully credentialed with appropriate education, training, and experience, provide veteran access that meets VHA standards, demonstrate high-quality clinical and utilization outcomes, demonstrate military cultural competency, and have capability for interoperable data exchange.
- Providers in the networks be paid using the most contemporary payment approaches available to incentivize quality and appropriate utilization of health care services (i.e., using Medicare Access and CHIP Reauthorization Act of 2015 [MACRA] physician payment methodology being proposed by CMS).
- The highest priority access to the VHA Care System be provided to service-connected veterans, and low-income veterans also be of high priority.
- The current time and distance criteria for community care access (30 days and 40 miles) be eliminated.
- Veterans choose a primary care provider from all credentialed primary care providers in the VHA Care System.
- All primary care providers in the VHA Care System coordinate care for veterans.
- The VHA Care System provide overall health care coordination and navigation support for veterans.
- Veterans choose their specialty care providers from all credentialed specialty care providers in the VHA Care System with a referral from their primary care provider.

²⁰ Contracts for Hospital Care and Medical Services in Non-Department Facilities, 38 U.S.C. § 1703(a).

²¹ RAND Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment C (Care Authorities)*, 37, accessed February 16, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_C_Care_Authorities.pdf.

²² Non-VA Medical Care Program, VHA Directive 1601, (2013).

²³ Veterans Access, Choice, and Accountability Act of 2014, Pub. L. 113-146, 128 Stat. 1754, (2014).

²⁴ Veterans Access, Choice, and Accountability Act of 2014, Pub. L. 113-146, 128 Stat. 1754, (2014), as amended by Construction Authorization and Choice Improvement Act, Pub. L. No. 114-19, 129 Stat. 215, (2015). The Independent Assessment proposed that VA should "Develop and implement more sensitive standards of geographic access to care. VA should compare the 'one-size-fits-all' approach of driving distance to alternative standards that are more sensitive to differences between Veteran subgroups, clinical populations, geographic regions, and individual facilities. This

- Live more than 40 miles from the closest VHA facility with a full-time primary care provider
- Cannot be seen within 30 days of the date veterans' providers indicate they need to be seen.
- Cannot be seen within 30 days of veterans' preferred appointment date if providers have not provided a specific appointment date.

This standard is difficult to reconcile with other statutory priorities for VA care.²⁵ For example, under the *Choice Program*, a veteran with severe service-incurred health conditions may have no access to providers outside VHA, yet a veteran with no service-related disabilities does have such a choice.²⁶ Implementing the *Choice Program* has posed challenges, including difficulties arising from overlapping, but fundamentally different, care-purchasing authorities. Veterans, VHA staff, and community providers²⁷ have been confused because of conflicting requirements and processes in eligibility rules, referrals and authorizations, provider credentialing and network development, care coordination, and claims management.²⁸

Adding to the confusion is the fact that VHA, facing a 90-day deadline for implementing the program, outsourced the creation and management of its provider networks to two private contractors, thus blurring lines of responsibility and leaving both patients and providers confused about who exactly holds responsibility for what. In execution, the program has aggravated wait times and frustrated veterans, private-sector health care providers participating in networks, and VHA alike.²⁹

In October 2015, VA submitted a report to Congress that proposed legislation to harmonize the different purchased-care authorities into a single approach.³⁰ VA's report also set out a plan for establishing high-performing networks. The report acknowledged that "[n]o organization can excel at every capability," and that "[s]ervice delivery systems designed around core competencies . . . provide the highest potential value to their customers."³¹ As further articulated by Dr. David Shulkin, USH:

assessment highlighted the importance of time spent driving, mode of transportation, traffic, and availability of needed services as key considerations in assessing geographic access to care."

³¹ Ibid., 18.

COMMISSION ON CARE FINAL REPORT

It's become apparent that the VA alone cannot meet all the health care needs of U.S. veterans. The VA's mission and scope are not comparable to those of other U.S. health systems. Few other systems enroll patients in areas where they have no facilities for delivering care. Fewer still provide comprehensive medical, behavioral, and social services to a defined population of patients, establishing lifelong relationships with them. These realities, combined with the wait-time crisis, have led the VA to reexamine its approach to care delivery . . . [A]ddressing veterans' needs requires a new model of care: rather than remaining primarily a direct care provider, the VA should become an integrated payer and provider. This new vision would compel the VA to strengthen its current components that are uniquely positioned to meet veterans' needs, while working with the private sector to address critical access issues.³²

Analysis

VHA needs systemic transformation, and merely clarifying and simplifying the rules for purchased care, as proposed in the *Independent Assessment Report*, is not sufficient to achieve that goal. VHA must replace the arbitrary eligibility requirements and unworkable clinical and administrative restrictions of current purchased programs with the new VHA Care System, available to all enrolled veterans.

The VHA Care System is defined as VHA employed providers and facilities; Department of Defense (DoD) and other federally-funded providers and facilities; and community-based, VHA-credentialed community providers and facilities, forming integrated networks to deliver high-quality and high-access care to enrolled veterans across the United States. VHA may establish the networks with the use of national contractors or with internal resources, but networks should be developed with local VHA leadership input and knowledge to ensure their composition is reflective of local needs and veterans' preferences.

This new delivery model must preserve critical VHA programs and competencies that are unique to VHA or that are of higher quality or greater scope than is available in the private sector, either locally or nationally³³ They include specialized behavioral health care programs, integrated behavioral health and primary care (in patient-aligned care teams), specialized rehabilitation services, spinal cord injury centers, and services for homeless veterans.³⁴ These and similar programs and services are core competencies and special capabilities that serve the needs of combat veterans, veterans with conditions incurred or aggravated in service, and veterans reliant on safety-net services and supports.³⁵ Because of its unique capabilities and competencies, VHA should play an important role in expanding and enhancing the care of veterans across the United States by collaborating with local network providers to improve the

³² David J. Shulkin, "Beyond the VA Crisis — Becoming a High-Performance Network," *New England Journal of Medicine*, 374, (2016): 1003-1005, accessed June 15, 2016, <http://doi.org/10.1056/NEJMp1600307>.

³³ RAND Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment A (Demographics)*, accessed June 2, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_A_Demographics.pdf.

³⁴ Special capabilities like spinal cord injury care, which draw from specialty care available in the full-service hospitals in which they are currently provided, merit continued support and investment. Thus, in instances where VHA might no longer operate a full-service hospital that had once housed a spinal cord injury center, it would need to establish community partnerships to assure veterans would continue to receive the same high quality care.

³⁵ David J. Shulkin, "Why VA Health Care Is Different," *Federal Practitioner*, 33, no. 5 (2016): 9-11, <http://www.fedprac.com/home/article/why-va-health-care-is-different/c8da5ba1261bdb726bdddcbceea81f27.html>.

availability and quality of care in areas especially needed by veterans, such as mental health and rehabilitation.

Management and Oversight

VHA Care System networks will be built out in a well-planned, phased approach overseen by the new governing board, which will determine the criteria and sequencing for the phases, to ensure effective execution of the strategy. The timing and phasing criteria may include veteran service needs, access issues, quality issues, facility issues, and IT capabilities.

The networks within the VHA Care System will require ongoing management and evaluation of their performance. This process will be the responsibility of VHA management and board, with board oversight of network performance.

The governing board will oversee the budget for the VHA Care System. Local leadership will provide input on funding, and the local networks will determine their funding needs and submit their respective requests to the chief of VHA Care System (CVCS), formerly the undersecretary of health for VHA. The governing board will recommend to Congress the budget required to implement the VHA Care System, with multiyear appropriations. The local network leaders will have the flexibility to manage their respective network budgets based upon local needs. A key element of the new system will be combining a national strategy and local flexibility for managing the budget to allow for effective decision making to ensure veterans' needs are met.

Provider Payment

Providers in the networks should be paid using the most contemporary payment approaches available to incentivize quality and appropriate utilization of health care services (i.e., using Medicare Access and CHIP Reauthorization Act of 2015 [MACRA] physician payment methodology being proposed by CMS). MACRA is intended to move the health care industry away from a fee-for-service model to value-based payments.³⁶ Such a system is expected to drive improved quality and lower costs.³⁷

Care Administration

From a strategic perspective, service-connected disabled veterans should receive the highest priority access to the VHA Care System. This principle should guide access to all types and points of care. Veterans with limited financial means should also have high priority. If needed, cost sharing (applicable only to those who are non-service-connected disabled and not financially needy) can provide a means for offering broader choice. The current time and distance criteria for community care access (30 days and 40 miles) should be eliminated. VISN geography should also be eliminated as a factor in determining where veterans can access care. Eligible veterans should be permitted to receive care at any facility and by any provider in the VHA Care System, whether in a veteran's home VISN or not.

Choice and Care Coordination

The topic of choice was the most contentious issue considered by the Commission. Some Commissioners advocated complete choice of providers for veterans, with no requirement for

³⁶ "The Medicare Access CHIP Reauthorization Act (MACRA)" National Partnership for Families and Women, accessed June 6, 2016, <http://www.nationalpartnership.org/issues/health/macra.html>.

³⁷ Ibid.

COMMISSION ON CARE FINAL REPORT

care coordination by primary care physicians. Others advocated for a tightly managed model with VHA controlling access to community providers, as is done today. After considering the costs of various design options, the importance of care coordination, and the need for greater veteran access to both primary care and specialty care services, the Commission agreed to the following design principles:

- VHA will establish and credential community networks with a focus on quality of providers, access to comprehensive services, and utilization of VHA resources.
- Veterans will have complete choice of primary care providers within the VHA Care System.
- All primary care providers in the VHA Care System (including VHA providers, DoD and other federally funded providers, and community providers) will coordinate veterans' care.
- Specialty care will require a referral from a primary care provider.
- VHA will assume overall responsibility for care coordination and navigation for all enrolled veterans.

Quality of care must be a core element of network design and consistently monitored with metrics that are routinely used by the private sector. Accordingly, VHA must adopt standards that both ensure networks are composed of high-quality providers and set appropriate expectations of those providers. Critically, all providers in the networks must have fully interoperable IT platforms to allow for complete data exchange. Providers must work together to maximize patients' well-being using evidence-based protocols of care.

Lack of coordination among providers is a major quality and patient-safety issue throughout the U.S. health care system. It is important for VHA to coordinate the care it provides because it serves an especially vulnerable population that has more chronic medical conditions, behavioral health conditions, and individuals of lower socioeconomic status than the general medical population.³⁸ Veterans who receive health care exclusively through VHA generally receive well-coordinated care, yet care is often highly fragmented among those combining VHA care with care secured through private health plans, Medicare, and TRICARE. This fragmentation often results in lower quality, threatens patient safety, and shifts cost among payers.³⁹

VHA Care System will operate as outlined in Table 2 below.

Table 2. VHA Care System Operations

Key Component	Expectations
Choice	<ul style="list-style-type: none"> ▪ Veterans can choose a primary care provider from all credentialed primary care providers in the VHA Care System. ▪ Veterans can receive their care at any VHA Care System location across the country with coordination by their primary care provider.
Care Coordination	<ul style="list-style-type: none"> ▪ All primary care providers in the VHA Care System must coordinate care for veterans. Specialty care is exclusively accessed through referrals from primary care providers. ▪ Veterans can choose their specialty care providers from all credentialed specialty care providers in the VHA Care System with a referral from their primary care provider. ▪ Although primary care is traditionally defined as internal medicine or family practice, VHA may designate other specialty providers as primary care coordinators based on veterans' specific health needs (e.g., endocrinologists for diabetic patients, neurologists for patients with Parkinson's disease, OB/GYN for female patients). ▪ VHA will have overall responsibility of ensuring care coordination for veterans, including complex care navigation.

Scope of Provider Networks

In setting up networks within the VHA Care System, VHA must make critical tradeoffs regarding their size and scope. For example, establishing broad networks would expand veterans' choice, yet would also consume far more financial resources (i.e., taxpayer dollars) due to increased utilization or cost shifting. Currently, money VHA spends on expanding choice is not available to spend on other programs and services vital to its mission.⁴⁰

Health plans commonly limit the size and scope of networks as a cost-management tool, offering insurance products with narrow networks (managed care plans) or more open networks (preferred provider plans). Well-managed, narrow networks can maximize clinical quality by requiring participating clinicians to adhere to evidence-based protocols of care.⁴¹ Achieving high quality and cost effectiveness may constrain consumer choice. A patient's preferred doctor, clinic, or hospital may not be part of that smaller network or the narrow network may not offer sufficient geographic access for some patients.⁴²

VHA must balance these competing considerations. In doing so, it faces a variety of options. In addition to the scope of networks, for example, is the question of whether and how VHA will play a role in steering patients to different providers within the networks. This is another area involving tradeoffs among competing values and considerations. Private-sector health plans

COMMISSION ON CARE FINAL REPORT

often require all specialty care to be preapproved through a referral from a primary care physician. Managed care plans may also use prospective and concurrent utilization review and care management for hospitalization. For prospective reviews, patients must receive approval from their health plan before being admitted to the hospital to ensure the admission is clinically appropriate. Plans may also use concurrent utilization or case management for inpatient care to ensure the care and tests ordered and the length of stay in the hospital are appropriate.⁴³

The Commission carefully weighed these issues in recommending an approach. The Commission considered the effect of cost using various configurations of VHA services and community delivered services (CDS). Options considered by the commission include the following:

- **Recommended Option:** This option provides an integrated network of VHA, DoD and other federally funded providers, and community providers, credentialed by VHA. It requires veterans to attain a referral from their primary care provider to access specialty care.
- **CDS Alternative 1:** The main difference between this option and the *Recommended Option* is primary care, inpatient medical and surgical care, and some standard specialty care would not be eligible for CDS networks and would be accessed within VHA unless the *Choice Program* distance exception applies.
- **CDS Alternative 2:** The division of care between VHA providers and CDS network providers would be the same as for *CDS Alternative 1*; however, veterans would only need to consult their primary care provider before seeking specialty care, rather than obtaining a referral.
- **CDS Alternative 3:** This option would combine the broad network in the *Recommended Option*, but would have no referral or consultation requirement; thus, it would be an extremely generous benefits package.
- **Premium Support:** Under this scenario, enrollees who are younger than 65 would choose a subsidized insurance premium with cost sharing. Access to VA services, including special services, would be eliminated.
- **Eligibility Expansion:** Under this scenario the VA health care system would expand to allow all veterans, regardless of priority group.
- **Other-Than-Honorable Discharges:** A policy change for which individuals with other-than-honorable (OTH) discharge is outlined in Recommendation #17. This option would allow temporary eligibility for VA health care to those with an OTH discharge until the adjudication process to determine long-term eligibility took place.

⁴³ Paul B. Ginsburg, "Achieving Health Care Cost Containment Through Provider Payment Reform that Engages Patients and Providers," *Health Affairs*, 32, no. 5, (2013): 929-934, accessed June 20, 2016, <http://doi.org/10.1377/hlthaff.2012.1007>. While these approaches can help keep costs down, patients, doctors and hospitals can experience the process as bureaucratic interference in clinical care. To implement utilization management, health plans usually include a strong clinical appeals process that both doctors and patients can access to question the decisions made by administrators.

Below is a more detailed summary of the Commission's *Recommended Option*. Additional information, including cost projections for all of the options above, can be found in Appendix A.

Cost Model for Commission Recommended Option

This option would expand community care. At least initially, all care currently provided by VA would continue to be available through VA. In addition, expanded community care, also called CDS, would be provided by an integrated network consisting of providers (medical practitioners including physicians, midlevel practitioners and therapists, and hospitals and clinics) vetted by VHA. The CDS network would include all primary and standard specialty care; it would not include special-emphasis care (care that is provided in a substantially different way than by VHA).⁴⁴ In 2014, 68 percent of care would have been eligible for CDS networks at current VHA prices. A referral from a primary care provider would be required to receive specialty care. This referral could come from a provider either at VHA or from the community network (i.e., from any provider in the VHA Care System). In this scenario, we assumed all other characteristics of the VHA Care System would remain the same as under current policy. We assume that the *Choice Program* ends and that those formerly in the *Choice Program* will take advantage of the community care offered in the CDS networks.

Both CDS networks and traditional Care in the Community (CITC) are priced at Medicare allowable rates by matching Medicare fee schedule data to VA Health Service Categories.⁴⁵ A few benefits that are not covered by Medicare, such as dental, are priced at historic CITC unit costs. Cost sharing for CDS networks is assumed to be the same as that for care in VA facilities. For care shifting into the CDS networks, we assume VA is able to adjust resources such that only the equipment and national overhead portions of unit costs remain in VA facilities. Note that unit costs do not include costs associated with the physical building or nonrecurring maintenance; those costs are not modeled.

We expect that allowing enrollees to get primary and standard specialty care in the community will increase reliance for care provided in the community because many veterans would have a choice among a larger number of providers and would be more likely to have the option to receive care at a more convenient location. We also expect enrollment to increase because some eligible veterans would be induced to enroll by the prospect of having VA pay for them to see a provider in the community. We assume that 60 percent of eligible care shifts from VA facilities to CDS networks. Currently reliance is 34 percent. Under this scenario, we model reliance levels of 40, 50, and 60 percent, which correspond to reliance rates increases of approximately 18, 47, and 76 percent, respectively. These reliance increases apply only to CDS care, not CDS-eligible care that is provided in VA facilities. Although the choice of providers is expanded and wait times are potentially reduced in VA, there continues to be a requirement for a referral to access specialty care, as there is in the current system. We modeled enrollment increases of 5, 15, and

⁴⁴ Special-emphasis care includes: prosthetics and orthotics, recreational therapy, rehabilitative care, pharmacy, home-based primary care, spinal cord injury and disorders, some categories of long-term services and supports, mental health, and homeless care. We count all mental health as special-emphasis because mental health categories cannot easily be differentiated by care that is VA special-emphasis and care that is not.

⁴⁵ Medicare Allowable rates were provided by Milliman at the request of VA. They were produced using repricing performed at the area-specific level for inpatient, outpatient, and professional care. For services that were not repriced within an HSC, Medicare amounts were estimated.

COMMISSION ON CARE FINAL REPORT

20 percent for the low, middle and high estimates, which assume integrated, narrow, and well-managed networks that are designed and managed with cost as one of the major considerations. We also modeled an enrollment increase of 50 percent, more consistent with a less-managed, relatively broad network for which cost is a less important consideration. Finally, we assume that newly entering veterans who receive treatment in CDS networks because of this policy have a 20 percent utilization increase for new demand in CDS networks. Much of this care was formerly subject to sizable cost sharing with private insurance or Medicare and now would be subject to little, if any, cost sharing associated with VA-financed care.

There are a number of caveats associated with our estimates. These caveats are important, and to the extent that these assumptions do not hold, the estimates will be inaccurate. The estimates do not include savings and costs of reducing or repurposing infrastructure, or effects on VA's teaching, research, and emergency preparedness missions. Medicare allowable rates are assumed adequate to provide all veterans with robust CDS networks in their local areas. For care priced at historic CITC rates, national average rates are assumed to represent future rates. Shifting care into CDS networks does not affect the unit cost of care that remains in VA facilities. Reductions in the volume of care within VA facilities, and potentially adverse effects on quality, are not addressed. Other than equipment and national overhead, the costs of care shifting out of VA facilities are phased out concurrently with other effects in the model. Finally, estimates do not include administrative costs associated with CDS networks; these costs could be substantial.

Figure 1 displays estimates for the *Recommended Option*. Estimates for well-managed, narrow networks range from \$65 billion to \$85 billion in 2019, with a middle estimate of \$76 billion. The middle estimate is moderately above the baseline projection of \$71 billion. Although reliance and enrollment increases push VA budgetary costs up, the switch from VA unit costs to the less costly Medicare allowable rates for CDS networks and CITC mitigate the increases. The estimate for the less-managed, broader network scenario is \$106 billion in 2019, illustrating that costs could increase markedly if governance of the network places less importance on cost or if VA were unsuccessful in tightly managing the network.

This model is described more fully in Appendix A, along with models for a range of other options, some of which are previously described in this section. Consult Appendix A for more details on the technical assumptions necessary to understand the results presented here. The assumptions and caveats detailed in Appendix A play a critical role in our estimates, and any deviation from these assumptions could substantially affect the estimates.

Figure 1. Projected Costs of Recommended Option

Mitigating Risks

Choice involves tradeoffs. Reducing drive times to see a doctor may lead to longer wait times, for example, if it induces substantially more veterans to seek more care.⁴⁶ VHA reliance on contracting could also have unintended consequences for already underserved communities. Providers in such communities who join the local VHA network may decide to limit the number of Medicare and Medicaid patients they accept into their practices. In other, highly concentrated health care markets, which are increasingly common throughout the United States, VHA may not be able to contract for care in the community except at higher prices.⁴⁷ Such circumstances underscore the importance of VHA retaining the option of building its own capacity.

Policymakers must also carefully weigh concerns that leaders of seven major veterans organizations expressed in a recent joint letter in which they warned “choice should never be the ultimate goal of a health care system designed to meet the unique needs of veterans.”⁴⁸ These organizations do not support providing unfettered choice, and the VSO leaders stated that “any health care reform proposal that elevates the principle of ‘choice’ above all other clinical considerations would have severe consequences for veterans who rely on VA, resulting

⁴⁶ RAND Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment B (Health Care Capabilities)*, 284, accessed May 2, 2016, http://www.va.gov/opa/choiceact/documents/assessments/assessment_b_health_care_capabilities.pdf.

⁴⁷ David M. Cutler and Fiona Scott Morton, “Hospitals, Market Share, and Consolidation,” *Journal of the American Medical Association*, 310, no. 18, (2013): 1964-1970, accessed June 20, 2016, <http://doi.org/10.1001/jama.2013.281675>.

⁴⁸ Garry J. Augustine, Disabled American Veterans et al., letter sent to Commission on Care, April 29, 2016.

COMMISSION ON CARE FINAL REPORT

in less ‘choice’ rather than the intended desire for more health care options for many disabled veterans.”⁴⁹

The Commission has addressed this concern in several ways, including the following:

- recommendations to substantially improve VHA operations, thereby enhancing the attractiveness of using VHA providers and facilities by enrolled veterans
- VHA control of network design
- VHA Care System governing board oversight of network execution and phasing
- high standards for community provider participation, including credentialing, military competence, and quality and utilization performance
- VHA oversight of care coordination and navigation
- requirement of primary care referral for specialty care

The Commission recognizes that greater choice of provider can result in higher utilization of health care services, which increases costs. This risk can be mitigated by recommendations in this report that will produce cost savings. To incentivize cost mitigation, all cost savings associated with improved efficiency and operations should be reinvested into the VHA Care System. Examples of cost mitigation strategies include the following:

- recovering third-party payments owed to VHA more effectively
- maintaining VHA as a secondary payer when veterans have other health insurance and treatment is for non-service-connected care
- increasing cost-sharing or changes in eligibility and/or benefit design could also substantially contain the projected costs of increasing provider-choice
- reducing fixed costs of underutilized facilities and services
- managing the supply chain to produce cost savings
- improving facilities to increase provider productivity (e.g., increase in outpatient exam rooms)
- adopting information technology that improves the quality and efficiency of care

Effectively implementing and managing integrated networks will require extensive changes in the governance and leadership of VHA, as well as flexible and smart procurement policies and

⁴⁹ Ibid.

contracting authorities, as discussed elsewhere in this report. The highest priority for standing up networks should be locations where VHA quality of care is deficient or capacity is strained.⁵⁰

Where capacity constraints exist within networks, first priority for care should go to those veterans with greatest medical need, followed by service-connected disabled veterans and indigent veterans.⁵¹ VHA should develop processes and procedures for insuring that veterans have the knowledge and assistance they need to make informed health care decision and to navigate effectively through the expanding health care networks. By employing strategies proven by other managed care plans, VHA will find administrative means to guard against inappropriate treatment, wasteful spending, and fraud.

As many surgical and medical procedures that previously required inpatient hospital stays have routinely become outpatient procedures, there continues to be a substantial shift from inpatient to outpatient care.⁵² Consequently, to ensure improved access to care for veterans, the VHA Care System and long-term plans for facilities should focus on creating a robust ambulatory network and reshaping inpatient resources to match expected demand. Additionally, to inform veterans' and providers' decisions and create increased accountability for performance, all VHA and community network providers and facilities must provide transparent information on inpatient and outpatient quality, service, and access using the same performance metrics, including those used by Medicare.

Implementation

Legislative Changes

- Enact legislation amending 38 U.S. Code, Chapter 17 to consolidate existing purchased-care authorities and authorize the SECVA to furnish enrolled veterans needed hospital care and medical services through agreements with providers the SECVA deems meet quality standards the SECVA will establish. Veterans would be eligible for community care on the same basis as for VHA-furnished care, and current wait time and geographic distance criteria should no longer be applicable.

VA Administrative Changes

- Develop national policy to govern local establishment of networks, and in doing so, focus its design and long-term planning on creating a robust ambulatory capability and reshaping inpatient resources to match expected demand.
- Establish standards that community providers must meet to qualify for participation in community networks, to include becoming fully credentialed, meeting patient-access criteria, demonstrating high-quality clinical outcomes and appropriate use decisions, demonstrating military cultural competency, and having capability for interoperable data exchange.

⁵⁰ Information on what medical centers are deficient in their care is available, for example, from the VHA's own Strategic Analytics for Improvement and Learning (SAIL) data.

⁵¹ It would seem prudent to begin such phased development by piloting that effort, and limiting the scope of unfettered choice to service-connected veterans.

⁵² Mehul V. Raval et al., "The Importance of Assessing Both Inpatient and Outpatient Surgical Quality," *Annals of Surgery*, 253, 3, (2011): 611-618, accessed June 20, 2016, <http://www.ncbi.nlm.nih.gov/pubmed/21183845>.

COMMISSION ON CARE FINAL REPORT

- Establish systems to ensure that all primary care providers in the VHA Care System can effectively coordinate veterans' care.
- Provide veterans navigation services for complex care needs, including information needed by patients and their families for informed decision making about treatments and providers. Navigation services should assist veterans and their families with eligibility, cost-sharing, and other administrative issues.
- Establish policies and procedures to ensure that VHA provider as well as community providers within each network, provide transparent information (using the same metrics) on care-quality, service, and access.
- Eliminate the practice of cross-country referrals if quality care is available locally.
- Employ the most current payment approaches that incentivize quality and appropriate use of health care services.

Other Department and Agency Administrative Changes

- None required.

Clinical Operations

Recommendation #2: Enhance clinical operations through more effective use of providers and other health professionals, and improved data collection and management.

Problem

A shortage of providers and clinical managers, combined with inadequate support staff and policies that fail to optimize the talents and efficiency of all health professionals, detract from the effectiveness of VHA health care.

The problem starts with inadequate numbers of providers. Ninety-four percent of VHA sites with clinically meaningful access delays indicated that increasing the number of licensed independent practitioners was critical or very important to increasing access.⁵³

The Commission Recommends That . . .

- VHA increase the efficiency and effectiveness of providers and other health professionals and support staff by adopting policies to allow them to make full use of their skills.
- Congress relieve VHA of bed closure reporting requirements under the Millennium Act.
- VHA continue to hire clinical managers and move forward on initiatives to increase the supply of medical support assistants.

At the same time, ineffective use of providers and other health professionals contributes to suboptimal productivity. Highly trained clinical personnel are often unable to perform at the top of their license, meaning they spend much of their time performing tasks that should be done by support staff.⁵⁴ For example, doctors and nurses often escort patients; clean examination rooms; take vital signs; schedule; document care; and place the orders for consultations, prescriptions, or other necessary care that could be done more cost effectively by support staff. Twenty-three percent of VHA providers identified “not working to top of provider licensure” as a barrier in health care provision.⁵⁵

VHA is also currently failing to optimize use of advanced practice registered nurses (APRNs). APRNs are clinicians with advanced degrees who provide primary, acute, and specialty health care services.

Background

A large part of the VHA’s problem with inadequate clinical support staff derives from its difficulties in hiring, retaining, and training medical support assistants (MSAs). These individuals answer phones, schedule care, and verify health care eligibility, among other duties.

⁵⁵ *Ibid.*, 95.

COMMISSION ON CARE FINAL REPORT

Congress has recently given VHA the flexibility to offer MSAs market-based pay rates.⁵⁶ VHA is changing cumbersome rules that have made hiring new MSAs exceptionally time-consuming.⁵⁷

VHA is working to resolve its problems with resource allocation in clinics. For example, the agency has committed to increasing use of clinical managers to help medical centers better match resources to patient demand. Widely used by other health care systems, clinic managers enhance operations by ensuring that telephone protocols, scheduling, and clinic workflow are operating at peak efficiency. They also ensure that staff members are assigned appropriate caseloads and are meeting productivity standards and wait time targets and that administrative staff has appropriate training in scheduling, coding, and/or documentation.

Many states have already taken the steps to ensure APRNs have full practice authority. VHA is working to do the same, which will allow a vast increase in the number of VHA clinicians available to treat patients independently.⁵⁸

To effectively manage clinician supply for the inpatient setting, administrators require accurate bed count data. Currently in VHA, data integrity of bed counts is compromised as a consequence of disclosure requirements of Congress. VHA is required by statute to complete a complicated reporting, approval, and notification process when it closes hospital beds.⁵⁹ To avoid the reporting requirements some VA medical centers count beds as unavailable indefinitely. This action can skew occupancy rates and thwart planning activities. VHA developed its guidance in part to satisfy the Millennium Act⁶⁰ and other requirements that essentially froze beds at FY 1998 levels.⁶¹

Analysis

VHA has taken a number of measures to address data integrity issues. VHA has started hiring clinical managers to assist in managing resources for effective performance. VHA has made efforts to address problems affecting supply and training of MSAs. Additionally, VHA has recently proposed a rule that would authorize full practice for APRNs working within the agency.⁶²

These measures by themselves, however, will not be sufficient to solve the current problems. VHA must ensure all facilities have enough support positions—both clerical and clinical—to

⁵⁶ Sloan D. Gibson, Deputy Secretary, Department of Veterans Affairs, presentation to Commission on Care, April 18, 2016.

⁵⁷ 38 U.S.C. § 7401(3)(A)(iii).

⁵⁸ Establishing Medication Prescribing Authority for Advanced Practice Nurses, VHA Directive 2008-049, (2008).

⁵⁹ Inpatient Bed Change Program and Procedures, VHA Handbook 1000.01, (2010).

⁶⁰ The Veterans Millennium Health Care and Benefits Act, Pub. L. No. 106-117, 113 Stat. 1545, Sec. 301. Title III of the Millennium Act prohibits the secretary from closing in any fiscal year more than 50 percent of the beds within a department medical center unless the secretary first submits to the veterans' committees a justification for such closure and waits to take action on a closure until 21 days after the submission of the report. It also requires the secretary to report annually to the veterans committees on bed closures during the preceding fiscal year.

⁶¹ Extended Care Services, 38 U.S.C. § 1710B(b) requires staffing for extended care to remain at FY 1998 levels.

⁶² "VA Proposes to Grant Full Practice Authority to Advanced Practice Registered Nurses," Department of Veterans Affairs, accessed June 3, 2016, <http://www.va.gov/opa/pressrel/pressrelease.cfm?id=2793>.

enable all clinicians to work at the top of their licenses and to avoid problems with turnover, unexpected staff absences, and surges in patient demand.⁶³

VHA must have authority to pay competitive rates for the personnel it needs. This goal would be accomplished in part by adopting Recommendation #15 of this report for creating a new personnel system under Title 38 for all VHA employees. Currently, for example, clinical managers and practitioners earn far more in the private sector.⁶⁴

As VHA develops improved clinic management tools such as the Health Operations Dashboard, these tools draw from clinical data, patient data, and other sources to allow managers to make decisions using real-time data.⁶⁵ To be effective tools, the data fed into them must be accurate. Relieving VHA from some of the reporting requirements of the Millennium Act will help accomplish effective use of the dashboard for inpatient management.

Implementation

Legislative Changes

- Create a new alternative personnel system under Title 38 authority as mentioned in Recommendation #15.
- Eliminate bed reporting requirements under the Millennium Bill, and require VHA to report new beds as closed, authorized, operating, staffed, or temporarily inactive within 90 days of enactment.

VA Administrative Changes

- Develop policy to allow full practice authority for APRNs.
- Develop leadership tracks, including clinical and group practice managers, for ambulatory settings.
- Develop training programs for medical support assistants (MSAs).
- Modify policy in VHA Handbook 1000.01, Inpatient Bed Change Program and Procedures, as appropriate.

Other Department and Agency Administrative Changes

- None required.

⁶³ McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment E (Workflow—Scheduling)*, 17-18, accessed June 3 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_E_Workflow_Scheduling.pdf.

⁶⁴ For example, Salaries.com listed a median salary for Clinic Manager III (a manager of a clinic with more than 50 physicians) in Dallas, TX, as \$94,000.⁶⁴ The pay grade assigned for this position is GS-13, which pays about \$73,800 in the first step and increases up to \$96,000. Office of Personnel Management, *Schedule 1 General Schedule*, accessed March 31, 2016, <https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/pay-executive-order-2016-adjustments-of-certain-rates-of-pay.pdf>.

⁶⁵ Sloan D. Gibson, Deputy Secretary for Veterans Affairs, presentation to Commission on Care, April 18, 2016.

COMMISSION ON CARE FINAL REPORT

Recommendation #3: Develop a process for appealing clinical decisions that provides veterans protections at least comparable to those afforded patients under other federally-supported programs.

Problem

All federal providers and most health insurers have processes to ensure that beneficiaries have enforceable protections that allow them to obtain medically necessary care within their health benefits package.⁶⁶ Such processes are imperative, particularly for care plans using capitated payment models for which there are incentives to conserve resources. Most veterans, and even their advocates, are unsure of VHA's process for resolving clinical disputes. This may be because there is not one policy in place for VHA, but 18 (one for each Veteran Integrated Service Network [VISN]).⁶⁷

The Commission Recommends That . . .

- VHA convene an interdisciplinary panel to assist in developing a national revised clinical-appeals process.

As part of the MyVA initiative, the SECVA has set a goal of world-class service for veterans, including a proactive patient advocacy team that is integrated into patient-centered care and cultural transformation plans.⁶⁸ The processes in place for patient grievances and central protections to ensure access to medically necessary care remain poorly understood despite these efforts. Also, they may be less comprehensive and fair than appeals processes private health insurers and other federal payers are required to provide.⁶⁹

Background

VHA policy has long required medical centers to operate a patient advocate program to address patient complaints.⁷⁰ In 1996, Congress enacted an eligibility reform statute that, for the first time, gave enrolled veterans access to a uniform benefits package.⁷¹ In implementing that law, VHA conducted a systemwide review of how clinical disputes were handled and consequently instituted an external appeal system in FY 2000. The policy, as outlined in a subsequent directive, allowed VISNs to request external professional boards to conduct impartial reviews of clinical determinations.⁷² That directive also addressed a process for internal clinical appeals. It stated as policy that patients or their representatives who have disputes regarding clinical determinations or services pertaining to provision or denial of care that are not resolved at the facility level must have access to a fair and impartial review of those disputes that could result in a different and/or improved clinical outcome. That policy requires VISN directors to have written policy and procedures in place for how internal appeals are to be handled. Under this policy, VISNs still have authority to request an external review at any time during the clinical

⁶⁹ MaryBeth Musumeci, *A Guide to the Medicaid Appeals Process*, accessed June 3, 2016, <https://kaiserfamilyfoundation.files.wordpress.com/2013/01/8287.pdf>. VHA Clinical Appeals, VHA Directive 2006-057 (2006).

⁷⁰ VHA Clinical Appeals, VHA Directive 2006-057 (2006).

⁷¹ Veterans' Health Care Eligibility Reform Act of 1996, Pub. L. No. 104-262, 110 Stat. 3177 (1996).

⁷² VHA Clinical Appeals, VHA Directive 2006-057 (2006).

appeals process.⁷³ Although the directive itself expired in 2011, it continues to serve as guidance because it has not been renewed or replaced.

VHA policy directs that all facilities have a patient advocate office to manage and attempt to resolve complaints. That office, which can serve as the liaison between patients and clinicians, is generally the first stop for veterans who are dissatisfied with a clinical decision.⁷⁴ If a clinical issue is not resolved at the point of the service, it generally goes to the facility director, who is to provide veterans written notification of the facility's decision and inform veterans about the VISN's appeals process. Under the same policy directive, veterans may appeal the facility decision to the VISN director. That official, or a clinical review panel that he or she establishes, is to render a decision within 30 days (or 45 days if the director requests an external clinical review).⁷⁵ Should the VISN director agree with the facility, he or she must notify the veteran that the decision is final or may refer the matter to a VACO office to arrange for an external review.⁷⁶

The VHA process does not appear fully comparable to procedures required under other federal and federally-supported health care programs. For example, under the Affordable Care Act, health care plans are required to provide external reviews to beneficiaries whose internal appeals have been denied.⁷⁷ Unlike those and other appeals processes, veterans have no right to external review; such review is at the discretion of the VISN director. Medicare has an extensive review process for clinical disputes between its managed care organizations and beneficiaries. Beneficiaries have the right to an internal appeal with an option for an expedited review, an internal reconsideration of the initial review, an independent review, a hearing with an administrative law judge, a review by the Medicare Appeals Council and, finally, a federal district court review.⁷⁸ Medicaid has requirements for localities to review appeals from its beneficiaries and for states to offer timely access to fair hearings to determine whether managed care organizations have denied or terminated medically necessary care.⁷⁹ Although VHA's timeframe for decision making seems reasonable, the national policy makes no provision for an expedited review, unlike Medicare managed care organizations and plans providing health benefits to federal employees. VHA's policy is also silent on meeting with veterans to hear their cases much less hold hearings during any point of the appeal. Unlike Medicaid, VHA also lacks any provision for service-continuity while the matter is being appealed. The Commission recommends that VHA develop a revised clinical-appeals process that provides veterans protections at least comparable to those afforded patients under other federal and federally-supported programs, including, at a minimum, a right to an external review at the veteran's discretion.

COMMISSION ON CARE FINAL REPORT

Implementation***Legislative Changes***

- None required.

VA Administrative Changes

- Convene an interdisciplinary panel to assist in developing a revised clinical-appeals process and policy that includes all care provided within the VHA Care System, to include representation from Patient Care Services, MyVA's Patient Advocates and Veterans Experience Program, the Office of Equity, the National Center for Ethics in Health Care, and the Office of Access and Clinical Administration. VHA should have that panel examine and offer recommendations regarding the following:
 - Each level of review in the clinical-appeals process – from the facility's initial reconsideration to a final decision by the VISN director to assess the fairness and impartiality in those processes compared to Medicare Managed Care and Medicaid appeals processes and private-sector managed care providers' best practices.
 - Whether VHA should establish a uniform national clinical appeals process.
 - The advisability of requiring review panels consisting of individuals such as attorneys, clinicians, case managers, patient advocates, and administrators to review clinical appeals.
 - Whether hearings or judicial reviews are appropriate at any level of the appeals process.
 - Whether resolutions of clinical appeals are equitable for all types of veterans (service-connected or non-service-connected, by racial or ethnic group, by age, or gender).
 - Options for increasing veterans' awareness of the clinical-appeals process.
- Publish the new clinical appeals policy and process for comment and input by veterans, VHA business partners, and other stakeholders.
- Once the new policy is finalized, VHA must train staff on the new process.

Other Department and Agency Administrative Changes

- None required.

Recommendation #4: Adopt a continuous improvement methodology to support VHA transformation, and consolidate best practices and continuous improvement efforts under the Veterans Engineering Resource Center.

Problem

VHA has not effectively empowered its staff to identify problems and make changes to improve the overall quality of care.

Best practices exist in pockets of VHA; however, communication and support for implementation appear to be challenges. Various facilities indicate best practices are in place but seem isolated rather than widely adopted. Facilities often struggle to implement best practices, and information sharing is limited and ad hoc.⁸⁰

VHA has a program of systems engineering — the Veterans Engineering Resource Center (VERC) — that can assist with transformation efforts, but it is not well known throughout VHA and until recently has been underutilized.

The Commission Recommends That . . .

- The Veterans Engineering Resource Center (VERC) be tasked to assist in transformation efforts, particularly in areas such as access and in areas that affect systemwide activities and require substantial change, such as human resources management, contracting, purchasing, and information technology.
- The many idea and innovation portals within VHA be consolidated under VERC.
- A culture to inspire and support continuous improvement of workflow processes be developed and fully funded.
- VHA's reengineering centers be enabled to proactively identify problem areas within the system and offer assistance.

Background

To become a truly veteran-centric care provider, VHA is working to become a learning organization.⁸¹ Learning organizations focus on worker competency rather than on rules compliance. Instead of using results to identify high- and low-performers, VHA will use this information to identify opportunities to intervene with training or other resources to improve employees' performance universally. Employees and patients should benefit from this approach because it values listening and encourages risk taking and innovation.

VA and VHA have adopted the tenets of LEAN Six Sigma as a systemic change approach to move the system forward. This methodology employs a rigorous define, measure, analyze, improve, and control approach to systemic change. LEAN, initially used by manufacturers, has been used successfully by many health care organizations.⁸² The goal of implementing LEAN practices is to eliminate waste, ensuring that any work done adds value. The MyVA plan calls for MyVA districts and the Office of Policy and Planning to ensure the transmission of best practices and the adopting of LEAN throughout the enterprise to provide a more comprehensive view of quality that balances a results-oriented approach with more process-

⁸⁰ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment F (Workflow—Clinical)*, 14 and A-2 accessed January 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_F_Workflow_Clinical.pdf.

⁸² MyVA Integrated Plan, Department of Veterans Affairs, July 30, 2015, 12, accessed June 30, 2016, http://www.va.gov/opa/myva/docs/myva_integrated_plan.pdf

COMMISSION ON CARE FINAL REPORT

oriented practice.⁸³ So far these efforts have been guided by trial and error, rather than directives and adopting a LEAN, process-driven model.⁸⁴ VHA must sustain its commitment to LEAN Six Sigma as a continuous improvement methodology.

VHA will have to use VERC staff and other trained staff members to ensure that principles of LEAN Six Sigma are applied at every level of the system. VERC has the mission to propose, develop, and facilitate innovative solutions to challenges within VHA health care delivery through the integration of systems engineering principles.

With VERC's reach already extending into access to care, health policy, population health, LEAN management, business systems, clinical systems, safety systems, and innovation, all other programs and initiatives become redundant or ancillary. VHA must assess its new system for best practice diffusion to ensure that selected practices are being appropriately scaled. This goal can best be achieved by collapsing all related efforts into VERC.

There are a number of emerging best practices within the health care sector that apply to all aspects of VHA – health care capabilities, staffing, access, supplies, and facilities – and involve the testing, dissemination, and application of procedures or systems that have been shown to improve approaches, processes, or systems.⁸⁵ VHA needs to have the opportunity to fully leverage and build on institutional strengths by implementing best practices.

VHA has recently developed the Diffusion of Excellence Initiative, which is designed to serve as the mechanism for improving practice through a combination of targeted national guidance and nationally-supported local best practice sharing and innovation.⁸⁶ Its organizational structure includes a governance board chaired by the USH, a Diffusion Council, and action teams responsible for implementing promising practices.

VHA also has many business lines charged with disseminating best practices information, including VERC, Systems Redesign SharePoint – Center for Improvement Education, VA Center for Innovation, MyVA – Best Practices in LEAN, MyVA Blog, MyVA Performance Improvement Hub, Knowledge Management System–Improvement in Action (I-ACT), VA Idea House, VA Pulse: Promising Practices Consortium, Evidence-based Synthesis Program (ESP), Quality Enhancement Research Initiative (QUERI), the Annual Conference on the Science of Dissemination and Implementation, and the Diffusion of Excellence Initiative.

Analysis

LEAN Six Sigma offers VHA a methodology to effect change and VERC offers VHA the agents to lead its implementation. VHA must consolidate its transformational tools, including its best

⁸³ MyVA Integrated Plan, Department of Veterans Affairs, July 30, 2015, 21, accessed June 30, 2016, http://www.va.gov/opa/myva/docs/myva_integrated_plan.pdf

⁸⁴ The MITRE Corporation, Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment F (Workflow—Clinical), viii accessed January 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_F_Workflow_Clinical.pdf.

⁸⁵ Institute of Medicine of the National Academies, *Transforming Health Care Scheduling and Access: Getting to Now*, 41, accessed January 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_D_Access_Standards.pdf.

⁸⁶ Sloan D. Gibson, Deputy Secretary for Veterans Affairs, Department of Veterans Affairs, Building on Excellence, 67, presentation to Commission on Care, April 18, 2016.

practice repositories within VERC. The VERC uses a systemic change process to streamline workflow and procedures by eliminating waste and redundancy to ensure that every step in the process adds value. The VERC offers services to VHA health care facilities upon request, but VHA would substantially benefit if the service was authorized to perform outreach to ensure awareness across the VHA Care System.⁸⁷

Until developing the Diffusion of Excellence Initiative, VHA lacked a uniform way to scale and optimize best practices throughout the enterprise. Although the Diffusion Initiative is initially targeting best practices from within VHA, to be successful, a long-term plan should also allow for the adoption of best practices from the private sector and other government sectors (e.g., the Medicare program related to pricing, contracting, privatization, value-based purchasing, management, and oversight). Plans should also allow for adaptation at the local and regional levels to reflect respective differences in provider supply, veteran needs, and marketplace characteristics.⁸⁸

VHA has multiple offices and sites invested in system reengineering, continuous process improvement, and best practices implementation. Repositories of best practices do not get information to the intended person or group that could benefit from the information and are dependent upon VHA employees knowing they exist.⁸⁹

VHA's National Leadership Council has proposed consolidating these best practice repositories under the VERC, which now serves within the Office of Organizational Excellence. Until recently, VERC has been underutilized because it is not known throughout the enterprise.⁹⁰

QUERI is a system that identifies evidence-based care practices that may be scaled for systemwide implementation. QUERI was integrally involved in the transformation of VHA from a largely hospital-based system to one centered on primary care⁹¹ and is now integral to the collaborative endeavor to transform VHA into a learning organization. QUERI recently released a policy brief that indicated veterans' reliance on VHA was strongly correlated to economic factors such as unemployment rates and availability of other health care coverage.⁹²

VA should use a systematic, continuous performance improvement process to improve access to care. Although many VA facilities achieve very high-performance ratings on key access and quality measures, a systematic effort is needed to improve performance. These efforts need to

⁹² Christine Yee, Austin Frakt, and Steven Pizer, U.S. Department of Veterans Affairs, "Economic and Policy Effects on Demand for VA Care," Partnered Evidence-based Policy Resource Center, Policy Brief, March 2016, accessed June 21, 2016, http://www.queri.research.va.gov/partnered_evaluation/YeeFraktPizer.pdf.

COMMISSION ON CARE FINAL REPORT

be embedded into routine use across the VA system. The best solutions should be adjusted to reflect local needs and designed to respond to veterans' preferences, needs, and values.⁹³

A systems approach to health care is “one that applies scientific insights to understand the elements that influence health outcomes, models the relationships between those elements, and alters design, processes, or policies based on the resultant knowledge in order to produce better health at lower cost”⁹⁴ and would benefit VA greatly, especially with resources like VERC to serve as a guide.

Emerging best practices have improved health care access and scheduling in various locations and serve as promising bases for research, validation, and implementation.⁹⁵ A variety of quality improvement organizations are involved in establishing and maintaining standards in health care as well as developing measures for the monitoring and assessment of these standards, including The Centers for Medicare & Medicaid Services, the Joint Commission, the National Committee for Quality Assurance, and the National Quality Forum.⁹⁶

The tools of operations management, industrial engineering, and systems approaches are successful in increasing process gains and efficiencies. In particular, a wide range of industries have employed systems-based engineering approaches to address scheduling issues, among other logistical challenges.⁹⁷

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- Consolidate all best practices and continuous improvement portals under VERC to provide a more accessible and comprehensive approach to best practice sharing and adoption.

Other Department and Agency Administrative Changes

- None required.

Health Care Equity

Recommendation #5: Eliminate health care disparities among veterans treated in the VHA Care System by committing adequate personnel and monetary resources to address the causes of the problem and ensuring the VHA Health Equity Action Plan is fully implemented.

Problem

The Office of Health Equity (OHE), tasked with eliminating health disparities by building cultural and military competence within VHA, has not been given the resources or level of authority needed to be successful. Until VHA leadership establishes the elimination of health care disparities as a critical strategic priority and commits the resources required to address this problem, health care disparities will continue to persist among veteran patients.

The Commission Recommends That . . .

- VHA work to eliminate health disparities by establishing health care equity as a strategic priority.
- VHA provide the Office of Health Equity adequate resources and level of authority to successfully build cultural and military competence among all VHA Care System providers and employees.
- VHA ensure that the Health Equity Action Plan is fully implemented with adequate staffing, resources, and support.
- VHA increase the availability, quality, and use of race, ethnicity, and language data to improve the health of minority veterans and other vulnerable veteran populations with strong surveillance systems that monitor trends in health status, patient satisfaction, and quality measures.⁹⁸

A systematic review of VHA in 2015 identified the existence of racial and ethnic health inequalities. Health care disparities exist among veterans and especially among minority and vulnerable veterans.⁹⁹ VHA cannot transform veterans' health care to enhance quality, access, choice, and well-being unless these health care disparities are addressed and eliminated. VHA has a plan for addressing these issues—the Health Equity Action Plan (HEAP)—but it has not been fully implemented.

Background

It is time to refocus, reinforce, and repeat the message that health disparities exist and that health equity benefits everyone.¹⁰⁰

Across the nation, health care systems are raising awareness about health care equity, inequality, and disparities.¹⁰¹ The growing incidence of health care disparities and inequities is said to be ascribed to individual and collective cultural indifference on the part of health care

⁹⁸ Kathleen G. Sebelius, Secretary, Department of Health and Human Services, *HHS Action Plan to Reduce Racial and Ethnic Health Disparities: A Nation Free of Disparities in Health and Health Care*, accessed March 30, 2016, http://www.minorityhealth.hhs.gov/npa/files/Plans/HHS/HHS_Plan_complete.pdf.

⁹⁹ Department of Veterans Affairs, *Evidence Brief: Update on Prevalence of and Interventions to Reduce Racial and Ethnic Disparities within the VA*, accessed May 19, 2016, <http://www.hsrd.research.va.gov/publications/esp/HealthDisparities.pdf>.

¹⁰⁰ Kathleen G. Sebelius, Secretary, Department of Health and Human Services, *HHS Action Plan to Reduce Racial and Ethnic Health Disparities: A Nation Free of Disparities in Health and Health Care*, accessed March 30, 2016, http://www.minorityhealth.hhs.gov/npa/files/Plans/HHS/HHS_Plan_complete.pdf.

¹⁰¹ Centers for Disease Control and Prevention, *CDC Health Disparities and Inequalities Report – United States, 2013*, accessed April 5, 2016, <http://www.cdc.gov/mmwr/pdf/other/su6203.pdf>.

COMMISSION ON CARE FINAL REPORT

providers and the health care system as a whole.¹⁰² A health disparity is a particular type of health difference that is closely linked with social or economic disadvantage. Health disparities adversely affect groups of people who have systematically experienced greater social and/or economic obstacles to health based on racial or ethnic group, gender, age, sexual orientation, military era, geographic location, religion, socioeconomic status, mental health, cognitive/sensory/physical disability, and other characteristics historically linked to discrimination or exclusion.¹⁰³

The United States is becoming increasingly diverse, with racial and ethnic minorities making up more than 36 percent of the population.¹⁰⁴ Indicators of overall health, such as life expectancy and infant mortality, have improved for most Americans; however, some minorities still face comparatively greater likelihood of preventable disease, death, and disability.¹⁰⁵

Although the country's veteran population is projected to decline from 22 million to 14.5 million by 2040, the percentage of minority veterans will increase from 20 percent to 34 percent during the same period.¹⁰⁶ Currently, African Americans make up 11 percent of the veteran population, and Hispanics, 6 percent.¹⁰⁷

Survey data show that minority veterans use VA health care more than White veterans, as shown below:¹⁰⁸

- African American: 38 percent
- Hispanic: 34 percent
- American Indian/ Alaska Native: 38 percent
- White: 32 percent

¹⁰² G.L.A. Harris, "Reducing Healthcare Disparities in the Military Through Cultural Competence," *JHSA* (2011), 146.

¹⁰⁷ U.S. Census Bureau, *American Community Survey, Public Use Microdata Sample (PUMS)*, 2011. Department of Defense, *Population Representation in the Military Services Fiscal Year 2011 Report*, accessed April 5, 2016, http://www.va.gov/vetdata/docs/SpecialReports/Minority_Veterans_2011.pdf

¹⁰⁸ Reliance projections here are based on ambulatory care utilization. Westat, *2015 Survey of Veteran Enrollees' Health and Use of Health Care*, 82, accessed May 19, 2016,

http://www.va.gov/HEALTHPOLICYPLANNING/SoE2015/2015_VHA_SoE_Full_Findings_Report.pdf.

Survey data on racial and ethnic minority veterans' use of VHA health care offer revealing insights on current equity issues:¹⁰⁹

- Fifty-seven percent of African Americans indicated they are more likely to use VA as their primary source of health care as compared to 45 percent of Whites.¹¹⁰
- The percentage of African Americans who reported they use VA for all or most of their care needs is 18 percent higher than the percentage of Whites who do so.¹¹¹
- A higher percentage of Whites assessed their health to be good or excellent than did African Americans.¹¹²

Analysis

VHA Office of Health Equity

VA created the OHE in 2012 to identify health care inequities, understand the cause of them, and bring to clinical practice interventions intended to reduce disparity drivers within VA. OHE partners with other VA offices, federal government offices, and nongovernment institutions with missions aimed at promoting health equity.¹¹³ OHE has substantial stakeholder involvement from minority veterans groups, including the Advisory Committee on Minority Veterans (ACMV), rural veterans groups, women veterans, and the Office of Diversity and Inclusion (ODI).¹¹⁴ A staunch internal partner and stakeholder of OHE, ODI's mission is to foster a diverse workforce and an inclusive work environment. The OHE and ODI missions intersect with ODI's special emphasis programs, intended to engage affinity groups and agencies to raise the awareness of the importance of diversity and demonstrate VA's commitment to a diversity model.¹¹⁵

OHE's foundational work included updated systematic reviews and data analyses that not only revalidated VA's previous findings on health care inequities, but also identified more areas of health care disparity among veterans. For instance, hepatitis C virus (HCV) was noted to have disparate effect on racial/ethnic minority veterans and Vietnam-era veterans. Additionally, OHE convened stakeholders and worked with the Health Equity Coalition to develop the VHA Health Equity Action Plan (HEAP), which aligns with the VHA Strategic Plan Objective 1e: Quality & Equity, which states, "Veterans will receive timely, high quality, personalized, safe effective and equitable health care irrespective of geography, gender, race, age, culture or sexual

COMMISSION ON CARE FINAL REPORT

orientation.”¹¹⁶ HEAP aims to address five strategic areas: awareness, leadership, health system and life experience, cultural and linguistic competency, and data that are vital for effectively implementing its mission. HEAP implementation strategies are conceptually modeled after the goals and strategies of the National Partnership for Action to End Health Disparities’ National Stakeholder Strategy for Achieving Health Equity sponsored by the U.S. Department of Health and Human Services.¹¹⁷

Despite OHE’s best efforts, HEAP was not fully implemented because VHA leadership failed to establish it as a strategic priority with adequate staffing, resources, and support, and the departure of the then USH, a champion for health equity. These factors led to the reduction of OHE staffing from 8 to 2 FTEs in FY 2013 and a realignment of OHE to several layers down in the organization. As a result of an FY 2015 budget reduction, OHE continues to operate with a two-person staff.¹¹⁸ The reduced staffing level is inadequate to meet the requirements and mission of the office.

OHE has a broad and challenging mission, particularly given the number of minority veterans who rely on VA health care, the health risks in those populations, and the health care disparities those populations experience.¹¹⁹ OHE faces serious challenges in its efforts to carry out its action plan and to realize its broad and critical mission, challenges intensified by its limited staffing and the downgrade of this office within VHA’s organization structure. These include the following:¹²⁰

- lack of quality data on vulnerable populations and disparate health outcomes
- health equity projects that have been delayed or halted due to staff and resource limitations
- lack of data on the overall impact of existing health equity initiatives at facilities
- lack of common definitions on vulnerable populations and health equity concepts

Notwithstanding its limited staffing, OHE has compiled a substantial record of accomplishments. Among its initiatives, OHE embarked in 2015 on a strategy of working collaboratively with the Quality Enhancement Research Initiative (QUERI) to advance health equity. The two collaborative efforts focus on using a population health approach to examine the distribution of diagnosed health conditions, mortality, and health care quality across the VA health care system. A fully staffed OHE would have the capability of creating additional

analytical tools to manage the daily health care equity program and provide needed services to advance health equity.¹²¹

Health Care Disparities Among Minority Veterans

Minority groups are at increased risk of major, life-threatening health conditions, as documented in a substantial body of research¹²² and illustrated in the table below:¹²³

Table 3. Major Health Conditions in Racial/Ethnic Minority Groups

Major Health Conditions Identified and Examined in Racial/Ethnic Minority Groups		
African Americans	Hispanics	American Indian or Alaska Natives
<ul style="list-style-type: none"> ▪ Colon Cancer ▪ HIV ▪ Chronic Kidney Disease ▪ Diabetes ▪ Stroke ▪ Venous Thromboembolism (VTE) ▪ Cancer ▪ Heart Disease 	<ul style="list-style-type: none"> ▪ Hepatitis C ▪ Cancer ▪ Heart disease 	<ul style="list-style-type: none"> ▪ Major Non-cardiac Surgery ▪ Pregnant Women with PTSD

HCV is more prominent among some racial and ethnic minority veterans and they are less likely to receive treatment for HCV. In VHA, some racial and ethnic minorities diagnosed with HCV are disproportionately more at risk for having associated liver disease (ALD). Disparities among veterans in the incidence of HCV, illustrated in the graphs below, show the important policy and resource implications for VA.¹²⁴

COMMISSION ON CARE FINAL REPORT

Figure 2. Disparities Among Veterans in the Incidence of Hepatitis C Virus

A recent review of evidence related to racial and ethnic differences in outcomes for VA patients showed moderate- and low-strength evidence suggestive of gaps in morbidity and mortality outcomes among vulnerable veteran populations with major health conditions. These data, presented in the table below, highlight targets for further research.¹²⁵

Table 4. Comparison of Health Outcomes by Race

Comparison		Worse Health Outcomes For Racial Minority Group Relative to Reference Population (usually White)
Moderate-Strength Evidence		
(based on VA data from the early 2000s)		
African American v. White	Increased end-stage renal disease among chronic kidney disease patients	
	Increased end-stage renal disease among HIV patients (with or without diabetes)	
	Decreased colon cancer survival 3 years after diagnosis	
Hispanic v. White	Increased cirrhosis and hepatocellular carcinoma among hepatitis C patients	
Low-Strength Evidence		
(each finding supported by only a single retrospective study with important methodological limitations)		
African American v. White	Increased mortality among diabetes patients	
	Increased risk of preterm birth among PTSD patients	
	Increased mortality at 2 years post-hospitalization among stroke patients	
	Decreased survival 3 years after diagnosis of rectal cancer	
American Indian or Alaskan Native v. White	Increased risk of 30-day post-op mortality after major noncardiac surgery	
	Increased risk of preterm birth among PTSD patients	
Combined other racial/ethnic minority groups v. African American	Increased injury-related death among alcohol use disorder patients

VA-18-0457-A-001680

OHE's focus, health equity, is intended to combat health care disparities, namely, the differences in the preventive, diagnostic, or treatment services offered to veterans with similar health conditions. Health care disparities stem from a combination of complex factors occurring at the level of the health system, provider, and patient.¹²⁶ Health care disparities can result from biological differences among various racial/ethnic groups as well as from social disparities,¹²⁷ also termed social determinants, which stem from such factors as socioeconomic status, discrimination, education levels, housing, transportation, and crime and violence, and are causally linked to subsequent adult disease.¹²⁸ For example, poor-quality housing poses a risk of exposure to many conditions that can contribute to poor health, such as indoor allergens that can lead to and exacerbate asthma, injuries, and exposure to lead and other toxic substances.¹²⁹ Social determinants that drive health disparities among African Americans, Hispanics, American Indians, and Alaska Natives include race/ethnicity; gender; age; geographic location; religion; socio-economic status; sexual orientation; military era; disabilities, including cognitive, sensory, or physical; and other characteristics historically linked to discrimination or exclusion. Positioned in a department that also provides benefits that fall within the social determinants of health, OHE is in a unique position to improve veterans' health.

The Henry Ford Health System (HFHS) is an example of a health system that is committed to health equity and one VHA can emulate as it works to improve health equity. HFHS is a nonprofit, vertically integrated health care organization that serves the primary and specialty health care needs of residents in southeastern Michigan, including Detroit and its surrounding metropolitan area.¹³⁰ HFHS's comprehensive health equity staff has a health care equity campaign with a goal of increasing knowledge, awareness, and opportunities to ensure health care equity is understood and practiced by HFHS providers and other staff, the research community, and the community-at-large.¹³¹ The campaign is also intended to make health care equity a key, measurable aspect of clinical quality.¹³² A similar effort by VHA would create a system for tracking improvement of health equity over time and holding the organization accountable for ongoing efforts in this regard.

The VHA strategic plan for FY 2013–2018 states that veterans will receive timely, high quality, personalized, safe, effective, and *equitable* health care, irrespective of geography, gender, race, age, culture, or sexual orientation.¹³³ Although that statement signals a sensitivity to health equity, the level of funding support for the VHA office with the lead role in promoting health equity and reducing disparity calls into serious question the leadership priority and commitment to that strategic goal. VHA leadership must make health care equity a strategic

COMMISSION ON CARE FINAL REPORT

priority by directing and funding the implementation of VHA HEAP nationwide and designating a leader and clinical champions within each VISN and VAMC, as a designated full-time equivalent (FTE), providing OHE budgetary support in FY 2017 and beyond to fully staff the office so that it can successfully achieve its mission and goals, to include providing additional needed funding to support implementation of the VHA HEAP; and ensuring OHE reports to the chief of VHA Care System (CVCS).

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- Make health equity a strategic priority by directing the implementation of the VHA HEAP nationwide and designating a leader and health equity clinical champion within each VISN and VAMC for whom part of their respective FTE position descriptions includes focusing on health equity issues.
- Reestablish OHE staffing based on the 2011 VHA Health Care Equality Workgroup recommendations to enable OHE to fulfill VHA's vision to provide appropriate individualized health care to each veteran in a method that eliminates disparate health outcomes and assures health equity. Action required includes, but is not limited to, funding FTE staffing levels commensurate with the scope and size of other federal offices of health equity.
- Reinstate OHE within the office of the CVCS to underscore health equity as a priority and to position the office to champion successfully the advancement of health equity for all veterans.¹³⁴
- Monitor and evaluate the department's success in implementing HEAP.

Other Department and Agency Administrative Changes

- None required.

¹³⁴ Department of Veteran Affairs, Health Equity Coalition Request for VHA Commitment, February 2016. Principal Deputy Under Secretary of Health Memorandum, Health Equity Coalition, March 21, 2013.

Facility and Capital Assets

Recommendation #6: Develop and implement a robust strategy for meeting and managing VHA's facility and capital-asset needs.

Problem

Veterans who turn to VHA to meet their health care needs should expect that its facilities have been designed and equipped to provide state-of-the-art care. As health care continues to move to ever greater use of ambulatory care delivery, VHA not only lacks modern ambulatory health care facilities in many areas, but generally lacks the means to readily finance and acquire space, to realign its facilities as needed, or even to divest itself easily of unneeded buildings. Many of these barriers are statutory in nature, although VA's own internal processes compound its capital asset challenges. Establishing integrated care networks, as proposed in

Recommendation #1 holds the promise of markedly improving veterans' access to care.

That promise cannot be realized without transformative changes to VHA's capital

structure. Political resistance doomed previous attempts to better align VHA's capital assets and veterans' needs. It is critical that an objective process be established to streamline and modernize VHA facilities in the context of the build out of the VHA Care System's integrated networks to ensure the ideal balance of facilities within each network. VHA needs as much control as possible to drive the process so that all facility plans are fully integrated with the strategic vision for the VHA Care System.

The Commission Recommends That . . .

- VA leaders streamline and strengthen the facility and capital asset program management and operations.
- The VHA Care System governing board be responsible for oversight of facility and capital asset management.
- Congress provide VHA greater budgetary flexibility to meet its facility and capital asset needs and greater statutory authority to divest itself of unneeded buildings.
- Congress enact legislation to establish a VHA facility and capital asset realignment process based on the DoD Base Realignment and Closure Commission process to be implemented as soon as practicable. The Commission recommends that the VHA Care System governing board subsequently make facility decisions in alignment with system needs.
- New capital be focused on ambulatory care development to reflect health care trends.
- VHA move forward immediately with repurposing or selling facilities that have already been identified as being in need of closing.

Background

Most VHA health care centers were designed when care was focused on inpatient hospital treatment. VA acquired some of these facilities nearly a century ago from the Public Health Service; many others were transferred from the War Department shortly after World War II.¹³⁵ The average VHA building is 50 years old – five times older than the average building age of not-for-profit hospital systems in the United States.¹³⁶ Most of its facilities were designed to meet markedly different needs than today's health care facilities. Some were tuberculosis

COMMISSION ON CARE FINAL REPORT

sanatoriums, others for years primarily housed patients with mental health conditions.¹³⁷ Although many have been extensively renovated, the renovations themselves are now outdated, and the condition of buildings shows this strain. Independent assessments of infrastructure and facilities showed that VHA facilities average a *C minus* score,¹³⁸ meaning much of the total facilities portfolio is nearing the end of its useful life, and 70 percent of facility correction repairs are being made on Grade D facilities.¹³⁹

During the past 8 years, veteran inpatient bed days of care have declined nearly 10 percent as outpatient clinic workload has increased more than 40 percent.¹⁴⁰ Current facilities, whether they have been maintained adequately or not, often do not support contemporary ambulatory care needs, with outpatient care often housed in converted inpatient spaces.

Through its capital planning methodology, VA has identified more than \$51 billion in total capital needs during the next 10 years.¹⁴¹ Capital funding during the past 4 years has averaged just \$2 billion annually.¹⁴² If funding levels remain consistent during the next 10 years, anticipated funding would be \$25 billion to \$35 billion less than the \$51 billion capital requirement.¹⁴³ VA planning must also take account of demographic changes and population migration that have led to underutilized medical centers in some areas of the country, and a need for new capacity in others.¹⁴⁴

Analysis

New Planning Paradigm

As the department acknowledged, “VA’s health care delivery model must . . . change.”¹⁴⁵ Importantly, it recognizes that “No organization can excel at every capability,” and stated “[s]ervice delivery systems designed around core competencies . . . provide the highest potential value to their customers.”¹⁴⁶ The acknowledgement that VHA can best serve veterans by focusing on its core competencies and unique capabilities, while relying more heavily on purchased care holds important implications for VHA’s capital needs and capital asset management. Rather than assessing VHA’s capital needs by reference to an expectation that each VA medical center, or constellation of medical centers, must provide virtually all needed hospital and medical services, capital needs must be redefined within the framework of the VHA Care System’s high-performing integrated community health care networks. VHA must determine what services it will continue to provide directly in a given community before it can determine its respective infrastructure needs. In identifying its core competencies, unique

¹⁴⁶ *Ibid.*

capabilities, and needed ancillary services, VHA would be setting at least a general framework through which network and local planners could assess where and how needed services would be delivered, including which would be provided directly by VHA and which through purchased care. Such a mapping exercise would be a first step in developing the integrated community health care networks.

The shape of an integrated delivery network will take different forms in each service-area, and planning and developing those local networks will necessarily require assessing VHA's physical plant and capacity in a new light. That reassessment process would inform capital planning, and must take account of at least three distinct needs: capital needs associated with buildings VA would retain; meeting new or replacement space needs; and the disposal of unused, unneeded property.

Property Divestiture

VHA's principal mission is to provide health care to veterans, yet over time it has acquired an ancillary mission: caretaker of an extensive portfolio of vacant buildings. As recently as October 2015, VA reported that its inventory includes 336 buildings that are vacant or less than 50 percent occupied, requiring it to expend patient-care funds to maintain more than 10,500,000 square feet of unneeded space.¹⁴⁷ The SECVA recently testified that it costs VA an estimated \$26 million annually to maintain and operate vacant and underutilized buildings.¹⁴⁸

VA's authority to carry out property-management is circumscribed in law,¹⁴⁹ and the department at times faces insurmountable challenges in either attempting to repurpose or divest itself of underutilized or vacant property.¹⁵⁰ In contrast to more rigid property-divestiture provisions, VA has had success in using a flexible authority to enter into long-term leases of VA property for *enhanced use*.¹⁵¹ This authority allows VA to lease underutilized capital

¹⁴⁷ Ibid., 92.

¹⁴⁸ "Witness Testimony of Honorable Robert A. McDonald, Secretary, U.S. Department of Veterans Affairs, Hearing on 2/10/2016: U.S. Department of Veterans Affairs Budget Request for Fiscal Year 2017," House Committee on Veterans' Affairs, accessed June 20, 2016, <https://veterans.house.gov/witness-testimony/the-honorable-robert-a-mcdonald-2>.

¹⁴⁹ Authority for Transfer of Real Property; Department of Veterans Affairs Capital Asset Fund, 38 U.S.C. § 8118 Authority to Procure and Dispose of Property and to Negotiate for Common Services, 38 U.S.C. § 8122. For example, under section 8118, VA must receive at least full market value in transferring property, unless the property is transferred to an entity that provides services to homeless veterans, and any proposed transfer is subject to the requirement in section 8122 that VA first hold hearings, notify Congress in advance, and not proceed for a specified period. VA property can be determined to be "excess," though under 38 U.S.C. § 8122(d)(1), VA may not make such a declaration unless the property is not suitable for use for provision of services to homeless veterans and reviewed for possible disposal under the Property Act Disposal, administered by the General Services Administration (GSA) (40 U.S.C., subchapter III). GSA employs a rigorous, multistep process to assure that the asset is not needed by any other Federal agency. Under the Act, the agency disposing of the asset is responsible for funding disposal costs, including environmental remediation. GAO has testified that properties remain in an agency's possession for years and continue to accumulate maintenance and operations costs because of the legal requirements agencies must meet and the length of the process. (U.S. Government Accountability Office, *Federal Real Property: Progress Made on Planning and Data, but Unneeded Owned and Leased Facilities Remain*, GAO-11-520T (Washington, DC, 2011), 5, <http://www.gao.gov/products/GAO-11-520T>).

¹⁵⁰ With many properties under the protection of the National Historic Preservation Act (16 U.S.C. § 470h-3), VA faces obstacles and delays in efforts to divest itself of these properties; VACO staff report that stakeholder concerns have been obstacles.

¹⁵¹ Enhanced-Use Leases of Real Property, 38 U.S.C. §§ 8161-8169, as amended by Veterans Millennium Health Care and Benefits Act, Section 208, Pub. L. No. 106-117, 113 Stat. 1545 (1999), as in effect when GAO testified on this successful program (U.S. Government Accountability Office, *VA Real Property: VA Emphasizes Enhanced-Use Leases to* VA-18-0457-A-001685

COMMISSION ON CARE FINAL REPORT

assets to private-sector entities for up to 75 years to develop housing for homeless and at-risk veterans and their families. Most recently, however, Congress imposed severe limits on that leasing authority.¹⁵²

Ongoing Capital Needs

Establishing a transformative new health care delivery model that relies more on purchased care will not eliminate the need for new clinics, facility renovations, and remedying VHA space deficiencies. The scope of those needs must still be determined in light of a proposed new delivery system, but they cannot be ignored. The *Independent Assessment Report* catalogued the challenges of managing and operating VA's capital program and the need to deploy best practices to improve total performance, and clearly address the importance of more modern facilities for delivering high quality care.¹⁵³

Of particular concern is an apparent breakdown in the process of bringing new clinics online and renewing the leases of existing clinics. With current law requiring congressional approval of any lease with an average annual rental of more than \$1 million,¹⁵⁴ a Congressional Budget Office (CBO) ruling¹⁵⁵ has upended the approval process and halted the leasing program.¹⁵⁶ Indicative of the scope of the problem, VHA's then USH testified in 2013 that VA, since 2008, had opened 180 leased medical facilities, 50 of which required authorization as major leases.¹⁵⁷ Currently, 24 major VA leases are in limbo.¹⁵⁸

Manage its Real Property Portfolio, GAO-09-776T (Washington, DC, 2009), <http://www.gao.gov/assets/130/122697.pdf>. For example, VA has authority to outlease its facilities for up to 3 years, but may not retain the proceeds of any such leasing (Authority to Procure and Dispose of Property and to Negotiate for Common Services, 38 U.S.C. § 8122(a)(1)). U.S. Government Accountability Office, *Federal Real Property: Progress Made on Planning and Data, but Unneeded Owned and Leased Facilities Remain*, GAO-11-520T (Washington, DC, 2011), 5, <http://www.gao.gov/products/GAO-11-520T>.

¹⁵² Before the sunset of that authority in 2011, VA could enter into such a long-term lease if (1) at least part of the property's use would contribute to VA's mission, (2) the lease would not be inconsistent with that mission; and (3) the lease would enhance the use of the property (Enhanced-Use Leases, 38 U.S.C. § 8162(a)(2)). Congress reauthorized enhanced-use leasing, but limited it to a single use: the development of supportive-housing for veterans who are homeless or at risk of homelessness (Honoring America's Veterans and Caring for Camp Lejeune Families Act of 2012, Sec. 211, Pub. L. No. 112-154, 126 Stat. 1165 (2012).)

¹⁵³ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment K (Facilities)*, accessed June 2, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_K_Facilities.pdf.

¹⁵⁴ Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104.

¹⁵⁵ *Hearing on Assessing VA's Capital Inventory Options to Provide Veterans' Care Before the Committee on Veterans Affairs*, 113th Cong., 42 (June 27, 2013) (Statement of Robert A. Sunshine, Deputy Director, Congressional Budget Office), accessed June 20, 2016, <https://www.gpo.gov/fdsys/pkg/CHRG-113hhrg82242/html/CHRG-113hhrg82242.htm>.

¹⁵⁶ *Ibid.* CBO maintains that the structure of VHA's lease transactions—the lease of a facility, designed by and built for VHA, and for which payments retire most or all of the debt over the life of the lease—is in the nature of a governmental purchase, and, as such, the full cost of acquiring the facility should be budgeted up front, rather than spread over the duration of the lease. As budget rules generally require that Congress offset that aggregate cost, CBO's position has had the effect of blocking what had previously been a manageable funding process.

¹⁵⁷ *Hearing on Assessing VA's Capital Inventory Options to Provide Veterans' Care Before the Committee on Veterans Affairs*, 113th Cong., 44 (June 27, 2013) (Statement of Robert A. Petzel, M.D., Under Secretary for Health, Veterans Health Administration, U.S. Department of Veterans Affairs), June 20, 2016, <https://www.gpo.gov/fdsys/pkg/CHRG-113hhrg82242/html/CHRG-113hhrg82242.htm>.

¹⁵⁸ "Witness Testimony of Honorable Robert A. McDonald, Secretary, U.S. Department of Veterans Affairs, Hearing on 2/10/2016: U.S. Department of Veterans Affairs Budget Request for Fiscal Year 2017," House Committee on Veterans' Affairs, accessed June 20, 2016, <https://veterans.house.gov/witness-testimony/the-honorable-robert-a-mcdonald-2>.

VA-18-0457-A-001686

One of the primary benefits of leasing is that it can provide flexibility and speed.¹⁵⁹ But the time VHA has required to execute a lease, from planning through to activation, has taken almost 9 years in the case of a major lease,¹⁶⁰ in contrast with private-sector expectations of build-to-suit leases that often take fewer than 3 years.¹⁶¹

In acknowledging the magnitude of the challenges associated with VA's capital program and the budget constraints within which VA is operating, the *Independent Assessment Report* includes a suggestion that transformative options be considered, to include alternative vehicles for capital delivery such as public-private partnerships.¹⁶²

Capital Asset Management

Capital asset management itself requires reengineering. Facilities-related functions are dispersed through VA, resulting in a lack of accountability for outcomes, a mismatch between planning efforts and funding decisions, and separation of project execution and facilities management,¹⁶³ suggesting a need for transformative changes in operations.¹⁶⁴

In its work to foster transformation, department officials have recognized many organizational and process challenges that require priority attention, including the need to realign its infrastructure, identify new (private) sources of financing, streamline investment decision making and contracting, and improve the management of capital projects.¹⁶⁵ Organizational change aimed at streamlining and better aligning core processes is vital to effective operation of VA's facilities programs.

Capital-Asset Imperatives

The planning and development of a new delivery model centered on establishing integrated networks of care has major implications for identifying, planning for, and realizing VHA's capital needs. Greater reliance on community care, inherent in that model, establishes a new set of imperatives, specifically, a need for

- facility realignment
- more effective means of repurposing or other divestiture of unneeded buildings and land
- new, more effective tools to meet VHA's need for new clinic capacity and major construction
- more effective management of VHA's capital needs

¹⁶⁵ Interviews of VA staff by Commission on Care staff, April 2016.

COMMISSION ON CARE FINAL REPORT

Facility Realignment

VA planning must closely examine the role of, and future for, individual facilities, in light of a transformative new delivery model. For more than a quarter century, VHA leaders have cited the need for medical center mission changes, realignments, disposal of unneeded buildings, and where indicated, hospital closures.¹⁶⁶ The critical importance of transforming VA health care delivery gives new urgency to providing tools to realign VHA's care-delivery infrastructure. The Commission recognizes that the SECVA does have authority to "consolidate, eliminate, abolish, or redistribute the functions of . . . [VA] facilities, and to carry out an administrative reorganization" of a field facility.¹⁶⁷ But that authority may generally not be unilaterally exercised.¹⁶⁸ In addition, despite VA's having established two previous commissions to address the need for facility realignment, leaders have had only limited success in achieving that objective. The exercise of SECVA's broad authority to reorganize is tempered by the prerogatives and fiscal authority held by Congress. Congress has rejected legislation that proposed a process to reassess the future of individual VA facilities,¹⁶⁹ reflecting concerns over veterans losing access to care and the potential of constituents losing employment. Such concerns can be addressed. To be successful, a capital asset realignment process must be conducted on a systemwide basis within a framework that provides for sound planning; the exercise of objective, independent expertise; and a reliable mechanism for implementation. Congress can look to and adapt a proven model¹⁷⁰ — the military base realignment and closure (BRAC) process — to meet those objectives and achieve marked improvements in access to care.

Congress should enact legislation, based on DoD's BRAC model, to establish a VHA capital asset realignment process to more effectively align VHA facilities and improve veteran's access to care. Creating a robust capital asset realignment process is vital because previous capital divestiture efforts have failed.¹⁷¹ This process should offer a level of rigor far beyond what currently exists for repurposing and selling capital assets. It should require VHA to employ criteria set by the VHA Care System governing board (see Recommendation #9) to conduct locally-based analyses of capital assets, based on national process criteria. Information generated would be used to assist an independent commission, established under the

¹⁶⁶ "VA Chief Seeks Panel to Revamp System," Christopher Scanlan, *Philly.com*, accessed December 31, 2015, http://articles.philly.com/1989-07-18/news/26134051_1_va-hospitals-derwinski-veterans-hospital. ¹⁶⁷ Authority to Reorganize Offices, 38 U.S.C. § 510.

¹⁶⁸ Authority to Reorganize Offices, 38 U.S.C. § 510(c). In instances where a reorganization would reduce employment by 15 percent or more at a facility, VA must provide Congress a detailed plan and justification, and must defer implementation for at least 45 days.

¹⁶⁹ Veterans Millennium Health Care and Benefits Act, H.R. 2116, 106th Cong. (1999). Section 107 of House-passed H.R. 2116 would have established a mechanism for VA to cease providing hospital care at medical centers which were no longer providing high quality, efficient hospital care because of factors such as aging physical plant, functional obsolescence, and low utilization, and to redirect funds instead toward establishment of enhanced-service programs. In taking up H.R. 2116, the Senate did not adopt that provision, and it was not included in the Veterans Millennium Health Care and Benefits Act, Pub. L. No. 106-117, 113 Stat. 1545 (1999), accessed January 12, 2016, <https://www.gpo.gov/fdsys/pkg/PLAW-106publ117/html/PLAW-106publ117.htm>

¹⁷⁰ Defense Base Closure and Realignment Commission, *Defense Base Closure and Realignment Act of 1990 (as amended through FY 05 Authorization Act)*, accessed June 23, 2016, <http://www.brac.gov/docs/BRAC05Legislation.pdf>.

¹⁷¹ "VA Chief Seeks Panel to Revamp System," Christopher Scanlan, *Philly.com*, accessed December 31, 2015, http://articles.philly.com/1989-07-18/news/26134051_1_va-hospitals-derwinski-veterans-hospital. "Distinguished Group Selected for CARES Commission," Department of Veterans Affairs, Office of Public and Intergovernmental Affairs, March 3, 2003, accessed December 31, 2015, <http://www.va.gov/opa/pressrel/pressrelease.cfm?id=578>.

legislation, in making recommendations regarding realignment and capital asset needs.¹⁷² The independent commission would conduct a thorough, one-time process, to include making site visits and holding hearings to inform recommendations that would constitute a proposed national realignment plan. The VHA Care System governing board would review, and adopt or make recommendations to revise, the independent commission's recommended realignment plan. The commission would then empower the VHA Care System governing board to implement the recommendations unless, within a specified timeframe, Congress disapproves the entire plan on an up or down vote. The Commission on Care envisions that after the completion of a realignment carried out under such proposed legislation and in the course of ongoing VHA transformation, the VHA Care System governing board would make all additional facility alignment decisions, to meet veterans' needs and to fully integrate with the strategic vision for the VHA Care System.

Repurposing and Divestiture of Unneeded Buildings and Land

Maintaining health care facilities to provide state-of-the-art care requires ongoing financial support. Bearing the additional cost of maintaining outdated, vacant, and unused buildings diminishes operating funds needed for patient care, and yields no benefit. Even taking unused buildings offline and placing them in *mothball status*, requires tens of millions of dollars in basic building maintenance.¹⁷³ If VA could sell, repurpose, or otherwise divest itself of unused or underutilized buildings in a timely, cost-effective manner, it would free funds for the purposes for which they are appropriated.¹⁷⁴

Enhanced-use leasing authority has in the past provided VHA a viable tool that prevents the need for such unnecessary spending, while permitting development of vacant property for uses compatible with VHA's mission, and effective use of the proceeds, whether in cash or in kind.¹⁷⁵ This leasing mechanism has been put to particularly effective use in leveraging an asset that VHA can no longer use, but which has development potential, as consideration for an asset it may need, such as clinic space. But limiting enhanced-use leasing to a single use that may not be feasible in many locations precludes effective use of a valuable capital-alignment tool.

In many instances, however, the condition or remote location of VHA buildings does not lend itself to enhanced-use leasing. Given the need to dispose of a large inventory of vacant

¹⁷² The process should take into account the community health needs assessments (CHNA) that not-for-profit hospitals are required to carry out under current law, (Patient Protection and Affordable Care Act of 2010, Pub. L. No. 111-148, 124 Stat.119, sec. 9007(a) (2010)) and opportunities to engage community providers in collaborative partnerships. This provision requires tax-exempt hospitals to create a hospital community health needs assessment every three years. This hospital CHNA is developed alongside community stakeholders. The community health needs assessment requirements include: demographic assessment identifying the community the hospital serves; a community health needs assessment survey of perceived healthcare issues; quantitative analysis of actual health care issues; appraisal of current efforts to address the healthcare issues; and formulation of a 3-year plan under which the community comes together to address those remaining issues collectively.

Petzel, M.D., Under Secretary for Health, Veterans Health Administration, U.S. Department of Veterans Affairs), accessed June 20, 2016, <https://www.gpo.gov/fdsys/pkg/CHRG-113hhrg82242/html/CHRG-113hhrg82242.htm>.

COMMISSION ON CARE FINAL REPORT

buildings for which there is no realistic prospect of their being repurposed, a streamlined divestiture process is needed.

Meeting Clinic Capacity and Other Infrastructure Needs

Developing a new delivery model and establishing a thorough realignment process may shrink VHA's future capital needs but will not eliminate them. As congressional budget rules have frustrated VHA efforts to lease needed clinic space, it is critical that VHA and Congress find models or remedies to establish new ambulatory care space and renew leases of existing clinics. Congress and VHA should work together to find the means to meet VHA's need for new clinic capacity. Given an impasse in congressional authorization of VA clinic leasing based on build-to-lease contracts, VA should explore the feasibility of restructuring those arrangements. VA should explore an arrangement that remedies the concern that it is entering into capital leases. Such an approach, for which VA provides the builder with space needs rather than a complete design, would have the additional benefit of bringing projects on line much sooner. Absent an effective solution to meeting VA's ongoing need for clinic space, Congress must be willing, as it was in passing VACAA, to take extraordinary steps¹⁷⁶ to overcome a funding challenge, and, in this instance to waive, or suspend for at least 5 years, the operation of current congressional authorization and scorekeeping requirements governing major medical leases.

In addition to severe leasing challenges, current statutory spending limits make it difficult for VHA to modernize and renovate its aging facilities.¹⁷⁷ Notably, minor construction funds, available for "constructing, altering, extending, and improving"¹⁷⁸ any VA facility, are limited to \$10 million,¹⁷⁹ yet such projects may require substantially more given the age and condition of many VA buildings. Congress last lifted the threshold of what constitutes a major medical facility project – the amount above which a project requires specific authorization – more than a decade ago.¹⁸⁰ The Commission believes that with the tight controls a governing board would exercise, that threshold should be lifted substantially, providing needed flexibility to carry out minor construction projects.

As VHA works more closely with community providers and participates in discussions regarding community health needs, it should be open to opportunities to discuss and potentially work toward joint efforts at meeting infrastructure needs.¹⁸¹

¹⁷⁶ Veterans Access, Choice, and Accountability Act of 2014, Pub. L. No. 113-146, 128 stat. 1754, sec. 803 (2014).

¹⁷⁷ VA Office of Inspector General, *Veterans Health Administration: Review of Minor Construction Program*, 8, accessed June 3, 2016, <http://www.va.gov/oig/pubs/VAOIG-12-03346-69.pdf>.

¹⁷⁸ Consolidated Appropriations Act, 2016, Pub. L. No. 114-113, 129 Stat. 2242 Div. J., Title II, Department of Veterans Affairs (2015).

¹⁷⁹ A major medical facility project is one involving a total expenditure of more than \$10 million. Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104(a)(3)(A).

¹⁸⁰ Sec. 812 of the Veterans Benefits, Health Care, and Information Technology Act of 2006, Pub. L. No. 109-461, 120 Stat. 3403 (2006), raised the threshold as to what constitutes a major medical facility project from more than \$7 million to more than \$10 million.

¹⁸¹ One such public-private model, such as under discussion in Omaha, NE, where talks have centered on private donors' partially funding construction of a replacement medical center, necessarily poses challenges, but merits exploration and support. ("VA Exploring Public-Private Plan for New Facility," Lincoln Journal Star, accessed June 3, 2016, http://journalstar.com/news/state-and-regional/nebraska/va-exploring-public-private-plan-for-new-facility/article_6a90778e-6962-545f-a86a-3f27930bd84e.html.) Although Congress must ultimately provide apt facilities for VA care-delivery, the law has long authorized the SECVA to accept gifts or donations, for purposes of facility

Capital Asset Management

The Commission fully recognizes that VHA has much to do on its own to more effectively meet its capital asset needs. At the core, leaders must strengthen and streamline the capital asset programs' management and operation, to include better aligning the component elements; streamlining the leasing program, contracting, and investment decisions; managing and streamlining project delivery for construction and renovation; and adopting a facility (or building) life-cycle-model planning tool. These are all important elements of needed system transformation.

As depicted in Figure 3, meeting and managing VHA's capital-asset needs require an integrated approach that requires congressional support to tackle the multiple capital-asset challenges facing VHA. The Commission's recommendations for meeting and managing those interrelated capital-asset needs are set forth in the *Implementation* section following Figure 3.

construction. (Congressional Approval of Certain Medical Facility Acquisitions, 38 U.S.C. § 8104(e)) Nevertheless, new legislative authority would almost assuredly be needed to permit development of public-private partnerships that provide new platforms for the construction of new or replacement medical facilities. For example, H.R. 5099 would establish a pilot program permitting VA to enter into public-private partnership agreements to plan, design, and construct new VA facilities using private donations. To Establish a Pilot Program on Partnership Agreements to Construct New Facilities for the Department of Veterans Affairs, H.R. 5099, 114th Cong. (2016), <https://www.congress.gov/bill/114th-congress/house-bill/5099>.

VA-18-0457-A-001691

COMMISSION ON CARE FINAL REPORT

Figure 3. The Complicated Process of Meeting and Managing VHA's Capital Needs

**Implementation****Legislative Changes**

- Provide VA new, more flexible authorities to realign facilities, meet capital-asset needs, and divest itself of unneeded buildings.
- Establishing a VHA capital asset realignment process that provides (notwithstanding any other law) for more effectively aligning VHA facilities with the objective of improving the access, quality, and cost-effectiveness of VA care, and provides for:

- Establishing an independent commission (empowered to hold public hearings, make site visits, and have full access to VHA analyses and data) charged with developing a national capital asset realignment plan that would include recommendations to the VHA Care System governing board (see Recommendation #9) for systemwide facility realignment (to include changes in facility mission, facility downsizing, integration of facilities, and closures), with the rationale for each recommended change.
- The proposed plan would identify (a) the criteria used in developing realignment recommendations, (b) proposals for reinvestment and savings/cost avoidance resulting from the realignment, (c) the projected care improvements that would result, and (d) mechanisms to minimize the adverse effects on displaced employees, to include assuring that, to the extent feasible, VA retrain and reemploys displaced employees.
- The VHA Care System governing board would be empowered to adopt or alter the proposed realignment plan, and to implement the final plan unless, within a specified timeframe, Congress disapproves the plan as a whole on an up-or-down vote.
- Waive or suspend for at least 5 years current authorization and scorekeeping requirements governing major medical facility leases under 38 U.S.C. § 8104.
- Amend 38 U.S.C. § 8104 to lift the threshold of what constitutes a major medical facility project from \$10 million to \$50 million.
- Amend pertinent provisions of 38 U.S.C. § 8161, and what follows, to reinstate and extend for 10 years the authority in prior law (as in effect on December 30, 2011) for VHA to enter into enhanced-use leases for any use that is not incompatible with VA's mission.
- Provide the VHA Care System governing board authority to promulgate regulations that for a period of not more than 5 years, and notwithstanding any other law, would ease the divestiture of unneeded vacant VHA buildings, to include (a) shifting to a third party the cost of meeting environmental requirements, (b) allowing VHA to retain the proceeds of any property sale, and (c) creating a streamlined process to address historic preservation considerations.

VA Administrative Changes

- None required.

Other Department and Agency Administrative Changes

- None required.

Information Technology

Recommendation #7: Modernize VA's IT systems and infrastructure to improve veterans' health and well-being and provide the foundation needed to transform VHA's clinical and business processes.

Problem

To operate a high-performing VHA Care System, VA requires a comprehensive electronic health care information platform that is interoperable with other systems and other health care providers; enables scheduling, billing, claims, and payment; and provides tools that empower veterans to better manage their health. Creating a single, uniform, integrated IT platform will promote care continuity, cost savings, and consistent care delivery and business processes.¹⁸²

VA's antiquated, disjointed clinical and administrative systems cannot support these essential clinical and business processes and consequently are unable to support the Commission's transformation vision for VHA. In addition, currently within VHA, there is no experienced senior health care IT leader focusing on the strategic health care IT needs of veterans and VHA staff.

The Commission Recommends That . . .

- VHA establish a Senior Executive Service (SES)-level position of VHA Care System chief information officer (CIO), selected by and reporting to the chief of VHA Care System (CVCS) with a dotted line to the VA CIO. The VHA CIO is responsible for developing and implementing a comprehensive health IT strategy and developing and managing the health IT budget.
- VHA procure and implement a comprehensive, commercial off-the-shelf (COTS) information technology solution to include clinical, operational and financial systems that can support the transformation of VHA as described in this report.

Background

A fully functional electronic health record (EHR) can improve the quality of patient care, help avert medical errors, and improve communication among providers and with patients.¹⁸³ Starting in the 1970s, VHA became a leader in the development of EHR technology with VistA and a computerized patient record system (CPRS).¹⁸⁴ Full implementation of the EHR, together with other reforms, helped improve the quality of care at VHA.¹⁸⁵ During the last decade, VHA has not been able to maintain an IT advantage.¹⁸⁶ Although in the past most VHA clinicians

Roswell, "The Veterans Health Administration: Quality, Value, Accountability, and Information as Transforming Strategies for Patient-Centered Care," *The American Journal of Managed Care* (November 2004), 828-836, accessed June 3, 2016, <http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.476.450&rep=rep1&type=pdf>.

¹⁸⁶ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment H (Health Information Technology)*, vi, accessed April 5, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_H_Health_Information_Technology.pdf.

have had a high opinion of the clinical applications and databases enabled by VistA and CPRS, a lack of upgrades has put VHA's EHR at risk of becoming obsolete.¹⁸⁷ Many large U.S. health care systems that were early adopters of homegrown EHR systems found themselves in similar circumstances and have since purchased and migrated to commercial off-the-shelf (COTS) products.¹⁸⁸ DoD recently made the same choice.¹⁸⁹

To achieve the Commission's vision of a health care system that delivers quality, access, choice, and veteran well-being, VHA requires effective, robust, and modern information technology systems. A robust EHR system would allow veterans and clinical providers to send, receive, find, and use electronic health information in a manner that is appropriate, secure, timely, and reliable. It would be seamlessly interoperable with other systems including DoD, private-sector providers, and with other VA enterprise systems such as those in the Veterans Benefits Administration (VBA). It would support VHA clinical workflow, evidence-based practice, and patient safety. It would provide clinicians, patients, and administrators the data, analytic power, and user interfaces required to monitor the effectiveness of care and improve it over time. A robust IT system for VHA should include more than just the EHR, however, extending to all the systems and tools required to facilitate and automate business processes that support access and veterans' care. These capabilities include an effective scheduling system, telephone systems, mobile applications, telehealth, financial management systems, human resources systems, and other systems that enable community care.

To realize such a transformation of IT in a system as complex as VHA requires exceptional leadership and staff, sufficient budget, a robust change management plan, effective systems for accountability and quality control, and efficient and agile contracting.¹⁹⁰ Presently, VHA appears to lack a majority of these factors required for success.¹⁹¹

Analysis

Leadership and Staff

Prior to 2006, VHA had a chief health informatics officer responsible for the VHA electronic record system and for coordinating with VA on IT systems. The programmers in VHA worked closely with the clinicians who used the tool to create a system that met their needs.¹⁹² VHA was able to prioritize clinical needs and patient safety requirements within its overall budget and plan for IT spending; however, there was no specific budget line item for the electronic health

COMMISSION ON CARE FINAL REPORT

record system or related technology, and there was limited central oversight or accountability for information technology infrastructure.

VA's IT budget was centralized in 2006, and the Office of Information and Technology (OIT) was assigned to deliver, operate, and manage IT and its budget, across the department. With this change, VHA's needs became only one of the priorities that OIT has had to accommodate and VHA's priorities have not always prevailed.¹⁹³

To ensure that clinical needs and patient safety are a priority, many large health care systems, such as DoD, Cleveland Clinic, Geisinger, and Kaiser Permanente, have a medical CIO (i.e., CMIO) who manages and advocates for the clinical IT needs of the organization. A CMIO ensures that clinicians are involved in the selection of any IT systems they use to perform their job functions and provide patient care, including EHRs. Clinicians involved in the selection and deployment of an IT system are more likely to feel ownership of it and fully adopt its use. The CMIO usually reports to the health system's CEO or CMO, and working in concert with these individuals and the organization's CIO, makes sure that health information needs are prioritized and funded.¹⁹⁴

VA does not have staff with the necessary expertise to execute large-scale IT projects. Previous system implementations have failed because VA did not have individuals with adequate experience to effectively plan and manage system development and deployment. If VA had an adequate system and skilled staff to monitor and identify program and contracting problems affecting the progress of prior IT implementations, effective and timely decisions could have been made to either redirect or terminate VA IT projects that ultimately failed. To avoid repeating these previous IT implementation failures, VA needs to develop effective oversight systems and develop in-house staff with the expertise to oversee, fully support, manage, and execute complex integrated IT programs.¹⁹⁵

Given all of these critical needs, the Commission believes that it is essential for VHA to have a CIO with health care expertise and substantial experience, reporting to the chief of VHA Care System. The VHA CIO will be responsible for managing the complex implementation of a state-of-the-art comprehensive information system platform to support the new integrated VHA Care System, with the functionality, interoperability, and data management capabilities to support the delivery and coordination of high-quality health care for veterans. The CIO will need to work closely with clinical and operational leaders on the effective execution of the new system, and will also need to collaborate with the VA CIO to ensure the integration and coordination of the health care information system and the Veterans Benefit Administration system.

Budget

The 1-year budget appropriations cycle makes it difficult to secure multiyear funding for long-term development and important IT projects.¹⁹⁶ The budget process is disconnected from total lifecycle IT costs.¹⁹⁷ That disconnect has grown wider with a change in law¹⁹⁸ under which Congress provides VHA advanced medical care appropriations—in effect a 2-year budget—while health IT funding remains 1-year money.¹⁹⁹ As the Congressional Research Service (CRS) testified,

*providing an advance appropriation for some VHA accounts and funding IT accounts under a regular appropriation act could create a situation whereby, for example, VHA could not purchase computer software although it has procured medical equipment that needs software. Another example would be the difficulty of procuring IT infrastructure to support opening of a new community-based outpatient clinic (CBOC).*²⁰⁰

Spending on new systems and upgrades to existing systems now represents only 15 percent of VA's total IT budget (see Figure 4),²⁰¹ meaning that essential upgrades like a new scheduling package and EHR modernization have not had the funding or focus required to succeed. Clinical users have become increasingly frustrated by the lack of any clear advances with VistA during the past decade. Numerous VHA clinicians have experience with commercial EHR systems and want the same level of features, modern clinical capabilities, integration, and mobility they see emerging in the commercial marketplace.²⁰²

Figure 4. VA IT Spending

In July 2015, DoD awarded a \$4.3 billion, 10-year contract to overhaul the Pentagon's electronic health records for millions of active-duty military members and retirees. Officials estimate that

COMMISSION ON CARE FINAL REPORT

during its potential 18-year life, the contract could be worth just less than \$9 billion.²⁰³ The recent Senate appropriations bill for VA OIT allots \$63 million toward development and modernization of VA's existing EHR (i.e., VistA Evolution).²⁰⁴ Assuming that VA's implementation of a new COTS EHR would be similar in size and scope to DoD's EHR implementation, VA would be short \$3.67 billion in funding for a new COTS EHR, given the current funding amount of \$63 million per year. VA will require a substantial increase in IT funding to support the successful implementation of a new comprehensive COTS EHR.

Robust Change Plan

Because VistA has been customized at each medical center, there are few standard data elements. The varied algorithms lead to a complex, heterogeneous mix of hardware and software that impedes system changes and new capabilities and raises operations and maintenance costs.²⁰⁵ Due to excessive project management overhead, a complex legacy IT infrastructure that is difficult to modernize, and more than 130 variations of the primary software system deployed across VHA medical facilities, the implementation of improved IT capabilities in the last 10 years has been extremely limited.²⁰⁶ VA is currently weighing whether to continue to modernize VistA or purchase a COTS health information technology platform. The Commission recommends moving to a COTS program.

Whether VHA moves forward with the purchase of a COTS product, as recommended by the Commission, or continues attempting to modernize VistA, VHA must effectively manage the change process. At present, a lack of standard clinical documentation has made it harder to develop effective clinical decision-support systems and hinders EHR information exchange among VA Medical Centers (VAMC), between VA and non-VA facilities (including those of DoD), and between VA and individual veterans. Shared data must be well labeled in a way that the receiving system can identify and properly ingest such data. An electronic medical record can contain as many as 100,000 different data fields. The lack of data standards presents challenges to using comparable data for analysis and disparities among the 130 tailored local instances of VistA, complicating information sharing, data aggregation, and analytics.²⁰⁷ VHA has not established comprehensive semantic definitions for data elements through the use of standard nomenclatures, terminologies, and code sets. Doing so is required to ensure consistency and integration across multiple systems, leverage follow-on IT products, and facilitate analytics for clinical decision making.²⁰⁸

The Office of the National Coordinator (ONC) for Health IT, under HHS, is responsible for advancing national connectivity and interoperability of health information technology. The

²⁰⁸ *Ibid.*, viii.

ONC developed the National Interoperability Roadmap with the goal of being able to use electronic health information exchange, so information can follow a patient where and when it is needed, across organizational, health IT developer, and geographic boundaries. The roadmap lays out a clear path to catalyze the collaboration of stakeholders who are going to build and use the health IT infrastructure.²⁰⁹ VA's intent to expand veteran care to more community providers through the creation of locally-integrated health care networks will mean that it is important for VHA to follow the ONC roadmap and standards. Following this roadmap includes using the continuity of care document to exchange data, which was established by ONC and is followed by community health care providers. VA OIT is currently collaborating with the ONC on VA's plans for interoperability and has committed VA to following the roadmap.²¹⁰

VHA does not yet have a robust, detailed strategy and roadmap for IT initiatives across VHA that integrates veteran access to scheduling via phone, telehealth, and mobile apps.²¹¹ National deployment of the VistA Scheduling Enhancement and the veteran mobile scheduling Veteran Appointment Request app, are initial steps to prepare for the implementation of new COTS electronic medical system with a scheduling package.

To resolve the underlying systemic issues with VistA scheduling, VA awarded a contract for the implementation of VA's new COTS medical appointment scheduling system in August 2015.²¹² This system is a COTS scheduling solution that, when implemented, is expected to move VHA from primarily a face-to-face appointment model to a coherent, resource-based system with broad opportunities for improved services for VA stakeholders.²¹³ Deployment is awaiting the final decision on whether VHA will continue with VistA or purchase a full COTS product.

COTS Solution

The current VistA/computerized patient records systems are based on a tightly integrated, monolithic architecture and design with numerous and diverse functional components and associated interdependencies. These characteristics impose barriers to modernizing the respective systems. In addition, the high cost of infrastructure operation and maintenance (85 percent of the total IT budget) reduces funding available for new development efforts.²¹⁴ Maintenance and data sharing are further complicated because most VAMCs have customized their local versions of VistA, leading to approximately 130 different versions of VistA across the country.²¹⁵

COMMISSION ON CARE FINAL REPORT

VHA relies on a VistA scheduling package to provide veterans with access to health care. The system is antiquated, highly inefficient, does not optimally support processes or allow for efficient scheduling of appointments. A report on scheduling published by the Northern Virginia Technology Council (NVTC) in October 2014, showed that VA's exam-scheduling processes are not enabled by state-of-the-art technologies or consistently applied standard operating procedures.²¹⁶ To improve this situation, VHA has developed, and is in the process of a national roll out of, VistA scheduling enhancements, which provides an improved user interface (i.e., graphic user interface or GUI). Although the new GUI will help veterans gain access to care by implementing better scheduling procedures, it does not address the need that managers, planners, and administrators have for accurate and timely data on clinic use.²¹⁷ For instance, VHA's new health care operations dashboard shows that more than 55 percent of clinic slots in VHA go unused each day.²¹⁸ However when questioned about this data, VHA notes that it is not correct.²¹⁹ The underlying VistA scheduling software does not allow accurate representation of clinician time toward each clinic stop. As a result, whether data is presented in a dashboard or a new GUI tool, as long as the underlying data cannot be captured accurately, then VHA will not have the information it needs to effectively manage the supply of clinic slots.²²⁰

VA's financial management information technology system is woefully outdated and VA has previously wasted approximately \$500 million in two failed attempts to replace it. Given VA's lack of an integrated finance and logistics IT system, VA has no method to perform commitment accounting.²²¹ VA's current financial management system does not support streamlining and automation of VA's revenue cycle.²²²

Community care processes currently include eligibility determinations, referrals and authorizations, care coordination, network management, claims, and customer service.²²³ VA's information technology systems limitations often demand manual processes to support community care that can reduce the timeliness and accuracy of data and obscure the true state of VHA's activities. Relying on manual processes slows collections and payment activities and introduces errors and waste into the process.²²⁴ Barriers to automation are multifactorial,

including confusing eligibility rules governing which veterans may receive care outside VHA and for what conditions, in what circumstances, and which services may be billed to third-party insurers.²²⁵ In addition, there are multiple authorities for purchasing community care—all with different business rules²²⁶ and reimbursement rates, as well as antiquated financial management information systems that are not standardized to private-sector processes. All of these impediments are exacerbated by workers throughout the revenue cycle who are poorly compensated and marginally trained, experience high turnover, and work in environments with a continuous 20 percent vacancy rate;²²⁷ thus, they cannot effectively manage certain business practices such as insurance verification and ensuring clinicians complete necessary coding documentation.²²⁸

Many large U.S. health care systems that originally developed in-house EHRs have since purchased and migrated to COTS EHRs.²²⁹ DoD recently made the same choice, deciding to replace its homegrown EHR with a COTS product to take advantage of private-sector innovation and have an EHR that communicates with private-sector systems. For a system in which 60 to 70 percent of military health care takes place outside the DoD,²³⁰ this was an important business consideration that is also consistent with VHA's long term direction. Very large IT programs with purpose-built systems and labor-driven business models are shifting rapidly toward more open source, COTS systems. Large proprietary IT solutions are increasingly being replaced by less risky, agile, and open-source solutions or IT as-a-service models, and getting away from client-server models.²³¹

Interoperability

VHA's EHR issues stymie interoperability among VHA facilities as well as between VHA and DoD and other non-VHA providers. Multiple assessments noted the lack of interoperability resulted in incomplete patient records with potentially substantial implications for veterans and VHA. Incomplete records introduce unnecessary clinical risk, complicate the transition from

COMMISSION ON CARE FINAL REPORT

DoD to VHA care, and inhibit VHA's ability to bill and collect revenue in an accurate and timely manner.²³²

As GAO reported in August 2015, VA and DoD have taken initial steps to increase interoperability between their existing electronic health record systems.²³³ They have deployed the Joint Legacy Viewer (JLV), which provides a patient-centric, integrated view of a patient's health data from VA, DoD, and community health partners on one screen. It has been available at all VA medical centers since October 2014 and currently has more than 70,000 users.²³⁴ The JLV is a positive step in supporting coordination of care among VA, DoD, and community partners, but it only allows for providers to view veterans'/service members' medical records and does not yet allow for the other agencies' medical records to be updated by providers.²³⁵

VA's next evolution in interoperability with DoD and community partners is the deployment of their Enterprise Health Management Platform (eHMP). eHMP is intended to provide VA streamlined access to complete patient history from VA, DoD, and community health partners in a single, reliable, customizable, and secure interface that is easy to use. It is reported to deliver a modern, web-based user interface and supporting infrastructure and is intended to replace the Computerized Patient Record System (CPRS) as VA's primary point-of-care application. The national rollout of eHMP is expected to be completed by December 2017.²³⁶

VHA does not have everything that is needed in an IT system to manage the business and clinical aspects of care in the community and support the overall veteran experience in an expanded community network. To address these gaps and provide health care well into the future, VA intends to develop in house a comprehensive and interoperable digital health platform (DHP). The DHP is intended to seamlessly integrate all of VHA's core processes, including scheduling, supply chain management, billing, and claims. Through consolidation of more than 40 contact center systems and more than 130 versions of the VistA EHR and clinical procurement/inventory systems, the DHP is designed to enable VHA's operation as a holistic, platform business and greatly reduce the cost of system maintenance across the IT enterprise.²³⁷

Because there is no unique patient identifier, problems exist with "1) accessing and integrating information from different providers and provider computer systems, 2) aggregating and providing a lifelong view of a patient's information, and 3) supporting population-based research and development."²³⁸ To accurately match veteran patient data that is exchanged between VA and non-VA providers, both organizations need to use the same unique patient

identifier. This practice is currently not used.²³⁹ Each health care system uses a unique patient identifier number, but it is specific to that system.²⁴⁰ VA uses patients' social security numbers as unique identifiers; whereas, due to stricter security standards required by HIPPA privacy laws that community providers must adhere to, many non-VA providers use other personally identifiable information (e.g., first name, last name, date of birth, and phone number) to match patient identities between record systems. Studies have shown that patient identification error rates range from 7-20 percent.²⁴¹ For VA to accurately identify patients and their records, a unique national patient identifier is essential.

The security of electronic records is an ongoing concern. One in three Americans had health care records breached in 2015.²⁴² Recent hacks of U.S. hospital health care systems through the use of ransomware, viruses that hold systems hostage until victims pay for a key to regain access, further highlight the need for enhanced VA cybersecurity.²⁴³ VA's OIG has repeatedly identified the same weaknesses and deficiencies in VA's information security program in its annual FISMA audit reports.²⁴⁴ Although VA has recently made some progress in developing policies and procedures to address current security gaps, OIG's FY 2015 audit concluded that information security is still a *material weakness* for VA and that VA must take comprehensive measures to mitigate security vulnerabilities affecting VA's mission-critical systems.²⁴⁵ For sharing of veteran data to be secure, only the designated correct parties can have access to patients' data.²⁴⁶ Interoperability increases the risk to veterans' health records.²⁴⁷ Cybersecurity guidelines and best practices are being developed by HHS in response to the requirements in the recently enacted Cybersecurity Information Sharing Act;²⁴⁸ however, security protocols also cannot impede health information exchange with VA community providers and health systems. VA OIT needs to be involved in the health information exchange planning discussions, which

COMMISSION ON CARE FINAL REPORT

are currently handled solely within VHA, so that VA OIT can assist in removing impediments to health information exchange.²⁴⁹

Veterans currently have to opt in (i.e., provide consent) to allow VA to share their health information with non-VHA/community care providers. Although the technology is in place for VA to exchange patient health information with more than 100 health information exchange partners, only a fraction of data can be exchanged in these networks because, due to lack of awareness, only 3 percent of veterans have opted in to allow VA to share their health information.²⁵⁰ The standard industry policy is to have patients opt out of having their health data shared with their other health care providers. VA is prohibited from taking this approach because statutory language in 38 U.S.C. § 7332 prohibits VA from disclosing information relating to drug abuse, alcoholism or alcohol abuse, infection with the human immunodeficiency virus, or sickle cell anemia, except when required in emergencies, without written authorized consent from the patient.²⁵¹

In response to this limitation, VA approved and submitted Legislative Proposal VHA-10 (10P-07), Authority for the Department of Veterans Affairs (VA) to Release Patient Information under 38 U.S.C. § 7332 to Health Care Providers for Treatment of Shared Patients in 2013. The proposal allows veterans to opt out of sharing their data with VA community providers instead of having to opt in. The proposal was approved by OMB and was included in the president's 2015 Budget. VHA provided a briefing to a Senate Veterans Affairs Committee staff in April 2015 on this legislative proposal. A House Bill was introduced, but it limited the opt-out option to the *Choice Program*. VA's Office of Congressional and Legislative Affairs responded back to Congress that the bill should be expanded to include all external purchased care options (i.e., community providers) thus directly supporting more veterans.²⁵²

Collaboration between VA OIT and VHA is paramount to transforming VHA's health IT infrastructure. Such collaboration would be most effectively achieved by establishing an IT leader for VHA who is focused on ensuring that the strategic and operational IT needs of VHA clinicians, staff, and veterans are met. Current OIT leadership is in the process of modernizing VA's IT management processes, to include putting in place IT account managers (ITAMs) for each of the agency's departments, including VHA.²⁵³ An account manager is neither senior enough, nor has the level of expertise and experience, to manage the complexity of the VHA IT system. VHA's extensive IT needs require a VHA CIO with authority over the health IT budget and the execution of the health IT strategy. VA needs a robust process for IT investment decisions, especially those relating to VHA's health strategy. The VHA CIO would work with the CVCS and the VA CIO to define the health IT strategy and key IT acquisitions/projects and ensure that health IT funding is aligned and committed to the execution of VHA's health IT

²⁴⁹ Jamie Bennett, VLER Health Program Manager, phone call with Commission on Care Staff, March 2, 2016.

²⁵⁰ Elaine Hunolt, email on February 1, 2016 in response to follow-up questions from her briefing to the Commission on Care, December 15, 2015

²⁵¹ 38 U.S.C. § 7332 Subchapter III - Protection of Patient Rights Sec. 7332 - Confidentiality of certain medical records.

²⁵² Elaine Hunolt, email on February 1, 2016 in response to follow-up questions from her briefing to the Commission on Care, December 15, 2015.

²⁵³ "OI&T Enterprise Strategy: Putting Veterans First," LaVerne Council, Assistant Secretary for Information & Technology, Chief Information Officer, Department of Veterans Affairs, briefing to Commission on Care, December 15, 2015.

strategy. Rolling out a new system takes multiple years, and VA must commit to funding system deployments to completion.

The modernization of VHA's IT infrastructure requires a substantial increase in and reallocation of VA's IT budget to implement it. The budget process for VA health care IT funding should be the same as the process for VHA medical care funding. That shift can be accomplished by establishing a separate line item for *health* IT within VA's IT appropriation, and providing for advanced appropriations for that account. In addition, there is also a potential supplementary role for government-wide IT legislation. For example, H.R. 4897, the Information Technology Modernization Act of April 2016, would create a \$3.1 billion revolving fund for upgrading outdated federal IT systems.²⁵⁴

The Commission strongly recommends that VA purchase a comprehensive COTS health IT platform, and implement all information systems with minimal customization. VHA leadership is in the process of assessing whether VistA is the best solution to support veterans' future health care needs or whether a new EHR, such as a COTS product or open-source EHR, should be used.²⁵⁵ The decision to choose a COTS product would be consistent the approach adopted by DoD and by other large health systems that have moved away from homegrown solutions to commercial and open-source products. It would allow VHA to focus energy on excellent patient care as a core competency and shift the IT development and maintenance risk of software products to external vendors with more expertise in this area.²⁵⁶ It is also likely to accelerate interoperability as vendors continue to offer IT solutions that meet meaningful use standards and the roadmap published by ONC.

A COTS product must be able to execute key functionalities required by VHA. These requirements include one standard version of an EHR across all VHA sites of care; interoperability within VA, such as with Veterans Benefit Administration (VBA), and between VHA and DoD, and community providers; robust security; and the ability to accommodate a national unique patient identifier. This system must also be a robust clinical management tool that supports VHA clinical workflow and has a customizable interface for clinical users, allows for evidence-based clinical order sets and patient safety features like automated medication reconciliation, has robust analytic capability for both clinical and administrative functions, and enables automated abstraction and reporting of performance measures.

The system must also seamlessly support administrative functions like scheduling, patient intake, eligibility determination, referrals, and patient out-of-pocket expense determination. The system must enable effective business operations in billing coding, automated claims processing, and all aspects of supply chain management. This COTS purchase should include a scheduling package. Improvements in scheduling should dramatically increase access and satisfaction, as well as data quality, productivity, and operational reporting capabilities.

²⁵⁴ "Two IT Modernization Bills Could See Movement in Congress," Aisha Chowdhry, accessed April 28, 2016, <https://washingtontechnology.com/articles/2016/04/22/it-bills-congress.aspx>.

⁷³ Sloan Gibson, Deputy Secretary of Veterans Affairs et al., briefing to Commission on Care, April 18, 2016.

²⁵⁶ "DoD awards Cerner, Leidos, Accenture EHR Contract," Tom Sullivan, accessed May 12, 2016, <http://www.healthcareitnews.com/news/dod-names-ehr-contract-winner>.

COMMISSION ON CARE FINAL REPORT

Broadening and improving scheduling capabilities will provide more opportunities for veterans to become active partners in their own care.²⁵⁷

For VHA to transition to a COTS product, the new VHA CIO must develop and implement a strategy that will allow the current nonstandard data to effectively roll into a new system, engage clinical-end users and internal experts in the procurement and transition process, ensure effective cybersecurity, and limit spending on the current systems to fund only critical changes required for continued operations. Finally, this plan should be coordinated with ONC and DoD.

Implementation

Legislative Changes

- Provide a specific appropriation to fully fund the complete development and deployment of the comprehensive COTS electronic health platform, recognizing this will require significant resources above the current annual appropriation and funding to support VHA's IT transformation; including funds that ensure appropriate training of all staff, recognize loss of staff productivity during implementation, and provide proper maintenance and upgrades of VA IT infrastructure in preparation for new and successor technologies.
- Establish within the Department's IT appropriation a line item for health IT, and provide for advanced appropriations for that account, consistent with the overall VHA IT strategy.
- Amend section 38 U.S.C. §7332, to authorize VA to share protected health information under the same rules as all other HIPAA protected information.

VA Administrative Changes

- Hire a CIO for the VHA IT transformation. The CIO should report to the CVCS, with secondary reporting responsibility to VA CIO.
- Establish a transformation strategy that addresses all of the following needs (as directed by the VHA CIO):
 - standardizes data elements in the current IT systems through the use of standard nomenclatures, terminologies and code sets in order to promote the transition to a COTS EHR and to support interoperability²⁵⁸
 - develops a robust cybersecurity plan for VHA IT infrastructure, in coordination with VA CIO and Chief Information Security Office, which addresses both current systems and defines
 - the requirements for new systems

²⁵⁸ *Ibid.*, 55.

- collaborates with the Office of the National Coordinator for Health IT on national interoperability standards and implementation
- limits any continued VistA development and associated spending to only those upgrades required to keep VistA functioning until a new system is in place
- Plan and implement procurement of a comprehensive COTS electronic health platform that executes all of the following requirements:
 - establishes one logical version of an electronic health record platform in VHA²⁵⁹
 - standardizes evidenced-based, best practice clinical order sets across VHA
 - incorporates effective analytic capabilities to drive health and business outcomes and offers the ability to interface with other tools for data management and presentation²⁶⁰
 - modernizes appointment scheduling so that it accurately measures wait times, is not susceptible to data manipulation, and is focused on the individual needs of the veterans²⁶¹
 - accomplishes a coordinated IT infrastructure for appointment scheduling, coding, billing, claims payment, third party collections, and other core VHA business processes, including the following specific capabilities: integration across patient intake, medical records, coding, and billing systems; single sign-on capability; automated first-party claims matching; real-time estimate of out-of-pocket patient expenses; and automation to support algorithmic edits and claims correction²⁶²
 - supports the business processes required to implement integrated community care networks, including eligibility determinations, referrals and authorizations, care coordination, network management, claims and customer service
 - promotes full interoperability with IT systems across VA (including VBA and National Cemetery Administration) and between VA and DoD
 - supports the development of full interoperability with integrated community care network facilities and providers

²⁶² The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 49, accessed February 16, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

- enables automated abstraction and reporting of quality performance measures including process and outcome measures of clinical quality, access measures, and cost effectiveness that are the same as the private sector
- includes functionality to use a national unique patient identifier
- integrates supply chain and financial systems with the electronic health records to provide accurate operational data²⁶³
- Streamline its current IT procurement processes so that IT procurement is expeditious, including lengthier contract vehicles with more options, the use of indefinite delivery indefinite quantity vehicles, blanket purchase agreements, time and material contracts, and flexible contract structures to allow for the onboarding of emerging technologies in a competitive fashion.
- Increase health IT expertise within VHA.

Other Department and Agency Administrative Changes

- CMS and federal health care providers should collaborate to develop a national unique patient identifier standard. CMS should require health care providers to use these identifiers as a condition of participation in Medicare and HHS should require federally qualified health centers to use them as a condition of participation. The President should require all federal health care providers to adopt the standard.

²⁶³ LaVerne Council, Assistant Secretary for Information & Technology, Chief Information Officer, Department of Veterans Affairs, briefing to Commission on Care staff, April 27, 2016.

Supply Chain

Recommendation #8: Transform the management of the supply chain in VHA.

Problem

Effective management of all aspects of the supply chain has become a competitive differentiator for health care delivery systems. Modernization and automation of the supply chain in health care have the potential to save hundreds of millions of dollars, if done well. VHA cannot modernize its supply chain management and create cost efficiencies because it is encumbered with confusing organizational structures, no expert leadership, antiquated IT systems that inhibit automation, bureaucratic purchasing requirements and procedures, and an ineffective approach to talent management.

The problems are systemic. The organizational structure is chaotic, contracting operations are not aligned to business functions, and processes are poorly constructed, lacking standardization across the organization. Information technology infrastructure is inadequate, and it lacks appropriate interoperability among IT systems. VHA is unable to produce high-quality data on supply chain utilization and does not effectively manage the process using the insights such data could provide.²⁶⁴

Background

Health systems nationwide, under pressure from reforms driven by the Affordable Care Act, are looking at every aspect of their business to maximize cost savings, while maintaining quality services.²⁶⁵ This effort includes examining the supply chain for ways to save money.²⁶⁶

The Commission Recommends That . . .

- VHA establish an executive position for supply chain management, the VHA chief supply chain officer (CSCO), to drive supply chain transformation in VHA. This individual should be compensated relative to market factors.
- VA and VHA reorganize all procurement and logistics operations for VHA under the CSCO to achieve a vertically integrated business unit extending from the front line to central office. This business unit would be responsible for all functions in a fully integrated procure-to-pay cycle management that includes policy and procedures, contract development and solicitation, ordering, payment, logistics and inventory management, vendor relations and integration, data analytics and supply chain visibility, IT alignment, clinician engagement and value analysis, and talent management across all these supply chain functions.
- VA and VHA establish an integrated IT system to support business functions and supply chain management; appropriately train contracting and administrative staff in supply chain management; and update supply chain management policy and procedures to be consistent with best practice standards in health care.
- VHA support the Veterans Engineering Resource Center (VERC) Supply Chain Modernization Initiative including consistent support from leadership, continued funding and personnel, and the alignment of plans and funding within OIT to accomplish the modernization goals.

COMMISSION ON CARE FINAL REPORT

Price competition achieved through technology and aggressive management of supply chain efficiencies by retailers such as Walmart and Amazon are held up as just the kind of disruption that health care requires.²⁶⁷ Health care organizations as diverse as Kaiser Permanente, Cleveland Clinic, Stanford Medicine, and Johns Hopkins Health System have taken on the challenge of transforming their supply chains, realizing savings of as much as hundreds of millions of dollars.²⁶⁸ VHA, which in FY 2014 spent approximately \$3.4 billion on clinical supplies, medical devices, and prosthetic appliances, has an opportunity to realize similar savings.²⁶⁹

Opportunities for efficiency in the supply chain include reducing pricing for purchases and lowering operating costs of procurement processes. To achieve price savings, organizations must have detailed information on what products they use, understand and reduce variability in the products purchased, and aggressively negotiate pricing, usually by consolidating purchases to a small number of preferred vendors who are willing to offer volume discounts and improve service delivery. On the operations side, cost savings are achieved by managing inventory lifecycle and restocking processes; order management; and the logistics of shipping, receiving, and transportation to drive down costs and lower waste and breakage. In health care, it also pays to ensure that clinical staff, both nurses and doctors, are treating patients rather than conducting inventory checks or ordering and collecting supplies.²⁷⁰ To be successful in managing the supply chain in health care, a partnership with clinical staff is key. Variability in device and supply purchases can be driven by clinician preferences and thus, to reduce variability, clinicians must be engaged in analyzing product options and examining data on product effectiveness to determine what products to use with patients.²⁷¹

VHA has a successful internal model of aggressive supply chain management that can serve as a model for improving the management of medical, surgical and other supplies: the VHA Pharmacy Benefits Management Service (PBM). PBM has taken a systems approach to

managing pharmaceutical supplies, logistics, and prescribing.²⁷² PBM has largely solved the internal contracting deficiencies in VA by consolidating its activities under just two contracting organizations that oversee all national-level contracts for pharmaceuticals. PBM also applies effective mechanisms to drive standardization of supplies through a national formulary, clinical guidelines for prescribers and utilization review, and feedback to help clinicians identify outlier prescribing practices.²⁷³ Vital to the success of this program is the involvement of clinicians and pharmacists in a vertically integrated model of engagement and decision making through facility-level, Veterans Integrated Service Network (VISN)-level, and national-level PBM committees that contribute to formulary and clinical guideline decisions and manage utilization review with local clinicians.²⁷⁴ PBM also has a sophisticated web of communications, education, and engagement efforts to ensure clinical leaders across the system are helping drive PBM policy and practices.²⁷⁵ As a result, 90 percent of purchases are acquired through pharmaceutical prime vendor contracts.²⁷⁶

PBM, taking advantage of standardized industry nomenclature and bar codes for pharmaceuticals, has implemented automated dispensing, distribution, and ordering processes, including VA's Consolidated Mail Outpatient Pharmacy (CMOP).²⁷⁷ The use of CMOP, a system of seven highly automated pharmacies that process more than 460,000 prescriptions every work day, results in exceptional accuracy and lower processing costs than would result if filling prescriptions at each VAMC.²⁷⁸ Eighty percent of prescriptions in VHA are filled through CMOP,²⁷⁹ which has been recognized for the last 6 years as the best or one of the best mail order pharmacies in the country meeting or exceeding customer satisfaction scores of health care systems like Kaiser Permanente and on-line pharmacies like Express Scripts and Walgreens Online Pharmacy.²⁸⁰ Customer service, veteran satisfaction, and patient safety delivered through team-based care are a hallmark of the mission of PBM,²⁸¹ and are a useful reminder of the principles that must drive any successful transformation of supply chain management in VHA.

COMMISSION ON CARE FINAL REPORT

Analysis

VHA's supply chain for clinical supplies, medical devices, and related services is inadequate compared to the agency's pharmacy organization or to best practices in leading hospital systems.

*Its contracting processes are bureaucratic and slow, which can delay veterans access to care. Purchasing processes are cumbersome which has driven VHA staff to work arounds and exacerbates the variation in prices VA pays for products. Utilization is difficult to measure or manage given a lack of data which likely leads to significant avoidable expense for VA.*²⁸²

Leadership and Organizational Structure and Function

Best-in-class supply chain organizations typically have a single group responsible for the strategy, sourcing, procurement, and logistics of clinical supplies and medical devices. The organization is typically led by an executive-level leader, such as a chief supply chain officer (CSCO), and personnel are aligned along product categories to develop and use deep expertise in the products and suppliers they manage.²⁸³ In contrast, the organizational structure for contracting, logistics, and supply management in VA and VHA is complex and duplicative.²⁸⁴ Four contracting entities are located within VA central office but report to two different management offices within VA's office of acquisition, logistics, and construction (OALC).²⁸⁵ Procurement personnel within VHA's regional contracting and VISN offices report to VHA's national office of procurement. In contrast, facility-based and VISN logistics personnel report to their local VAMC or VISN director and not to the national VHA logistics office.²⁸⁶ To further complicate the management picture, clinical supplies are managed by the logistics organization, yet medical devices are managed by the Prosthetics and Sensory Aid Service (PSAS)²⁸⁷ (see Figure 5). In most health care organizations, the supply chain chief operating officer and their integrated supply chain group manages the procurement and distribution of all clinical supplies and medical devices.²⁸⁸ This is not the case in VA. Senior leaders in VA's and VHA's supply chain organizations and field-based supply chain personnel indicate current organizational structure is too complex and should be simplified.

*National supply chain leaders expressed lack of clarity regarding the scope of responsibilities of the entities for which they are responsible, which has led to some tension and what one leader described as a 'turf war.' Others described a vacuum of ownership and accountability, and lack of clarity on roles and responsibilities.*²⁸⁹

²⁸² The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, v, accessed April 29, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

Figure 5. Organizations Comprising VA's Supply Chain²⁹⁰

Notes: Some VISNs may have different reporting relationships with facility prosthetics staff.

The separation of clinical supplies and prosthetics/medical devices causes issues in coordinating products needed for procedures. Frontline staff members indicate the time it takes to procure simple items through contracting (1 to 3 months) is problematic. For example, heart valve surgery may be delayed because some heart valves cost more than the micro-purchase threshold (\$3,000), thus the purchase must be made through the contracting process.²⁹¹ Medical center staff consistently expressed concern that VHA procurement offices are not responsive to the needs of a health care organization and do not communicate effectively with them,²⁹² findings borne out by low customer satisfaction scores given to these organizations.²⁹³

There is great overlap and redundancy in procurement and logistics functions in VA and VHA and the reporting structures are not aligned to ensure that the needs of veteran patients and their clinical providers are met. In an environment with limited sharing of best practices and a lack of transparent, open communications, the current complicated reporting structures impede customer-service quality and effectiveness. The original intent behind the current structure was to consolidate and strengthen purchasing power through the establishment of national contracts; however implementation of the vision has been poor and the result has been a

²⁹⁰ Ibid., 49.

²⁹¹ Ibid., 67.

²⁹² Ibid., 68.

²⁹³ Ibid., 69.

COMMISSION ON CARE FINAL REPORT

complicated, bureaucratic system filled with redundancies.²⁹⁴ These broken processes serve as a precursor for catastrophic systems failures.²⁹⁵

There is an immediate need to consolidate and streamline procurement and logistics for medical and surgical supplies under one leader in VHA, the VHA chief supply chain officer (CSCO), who would be accountable for transforming VHA supply chain management. As identified under MyVA, medical and surgical supply chain management is the first priority but the rest of the supply chain needs to be addressed by the CSCO in a staged approach. The VERC or other experts in business process engineering must be engaged to create a vertically aligned organizational structure with clear delegated responsibilities at each level of the organization to create an efficient and responsive procurements and logistics process which the VHA CSCO would lead.

Clinical Engagement and Value Analysis

*In contrast to pharmaceuticals, usage of clinical supplies and medical devices is not strictly monitored or managed in VA. In general, physicians and nurses can choose whichever products they believe are best for patients and the supply chain organization's role is to make those items available.*²⁹⁶

VHA does not have a means to determine what supplies should be standardized or a feedback loop administrators and staff use to assess whether standards were being used when they did exist.²⁹⁷ As a result, limited product standardization has been achieved across VHA, despite VHA establishment of national standardization user groups in 2001 responsible for identifying items for standardization based on national procurement data.²⁹⁸ To date, national product standardization has been achieved in only a limited number of categories.²⁹⁹ Since 2011,

*VHA required that medical centers establish Clinical Product Review Committees (CPRCs) to: (i) review and approve the use of new clinical items and reusable medical equipment (RME) at each medical center; (ii) maintain a list of approved expendable clinical supplies and RME by establishing and maintaining a Medical/Surgical Supply Formulary; and (iii) ensure compliance with nationally standardized contracts and blanket purchase agreements. In all sites visited, CPRCs exist and meet regularly but reviews were generally formalities.*³⁰⁰

³⁰⁰ Ibid., 82.

Under this 2011 policy, the establishment of VISN oversight committees was also required to provide accountability and feedback to the local committees, but these committees were apparently never established.³⁰¹

VHA, with the engagement of the Veterans Engineering Resource Center (VERC), is making progress on clinician alignment to accomplish value-based purchasing decisions for medical and surgical supplies. VERC has recently rolled out a national clinical product review committee (CPRC-E) e-portal to better organize this function. This portal provides a central system and standard processes for all new product requests and approvals to inform the procurement processes.³⁰²

In the area of medical and surgical supplies, clinician preference can drive variability in procurement and utilization. As has been done in VHA for pharmaceutical prescribing, a similar system to engage and align clinicians must be undertaken for medical devices and surgical supplies. VERC has started this process, but requires further funding and leadership support to fully implement a clinician-driven sourcing process. Current and future leaders of VA and VHA must ensure that VERC continues to receive the funding support and leadership engagement it needs to fully accomplish this transformation with support and direction from a VHA CSCO.

Information Technology, Data Standards, and Analytics

Information technology systems, data systems, and analytical capability for finance, inventory management, and purchasing impede VHA's ability to effectively manage its supply chain.³⁰³ VHA needs greater "end-to-end visibility into the operational and financial performance of their supply chain" and more effective means to accomplish supply chain budgeting, forecasting, inventory management and automation of at least some key supply chain functions.³⁰⁴

*VA lacks visibility into supplies and devices spending at the level of granularity usually seen in the private sector. For example, in the private sector, it is typically possible to measure clinical supply spend and utilization at the service, patient, or physician level. However, this is not possible in VHA because it does not capture such data. Therefore, supplies spend per case can only be calculated in aggregate, which is relatively meaningless and does not allow for fair comparison across hospitals, services, or physicians. This inhibits VA's ability to manage utilization and to understand fully the impact of product standardization efforts.*³⁰⁵

VERC is working to reduce the more than 130 versions of VistA in place across the country so that the same data sets can be tracked and reported.³⁰⁶ Funding was approved by OIT for the Future Transformation Tool (FTT) graphical user interface that will standardize product names

COMMISSION ON CARE FINAL REPORT

and provide data integration across all of VHA. Point of Use Solution, a commercial off the shelf supply management software product, has been purchased to achieve better inventory and demand management control and has been deployed to 32 percent of facilities, as of April 2016.³⁰⁷

True sustainment of a clinician driven process cannot be achieved with fragmented information systems that do not communicate. Leaders at all levels of the organization are not able to effectively identify and manage procurement requirements or provide effective feedback to clinicians on utilization. Similarly, automated inventory control, ordering, billing, and payment cannot occur without a seamless information technology infrastructure. With a current IT system in which fiscal, supply chain, and clinical informatics systems do not interface, the hopes of moving to automated processes for supply ordering, equipment life cycle management, and vendor communications cannot be realized. A plan for the transformation of supply chain management, developed by a VHA CSCO with support from VERC, must be fully integrated with planning and procurement within OI&T and fully financed to accomplish these important goals.

Policy and Procedures

Ninety-eight percent of all clinical supplies are acquired using purchase cards³⁰⁸ and 75 percent of what VHA spends on clinical supplies is made through this purchase mechanism.³⁰⁹ This is not a surprise given that the standard contracting process can take anywhere from 150 to 180 days to complete,³¹⁰ yet use of purchase cards is inefficient as this mechanism does not take advantage of economies of scale and potential cost savings an organization the size of VHA can achieve through price negotiations and strategic sourcing.³¹¹ It can also be contrary to law, as use of purchase cards often necessitates orders be split to remain under the \$3,000 purchase card limit.³¹² An analysis of purchase records showed that 38 percent of supply orders were made through standing vendor contracts which is in stark contrast to the private sector benchmark of aiming to complete 80-90 percent of supply purchases from master contracts with negotiated price discounts.³¹³ Indeed, the private sector trend in health care has been for hospitals and health care systems to form alliances in “group purchasing organizations” to achieve the scale that VHA naturally enjoys.³¹⁴ Weaknesses in logistic management have been recognized in VHA for some time and still remain.³¹⁵ For instance, a review of logistics business

practices at 17 VHA medical facilities in 2014 showed that none of the facilities achieved 100 percent compliance on the factors assessed, and the rate of noncompliance ranged from 53 to 88 percent, depending on the business metrics examined.³¹⁶

VA is inhibited by a failure to update its acquisition regulations to take advantage of modernization made in 2014 to the governmentwide regulations to promote simplified purchasing procedures.³¹⁷

VERC initiatives to improve VHA supply chain are intended to standardize business processes and address the great price variations for the purchasing of medical and surgical supplies. A national medical surgical prime vendor (MSPV) contract has been established. This development has several advantages to include (a) increased ability to leverage pricing negotiations; (b) standardized pricing; (c) elimination of redundant contract development, bidding, and selection; and (d) future ability to integrate with CPRC E-Portal.³¹⁸ VA has established a goal for 85 percent of all orders in FY 2016 be made under the prime vendor contract and has made 1,100 contracting officers available to meet demand against the contract.³¹⁹ As of April 2016, an estimated \$24.4 million in supply chain costs had already been avoided since January.³²⁰

The establishment of a new MSVP contract in April 2016, the assignment of 1,100 staff to support its use, and the expectation communicated to the field that 85 percent of all purchases be made from the contract are important steps in the right direction. For efficient ordering processes to take hold and be sustained across VHA, all of the policies and procedures from the bedside (or surgical suite) to the head contracting office must be reworked to align with the desired business outcomes. Reworking policies and procedures must occur together with appropriate training and communication at all levels of the organization. Each staff member involved in the procurement process must be held accountable for meeting the new requirements and expectations assigned to them. Updating the VA Acquisition Regulation (VAAR) is just one small piece of such a transformational change. The VERC or others with appropriate experience in aligning business processes within government should be assigned responsibility to finish developing and implementing plans for such a transformation under the direction of a VHA CSCO.

Contracting

Analysis of the *Independent Assessment Report* confirmed issues with the responsiveness of contracting. For example, at one facility, if a request was submitted to contracting that was incomplete or inaccurate, it took on average 21 to 39 days from the date of initial submission to

³¹⁶ U.S. Department of Veterans Affairs, *VA Supply Chain News*, Issue 13, Jan/Feb 2015.

³²⁰ Ibid.

COMMISSION ON CARE FINAL REPORT

receive the first response from contracting requesting, for example, additional information or paperwork.³²¹ This problem appears to be a widespread.

In another instance, interviews conducted as part of the independent assessment showed that VA vendor contracting processes to order equipment valued at less than \$3,000, for example, scalars for dentistry, can be confusing and lengthy, leading to shortages in equipment and delays in clinic as equipment is located. Delays in sterile processing were also indicated by providers as an issue pertaining to equipment availability.³²²

Communication with contracting is another substantial challenge within VHA. In surveys that assessed the effectiveness of VA's contracting organization, VHA employees' customers rated the communications received from contracting officials the lowest of all contracting dimensions that were evaluated.³²³ Several interviewees recommended that VA provide more clarity on the status of contracting requests to help them plan and schedule care.³²⁴

Individuals in contracting believed that VAMC staff members were responsible for some of the delays in the contracting process. They reported that requests submitted to them from VAMCs were often incomplete or unclear and that facilities were poor at forecasting demand for items, leading to unpredictable peaks in demand for contracting services that exceeded their capacity. The VHA Procurement and Logistics Organization (PLO) and facilities are seeking to address these challenges by placing contract liaisons in facilities to better support contracting officer representatives throughout the process.³²⁵

Contracting compliance analysis showed substantial opportunity for improvement. Analysis of purchase order data showed that 38 percent of purchases were made on a government contract, 27 percent were made at open-market prices, and 34 percent did not have a source type specified.³²⁶ Private-sector organizations typically aim to buy 80 to 90 percent of their clinical supplies and medical devices on some type of negotiated contract.³²⁷

Interviews and observations undertaken as part of the independent assessment revealed that there are two primary reasons for VHA's relatively high share of open-market purchasing. First, in contrast to pharmaceutical purchasing, VHA's supply purchasing systems are not integrated

³²¹ The consulting team based this on an IFCAP/eCMS transmission log received during a VAMC site visit (2015). McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, x, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

³²² Grant Thornton, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment G (Staffing/Productivity/Time Allocation)*, 91, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_G_Staffing_Productivity.pdf.

³²³ The consulting team derived this from a VHA procurement metrics book. McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment J (Supplies)*, 69, accessed June 1, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_J_Supplies.pdf.

³²⁶ Ibid., xii.

³²⁷ Ibid.

with contract or pricing catalogs. Therefore, the purchasing process relies on buyers (often clinical staff) to research whether an item is on contract and through which contract a purchase should be made. Because of that complexity, several buyers reported that they bypass this step and buy products through the channel that is most familiar and convenient, for example, by replicating previous orders to their usual supplier, despite changes that may have occurred (new contracts and pricing arrangements, for example). Second, VHA has limited ability to monitor and drive compliance with the contract hierarchy because the required data are not captured electronically. In fact, more than 60 percent of all clinical supply items do not have a contract number listed.³²⁸

VHA's fragmented inventory management systems and processes also create challenges. VHA's current inventory management does not have a feedback loop to link inventory to product use, contracting, ordering, and vice versa. This lacking information prevents optimal use of the MSPV contract program and creates missed opportunities to establish more effective volume-based national or regional contracts. It also leads to peaks and troughs in demand for contracting services, which can overwhelm contracting's capacity.³²⁹

There are pockets of good performance and innovation in VHA that could be replicated across its supply chain. The *Independent Assessment Report* notes that the Denver Acquisition and Logistics Center (DALC) is a bright spot within VHA's supply chain organization in its acquisition and distribution of select devices such as hearing aids to veterans. It has developed an integrated operating model that brings together clinicians, contracting, finance, logistics, and program management. That integrated team makes decisions around product and supplier selection based on a holistic view of what is best for veterans and for VHA.³³⁰

Talent Management

VHA is unable to hire good talent to manage its supply chain. In 2014, 20 to 30 percent of logistics positions were unfilled, and 20 percent of medical supply aide jobs were vacant.³³¹ The causes were identified as lengthy time-to-hire, nonexistent internal career progression ladders for these individuals, and inability to provide competitive pay due to position downgrades made by OPM under Title 5.³³² Examples of recent downgrades include supply technician, mail manager, administrative officer, and materials handler.³³³

*It is well known in the health care industry that there is a shortage of supply chain talent currently. The private sector organizations interviewed during this assessment stated that they are recruiting more highly trained individuals than they did in the past and, because of competition for talent, are paying them more than they used to. This may be contributing to VHA's recruitment and retention challenges.*³³⁴

In Recommendation #15, the application of the more than 60-year old standards and processes used in the Title 5 personnel system does not serve the needs of a modern health care delivery

COMMISSION ON CARE FINAL REPORT

organization. Health care supply chain management is a recognized field of study and a valued component of leadership teams at the highest performing health care organizations. For VHA to compete for top leadership talent in this field and frontline staff, logistics and procurement personnel must be included in a new excepted personnel system for VHA under Title 38 (see Recommendation #15).

To address talent management issues, VERC has established a new VA Acquisition Academy (VAAA) Supply Chain Management School.

*The mission of the Supply Chain Management School is to provide best-in-class education, training, professional development, and certification of the VA supply chain workforce. VAAA's competency-based curriculum addresses general and technical skills, VA-specific functional areas, and core activities for VA logistics professionals. Emphasis is on translating theory, fundamentals, and concepts to practical application with realistic VA-based scenarios utilizing hands-on application of problem-solving skills.*³³⁵

The supply chain management school is organized under VAAA which has been recognized by external organizations to offer high quality training.³³⁶

Implementation

Legislative Changes

- Establish a new excepted personnel system under Title 38 to permit VHA to compete effectively with the private sector for personnel required to run a complex health care system, including staff to manage and operate a modern supply chain system.

VA Administrative Changes

- Establish an executive position for supply chain management, a VHA chief supply chain officer (CSCO), to drive supply chain transformation in VHA. This individual should be compensated relative to market factors.
- Transform policy and procedures for supply chain management in parallel with identification and procurement of new management software: new software should support the new processes and not the existing, poorly organized business processes and requirements.
- Establish a staged process for the transformation of all supply chain operations in VHA under the direction of a VHA CSCO, with support from VERC.
- Reconcile the VAAR with the Federal Acquisition Regulation (FAR) to ensure the VAAR aligns with recent updates to the FAR to permit streamlined acquisition processes.
- Provide consistent and standardized training to ensure those developing and administering contracts have updated information regarding FAR and VAAR

COMMISSION RECOMMENDATIONS

regulations as well as a thorough understanding of their responsibilities under the new approach to supply chain management and how to carry out these duties.

Other Department and Agency Administrative Changes

- None required.

Governance, Leadership, and Workforce

Board of Directors

Recommendation #9: Establish a board of directors to provide overall VHA Care System governance, set long-term strategy, and direct and oversee the transformation process.

Problem

The existence—and concealment—of unacceptably long delays in care at the Phoenix VA Medical Center (VAMC), and similar problems at multiple other VAMCs, had both direct and indirect causes. Weak governance was found to be among those indirect causes.³³⁷ As the authors of a root-cause analysis of the Phoenix scandal highlighted, “a governance gap in leadership continuity and strategic oversight from one executive leadership team to another” contributed to the wait-time problems.³³⁸ The report authors observed, “Unlike other health care systems, VHA does not have a governance mechanism to fill the role of a board of directors.”³³⁹ The governance limitations made evident in the Phoenix scandal have profound implications for the long term. As discussed in this report, the Commission believes VHA must institute a far-reaching transformation of both its care delivery system and the management processes supporting it. Changes of the magnitude facing VHA would be difficult for any health care system to achieve. A transformation will take years to accomplish and must be sustained over time. Yet the short tenure of senior political appointees, each administration’s expectations for short-term results,³⁴⁰ and VHA’s operating in a “dynamic environment [in which it is] answering to a large number of stakeholders, sometimes with

The Commission Recommends That . . .

- Congress provide for the establishment of an 11-member board of directors accountable to the President, responsible for overall VHA Care System governance, and with decision-making authority to direct the transformation process and set long-term strategy. The Commission also recommends the governing board not be subject to the Federal Advisory Committee Act and be structured based on the key elements included in Table 5.
- The Board recommend a chief of VHA Care System (CVCS) to be approved by the President for an initial 5-year appointment. Additionally, the Commission recommends the governing board be empowered to reappoint this individual for a second 5-year term to allow for continuity and to protect the CVCS from political transition. If necessary, the CVCS can be removed by mutual agreement of the President and the governing board.

³⁴⁰ Ibid.

competing demands”³⁴¹ offer little reason for optimism that real transformation could take hold without fundamental changes in governance.

Background

VHA, as an agency within a cabinet department, is accountable to the secretary of Veterans Affairs (SECVA) and to the President. This framework, when it works well, can provide VHA access to, and support from, the President and White House staff. Like other executive branch agencies, VA and VHA undergo Office of Management and Budget (OMB) oversight; must win OMB approval of proposed rulemaking, budgets, IT development, and performance plans; and are also subject to governmentwide regulation of such areas as procurement, personnel, and property management. VHA health care and operations are subject to close congressional scrutiny.³⁴² VHA undergoes oversight from several independent bodies, including the internal Office of the Inspector General audits and external Government Accountability Office audits.

Within VA, VHA participates in the VA Executive Board (VAEB) and Senior Review Group, which are designated as the principal governance bodies of the department.³⁴³ VAEB serves as the department’s risk-governance board and determines VA’s strategic direction. VAEB oversees the department’s planning, programming, budgeting, and execution. Notwithstanding certain strengths inherent in this framework, VHA governance can be paralyzed by bureaucratic decision-making processes and competing stakeholder concerns.³⁴⁴

Among its principal recommendations, the *Independent Assessment Report* calls for “establishing a governance board to develop fundamental policy, define the strategic direction, insulate VHA leadership from direct political intervention, and ensure accountability for the achievement of established performance measures.”³⁴⁵

Analysis

In recent years, VHA leadership priorities and strategic direction have been unclear. Leaders have been consumed by crisis and by responding to congressional demands, creating a reactive, rather than proactive environment.³⁴⁶ Additionally, the leadership vision has lacked continuity.³⁴⁷ The SECVA and deputy secretary of Veterans Affairs may exercise oversight of

³⁴¹ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, xiv, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

COMMISSION ON CARE FINAL REPORT

VHA and try to impose accountability, but incumbents do not necessarily have experience in federal health care administration or delivery.³⁴⁸ The SECVA has often lacked independent information and metrics on VHA performance, and the oversight, risk management, and compliance functions of VHA report to the undersecretary for health (USH) or to lower officials in VHA.³⁴⁹

Previous studies, dating back 20 years,³⁵⁰ have proposed fundamental change in VHA's governance and government structure, to include a proposal that it be restructured as a government corporation.³⁵¹ The earliest rationale for making VHA a government corporation was based on the view that the system needed a new service-delivery strategy,³⁵² and envisioned specific legislation to permit the corporation to operate more expansively under a wide range of reforms.³⁵³ Although the authors of the 1996 report presented a VHA government

³⁴⁸ Department of Veterans Affairs Governance Structure, VA Directive 0214 (2014). McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, viii, accessed June 15, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf. Under Secretary of Health, 38 U.S.C. § 305. While statute requires the USH of VHA to be appointed “solely on the basis of demonstrated ability in the medical profession, in health-care administration and policy formulation, or in health-care fiscal management; and on the basis of substantial experience in connection with the programs of the Veterans Health Administration or programs of similar content and scope” there is no such selection criteria for the VA Secretary or VA Deputy Secretary. Of the eight men to hold the position of Secretary of Veterans Affairs, only one, James Peake would qualify to be USH (“United States Secretary of Veterans Affairs,” Wikipedia, accessed June 15, 2016, https://en.wikipedia.org/wiki/United_States_Secretary_of_Veterans_Affairs#List_of_Secretaries_of_Veterans_Affairs) and of the six men to hold the position of DEPSECVA, none would qualify to be USH.

³⁵⁰ Veterans Benefits Improvement Act of 1994, Pub. L. No. 103-446, 108 Stat. 4645 (1994). In 1994, Congress in sec. 1104 of Public Law 103-446 called for an independent examination of the justifiability of establishing an alternative government structure to provide health care services for veterans, culminating in the 1996 report.

³⁵¹ Klemm Analysis Group, Lewin Group, Arthur Anderson LLP, *Feasibility Study: Transforming the Veterans Health Administration into a Government Corporation* (Washington, DC: Department of Veterans Affairs, 1996), 23. A government corporation has been described as “a government agency that is established by Congress to provide a market-oriented public service and to produce revenues that meet or approximate its expenditures.” Kevin R. Kosar, Congressional Research Service, *Federal Government Corporations: An Overview*, 2, accessed June 15, 2016, <https://fas.org/sgp/crs/misc/RL30365.pdf>. Booz Allen Hamilton, *Veterans Health Administration (VHA) National Center for Patient Safety (NCPS) Systems Review: Final Report* September 22, 2015. Concerned Veterans for America, *Fixing Veterans Health Care: A Bipartisan Policy Taskforce*, accessed June 15, 2016, <http://cv4a.org/wp-content/uploads/2016/01/Fixing-Veterans-Healthcare.pdf>. Commission on the Future for America's Veterans, *Preparing for the Next Generation*, 3, accessed June 15, 2016, http://s3.amazonaws.com/siteninja/site-ninja1-com/1438121489/original/2014-05_Commission-Report-on-America-Veterans.pdf. That task force study, for example, called for an independent governance model and stated that “the operational structure of VHA does not lend itself to progress. Due to its size, governmental structure and geographic extension it does not readily foster innovation and faces challenges in addressing the politics of changing demographics and ancient facilities.” The study report states, “VHA provides excellence in care in spite of its operations/governance structure, not because of it.”

³⁵² Klemm Analysis Group, Lewin Group, Arthur Anderson LLP, *Feasibility Study: Transforming the Veterans Health Administration into a Government Corporation* (Washington, DC: Department of Veterans Affairs, 1996), 23. The strategy was premised in part on the view that VHA would be operating in a resource-constrained environment and lacked the resources it would need to invest in making significant changes.

³⁵³ Ibid. The 1996 report proposed such measures as providing VHA authority to seek additional revenue streams, to include billing and keeping funds from Medicare, Medicaid, and other government sources; authorizing it to invest nonappropriated funds; developing a trust fund for deposit of Medicare taxes by active-duty personnel; incorporating VHA as a Federal Employee Health Benefits Plan selection; allowing it to become part of health maintenance organization (HMO) networks and open HMO enrollment to veterans; changing appropriation law to create

corporation as a means of achieving specific objectives, those objectives were largely met (though ultimately not fully sustained) by reforms within existing government structures and processes set in place by former USH Kenneth W. Kizer.³⁵⁴

Nearly 20 years later, the report analyzing the root causes of delayed care at the Phoenix and other VA centers proposed creation of “governance mechanisms to bridge ‘Secretary suite’ leadership transitions and provide more stable strategy, oversight, and stewardship.”³⁵⁵ Explaining that “the study team feels that the complexity of this organization requires a more stable and professionalized governance model that more closely resembles the governance of large health care systems in the private sector,”³⁵⁶ the study authors proposed the creation of a board-of-directors-type oversight board to set the strategy for the organization, define priorities, provide operational oversight, and review budget requests. “The board would . . . create a body that would be the steward of the organizational vision, providing institutional memory and continuity as senior political appointees transition.”³⁵⁷

Frequent turnover of the USH is a critical problem. Recently, each USH has served for only a relatively short period, leaving office with a change in administration or sooner. This pattern has deprived VHA of vitally needed sustained leadership and has likely contributed to short-term decision making. VHA history shows a connection between longer tenure and transformative accomplishment.³⁵⁸ As testimony to the Commission from three former USHs would indicate, brevity of tenure tends to limit leaders’ strategic horizon and create a pattern of leadership discontinuity. Because transformative change can only be realized through many years of focused leadership, VHA and those who depend on it cannot afford the senior leadership turnover routinely associated with a change in administration.

The complex, sustainable transformation VHA needs will take years to implement. To succeed, VHA needs strong, consistent leadership and a governance framework that can assure effective development and execution of transformation plans over time. The current governance structure emphasizes operational, rather than strategic priorities; experience has shown it to be incapable of sustaining transformational change. Establishing a well-designed, overarching-governance model would provide an opportunity to achieve objectives shared by both the executive and legislative branches.

To be effective, a VHA Care System governance model should be empowered with a governing board that exercises fiduciary-like responsibilities (not subject to the Federal Advisory Committee Act) to carry out the following key functions:

multiyear/no-year appropriations; reforming human resources management practices for increased flexibility in hiring and firing, compensation, leave, and other functions; and reforming; and reforming procurement and contracting.

³⁵⁴ Ibid., 46, 48. The Klemm report saw a VHA corporation as having greater capacity to focus on strategic as well as short term goals; greater results orientation; greater flexibility; greater capacity to replicate and develop best practices; upgraded staff competence and expertise at senior levels; and greater political independence.

COMMISSION ON CARE FINAL REPORT

- select the chief of VHA Care System (CVCS) and recommend the appointment of the CVCS to the President
- provide long-term, strategic direction for VHA Care System and establish priorities, milestones, and timelines
- oversee, direct, and make critical decisions regarding the transformation process
- review and approve major operational, business, and organizational plans
- set VHA Care System performance objectives and provide annual reports to Congress and the President on VHA Care System performance
- review and make decisions regarding VHA's budget request, and independently assess and report to Congress on the adequacy of VHA budgets

New governance and changes to assure continuity of leadership are critical to meeting the needs of VHA and veterans who depend on it. At the core of this foundational recommendation, the Commission calls for establishing a VHA board of directors,³⁵⁹ referred to as the VHA Care System governing board, which is independent of department leadership to provide governance, strategic direction, decision making, and oversight of VHA Care System's operations and transformation. Table 5 provides details regarding the governing board.

Table 5. Overview of VHA Care System Governing Board

Detailed Outline for VHA Care System Governing Board	
Voting Members	The President, the majority leader of the Senate, speaker of the House, the minority leaders of the Senate and House would each appoint two members. In addition, the SECVA would serve on the Board as a voting member.
Qualifications	Members would be selected to achieve collectively broad experience, expertise, and leadership, such as experience in senior management of large, private, integrated health care systems; clinical expertise; extensive experience with federal government health care systems; extensive experience with (though not current employment in) VHA; expertise in federal medical facility construction and leasing, and commercial property transactions; expertise in government contracting; expertise in federal health care budgeting and finance; expertise in health equity and disparities; and veterans' representation. Because of the importance of veterans' representation, at least one of each congressional leader's two appointees would be a veteran; at least one of the appointees of the President would be a veteran who receives VHA care.

³⁵⁹ Michael A. Froomkin, "Reinventing the Government Corporation," *University of Illinois Law Review*, (1995): 543, accessed June 15, 2016, <http://osaka.law.miami.edu/~froomkin/articles/reinvent.htm>. Congress need not create a government corporation to meet VHA's governance needs. The Commission notes that Congress has created entities it has called government corporations that are not predominantly commercial enterprises, rely on appropriations, and do not have the potential to become self-sustaining. A principal intention behind assigning this status and title has been to provide insulation from central management oversight agencies and the application of general management laws. When the corporation relies in whole or in part on appropriations, Congress retains the power of the purse, and the means of exercising it on matters large and small, and through formal and informal means.

Detailed Outline for VHA Care System Governing Board	
Terms	Governing board members would serve staggered terms of up to 7 years, with the governing board members electing a chair and vice chair from among the membership (other than the SECVA, who would not be eligible to serve as the chair) for 3-year terms.
Personnel Matters	Compensation would be at a rate equal to the daily equivalent of annual pay prescribed for level IV of the executive level. ³⁶⁰
Funding	Congress would provide a specific budget for the operation of the governing board as a separate account within VA's appropriations.
Relationship to the CVCS	Relationship to the CVCS: The governing board would provide the President its recommendation for a chief of VHA Care System (CVCS); the President would appoint that executive to a 5-year term; the governing board would annually review the CVCS's performance and be empowered to reappoint that official to a second 5-year term, to allow for continuity and to protect the CVCS from political transitions. The CVCS can be removed by mutual agreement of the President and the governing board.
Staff	The chairperson would determine the size and compensation of the permanent staff of the board, including an executive director responsible for governing board operations and a chief of staff. The director of the proposed transformation office within VHA would report to the chairperson through the CVCS.
Powers	<p>The board would have the power to do the following:</p> <ul style="list-style-type: none"> ▪ Select the CVCS and recommend the candidate to the President. ▪ Review the performance of the CVCS on an annual basis. ▪ Reappoint the CVCS to a second 5-year term. ▪ Remove the CVCS with the mutual agreement of the President. ▪ Direct and exercise decision-making authority regarding the transformation process and operations related to the transformation process. ▪ Establish priorities, milestones, and timelines for the transition process. ▪ Review and approve major new initiatives; major operational and organizational plans (including plans regarding capital asset and facility management); strategic and business plans; and goals and metrics for operational performance and established priorities. ▪ Oversee and manage facility and capital asset strategies and operations. ▪ Review, approve, and/or amend VHA's budget requests, and independently assess and comment on pertinent elements of the President's budget, as deemed appropriate.
Reporting	The board would report annually to the President and Congress on VHA's progress toward transformation.

Navigating transformation of one of the largest agencies in the federal government requires not only extraordinary leadership, but steady, sustained, long-range-focused governance. A governing board structured to provide continuity of membership—as the Commission proposes through staggered terms among members—is vital. A second critical step toward assuring such continuity would be to address the tenure of the CVCS and the process for selecting candidates for that position.³⁶¹ VHA, Congress, and the President would be better served by a VHA leader who holds a 5-year term of office, with the governing board empowered to reappoint that leader to a second 5-year term.

³⁶⁰ The rate of compensation provided for members of the Commission on Care.

³⁶¹ Under Secretary of Health, 38 U.S.C. § 305. Current law provides that the Under Secretary is appointed by the President with the advice and consent of the Senate. When a vacancy in that position occurs or is anticipated, the Secretary is to convene a commission (the composition of which is set forth in the statute) which is to recommend at least three individuals to the Secretary, who is to forward those names, with any comments the Secretary considers appropriate, to the President.

COMMISSION ON CARE FINAL REPORT

It is important that that the CVCS report to the board and function as a chief executive officer of VHA. Although the Commission envisions that the President would appoint this official, it is critical that the governing board be empowered to recommend to the President an individual for appointment when the office becomes vacant. This would replace the framework in current law that requires the establishment of a new commission convened solely to carry out the task of recommending candidates to the President.³⁶²

A governing board must be tailored to the unique needs of VHA.³⁶³ It should include members of appropriate expertise and experience to provide strategic guidance and continuity of leadership and it should possess authority to exercise the powers needed to realize and sustain a VHA transformation.³⁶⁴

Although some might consider Congress to be VA or VHA's board of directors and might question the appropriateness of establishing a VHA board of directors, this governance model does not diminish Congress's role. Instead, a board that would report periodically to congressional committees would provide a level of close oversight and health care expertise that would complement, and in many ways enhance, Congress's work.

A change in governance alone will not bring about successful transformation. This recommendation must be instituted in concert with many other Commission recommendations. For example, a board will require data, and data systems, to carry out its responsibilities, and establishing these and other appropriate systems, as addressed throughout this report, is key to empowering a board to drive and sustain transformation.

Implementation

Legislative Changes

- Amend 38 U.S.C., Chapter 3 to establish a VHA Care System governing board.
 - Amend 38 U.S.C. § 305 – which currently provides in subsection (a) for the President to appoint the USH by and with the advice and consent of the Senate, and subsection (c) for the establishment of a commission to provide recommendations for appointees for USH when a vacancy is expected or has occurred – as follows:
 - Amend subsection (a) to provide for the President to appoint the CVCS to a 5-year term of office.
 - Repeal subsection (c) of that section.
 - Provide instead for the governing board to recommend a CVSC candidate.
 - Authorize the governing board to reappoint the CVSC to a second 5-year term.

VA Administrative Changes

- None required.

³⁶² Under Secretary of Health, 38 U.S.C. § 305.

³⁶³ Booz Allen Hamilton, *Veterans Health Administration (VHA) National Center for Patient Safety (NCPS) Systems Review: Final Report*, September 22, 2015, 60.

³⁶⁴ The Board is not an advisory body, and as such would not be subject to the Federal Advisory Committee Act.

Other Departments and Agency Administrative Changes

- None required.

Leadership

Recommendation #10: Require leaders at all levels of the organization to champion a focused, clear, benchmarked strategy to transform VHA culture and sustain staff engagement.

Problem

High-performing organizations have healthy cultures in which diverse staff members feel respected and engaged at work. These workers, in turn, are better able to demonstrate compassion and caring toward customers in their delivery of high-quality services. Leaders at all levels of the organization are responsible for promoting a positive organizational environment and culture through how they treat staff and the systematic approach they take to decision making and management. VHA has among the lowest scores in organizational health in government.³⁶⁵ For the past decade, VHA's executives have not emphasized the importance of leadership attention to cultural health, and it has not been well integrated in training, assessments, and performance accountability systems.

The Commission Recommends That . . .

- VHA create an integrated and sustainable cultural transformation by aligning all programs and activities around a single, benchmarked concept.
- VHA align leaders at all levels of the organization in support of the cultural transformation strategy and hold them accountable for this change.
- VHA establish a transformation office to drive progress of this transformation and report to the chief of the VHA Care System and the new VHA Care System governing board (also included in Recommendation #12).

Background

Healthy organizations successfully align, execute, and renew themselves through learning and innovation.³⁶⁶ They are characterized by a high level of trust, accountability, and ownership among staff; high functioning, empowered teams; and an environment that provides psychological safety and open communication, focuses on the needs of customers, and instills pride in performance.³⁶⁷ An inclusive workplace where diversity is valued, staff feel empowered and supported, are treated with fairness, and cooperation and open communication helps engage employees and drive organizational performance.³⁶⁸ Engaged

COMMISSION ON CARE FINAL REPORT

employees who are dedicated to their work and attached to the organization and its mission support a healthy organization.³⁶⁹

Companies that have a healthy organizational culture or engaged staff outperform those that do not. Companies that score in the top 25 percent of organizational health metrics outperform comparable companies in the bottom 25 percent by more than two-fold.³⁷⁰ Similarly, high employee engagement is correlated with better staff and customer experiences that include higher patient satisfaction, higher staff retention, better safety and quality, higher productivity and lower absenteeism.³⁷¹ Companies with engaged employees outperform those without by more than 200 percent.³⁷² Leaders and supervisors play a key role in establishing and sustaining employee engagement and in establishing a positive environment and culture that supports a healthy organization.³⁷³

Analysis

VHA staff and leaders are highly dedicated to the mission of VA and to serving veterans.³⁷⁴ This dedication is arguably VHA's greatest strength, and it can be leveraged to create and sustain positive change.³⁷⁵ There are substantial impediments to moving VHA forward, however, as noted in the *Independent Assessment Report*. There is a pervasive lack of trust throughout the organization.³⁷⁶ Staff perceives VHA to be bureaucratic and political and to lack a systems orientation.³⁷⁷ Employees want to work for an organization that is accountable and efficient, but instead they operate in a bureaucratic, siloed, and political organization.³⁷⁸ The culture creates risk aversion in staff, and when cultural factors are measured in VHA, none of the metrics align with the definition of a healthy organization.³⁷⁹ Staff find the work environment at VA challenging, with no connection to leadership, and feel they receive little positive

reinforcement or clear feedback on performance.³⁸⁰ As demonstrated in the Federal Employee Viewpoint Survey for 2015, VHA staff does not believe top leaders lead (only 47 percent positive³⁸¹) and only 65 percent have a positive view of their immediate supervisor compared to 70 percent in other large federal agencies.³⁸²

Through the review of available documents and briefings from key staff, the Commission found VA and VHA have a number of activities intended to support a positive environment and culture in VHA (see Table 6), but the efforts are not systematic, integrated, or broadly deployed.³⁸³ The efforts are under-resourced to achieve success. Specifically, the effort lacks mandatory positions at the facilities to lead these efforts and has no requirements on the VHA Central Office (VHACO) program offices to participate in the efforts.³⁸⁴ At the same time, the efforts are duplicative in that multiple offices communicate similar, but distinct messages to field staff and leaders. VHA appears to lack systematic mechanisms to ensure leaders at all levels of the organization have the knowledge, skills, and ability to create an effective culture; metrics are not comprehensive or aligned with a single-change model; and leaders in VHACO and the field are not consistently held accountable for their actions in support of a positive organizational culture.³⁸⁵

COMMISSION ON CARE FINAL REPORT

VHA must rebuild a high-performing, healthy culture by cultivating greater employee collaboration, ownership, and accountability to accomplish its mission.³⁸⁷ This cultural transformation needs to occur at all levels of the organization (VA, VHACO, veterans integrated service network [VISN], VA medical center, and community-based outpatient clinic). To achieve transformation in VHA, create a healthy environment and culture, and sustain staff engagement, the solution must start with leaders. Leaders must understand and believe in the powerful effect they have on the climate and culture in their organization. Change occurs one employee at a time. Leaders at all levels must commit to this change process. They must be inspired by top executives and embrace the values and mission of VHA and then, in turn, inspire their teams, engaging with individual employees to make change. Leaders must be given the roadmap and tools to make such change and then be supported with training, coaching, and feedback to achieve success. They must also be held accountable for their personal behavior and for the actions they take to positively influence the environment and culture of their unit or facility. Leaders should not be on their own in this transformation. Fellow leaders, outside experts, national program offices, and VA and VHA top executives must provide them with incentives, support, feedback, coaching, and, when needed, admonishment to support this cultural transformation.

To align leaders at all levels with expectations for the cultural transformation, all leaders must understand the role they play in the process. VHA must create standards for the behavior and actions leaders adopt to accomplish the transformation and widely publicize the standards among leaders and staff to establish uniform expectations across the organization and a single vision of cultural transformation. The CVCS and other senior leaders must model and reinforce these behaviors to further embed expectations. These behaviors and actions should be integrated into leadership assessment tools such as a 360 evaluation, performance management frameworks, and coaching guides to ensure expected behaviors and actions are reinforced across the leadership development and advancement system. The strategy must include the development of tools, training, guidelines, and operating procedures that create a living curriculum to support leaders in developing and deploying these new skills and behaviors. Finally, to ensure leaders at all levels implement the behaviors and actions, the strategy must establish both explicit rewards and sanctions. The rewards and recognition (nonmonetary) should liberally acknowledge and publicize leaders and staff who embody the very best standards of behaviors and actions that support a positive organizational culture. At the same time, leaders and staff at all levels must clearly understand what behavior and actions are not acceptable and be held accountable through disciplinary action if they cross these boundaries. Expectations and repercussions should be clearly articulated.

VA and VHA have a number of competing models of organizational health and staff engagement. The models are not integrated with one another or with an overall leadership competency model. Some models are robust, coupling abundant resources and training, while others are not. To create a clear focus for engagement and organizational health and guide

³⁸⁷ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Volume 1: Integrated Report*, 55 accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

transformation effectively, one model must be selected for use in VHA. To do so, VHA must establish a cross functional executive team to make this decision. The team should include all of the stakeholder offices involved in current efforts, but none of them should lead the effort, to avoid parochial interests driving decisions. Once a single model is selected, the executive team must then outline a clear strategy, involving and engaging the offices in VHA with relevant expertise and resources to support the execution, and put forward a single strategic plan. Consequently, each of those offices must also be required to stand down its own efforts that are not part of this new model going forward and align its work and budget behind a single focused model and strategy. Tools, training, and communication to support broad deployment must be part of the strategy, and the CVCS and the executive team must present a compelling, transparent rationale for what the model is, why it was selected, and how it is to be deployed. All leaders and staff members in the organization must understand their roles in cultural transformation and what is expected of them.

The strategy must establish and articulate a clear set of behaviors and actions expected of staff to ensure their alignment around the transformation. The standards should be incorporated into the hiring process to ensure that VHA is hiring into the new culture and avoids a poor fit from the start. These behavioral expectations must be articulated clearly in the on-boarding process and reinforced on an ongoing basis in performance evaluations, reviews, and individual development plans. Leaders at all levels of the organization must also reinforce these behavioral expectations with staff and be provided with tools, messages, and communication support to accomplish this. Leaders must also recognize and reward the positive examples of the desired behaviors and sanction the worst examples, up to and including discipline and removal.

The change strategy should also recognize that cultural transformation and staff engagement go beyond individual leader and staff behaviors. Systems and processes at both the local and national level can impede the realization of the positive organizational culture desired. As such, the transformation strategy must also anticipate changing systems and processes as an explicit component of transformation. Leaders at all levels must establish mechanisms to elicit staff concerns and have quality improvement tools in place to address them, such as LEAN Six Sigma. Line staff must be engaged as part of the solution to these system issues. Leaders should be transparent about these issues and publicly track and report on progress.

To ensure the effective execution of this strategy, specific responsibilities must be assigned to program offices. The program offices must also support the VISN and facilities in their transformation effort by developing the standards and guidance for them to use and making program office expertise available to support coordination, coaching, and sharing of best practices across the institution. The program offices must be held accountable for supporting the application of these same standards and process within VHACO.

Standards for facility implementation must include a funded, full-time equivalent employee to support each major facility director³⁸⁸ and be the point person to coordinate efforts with VHACO and other facilities. Facilities may take the opportunity to consolidate related functions that currently exist in the facility. Each facility must have a local mechanism, such as an organizational health council, to integrate and drive transformation locally. But this does not

³⁸⁸ This equates to one person at each of the approximately 141 VHA health care systems led by a facility director.

COMMISSION ON CARE FINAL REPORT

mean the facility should create yet another committee or oversight group to accomplish the transformation. Instead, facilities must look to existing leadership structures and activities, consolidating similar efforts to create an efficient process.

Finally, the executive team must oversee the development of a consolidated and meaningful set of metrics, using community standards where available, to track cultural transformation, organizational health and staff engagement. The metrics should not only measure the desired outcomes but also provide insights to leaders on how to fix problems by providing sufficient detail and specificity to offer this insight. Once deployed, the metrics should be used by the executive team and responsible program offices to identify under-performing facilities and to provide additional expertise, resources, and support to help those facilities improve. If, after much support, the continuing behavior and actions of the leaders at the under-performing facility are identified as the cause of the long-term culture problem, these individuals must be removed from leadership positions in VHA.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Develop and implement a strategy for cultural transformation.
- Establish a cross-functional senior executive team reporting directly to the CVCS with long-term responsibility for creating, executing, and tracking the cultural transformation.
- Align frontline staff in support of the cultural transformation strategy.
- Require standards and a strategy for execution of the cultural transformation from every program office and facility and these efforts must be fully funded.
- Develop consolidated, meaningful metrics for organizational health and staff engagements with input from experts and field users.

Other Department and Agency Administrative Changes

- None required.

Recommendation #11: Rebuild a system for leadership succession based on a benchmarked health care competency model that is consistently applied to recruitment, development, and advancement within the leadership pipeline.

Problem

VHA, like any large organization, requires excellent leaders to succeed. Succession planning and robust structured programs to recruit, retain, develop, and advance high potential staff are essential to maintaining a pipeline of new leaders. In health care, leadership programs must prepare candidates with the specialized knowledge and skills required of health care executives, while also helping to mature their leadership traits. VHA does not use a single leadership competency model, and what it does use is not specific to health care or benchmarked to the private sector. VHA also does not use competency models as a tool to establish standards for hiring, assessment, and promotion. As a result, executive leaders and promising staff members do not have the tools they need to guide career transitions and ensure VHA has the leaders it needs for the future.

The Commission Recommends That . . .

- VA establish, as an Office of Management and Budget management priority for VHA, the goal of implementing an effective leadership management system in the agency.
- VHA executives prioritize the leadership system for funding, strategic planning, and investment of their own time and attention.
- VHA adopt and implement a comprehensive system for leadership development and management that includes a strategic priority of diversity and inclusion.
- Congress create more opportunities to attract outside leaders and experts to serve in VHA through new and expanded authority for temporary rotations and direct hiring of health care management training graduates, senior military treatment facility leaders, and private not-for-profit and for-profit health care leaders and technical experts.

Background

*Our Corps does two things for America: We make Marines and we win our nation's battles. Our ability to successfully accomplish the latter depends upon how well we do the former.*³⁸⁹

Effective leaders are required for organizational success. Thus, attracting, growing, and advancing leaders is a key business imperative across all sectors.³⁹⁰ The most urgent human capital management need worldwide, according to one survey, is the development of leadership talent.³⁹¹ This need is driven by a changing workforce that is motivated more by passion than by monetary incentives, a rapid advance in knowledge that quickly creates obsolescence, and technology drivers that change business practices over months instead of years.³⁹² Investing in new supervisors and emerging leaders is critically important because

³⁸⁹ U.S. Marine Corps, *Sustaining the Transformation*, Foreword, accessed June 9, 2016, [http://www.marines.mil/Portals/59/Publications/MCRP percent206-11D percent20Sustaining percent20the percent20Transformation.pdf](http://www.marines.mil/Portals/59/Publications/MCRP%20206-11D%20Sustaining%20the%20Transformation.pdf).

³⁹² *Ibid.*, 3.

COMMISSION ON CARE FINAL REPORT

employees report that when they quit a job they leave their supervisors and not their organization.³⁹³ In an organization like VHA, with more than 300,000 employees but only a bit more than 200 executives, VHA's 28,000 supervisors are responsible for leading the staff.³⁹⁴

Going back to at least 1998, the federal civilian sector has had difficulty identifying and promoting individuals with leadership skills.³⁹⁵ Staff members who can produce results and meet organizational objectives are promoted into supervisory and leadership positions.³⁹⁶ Yet, the skills needed to be a successful leader are different than those needed to be a successful technical expert. Today, soft skills such as empathy, effective listening, and team coaching are valued in leaders.³⁹⁷ The most effective leaders are those who consistently display integrity, high moral character, and the ability to inspire others.³⁹⁸ An effective leadership system develops leaders at all levels, from frontline supervisor to executives, and does so in all dimensions of leadership: "knowing, doing, and being."³⁹⁹

Analysis

In a review of VHA's approach to leadership development, the *Independent Assessment Report* noted the current system was not sufficient to meet VHA's need for high-quality, prepared leaders.⁴⁰⁰ VHA lacks a comprehensive approach to leadership development that would include formal structured programs such as networking, reflection, goal setting, learning, mentoring, experiential learning, and a clear career ladder. As a result, leaders are unable to fully prepare

⁴⁰⁰ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 37, accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf.

for future roles.⁴⁰¹ Although VHA does have some components of a development program, the activities are not connected to a career path and not well coordinated. Comprehensive development efforts are impeded by the use of multiple competing competency models in VA that make it impossible to align assessment and development with a cohesive standard. Emerging leaders are left to navigate career progression largely on their own and may be stymied because development opportunities are cancelled due to budget restrictions. Even when promising young leaders complete the current activities, gaps remain in their experience and training because the training programs are not coordinated.⁴⁰² As a result, VHA does not have a robust pipeline of young leaders ready to take on higher-level responsibilities.⁴⁰³

Included in the *Independent Assessment Report* is a recommendation that VA stabilize, grow, and empower leaders. This recommendation includes suggestions to fill current vacancies with high-quality leaders, improve the attractiveness of the roles, ensure leaders are prepared to assume their roles, and create a comprehensive strategy that connects top performers to leadership opportunities and development plans.

There is little concrete information in the assessment to suggest how VA and VHA should accomplish these objectives. The commission examined VA's and VHA's current work to assess whether they have created plans to operationalize the leadership development recommendations articulated in the *Independent Assessment Report*.

Neither VA nor VHA has rationalized the multiple competency models within the department. A competency model is the core driver informing recruitment, development, assessment, and advancement in any comprehensive approach to leadership development and management.⁴⁰⁴ Having a cogent competency model is a prerequisite to a coherent strategy.⁴⁰⁵ Leading a health care organization requires specialized knowledge and skills not required of leaders in other fields.⁴⁰⁶ Thus, any competency model applied in VHA must include health care specific components. Health care executive competencies embrace such topics as an understanding of ethics in health care, management of self-governing professionals (e.g., physicians, nurses), the technical knowledge of health care regulation and operational management, and leading change, in addition to other leadership skills and knowledge.⁴⁰⁷

The current models used in VHA do not reference external benchmarks, and they are not health care specific. VHA plans to continue to use the High Performance Development Model (HPDM) as its competency model.⁴⁰⁸ HPDM was developed by VHA and is not benchmarked to private-sector competency models for health care executives. VHA plans to use the model to drive

COMMISSION ON CARE FINAL REPORT

position requirements, performance management, and training content.⁴⁰⁹ The plan mentions coordination with VA Learning University but provides no detail.⁴¹⁰ The plan also does not provide specific information about how the use of HPDM will link to formal recruitment, performance assessment, and advancement of leaders.⁴¹¹

VHA is working to understand the current career progression of candidates who move into field-based executive positions. VHA field leaders are cultivated from within VHA with about 98 percent advancing from lower-level field positions such as associate director, service chief, or chief of staff.⁴¹² As a result, field senior executives often lack outside experience and first-hand knowledge of alternative management methods.⁴¹³ Most companies look for a mix of internal and external hires, and the circumstances of the organization often drive the mix.⁴¹⁴ For instance, Henry Ford Health System, a successful growing company with a robust internal leadership development program has set a target of 70 percent internal promotions and 30 percent external hires.⁴¹⁵

The VHA pool of internal candidates is also deficient in racial and ethnic diversity with striking under-representation of women of color in all of the positions that constitute the pipeline for medical center director positions (see Figures 6 and 7).⁴¹⁶ VHA leadership development programs have failed to effectively recruit and advance under-represented minorities with a striking over-representation of White men in the leadership class that feeds the senior executive service (see Table 7).⁴¹⁷ Minority women shoulder the biggest burden of formal mentoring within the organization.⁴¹⁸ VHA also has the lowest representation of veterans among its staff (31 percent) compared to Veterans Benefit Administration (52 percent) and National Cemetery Administration (74 percent). The number of veterans among doctors and dentists in VHA is only about 14 percent of the employees.⁴¹⁹ Among leaders, 22 percent of senior executives are veterans and a similar number (23.8 percent) populate the leadership pipeline.⁴²⁰

Note: VHA offers career development opportunities from entry-level programs (TCF and GHATP) to an SES preparatory curriculum (HCLDP). Overall, White men make up about 23% of VHA employees but are over-represented in the HCLDP program at 41%. African American and Hispanic men and women are under-represented in the same program.

TCF= Technical Career Field; GHATP=Graduate Healthcare Administration Training Program; LEAD=Leadership, Effectiveness, Accountability, and Development; HCLDP=Health Care Leadership Development Program.

No evidence was presented to indicate that career progression mapping is occurring for positions within VHA central office, where high-quality leaders are also required.⁴²¹

⁴²¹ Department of Veterans Affairs, Veterans Health Administration, *VHA Workforce Planning Report 2015*, 94, accessed June 10, 2016, http://vaww.succession.va.gov/Workforce_Planning/WorkforcePlanningLibrary/2015%20VHA%20Workforce%20Report.pdf.

COMMISSION ON CARE FINAL REPORT

VHA has much work to do to produce an effective leadership management system. Recruitment, retention, development and advancement are key processes that require immediate and sustained attention from VHA leaders. Without substantial changes, high-potential staff will continue to struggle to understand their career trajectory. Without a driving competency model and coordinated training to guide advancement, hiring decisions will continue to be made without uniform standards against which to measure applicants and new executive hires will continue to struggle to understand VHA and their role in leading it. Without the committed engagement and support of the chief of VHA Care System (CVCS) and the other top VHA executives for the leadership management system and their direct communications about and modeling of the leadership competencies, VHA will continue to flounder. As a result, veterans will be denied the high-performing health system they deserve.

Executive Commitment

The long-term success of any enterprise rests on having excellent leaders in key positions and sustaining them over time. To accomplish this goal, leadership management, development, and recruitment must be a core responsibility and a priority for VHA senior executives. To start, VA must include the goal of achieving an effective leadership management system in VHA as a component of the department's management agenda in the annual budget. The goal is a robust, high-quality, diverse leadership team in VHA. VA needs to establish a credible operational plan and accountability mechanisms for meeting this goal. Executive leaders are then held accountable for attaining the leadership management goals, including personally investing time in meeting diversity targets, recruitment plans, and succession planning objectives. These targets are to be reviewed in the individual performance of top leaders as well as in the Office of Management and Budget's ongoing review of the department's management objectives. Executive leaders need to also set and communicate clear expectations for the behavior of leaders and staff and to invest their own time in mentoring, coaching, and developing subordinate leaders and promising staff, including under-represented populations. They must be visible and role-model leadership competencies in meetings, training, and new-hire orientations. They must take an interest in developing leaders and help create opportunities for them to gain leadership experience and competencies. The CVCS and senior executives must keep in mind that their sole role is not to manage crises or to oversee a process or to manage up. Rather, their primary role is to lead their people. Their time and attention must reflect that priority.

Leadership Model

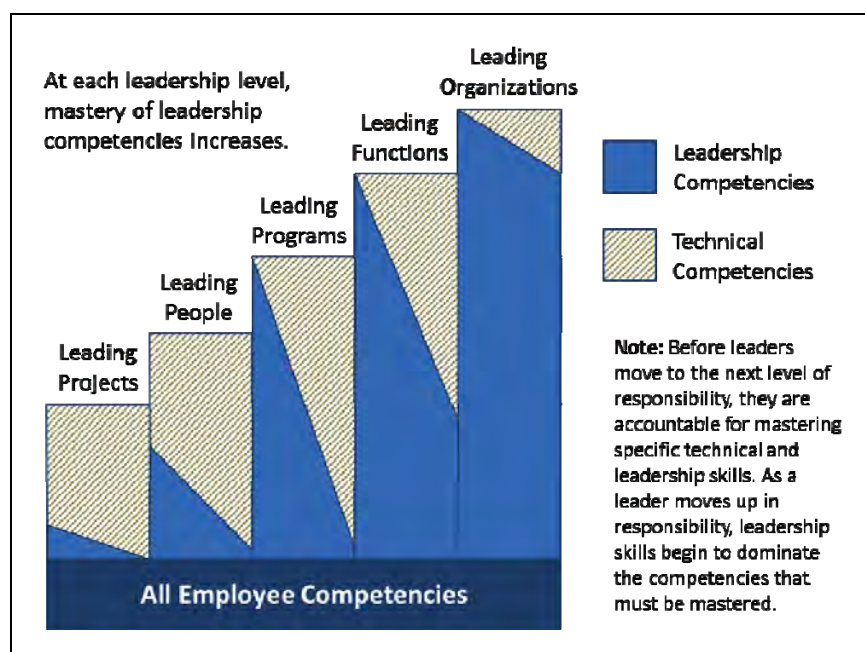

To establish clear leadership standards to guide hiring, development, and the advancement of leaders, VHA needs to adopt one benchmarked health care competency model. Currently, VHA is subject to the Office of Personnel Management executive core qualifications, HPDM, and standards for servant leadership. Although all of the models have value, none provide a clear trajectory for high-potential staff to follow, and they do not provide opportunities for VHA to intersect with leaders in the private sector. VHA must stop using these varied competency models and instead adopt a single model that is benchmarked to private-sector standards. The Commission is not making a recommendation about which model VHA should choose. Rather VHA should apply the criteria below to select a model around which to base its leadership development program:

- The standard must embrace leading through ethics and values, demonstrating character and concern for others, and creating a strong organizational culture.
- The standard must be health care based and describe the knowledge, skills, ability, and leadership bearing and behaviors that health care leaders must master to be effective.
- The standard must be a robust competency model including aligned training and tools to permit quick implementation.
- The model must describe different career tracks and the mastery requirements for key points in each career track. Key career tracks such as VISN director, facility director, and VHA Central Office (VHACO) program executive should fit into the competency model.
- A career path must specify the competencies that require mastery before moving to a higher position.
- VHA may need to enhance the model with competencies in care and services to Veterans and knowledge of military occupational health.

Training and Assessment

VHA needs to develop assessment tools based on the competency model, including 360, 180, self-assessment, and supervisory review processes. Leaders and developing leaders should be required to use at least one of the assessments each year and to apply the results to identifying their training and development needs. Findings from the assessments should be rolled into an individual development plan (IDP) for each leader or developing leader and enrollment in a leadership course should require a documented need from one of these assessments.

Figure 8. At Each Leadership Level, Mastery of Leadership Competencies Increases

COMMISSION ON CARE FINAL REPORT

Training must be mapped against the competency model career track. All current leadership training should be mapped against the model. Gaps should be identified and filled with commercially available, or where needed, internally developed training. This training should include leadership competencies for the care of veterans, including an understanding of military occupational health, combat injuries and exposure, combat readjustments, and military sexual trauma. (See Appendix H for descriptions of such training material.) VHA should look for opportunities to partner with Department of Defense and the private sector to provide joint training and development opportunities to fill some of the identified gaps. VHA must develop one or more face-to-face training series that allow high-potential candidates to complete all the competencies required to move to the next career stage. As VHA strengthens its partnership with community providers and health systems, executive and high-potential training resources from VHA should be made available to community health care leaders and VHA should join training offered by these private-sector partners.

Based on the benchmarked competency model, VHA should collaborate with Academic Affiliates to establish two new programs. The first is to create opportunities for VHA physicians to gain masters-level training in health care management to prepare them to lead a medical facility. Second, VHA should work to create rotations in VHA for external physicians who are completing graduate health care management programs. Like academic affiliate residency training programs, VHA should collaborate with academic medicine to establish, fund, and run these programs with the goal that all participants rotate in management positions in VHA or VHA-partnered private-sector systems for six or more months during their training. Graduates of such programs would be candidates for recruitment into the VHA leadership pipeline and would encumber a pay-back commitment to VHA for any direct funding provided.

All training should include formal assessment to assure that learners have mastered the material and this mastery should be noted in their IDPs and training record.

As part of the leadership development model, experiential learning opportunities and formal coaching are critical to executive learning. Individual and group coaching standards and programs must be established for all developing and new leaders. A program for senior leaders to pair them with private-sector health care leaders must also be supported. VHA must establish rotation opportunities for developing leaders to rotate for substantial periods (e.g., 3 to 18 months) in not-for-profit hospital systems. This program could be structured as a certificate program that the employee and VHA jointly fund and include a payback commitment on the part of the trainee. Similar rotations from the private sector into VHA should be developed with health care system partners to help develop private-sector competencies in care for veterans and inject private-sector approaches into VHA.

Apply the Leadership Model

VHA is required to apply the competency model in all hiring decisions for executive career field positions. Thus all functional statements must be based on the model, all interview protocols must incorporate the competencies, and all candidates who are not internally certified to the standard of the job must undergo an assessment by a board to ensure they meet the position requirements. Conversely, internal candidates must be required to demonstrate mastery of the competencies before qualifying to apply for a position. VHA must adopt the strategies of executive recruiters to identify and recruit needed experts outside of government with the

VA-18-0457-A-001744

competencies VHA seeks. Recruiters can look to the pipelines the Commission has recommended building to bring military treatment facility commanders and other senior leaders and private sector experts into VHA as a network for identifying additional recruits. Executive recruiters can particularly help ensure diverse candidates are identified for open positions.

VHA will require competency assessments and IDPs for all existing executives, potential executives, and new hires. Current leaders and new hires who have an identified gap in any competency must have it included in their IDP and be required to fill these deficiencies by a specific deadline or face demotion or dismissal. Completion of IDP development opportunities is required for advancement in grade or promotion to higher position within the leadership pipeline.

VHA will aggressively manage its leadership candidate pool by identifying and tracking all high-potential individuals. Diversity statistics should be tracked and diversity in this pool actively managed. This pool of candidates derives from annual ratings as well as leadership development program graduates. Supervisors and executive leaders must provide ongoing coaching for higher positions to this pool of developing leaders. VHA must identify anticipated succession needs and offer development opportunities that would help prepare candidates for these anticipated openings. Once the positions are open, individuals in the high-potential pool must receive notices of new job postings and detail opportunities that provide experience into higher positions. Candidates who agree to be in this pool should be required to enter into formal mentoring relationships with leaders outside their chain of command to further advance their career development. For highest-level positions (VISN director, facility director, VHACO chief officer) a formal pool of approved or precertified candidates should be established.

To expand the perspectives and management experience in its leadership pipeline, VHA must develop explicit strategies to on-ramp diverse candidates at critical midcareer transition points. This process includes creating pathways for retiring commanders and other senior officers of military treatment facilities to compete effectively for leadership positions in VHA. To increase VHA understanding of private-sector health care, VHA must develop midcareer entry points for private-sector candidates. This could be accomplished through the use of temporary hiring authority and the ability to convert these positions to permanent staff positions if leadership competencies standards have been met by the candidates. Such opportunities can be modeled on efforts recently announced by DoD and, wherever practicable, should be developed collaboratively with DoD to establish the legal and policy requirements for implementing these programs. Finally, the current graduate health administration training program (GHATP) program should be expanded to include more schools and programs with diverse trainees. This expansion must allow high-performing residents to continue to convert to full time positions.

On-boarding

A formal on-boarding process should be instituted for all new executive hires. In addition to the transactional knowledge the individual will need, on boarding should establish the expectations for what it means for that executive to be successful in VHA. The values of the organization and the expectations for ethical practice must be conveyed by the CVCS and the top leadership team. A formal assessment of knowledge and skills should be made during on-boarding and an IDP established to cover the probationary period of new hires if any deficiencies are identified.

VA-18-0457-A-001745

COMMISSION ON CARE FINAL REPORT

Completion of the IDP is required for continued employment. All new leadership hires should be assigned a coach based on their individual needs. Within their first 6 months of employment, the undersecretary for health and Secretary should meet with these new executives to build a relationship with them and hear their fresh perspectives on the performance of VHA.

Stabilize Leadership

VHA should immediately stabilize its leadership ranks by authorizing VA medical center and veterans integrated services network (VISN) director details to last up to a year with no restrictions on an acting leader competing for the permanent position. VHA should also create flexible capacity by creating more assistant-level positions (e.g., assistant director, assistant VISN chief medical officer, assistant nurse executive, deputy chief officer). These individuals would comprise the pool of potential leaders and also allow for cross filling positions that are empty due to development assignments, training, or other leadership development opportunities.

Implementation

Legislative Changes

- Establish direct-hire authority from the graduate health care administration training program, military treatment facility, and private-sector fellow pools, clarifying application of merit-system principles, including approaches to managing veterans' preference in these programs.
- Establish Intergovernmental Personnel Act authority for VHA to include the for-profit private sector; this could be done as a pilot program with a report to Congress before considering whether to make the authority permanent.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Fund and implement leadership assessments, training, coaching, and developmental opportunities based on the new leadership competency model.
- Aggressively manage leadership recruitment, retention, development and advancement using the new leadership competency model: All hires and promotions are required to demonstrate these competencies.
- Require a formal on-boarding process for HPDM 3 and 4 leaders at all levels that reinforces the leadership competency model.
- Take immediate steps to stabilize the continuity of leadership by extending the length of authorized details to extend the continuity of leadership at medical centers and allow leaders detailed to a position to compete for a permanent appointment to the position by removing the non-compete requirements.

COMMISSION RECOMMENDATIONS

- Establish the competency model in regulation and include requirements for its use in hiring, promotion and dismissal and clarify the application of veterans' preference in executive development.

Other Department and Agency Administrative Changes

- None required.

COMMISSION ON CARE FINAL REPORT

Recommendation #12: Transform organizational structures and management processes to ensure adherence to national VHA standards, while also promoting decision making at the lowest level of the organization, eliminating waste and redundancy, promoting innovation, and fostering the spread of best practices.

Problem

Leadership structures and processes should be organized to promote agile, clear decision making, the free flow of ideas, and identification of organizational priorities, as well as make clear reporting relationships and lines of accountability within the organization. VHA currently lacks effective national policies, a rational organizational structure, and clear role definitions that would support effective leadership of the organization. The responsibilities of VHA Central Office (VHACO) program offices are unclear, and their functions overlap or are duplicative. The role of the Veterans Integrated Service Network (VISN) is not clear, and the delegated responsibilities of the medical center director are not defined.

Background

A prerequisite of a successful, high-performing system is having strong leaders and a strong leadership system.⁴²² An organization's leadership system is "the way leadership is exercised, formally and informally, throughout the organization; the basis for key decisions and the way they are made, communicated, and carried out."⁴²³ It includes "structures and mechanisms for making decisions; ensuring two-way communication; selecting and developing leaders and managers; and reinforcing values, ethical behavior, directions, and performance expectations."⁴²⁴ In an organization the size of VHA, with a budget of \$69 billion,⁴²⁵ more than 300,000 employees, and more than 1,000 sites of care,⁴²⁶ strong leadership systems are essential.

The Commission Recommends That . . .

- VHA redesign VHA Central Office (VHACO) to create high-performing support functions that serve Veterans Integrated Service Networks (VISNs) and facilities in their delivery of veteran-centric care.
- VHA clarify and define the roles and responsibilities of the VISNs, facilities, and reorganized VHA program offices in relation to one another, and within national standards, push decision making down to the lowest executive level with policies, budget, and tools that support this change.
- VHA establish leadership communication mechanisms within VHACO and between VHACO and the field to promote transparency, dialogue, and collaboration.
- VHA establish a transformation office, reporting to the chief of VHA Care System with broad authority and a supporting budget to accomplish the transformation of VHA and manage the large-scale changes outlined throughout this report (also included in Recommendation #10).

⁴²⁶ "About VHA," Department of Veterans Affairs, accessed February 5, 2016, <http://www.va.gov/health/aboutVHA.asp>.

In the last successful reorganization of VHA in 1995,⁴²⁷ the organizational design and functional roles of the leadership system were organized into clear structures with clear functions. The VISNs were responsible for operations⁴²⁸ and VHACO program offices were responsible for policy, guidelines, and outcomes.⁴²⁹ The National Leadership Board (made up of VISN directors and all program office leaders) was responsible for collective, fact-based decision making and the Friday Hotline call was used to communicate leadership priorities and decisions directly to VA medical center (VAMC) leadership. A negotiated performance measurement system based on consistent, benchmarked, outcome-focused metrics⁴³⁰ was also established that was supported by centralized functions that benefit from economies of scale.⁴³¹ As part of the reorganization, VHA experienced a reduction in staff and consolidation of VHACO offices to create a flat, agile leadership system.⁴³² Because this functional matrix was not sustained, VHA now faces the challenge of reinstituting an effective leadership system.

Analysis

Twenty years after the Kizer reorganization, VHA has a very different leadership system, under which it “is intensely, unnecessarily complex due to a lack of clear operating model, limited role clarity, fragmentation of authority, and overlapping responsibilities.”⁴³³ The *Independent Assessment Report* included the following findings about the VHA operating model:⁴³⁴

- VHACO has grown rapidly since 2009 from 753 in FY 2009 to 1,990 in FY 2014.
- The VISNs’ ability to manage and support their regions is heavily hampered by resourcing restrictions and direct VHACO control over VAMC operations.
- The VAMCs’ operating model suffers from powerful silos, which prevent an effective end-to-end mission focus.
- VA’s increasingly top-down management style, coupled with poor prioritization and the external political environment, result in a lack of clarity around strategic direction, reactivity to external headwinds, and flawed efforts to standardize.

VHACO has grown rapidly in the past few years.⁴³⁵ The growth in central office was driven in part by new ideas, new priorities, and new crises being addressed through the creation of new

COMMISSION ON CARE FINAL REPORT

offices and new staff infrastructure to support it.⁴³⁶ A portion of the growth came from the centralization of functions that were previously managed in the field such as business office functions. The final component has come from the duplication in VHA of offices in which decision-making authority rests with VA, such as communications and regulatory management. VHA has also duplicated functions and responsibilities between two or more offices in VHA, such as primary care, surgery, mental health, and geriatrics and extended care. This increased growth in staff and offices has resulted in more complex and lengthy decision processes, often with little clarity as to whom ultimate responsibility for decisions or follow up falls.⁴³⁷

One symptom of the top-down management is VHACO control of budgeting and resource management. “Support funding is outside local control” and the “increasing share of Specific Purpose funding hinders” local leaders in their ability to use resources effectively.⁴³⁸ In FY 2015, specific-purpose funds were spread across more than 450 line items,⁴³⁹ taking money away from general purpose funding and restricting how this money can be used. Both VHACO and Congress have been complicit in taking control away from medical center directors through these budget controls.⁴⁴⁰ For instance, the congressional appropriation to fund VHA for 1998 included only five appropriation line items; medical care, medical administration, construction major, construction minor, and medical and prosthetic research.⁴⁴¹ In contrast, the budget request to Congress for FY 2016 included 12 budget categories relevant to VHA with some of those accounts having four or five subcategories.⁴⁴² In his testimony before the Commission and Congress, Secretary McDonald made the point that such fragmentation of the VHA budget and the prohibition to reallocate across budget categories without first receiving Congressional approval was an impediment to effective and agile management of the department.⁴⁴³ Greater Congressional control of VHA spending is understandable in light of VA’s lack of adequate management systems and data analytic capabilities to track expenditures in real time⁴⁴⁴ and report them to Congress and central office. The only means available to hold the medical centers

⁴⁴³ On January 21, 2016, Secretary of Veterans Affairs, Robert A. McDonald, provided the following testimony before the U.S. Senate Committee on Veteran’s Affairs “Flexible Budget Authority: We need flexible budget authority to avoid artificial restrictions that impede our delivery of care and benefits to Veterans. Currently, there are over 70 line items in VA’s budget that dedicate funds to a specific purpose without adequate flexibility to provide the best service to Veterans. These include limitations within the same general areas, such as health care funds that cannot be spent on health care needs and funding that can be used for only one type of Care in the Community program, but not others. These restrictions limit the ability of VA to deliver Veterans with care and benefits based on demand, rather than specific funding lines.” accessed June 10, 2016,

⁴⁴⁴ The MITRE Corporation, *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 105, accessed March 10, 2016, http://www.va.gov/opa/choiceact/documents/assessments/integrated_report.pdf.

accountable was to fund the priority initiatives as separate budget lines or indicate allocations to be made under the specific-purpose process.

To fix the overly complex and bureaucratic structure of VHA, the *Independent Assessment Report* suggests that VHA “redesign (its) operating model to create clarity for decision-making authority, prioritization, and long-term support.”⁴⁴⁵ VHA must take a systems approach to reorient its leadership operations, restructuring and re-orienting VHACO program offices to ensure all of the following:⁴⁴⁶

- fact based, innovative decision making that is responsive to the field, other offices, and external stakeholder requirements
- feedback mechanisms to incorporate system learning into policy development and operational guidance
- communication mechanisms to effectively share information across offices and reach VISN and facilities to explain expectations and tie decisions to organizational values and goals
- effective execution of policy decisions through expert coaching, deployment of resources, and guidance based on external benchmarks and sharing of internal best practices
- analytic capability and infrastructure to effectively monitor progress and outcomes of all organizational priorities

Such a reorientation will involve a different skill set and expertise than currently required in VHACO. Transformation will call for recruiting new expertise, making advancement decisions based on these new competencies, reinforcing them through recognition and performance assessment, and developing new skills in current staff through training and coaching. This skill set includes a high level of technical expertise relevant to the program office; the ability to build relationships with external stakeholders; demonstrated skills in coaching, staff development, and training; certification in quality improvement methodologies; analytic capabilities to develop and track metrics; and the ability to lead transformational change. VHA must fully fund the retraining and the hiring of skilled staff in VHACO to accomplish this transformation.

For the VHACO program offices to work effectively with one another and with the field, the specific authority of each office must also be defined. Where overlap and confusion exists between offices, programs must be combined and streamlined or eliminated with a corresponding reduction in force. In changing the structure and orientation of VHACO program offices, VHA leadership can take the opportunity to align functions to achieve its stated priority of patient-centered care. In a fully aligned operating structure, business processes from the VAMC front line to central office must be organized to deliver important

⁴⁴⁶ Baldrige Performance Excellence Program, *2015-2016 Baldrige Excellence Framework: A Systems Approach to Improving Your Organization's Performance (Health Care)*, (Gaithersburg, MD: U.S. Department of Commerce, National Institute of Standards and Technology, 2015), 7, 34, and 50.

COMMISSION ON CARE FINAL REPORT

patient outcomes rather than aligned in professional silos. For instance, instead of having an office of nursing, one for social work, and a lead for physician assistants, business offices should be aligned around the work they do together, like patient aligned care teams, to deliver positive outcomes for veterans.

The administrative operations of VHACO should also be flattened. Senior staff should be speaking directly to other senior staff to discuss and make decisions rather than relying on bureaucratic, paper-based processes as a means of negotiation: It is neither a healthy culture nor an efficient process. At the same time, VHACO needs to take full advantage of being a large-scale enterprise by centralizing functions such as acquisition package development, recruitment package development, and account reconciliation so that staff is not required in each program office to take on these occasional but complex activities. The net savings resulting from this reorganization and delayering of the bureaucracy must be reinvested in the transformation process.

VISNs must also examine the skills needed to take on an expanded role as facilitators, coaches, and guides in improving services and sharing best practices across facilities. VISNs are critical players in the feedback loop between service delivery and VHACO to identify ineffective processes, problems, and emerging issues that need to be raised to VHACO for help in clearing away barriers to effective operations. Similar to VHACO, VISNs must define the new skill set required by their staffs and establish these requirements in hiring, promotion, and performance evaluation as well as training and coaching staff to develop these competencies. Finally, the chief of VHA Care System (CVCS) should establish a required staffing ratio for the VISN office and reduce the staffing in VISNs that exceed this standard.

A new operating model also means that medical center directors must control the budget, staff, supplies, and infrastructure required to deliver needed health care. This model includes consolidation of budget lines and new authority and expanded authority to reallocate funds across the remaining budget categories. To manage the new VHA Care System and ensure that facility and network directors have the local control needed to make decisions about how to deliver services, fewer restrictions should be placed on the VHA budget. To start, specific-purpose funds must no longer be used to direct obligations at facilities. Congress should also work with the administration to reduce the number of budget lines and specific spending authorities back to a simpler system like that used in 1998. To support these changes and create transparency, medical centers should be accountable for their expenditure of funds by ensuring accurate, complete, and timely cost accounting. This last requirement, however, can only be met if it is supported by effective financial management data systems and fully trained staff and leadership who understand how to use such systems.

To support the leaders, program offices, and the field in this transformation, the CVCS must establish a transformation office that has appropriate expertise in business process reengineering and is fully funded to conduct this work. Existing offices with the requisite expertise, including the Office of Strategic Integration and the Veterans Engineering Resource Center (VERC), should be rolled into the transformation office. This office would oversee transformation and incubate new initiatives with the goal of incorporating them into regular work of other program offices once the new initiative is established. This mechanism, if used consistently, would prevent VHA from growing new offices as new priorities arise.

VA-18-0457-A-001752

Finally, as part of cultural change within the leadership system, the CVCS, VISN directors, and program office leaders must promote open and productive dialogue among themselves about problems and solutions. To accomplish this goal, leaders must address both the culture within the leadership ranks, as well as establish systems and processes that support identification and discussion of problems. The CVCS must model this behavior by inviting input on problems and rewarding leaders when they bring issues forward, including rewarding them with access to expertise, staff, and money; removing barriers; and aligning other leaders in support of solutions.

In its work to oversee change in VHA, the transformation office will create an implementation plan for transformation, identifying key strategies and milestones. This plan will drive data collection, development of strategic goals and supporting objectives to encourage effective planning, accountability, and the ability to unearth critical gaps that need to be addressed. The transformation office will require each new initiative to establish a project plan and provide periodic reports that include all of the following components: tactic/action, initiative owner, cost (i.e., operational, equipment, contracts), number of FTEs, start and completion dates, outcome measures, strategic drivers, and milestone.⁴⁴⁷ The President's Management Agenda Scorecard will serve as the evaluation model. The Office of Management and Budget created this tool to evaluate new initiatives and track progress on outcomes over time with regular spotlight reports (red, yellow, green) to leadership.⁴⁴⁸

Implementation

Legislative Changes

- Simplify the VHA budget to include fewer accounts while at the same time requiring more transparent and detailed accounting of VHA expenditures.

VA Administrative Changes

The following administrative changes are a priority during the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B. Responsibility for establishing a transformation plan with milestones, timelines, and evaluation of outcomes is assigned to the transformation office that the Commission recommends be established in VHA.

- Eliminate duplication within VHA and consolidate program offices to create a flat structure. Figure 9 is one model of an organizational chart for accomplishing this goal. This organizational chart shows how VHA can be streamlined to mirror the structure of large private-sector hospital systems. Figure 10 is the current VHA organizational chart, provided as a point of comparison and to emphasize the cumbersome nature of the current structure.

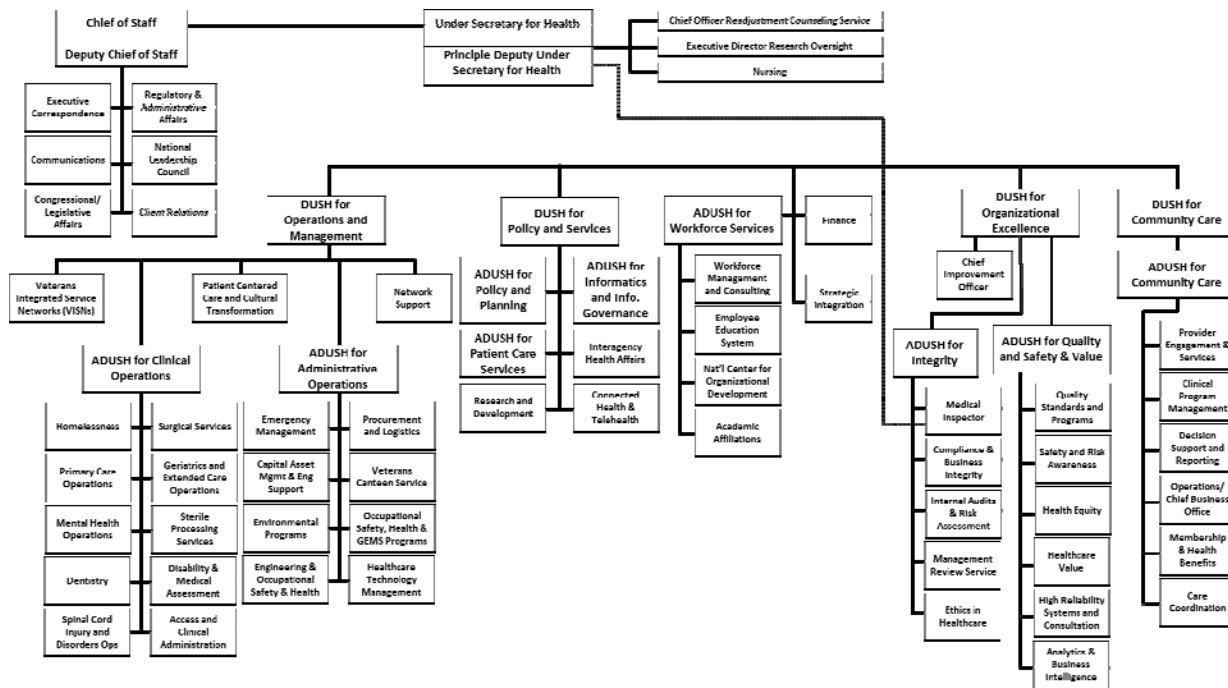

⁴⁴⁷ For example, see "VA Faith-based and Community Initiative President Management Agenda Scorecard," September 30, 2008,

⁴⁴⁸ "Office of Federal Financial Management President's Management Agenda," Office of Management and Budget, accessed June 15, 2016, https://www.whitehouse.gov/omb/financial_fia_pma/.

COMMISSION ON CARE FINAL REPORT

Figure 9. Proposed VHA Organizational Chart⁴⁴⁹

Note: This organizational chart is an example of how to align VHA functions to create a flatter organization, remove duplication, and streamline decision making as discussed throughout this section of the report. Of note, the placement of the Transformation Office, CIO, and supply chain in this diagram is consistent with recommendations made by the Commission elsewhere in this report. In this chart, COS is chief of staff.

Figure 10. Current VHA Organizational Chart⁴⁵⁰

⁴⁴⁹ Modified from Appendix C, Mike Mayo-Smith and Pat Vandenberg, *Task Force on Improving Effectiveness of VHA Governance: Report to the VHA Under Secretary for Health*, (Washington, DC, Veterans Health Administration, February 2015), 41.

⁴⁵⁰ Ibid.

COMMISSION RECOMMENDATIONS

- Eliminate the duplication of functions between VHA and VA by closing VHA offices as needed.
- Create innovative organizational structures that are aligned to patient's needs rather than professional silos, to support clinical care.
- Undertake a reduction-in-force in VHACO that facilitates delayering and efficiency in communication and decision making.
- Establish a transformation office implementation plan to ensure effective and comprehensive implementation of the transformation across VHA. The transformation plan is to capture all of the transformation activities recommended in the Commission report, establish specific timelines and milestones for accomplishing each objective, and report on both progress and outcomes at least quarterly to VHA leadership and the governing board. Periodic evaluation of the effect of these change initiatives on internal and external stakeholders would also be appropriate.
- Clarify the roles and responsibilities of VISNs and facilities and implement a change strategy to orient staff and leaders to these new expectations. Establish effective leadership communication mechanisms to promote transparency, dialogue, and collaboration among VHACO offices and with the field.

Other Department and Agency Administrative Changes

- None required.

Recommendation #13: Streamline and focus organizational performance measurement in VHA using core metrics that are identical to those used in the private sector, and establish a personnel performance management system for health care leaders in VHA that is distinct from performance measurement, is based on the leadership competency model, assesses leadership ability, and measures the achievement of important organizational strategies.

Problem

To achieve the Commission's vision of quality, access, and choice for veterans, VHA must effectively measure outcomes and hold leaders accountable for improvement. VHA can measure itself against internal best practices, but veterans deserve care that uniformly meets or exceeds private-sector quality standards. A clear, concise, balanced measure set, identical to private-sector standards, will give leadership, staff, and administrators focus and direction for their work. VHA leaders are responsible for delivering these quality outcomes for veterans. They do so by exercising leadership skills and traits in their management and direction to staff. Short-term gains can be realized at the expense of staff morale and well-being, but the long-term health of the organization cannot. Therefore, organizations must be sure to assess leaders' performance not just on *what* they achieve but *how* they achieve it.

Background

One of the criteria for performance excellence in health care is the measurement, analysis, and improvement of organizational performance.⁴⁵¹ Performance measurement is used to track daily operations, overall organizational performance, and progress in achieving organizational objectives and action plans. Performance measurement is also used to benchmark organizational performance against internal and external standards.

Organizational performance measurement is not the same as workforce performance management.⁴⁵² Workforce performance management is intended to reinforce intelligent risk taking, help focus the workforce on the needs of patients and other customers, and support

The Commission Recommends That . . .

Organizational Performance Measurement

- VHA streamline organizational performance measures, emphasize strategic alignment and meaningful effect, and use benchmarked measures that allow a direct comparison to the private sector.
- The new Office for Organizational Excellence work with experts to reorganize its internal structure to align business functions with field needs and consolidate and eliminate redundant or low-priority activities.

Workforce and Leadership Performance Management System

- VHA create a new performance management system appropriate for health care leaders, tied to health care leadership competencies, and benchmarked to the private sector.
- The CVCS and all secondary raters hold primary raters accountable for creating meaningful distinctions in performance among leaders.
- VHA recognize meaningful distinctions in performance with meaningful awards.

⁴⁵¹ Baldrige Performance Excellence Program, 2015-2016 *Baldrige Excellence Framework: A Systems Approach to Improving Your Organization's Performance (Health Care)*, Gaithersburg, MD: U.S. Department of Commerce, National Institute of Standards and Technology (2015), 16.

⁴⁵² *Ibid.*, 20.

health care delivery and the achievement of action plans.⁴⁵³ Although there is a relationship between organizational performance measurement and workforce performance management, they are not synonymous processes.

Workforce performance management is made up of much more than just clinical outcome measures. As noted by the American College of Healthcare Executives (ACHE), performance evaluations of hospital CEOs must also evaluate leadership traits such as judgment, communication, and diplomacy.⁴⁵⁴ Furthermore, ACHE emphasizes the inclusion of individual professional objectives in performance plans, such as promoting ethical behavior, supporting diversity and inclusion within the organization, or fostering effective medical staff relationships.⁴⁵⁵ ACHE and other leading practitioners⁴⁵⁶ emphasize that performance management is not a plan or an event, but rather a continuous, ongoing process and conversation among the leaders and their reviewers. A workforce performance management system must also make meaningful distinctions among individuals⁴⁵⁷ and promote high performance through rewards, recognition, and incentive practices.⁴⁵⁸ Ideally, when coupled with a leadership competency model and development program, workforce performance management should also help to identify high-performing potential leaders and provide guidance to the workforce on how to move up in the leadership ranks.⁴⁵⁹ As deployed in FY 2015 and evaluated by the *Independent Assessment Report*, VHA's performance management system failed to effectively achieve any of these objectives.⁴⁶⁰

Analysis

One of the findings in the *Independent Assessment Report* was that “hundreds of operational performance measures overwhelm leaders and this, combined with limited transparency and inconsistent data availability, makes it difficult to focus on what is most important.” More than 300 measures spanned everything from critical clinical metrics to political priorities introduced to address the most recent crisis. VHA reports that it was tracking approximately 500 measures,

COMMISSION ON CARE FINAL REPORT

including 156 related to access, 29 measuring employee engagement, 18 on high-performing networks, 250 best practice measures, and seven related to trust.⁴⁶¹

Distinct from performance measurement, the performance management process⁴⁶² is a cycle that begins with clear input from top leadership on the priorities of the organization, followed by clear targets, performance tracking, reviews, and rewards. The *Independent Assessment Report* noted that, “Individual performance management processes are hindered by targets inconsistent with the VHA mission, delayed implementation, lack of meaningful performance dialogue, and limited rewards.”⁴⁶³ Many of the same system flaws that impede effective organizational performance also impede individual success. Performance plans are released late in the performance cycle,⁴⁶⁴ metrics are hard to track in real time and lack the detail required for individual performance assessment,⁴⁶⁵ and few plans are written to support shared accountability and team-based solutions. In addition, participants observed that the current senior executive performance agreements and rating process (a) do not result in meaningful distinctions in performance between individuals, (b) do not drive meaningful conversations about individual performance, (c) and do not consistently focus on key health care metrics of quality, safety, patient experience, operational efficiency, finance, and human resources.⁴⁶⁶ The *Independent Assessment Report* notes that the rewards currently offered to employees do not motivate them to work toward exceptional performance.⁴⁶⁷

Information provided to the Commission indicates that VHA has taken action to address some of these findings. First, the USH has reestablished a performance accountability workgroup (absent for a number of years) comprising leaders from the field and VHACO to provide oversight and direction to the performance measurement process.⁴⁶⁸ The workgroup has been charged with aligning metrics to each level of VHA, dramatically simplifying metrics, and increasing the capacity of the organization to focus on measures that truly matter.⁴⁶⁹ The group has created an aspirational vision of a performance measurement system that describes cascading accountability from the top of the organization with health system outcomes (reported annually) through strategic measures (reported quarterly), to tactical measures (reported monthly) to transactional measures (reported in real time).⁴⁷⁰ It is critical that these aspirations become policy.

⁴⁷⁰ Ibid.

Starting in the 1990s, VHA has used performance measurement, benchmarking, and reporting internally to motivate higher clinical quality performance by individuals and teams.⁴⁷¹ As a large, national health care system, internal benchmarking can be a valid method to drive change, yet both internal and external audiences may ask how well VHA performance compares to that of private-sector providers. VHA currently posts some patient quality, safety, and outcome measures on both its website and on the Department of Health and Human Services (HHS) Hospital Compare website.⁴⁷² These measures allow patients to evaluate the quality of care they receive from VA and make informed health care decisions. They include measures of timely and effective health care; measures of readmissions; complications of death, surgical complication measures and health-care related infection measures; survey data of patient experiences; and other measures required of hospitals participating in Medicare.⁴⁷³ Former USH Kizer believes this reporting is insufficient, noting

*the VA health care system has become increasingly insular and inward-looking. It now has little engagement with private-sector health care, and too often it has declined to make its performance data public. For example, it contributes only a small proportion of its data to Hospital Compare and has declined to participate in other public performance reporting forums such as the Leapfrog Group's efforts to assess patient safety.*⁴⁷⁴

The Commission has reviewed VHA's principal measurement approach, Strategic Analytics for Improvement and Learning Value Model (SAIL) and has determined that although it is modelled on private-sector approaches to measurement and rating, measures are not exactly the same as those reported in the private sector and consequently impede direct benchmark comparisons of VHA to the private sector. Updating these measures so they are consistent with the private sector will be especially important as integrated delivery networks are established and more care is received in the community, as they will allow for making objective comparisons.

Measurement, analysis, and improvement of organizational performance work together as a key system.⁴⁷⁵ The USH has signed a new organizational chart for VHA that acknowledges the interconnection of these elements by establishing an office for organizational excellence that encompasses all of these functions.⁴⁷⁶ To be effective, not only must all of the various units within this office work together but also they must work with personnel in the field to coach and develop their ability to effectively apply performance measurement and improve organizational performance.

⁴⁷⁶ See the proposed organizational chart at end of Recommendation #12.

COMMISSION ON CARE FINAL REPORT

These improvements in performance measurement do not appear to be mirrored on the performance management side of the equation. The draft FY 2016 performance plan template for network directors and medical center directors,⁴⁷⁷ although more streamlined than in previous years, continues to reflect confusion of performance measurement and performance management. It also continues to distribute all of the organization's key (and not so key) priorities under OPM executive core qualifications of leading change, leading people, business acumen, building coalitions, and results driven. The new, streamlined performance measures described above could be considered results-driven; however, the rest of the plan continues to be a confusing presentation of instructions to field leaders, restatements of policy, and performance objectives for action plans. Only the last category is appropriate for workforce performance management.⁴⁷⁸ The Corporate Senior Executive Management Office has implemented a new online performance management data tool that allows for tracking and assessment of the performance management process for senior executive service and equivalent leaders in VA.⁴⁷⁹

To improve performance measurement and organizational performance, the *Independent Assessment Report* recommends that VHA focus and simplify organizational performance measurement to clarify accountability, actively support the mission, and promote continuous improvement. Specifically, VHA must create a simplified, focused, balanced scorecard that reduces the total number of metrics to about 20; establish metrics that support cross-functional collaboration; cascade metrics down the organizational hierarchy; and make data tracking transparent, timely, broadly available, credible, reliable, and meaningful down to the lowest level of the organization. Furthermore, leaders should support continuous improvement, problem-solving, and the exchange of best practices across the organization rather than focusing on only correcting poor performance.⁴⁸⁰ The Commission broadly agrees with this approach to performance measurement. In addition, the Commission emphasizes that VHA customers and stakeholders require public reporting of clinical quality measures that are the same as, and therefore directly comparable to, measures used by the private sector. Although VHA may require an enhanced set of measures that reflects services not broadly deployed in the private sector, or for which measures do not yet exist, a minimum set that are the same as private-sector measures must be used by VHA. As VHA expands integration of care with the community, the use of the same measures as the private sector will be important so that direct comparisons can be made of care delivered inside VHA and that delivered under contract or partnership agreement by the VHA community care network.

VHA also requires a cohesive, integrated personnel performance management system that is specific to the knowledge, skills, and abilities required of health care leaders; includes

⁴⁷⁹ Sam Retherford, Principal Deputy Assistant Secretary for Human Resources and Administration, Department of Veterans Affairs, speaking to the leadership workgroup of the Commission on Care, December 15, 2015.

⁴⁸⁰ McKinsey & Company, Inc., *Independent Assessment of the Health Care Delivery Systems and Management Processes of the Department of Veterans Affairs, Assessment L (Leadership)*, 81, accessed January 26, 2016, http://www.va.gov/opa/choiceact/documents/assessments/Assessment_L_Leadership.pdf.

accountability to key organizational outcomes; but also assesses organizational and professional objectives. A new personnel performance management system must be free of OPM requirements for executive core qualification and certification process and instead be benchmarked to the private sector⁴⁸¹ and consistent with the new leadership competency model. Congress required DoD to establish independent competency standards for the Commanders of Military Treatment Facilities (MTFs) and should consider doing the same for VHA.⁴⁸² This new performance management model must be based on both evaluation of leadership competencies and demonstrated success in delivering on strategic priorities. To break with current perceptions of the rating scales, it would be helpful to establish a new rating scale for the performance management system. Once the new system is developed, VHA must conduct training to describe the system, rating process, and expectations for both participants and raters.

A performance management system must also address the responsibilities of the rater. This includes clearly establishing written performance requirements for subordinates that are both timely (i.e., prior to the start of the rating period) and meaningful. Raters must be required to provide continuous feedback and assessment throughout the year to recognize and reward progress and outstanding achievements as well as to coach and trouble shoot when needed. The CVCS must establish this expectation by clearly communicating what is required of raters, and most importantly, by modeling the behavior. Finally, raters must provide meaningful ratings that distinguish achievement based on objective performance and demonstrated leadership skills. For instance, the Cleveland Clinic has moved to a system of forced rankings for which the top 10 percent of performers are celebrated and the bottom 10 percent are given intensive coaching or, if justified, sanctioned.⁴⁸³ To accomplish the last point, raters themselves must be given feedback and oversight to understand how their approach to rating compares to other leaders in the organization. If raters' assessments are not consistent with rating standards, their supervisor must bring this issue to their attention and include it in the performance assessment they receive.

The newly established performance management data tool can be used to support the performance management process. The submission of written performance plans (or failure to do so) can be tracked and reported; and the quality of those plans can be audited to provide feedback to raters. Final ratings and a comparison of raters can be conducted and provided to all of the executive raters in the organization. Finally, such a tool can also be used to identify and track high performers who deserve further investment and development as leaders from VHA.

⁴⁸³ Delos M. (Toby) Cosgrove, MD, CEO, Cleveland Clinic, statement during Commission on Care public meeting, March 22, 2016.

COMMISSION ON CARE FINAL REPORT

Implementation***Legislative Change***

- Obtain legislative relief from the requirement to use the OPM executive core qualifications system of competencies and ratings and tied to new Title 38 pay authority for health care leaders (see Recommendation #15).

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Establish a workgroup and engage outside experts to create a new performance management system for VHA leaders that is appropriate for health care executives.
- Establish standards and processes to hold raters accountable for creating meaningful distinctions in performance between subordinate leaders.
- The new Office for Organizational Excellence should work with experts to reorganize their internal structure to align business functions with field needs and consolidate and eliminate redundant or low-priority activities.

Other Department and Agency Administrative Changes

- None required.

Diversity and Cultural Competence

Recommendation #14: Foster cultural and military competence among all VHA Care System leadership, providers, and staff to embrace diversity, promote cultural sensitivity, and improve veteran health outcomes.

Problem

The VHA Care System must implement a systemic approach to developing the cultural and military competence of its leadership, staff, and providers, as well as measure the effects of these efforts on improving health outcomes for vulnerable veterans. Although VHA has made some strides in specific program areas, cultural competency is an essential part of providing effective care to veterans, and must become a strategic priority throughout the organization, because of the unique needs military service, and especially participation in combat operations, may cause.

The Commission Recommends That . . .

- VHA implement a systemic approach to establishing cultural and military competence across VHA and its community providers, and provide the resources required to fully integrate the related strategy into veteran's care delivery.
- Cultural and military competency training be required on a regular basis for VHA Care System leadership, staff, and providers.
- Cultural and military competency be criteria for allowing community providers to participate in the VHA Care System.

Background

Cultural competence is the ability of health care organizations and their providers to understand and respond effectively to the cultural, language, and in VA's case, military service experience brought by the patient to the health care encounter. It has been endorsed as a viable skill set to reduce, if not eliminate, the rate at which health care disparities occur. VHA has recognized the problem of health disparities among its patient population and has taken steps to address it by tasking certain internal offices with building cultural and military competence throughout the organization. For example, VHA established the Office of Health Equity (OHE) and charged it with championing the efforts to identify, understand, and address health care disparities among veterans.

Analysis

There are seven essential strategies for promoting and sustaining organizational and systemic cultural competence. These strategies include the following:⁴⁸⁴

- Provide executive-level support and accountability.
- Foster patient, community, and stakeholder participation and partnerships.
- Conduct organizational cultural competence assessments.
- Develop incremental and realistic cultural competence action plans.

⁴⁸⁴ Miriam E. Delphin-Rittmon et al., "Seven Essential Strategies for Promoting and Sustaining Systemic Cultural Competence," *Psychiatric Quarterly*, 84, (2013), 53-64.

COMMISSION ON CARE FINAL REPORT

- Ensure linguistic competence.
- Diversify, develop, and retain a culturally competent workforce.
- Develop an agency strategy for managing staff and patient grievances.

VA has taken some steps to address cultural and military competence strategies, but these programs are not sufficient to address the breadth and depth of the problem. These strategies will not take hold and become fully ingrained in VHA's culture unless VHA leadership makes them a key priority and commits the resources and on-going, comprehensive training required to build cultural competencies across the entire VHA workforce.

Military Competency

In addition to addressing the needs of minority veterans and vulnerable veterans populations, VA must address military-specific needs and ensure that all providers in the VHA Care System have sufficient military competency (i.e., knowledge of specific issues and health care needs of those who served in the military). VHA's Office of Academic Affiliations developed a *Clinician Pocket Card* for providers that includes questions for clinicians to ask veterans about their military health history.⁴⁸⁵ The *Pocket Card* and similar resources should be given to all VHA and community providers to leverage during veteran patient medical assessments and appointments. In addition, VA's Office of Public Health (OPH) provides information on VA health care programs for veterans who were exposed to environmental and occupational hazards during military service, such as Agent Orange, chemicals leading to Gulf War veterans' illnesses, and Camp Lejeune water contamination.⁴⁸⁶ This military exposure information should be leveraged in VA's cultural competency strategy.

Health care disparities often result from patients' lack of trust in their health care provider; therefore, enhancing the patient-provider relationship is paramount in overcoming these disparities. Stereotypical thinking on the part of providers about certain patient groups, including veterans, may unwittingly influence their prognosis.⁴⁸⁷ Specific reasons for the increase of health care disparities in the military population include the following:

- the cultural norms of the military are such that to admit or display any signs of perceived weakness, especially related to mental health issues, discourages military personnel and veterans from seeking medical care and treatment
- changes in the demographical makeup of the civilian population result in similar changes to the military population
- a small but gradual increase in the number of foreign born personnel who have joined the ranks of the military

⁴⁸⁵ Department of Veterans Affairs, Office of Academic Affiliations, *Military Health History: Pocket Card for Health Professions Trainees and Clinicians*, accessed June 12, 2016, <http://www.va.gov/oaa/archive/Military-Health-History-Card-for-print.pdf>.

⁴⁸⁶ "Public Health: Military Exposures," U.S. Department of Veterans Affairs Intranet, accessed June 12, 2016, <http://vaww.publichealth.va.gov/exposures/index.asp>

⁴⁸⁷ G.L.A. Harris, "Reducing Healthcare Disparities in the Military Through Cultural Competence," JHHSA (2011), 148.

- a disengaged provider culture that may have become more immersed in the medical culture than the military culture

VA must make cultural and military competence a strategic priority, provide the resources needed to execute the strategy, and hold leadership and providers, both within VHA and community partners, accountable for strategy implementation and integration into VA's culture.

Women

Women are the fastest growing group within the veteran population.⁴⁸⁸ As of 2011, approximately 1.8 million (8 percent) of the 22.2 million veterans were women. Data indicate that by 2020 women veterans will comprise nearly 11 percent of the total veteran population. As the number of women veterans increases, VHA continues to prepare for an increasing demand for women veterans' health care needs.⁴⁸⁹ To address the health disparities affecting women veterans, VHA must provide high-quality, equitable care on par with that of men, deliver that care in a safe and healing environment, provide seamless coordination of services, and actively recognize women as veterans.⁴⁹⁰

In the past, VHA found gaps in its ability to provide comprehensive primary care for women veterans because many primary care providers had little or no exposure to women patients and women were often referred outside of primary care for gender-specific care. To close these gaps, VHA has implemented women's health comprehensive primary care clinic models with the goal of providing complete primary care from one designated women's health provider (DWHP) at one site. An analysis of FY 2012 data revealed that women assigned to DWHPs had more positive overall experiences with care and were more satisfied on six composite scores including access, communication, shared decision making, self-management support, comprehensiveness, and office staff.⁴⁹¹ VA has substantially reduced gender gaps in care,⁴⁹² but women veterans still encounter challenges when accessing care. VHA leadership must support the future planning of women's services and programming so that women veterans receive the highest quality health.⁴⁹³

LGBT Equity

In its systemwide implementation of cultural competency, VHA should leverage best practices from an area in which the agency is already an equity leader: treatment of LGBT patients. Every year since 2007, the Human Rights Campaign has published a Health Equality Index (HEI) report that aims to measure the quality of health care for LGBT patients based on core criteria

⁴⁸⁸ "Women Veterans Health Care," Department of Veterans Affairs, accessed June 12, 2016, <http://www.womenshealth.va.gov/>.

⁴⁸⁹ U.S. Department of Veterans Affairs, *Study of Barriers for Women Veterans to VA Health Care*, April 2015, accessed June 12, 2016, http://www.womenshealth.va.gov/WOMENSHEALTH/docs/Womens%20Health%20Services_Barriers%20to%20Care%20Final%20Report_April2015.pdf.

COMMISSION ON CARE FINAL REPORT

that require health care systems to couple strong policies with appropriate training.⁴⁹⁴ In 2016, VAMCs made up 20 percent of all HEI participants. Among participating VAMCs, 84 percent were designated with *Leader* status.⁴⁹⁵ VHA hospitals publicize that discrimination against LGBT patients and employees is prohibited. Senior managers are registered for HEI training. And equal visitation rights are granted to families and friends of LGBT patients. VHA hospitals play a critical role in promoting patient care equality in states where VHA is the only Equality Leader.⁴⁹⁶ VHA should create strong policies and mandatory training, like that used to promote health equity for LGBT patients, to address equity issues for racial and ethnic minorities and women.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- VHA Care System providers should be required to ask patients about their military health history and incorporate veterans' responses into patients' treatment plans.
- VHA leadership should support the future planning of women's services and programming so that women veterans receive the highest quality health care.
- VHA should leverage the best practices developed in support of LGBT equity and implement them across VHA.
- VHA Care System providers should be required to attend comprehensive, on-going cultural and military competency training.

Other Department and Agency Administrative Changes

- None required.

Workforce

Recommendation #15: Create a simple-to-administer alternative personnel system, in law and regulation, which governs all VHA employees, applies best practices from the private sector to human capital management, and supports pay and benefits that are competitive with the private sector.

Problem

VHA has staffing shortages and vacancies at every level of the organization and across numerous critical positions, including facility leadership, clinical staff, supply chain personnel, and customer service staff. VHA lacks competitive pay, must use inflexible hiring processes, and continues to use a talent management approach from the last century. A confusing mix of personnel authorities and position standards make staffing and management a struggle for both supervisors and human resources personnel. Title 5 was not created with a modern health care delivery system in mind and falls short of offering what is needed to create a high-performing health care system.

Background

During the 1990s, Congress passed the Government Performance and Results Act⁴⁹⁷ to correct shortcomings in the way government was managed and assessed in an effort to bring modern business management practices into the federal government. The law was updated in 2011,⁴⁹⁸ yet one essential

The Commission Recommends That . . .

- Congress create a new alternative personnel system that applies to all VHA employees and falls under Title 38 authority. The system must simplify human capital management in VHA; increase fairness for employees; and improve flexibility to respond to market conditions relating to compensation, benefits, and recruitment.
- VHA write and implement regulations for the new alternative personnel system, in collaboration with union partners, employees, and managers, that does all of the following:
 - Meets benchmark standards for human capital management in the health care sector and is easy for HR professionals and managers to administer.
 - Promotes veteran preferences and hiring.
 - Embodies merit system principles (merit-based, nonpartisan, nondiscrimination, due process) through simplified, sensible processes that work for managers and employees.
 - Creates one human capital management process for all employees in VHA for time and leave, compensation, advancement, performance evaluation, and disciplinary standards/processes.
 - Provides due process and appeals standards to adverse personnel actions.
 - Allows for pay advancement based on professional expertise, training, and demonstrated performance (not time-in-grade).
 - Promotes flexibility in organizational structure to allow positions and staff to grow as the needs of the organization change and the success of each individual merits.
 - Establishes simplified job documentation that is consistent across job categories and describes a clear path for staff professional development and career trajectories for advancement.
 - Eliminates most distinctions (except for benefits) between part-time and full-time employees.
 - Grandfathers current employees with respect to pay and benefits.
- VHA ensure all positions, to include human resources management staff, are adequately trained to fulfill duties.

⁴⁹⁸ GPRA Modernization Act of 2010, Pub. L. No. 111-352, 124 Stat. 3866 (2011).

COMMISSION ON CARE FINAL REPORT

component of modernizing the management of federal programs is still missing: reform of human capital management.⁴⁹⁹

The Civil Service Act was initially passed in 1883 and revised in 1978.⁵⁰⁰ The *general schedule*, which governs the pay and job classification process, was codified by regulation in 1949. The U.S. workforce, including the federal workforce, has changed dramatically since these laws and regulations were implemented. As noted in a recent report from the Partnership for Public Service, “the personnel system, designed more than 60 years ago, now governs more than 2 million workers and is a relic of a bygone era, reflecting a time when most federal jobs were clerical and required few specialized skills.”⁵⁰¹ As of 2013, nearly two-thirds of federal employees work in professional or administrative positions focused on knowledge-based work, with the Department of Veterans Affairs accounting for the largest percentage of such workers.⁵⁰²

The Partnership for Public Service calls for broad reform of the civil service system, noting that the

*the federal workforce has become an island disconnected from the larger talent market for knowledge-based professional and administrative occupations that are mission critical. . . . Federal employee pay . . . is not tied to the broader labor market, making it harder to compete with the private sector for talent. That disconnect is exacerbated by a job classification system that describes a workplace from the last century.*⁵⁰³

This system lacks mechanisms for rewarding top performers, demoting or firing poor performers, and holding managers accountable.⁵⁰⁴ The unnecessarily complex hiring system is difficult for applicants to navigate and makes it challenging for hiring managers to identify the most qualified candidates, hindering the ability to bring in experienced candidates from the private sector.⁵⁰⁵

*The civil service system has become a maze of rules and procedures that are not perceived as rational by the people who serve in government or by the general public. . . . Rigid policies . . . are now a burden on a government that needs to encourage flexibility and innovation to meet rapidly changing and difficult challenges.*⁵⁰⁶

⁵⁰⁴ Ibid.

⁵⁰⁵ Ibid.

⁵⁰⁶ Ibid.

The General Accounting Office (GAO) also continues to point to human capital management as a high-risk area across government.⁵⁰⁷ DoD has proposed walking away from the Title 5 civil service system to support modernization of human capital management,⁵⁰⁸ President Barack Obama has repeatedly called for a commission to overhaul and modernize the civil service,⁵⁰⁹ and Congress is considering whether the time is right for civil service reform.⁵¹⁰

VHA currently uses three different personnel systems: Title 5 (the civil service/general schedule system) for senior executive service (SES) and other, mostly nonclinical, employees; Title 38 for physicians, dentists, and other specified health care professionals;⁵⁰⁹ and Title 38 Hybrid for allied health professionals such as pharmacists and licensed physical therapists.⁵¹⁰ Each system has its own set of requirements, procedures, and rules for the employees under its respective authority.⁵¹³ Currently, about two-thirds of VHA employees serve in the Title 38 Hybrid occupations.⁵¹⁴

VHA is not alone in having an excepted service system. More than a dozen agencies have special legislative authority to create a personnel system to fit their particular needs, including the Federal Bureau of Investigation, National Institutes of Health, National Security Agency, U.S. Public Health Service, Defense Intelligence Agency, U.S. Nuclear Regulatory Commission, and National Aeronautics and Space Administration.⁵¹¹ In an acknowledgement of the failure of the general schedule process to meet the needs of certain professions, OPM has also instituted governmentwide direct hiring authority for difficult-to-recruit positions, including medical officer, nurse, pharmacist, radiologic technician, and information technologist – all positions critically important to VHA’s mission success.

Modernizing human capital management is a global imperative for the private sector as well, with 92 percent of participants in one assessment of 7,000 businesses noting that a new approach to human resources is a critical organizational priority in 2016.⁵¹² According to a report from Deloitte, which examined broad human resource (HR) trends, “HR is redesigning almost everything it does – from recruiting to performance management to onboarding to reward systems” to learning and development.⁵¹³ Younger workers are driving many of these

COMMISSION ON CARE FINAL REPORT

changes with expectations for meaningful work, learning opportunities, and career progression.⁵¹⁴ These workers have been choosing the federal government in diminishing numbers, with only 6 percent of federal employees currently younger than 30 years of age (compared to 23 percent of the civilian workforce).⁵¹⁵ In VHA, millennials (those 34 and younger) make up only 15 percent of the workforce, but are disproportionately over-represented among staff that quit VHA, at 20 percent.⁵¹⁶

As of January 2016, VHA had a vacancy rate of 16 percent for all positions, despite filling more than 40,000 positions in FY 2015.⁵¹⁷ VHA faces the additional challenge that 40 percent of its overall workforce is eligible for retirement in the next few years.⁵¹⁸ This problem occurs in the face of acknowledged national shortages of physicians⁵¹⁹ and geographic misalignment of the current health care workforce that leaves many localities short of needed providers.⁵²⁰ Taken together, this information makes clear that excellence in human capital management continues to be a business imperative for VHA.

Analysis

The human resource function within VHA needs a fundamental overhaul to increase responsiveness, efficiency, and customer service, as well as to align its orientation to the business needs of VHA.⁵²¹ Medical center directors do not receive the support they need from HR to accomplish hiring, disciplining, and planning for succession of employees.⁵²² During exit interviews, staff members who leave VHA cite barriers to career growth, insufficient professional development, a lack of promotions, and poor on-boarding and training as reasons for departing.⁵²³ In a recent national survey of VA employees, improving end-to-end hiring, recognizing stellar job performance, and providing professional development and career

planning ranked, numbers one, six, and nine respectively as top priorities for improving the employee experience at VA.⁵²⁴

The Civil Service System Does Not Support a High-Performing Health System.

Recruitment in VHA operates in an incredibly complex environment. Federal rules and regulations make HR more challenging than it is in the private sector.⁵²⁵ For example, interviews in 2014 with more than 500 VHA hiring managers and HR staff members pointed to the top problems with Title 5 recruitments as OPM classification standards, grading of position descriptions, position characterization, and the ranking and rating process.⁵²⁶ The group specifically noted that there are many staff positions required in a health care delivery system that do not translate into a general schedule occupational series; therefore, when the positions are graded, the grade and salary is too low to compete with the private sector. Examples of such positions are custodial workers (hospital employees need to apply antiseptic cleaning techniques, but general custodians do not) and general facilities and equipment maintenance (hospital employees need to understand the maintenance of such items as specialized medical equipment, positive pressure rooms, and sterile plumbing systems that are not requirements for general plant maintenance at an office building).⁵²⁷ In another example, VHA managers noted that the OPM classification standard for supply chain positions rendered VHA unable to compete for local talent because the assigned grade was too low.⁵²⁸

The general schedule system also has been identified as a barrier to career advancement.⁵²⁹ Clerical staff members in particular often cannot advance in pay and responsibility without leaving their positions and moving into a different job series.⁵³⁰ Similarly, frontline customer service staff under the general schedule cannot receive advanced steps within the grade for better performance or completing job-related certifications or degrees, unlike nurses and allied health professionals who can receive advances in pay for these accomplishments.⁵³¹

The hiring process in VHA is acknowledged to take too long.⁵³² “HR is expected to fill a position within 60 calendar days . . . but process requirements, even if perfectly executed, take about 49

COMMISSION ON CARE FINAL REPORT

to 62 days.” Hiring timelines can span 4-8 months compared to private-sector hiring that takes between 0.5 and 2 months.⁵³³

This finding was echoed in a Northern Virginia Technology Council report on information technology challenges in VA that indicated across the board hiring of needed staff proceeds too slowly. “The causes are complex, but much of the delay can be traced to redundant, inconsistent, and inefficient hiring processes.”⁵³⁴ One driver of extended VHA hiring times is the government background checks and the licensing and credential review for clinical staff that is managed through VetPro, an internet-enabled data bank for credentialing VHA personnel.⁵³⁵

Although addressing recruiting and hiring problems will not be easy, doing so is essential to maintaining VHA’s workforce.⁵³⁶ An internal VHA workgroup that examined HR concluded that a complete break with Title 5 and a reworking of current Title 38 hiring authority is required, stating:

*The existing Personnel system does not meet today’s market or demand. With VHA’s tremendous volume of occupations to hire and significant turn-over rate in critical positions, it is necessary to promote an efficient organizational system to be able to hire qualified candidates as quickly as possible. The current classification system led to disparity across the systems and only looks at the duties of the position versus the qualifications of the person. The VHA hiring system must be agile and attractive to recruit those that just graduated or are entering the workforce... An agency specific excepted employment system would allow VHA to meet the unique staffing demands that are required of a complex health care organization.*⁵³⁷

VHA is Not Competitive in Pay for Many Positions

Many VHA staff have substantially lower earning potential than their private-sector counterparts. Despite a generous benefits package and the possible opportunities for greater work-life balance, and for research and teaching in a system that serves the important role of caring for the nation’s veterans, lower salaries reduce VHA’s competitive edge in the marketplace when trying to attract top talent.⁵³⁸ For example, although VHA is often able to provide physicians an entry salary that is comparable or better than industry standards, physicians’ long-term earning potential is dramatically less in VHA than that of their private-sector peers. “At the top of the salary ranges, VHA providers made less than their counter parts

by up to \$310,000 and on average, \$74,631. The only specialties for which VHA physicians made equal to or more than industry averages were anesthesiology, nephrology, ophthalmology, and psychiatry.”⁵³⁹ In another example of barriers to competitive pay, current provisions in law limit VA to a 60 percent level of market pay compensation for allied health professionals, even when recruitment failures demonstrate the need to offer higher salaries.⁵⁴⁰ As noted above in the discussion on classification, failure to appropriately classify positions also leads to a salary that is not competitive with private-sector health care organizations for positions such as customer service personnel.

In the area of educational debt repayment relief, VHA lags behind other federal and state agencies that use such programs to fill critical physician shortages in medically under-served areas.⁵⁴¹ VHA can offer up to a maximum of \$60,000 for 2 years (\$30,000 per year). HRSA National Health Service Corps (NHSC) runs three programs: the NHSC loan repayment program that provides up to \$50,000 in loan payments, the Student-to-Student Loan Repayment Program for up to \$120,000, and the State Loan Repayment Program with each state establishing loan amounts that are administered by HRSA.⁵⁴² These amounts range broadly from \$80,000 in Arizona and Arkansas, \$90,000 in Colorado, \$100,000 in Georgia and Alabama, and \$190,000 in California.⁵⁴³

Clinic Staffing Is Impaired by Current Law, Regulation, and Policy

Successfully reallocating staff to meet veterans’ needs in a rapidly evolving health care environment is difficult in VHA. The *Independent Assessment* recommended that VHA use extended clinic hours and weekend clinics to better optimize space and increase access to care for veterans.⁵⁴⁴ VA policy currently prohibits full-time VA physicians from receiving fee-basis compensation from the same VA facility in which they are salaried, although they can, under certain circumstances, receive fee-basis appointments at other VA facilities.⁵⁴⁵

These restrictions can make it hard to meet policy requirements for night and weekend schedules⁵⁴⁶ without reducing staffing on inpatient units or under-resourced primary care clinics. Use of alternative work schedules and overtime pay for physicians to meet local patient demands should be under control of local medical center directors.

COMMISSION ON CARE FINAL REPORT

VHA Staff Receive Inadequate Training Including at Initial Hire

Leading practices include providing mandatory onboarding training that introduces policies, procedures, and necessary skills. Onboarding programs include various activities that expose new hires to the culture of the organization and expectations based on roles and responsibilities. A report released by the Society for Human Resources Management suggests, “Formal orientation programs help new employees understand many important aspects of their jobs and organizations, including the company’s culture and values, its goals and history and its power structure.”⁵⁴⁷ To make up for inadequate on-boarding and to fill current staff’s understanding of VA, VHA is providing VA 101 training for current employees, with 60 facilities having completed the training in FY 2015.⁵⁴⁸ Employees in VA continue to desire a wide array of training, including customer service training, professional development, peer-to-peer training, hands-on training, and role-specific training.⁵⁴⁹

HR Professionals Must Focus on People and Business Priorities Not Compliance

VHA job candidates indicate they have unsatisfactory recruiting experiences, noting failures in timely follow-up and communication.⁵⁵⁰ VA human resources management and administration indicate that VA HR professionals do not exhibit a uniform level of competency, frequently do not understand the employee recruitment process end-to-end, and fail to provide high quality consultative support to managers with respect to all HR functions, but particularly in the area of progressive discipline and firing of employees.⁵⁵¹ Currently HR professionals in VA are largely focused on compliance with a complex set of rules,⁵⁵² rather than adding true value to the organization and being able to be full partners in accomplishing VHA business objectives. Resolving these staffing issues would render the overall HR function more effective.

VHA must become the employer of choice to attract and retain the very best health care workforce. To help it accomplish this goal, VHA requires competitive pay and flexible hiring and talent management processes. VHA cannot achieve that goal within its current personnel systems. A uniform alternative personnel system under Title 38 for all VHA human capital management would accomplish all of the following:

- Meet the unique staffing demands of a health care delivery organization.
- Allow market-based compensation and pay-setting latitude using broad pay bands to support staff growth and progression within their job. VHA must consider total compensation (with benefits), as compared to market rates because the government provides many more benefits than private-sector organizations. Consequently, VA may

⁵⁵¹ Sam Retherford, Principal Deputy Assistant Secretary for Human Resources and Administration, Department of Veterans Affairs, speaking to the leadership workgroup of the Commission on Care, December 15, 2015.

⁵⁵² Ibid.

pay less than private-sector employers for a position, but the total compensation (with benefits) may end up being equivalent to private-sector total compensation.

- Allow flexibility in the processes used to hire staff including direct hiring when needed.
- Support career planning and professional development through the application of competency models and training specific for health care as part of position management.
- Simplify the management tasks for supervisors and hiring managers who will only need to know one set of rules and processes instead of four.
- Simplify the job of HR professionals who will only need to know one set of rules and processes instead of four.
- Allow development and training of the HR workforce in VHA to focus on only one personnel system to create true end-to-end hiring expertise.
- Reduce competition within government where shortages of HR professionals create competition for Title 5 trained HR professionals.
- Create streamlined and uniform standards and approach to discipline and dismissal.
- Create fairness among staff in sick leave, vacation pay, salary, awards and bonuses, and compensatory time off.
- Support flow of staff between the field and VHA Central Office (VHACO) under a single personnel system.

Establishing a new human capital management system in VHA will neither be easy nor quick, nor will it be a panacea that alone will fix all that is wrong with recruitment, retention, development, and advancement. In designing and implementing a new system, VHA must take full advantage of private-sector resources and expertise in human resource management and ensure that the new system is built to be compatible with the private-sector. As VHA moves toward greater integration of care delivery, with networks of community providers, compatibility in personnel systems and a resulting greater flow of employees between VHA and community sites can help create closer linkages between the two parts of the care delivery system.

Implementation

Legislative Changes

- Create a simple-to-administer alternative personnel system, in law and regulation, which governs all VHA employees, applies best practices from the private sector to human capital management, and supports pay and benefits that are competitive with the private sector.
- Update student loan reimbursement limits to be competitive with other federally administered programs and market conditions.

COMMISSION ON CARE FINAL REPORT

- Establish an appeals process that provides staff appropriate due process that is based on the regulatory standards for the new alternative personnel system.

VA Administrative Changes

- Eliminate barriers to creating hiring pools for positions with frequent turnover (e.g., extend the length of time over which candidates can continue to be hired from a completed certification until all of the qualified candidates are hired or have declined offers).
- Eliminate barriers to initiating a recruitment process when vacancies are anticipated; positions need not be empty before recruitment ensues. In some cases, hires should also be made before the departure of key personnel to allow for on-the-job training and mentoring of the replacement.
- Benchmark credentialing to private-sector processes and consider outsourcing the process as much as practicable through centralized mechanisms.
- Release market pay and total compensation information to the field for all job categories using commercially available data and information, at least every 2 years.

Other Department and Agency Administrative Changes

- OPM should continue to oversee and administer benefits for VHA but not impose any of the other existing conditions or requirements on the management of the new alternative personnel system. The new personnel system should be governed by the new legislative requirements and those established during the anticipated rulemaking process in VA. These requirements include market-based pay, performance awards, or performance and disciplinary processes other than those imposed under Title 38.

Recommendation #16: Require VA and VHA executives to lead the transformation of HR, commit funds, and assign expert resources to achieve an effective human capital management system.

Problem

Effective planning for and management of human capital are core enabling requirements for any organization. If the system that supports the employees fails, then the organization fails. Executive leaders must ensure the success of human capital management; however, for too long in VA, human capital management has not been a top priority for leadership time, attention, and funding support. Human capital management personnel must be equal members of the leadership team, contributing fully to strategic decisions and planning for future initiatives.

Background

As recognized by GAO, “to attain the highest level of performance and accountability, federal agencies depend on three enablers: people, process, and technology. The most important of these is people, because an agency’s people define its character and its capacity to perform.”⁵⁵³ Human capital management, although often viewed as a cost, must be viewed as an investment in business success.⁵⁵⁴ For too long, VA human capital management has been undervalued and under resourced. A 1993 report from GAO outlined many of the same deficiencies found in 2016: a focus on compliance instead of outcomes, a lack of proactive human capital planning and management, and a weak system of rewards and incentives to attract and retain qualified personnel.⁵⁵⁵

Today, VA Human Resources and Administration (HRA) shares responsibility for human capital management with VHA. Neither organization has been able to establish a high-performing, effective, human capital management system. For VHA to transform to a high-performing organization, human capital management must do the same.

Analysis

VA “needs a fundamental overhaul of the core support functions (including human resources) . . . to increase responsiveness and efficiency and improve customer service. These functions should be aligned with the needs of the VHA organizations delivering care to

The Commission Recommends That . . .

- VHA hire a chief talent leader who holds responsibility for the operation’s entire HR enterprise, is invested with the authority and budget to accomplish the envisioned transformation, and reports directly to the CVCS.
- VA and VHA prioritize the transformation of human capital management with adequate attention, funding, and continuity of vision from executive leaders.
- VA align HR functions and processes to be consistent with best practice standards of high-performing health care systems.
- VA Human Resources and Administration and the Office of Information and Technology should create an HR information technology plan to support modernization of the HR processes and to provide meaningful data for tracking, quality improvement, and accountability.

COMMISSION ON CARE FINAL REPORT

Veterans.”⁵⁵⁶ Governance and responsibility for human capital management is fragmented and complicated.⁵⁵⁷ Medical center directors appear to be largely on their own in addressing human capital management needs, without competent and timely assistance to support hiring employees, planning for succession, and taking disciplinary actions.⁵⁵⁸ Recruiting takes too long and is cumbersome because information is not shared freely among the various organizational components.⁵⁵⁹ Candidates are not treated with respect, experience lengthy intervals between contacts from VA, fail to receive timely follow-up once candidates are selected, and experience a lengthy on-boarding process.⁵⁶⁰ Human capital management also fails to effectively support the disciplinary process, which is perceived as too long and too difficult.⁵⁶¹ Insufficient resources are devoted to training,⁵⁶² leaving VHA vulnerable to failure.

VA requires a comprehensive redesign of the human resources function to be more responsive, more efficient, and more focused on customer service.⁵⁶³ Transforming HR will require “redesigning key processes, shifting the mindset of [human resources] staff from compliance to effectiveness, training [human resources] and its customers on key roles and responsibilities, and rationalizing its technology systems.”⁵⁶⁴

Some progress has been made in updating human capital management functions. VA is in the process of implementing new talent management software to provide better process management and analytics.⁵⁶⁵ HRA has also started a new HR Academy.⁵⁶⁶ The academy is intended to demonstrate alignment between training resources and competency requirements⁵⁶⁷ and to describe the experience needed to advance to the next position level in human resources.⁵⁶⁸ VA instituted a new online senior executive service performance management system that permits real-time tracking of the performance management process and analysis of

performance outcomes;⁵⁶⁹ however, HR specialists must still use as many as 30 different IT systems that do not communicate with each other to do their work.⁵⁷⁰ Although some new systems have been purchased, life cycle funding for them is not guaranteed by the Office of Information and Technology and no concrete plan has been approved to replace and consolidate the many current systems that are not interoperable. In addition, funding support for HRA initiatives overall are not planned, allocated, and maintained at consistent levels year-to-year in the departmental budget, impeding long term transformation.⁵⁷¹

A VHA workgroup was formed with HR subject matter experts and leadership to identify hiring barriers and develop recommendations for improvements. The workgroup fielded a survey in July 2014 to gather broad input from VHA on the deficiencies in the management of human capital in VHA. These experts concluded that VHA should move to a new alternative personnel system under Title 38.⁵⁷² (See Recommendation #15.)

Substantial deficiencies in human capital management still remain in VA. The funding mechanism to support the departments' human capital management does not support long-range planning and effective program implementation. The lines of authority and management for human capital management professionals do not permit consistency in the quality and skill of the human capital management professionals hired and promoted, nor does the reporting structure allow HRA to hold human capital management staff accountable for effective service delivery. The investment in human capital management information technology systems has been inadequate for decades.⁵⁷³

Top leadership, including the SECVA, DEPSECVA, and CVCS, must make the transformation of human resources a top priority as demonstrated by investing their personal time in human capital management transformation; reviewing and endorsing a transformation plan including the funding required to accomplish it; receiving regular progress updates; and engaging in problem-solving sessions with human capital management leaders to refine and advance transformation efforts. Top leadership must demonstrate to other leaders that human capital management transformation is an organizational priority by disseminating clear goals for transformation in planning documents, communicating expectations for change that are clear to all key employees, and sharing successes with subordinate leaders and employees. The CVCS must ensure that the executive who leads the human capital management function has the demonstrated knowledge, skills, and experience in human capital management to competently lead the function and make this individual part of the executive leadership team on par with other key functions like finance and clinical operations. (See suggested organization chart in Recommendation #12.)

⁵⁷² Ibid.

⁵⁷³ Ibid.

COMMISSION ON CARE FINAL REPORT

The SECVA, DEPSECVA, and CVCS must engage subordinate leaders in the transformation process by ensuring the needs of these leaders have informed the transformation solutions; that subordinate leaders are assigned specific responsibilities under the transformation plan; and they are held accountable by the CVCS for outcomes. They must also ensure that the HR transformation and ongoing HR function is adequately resourced to be successful.

The VA HRA and VHA Workforce Management Office must engage change management experts to undertake a review of human resource business processes, management structures, funding, and technology needs to create a transformation agenda and human capital management plan. As VHA is shifting to a new alternative personnel system under Title 38, the human capital management plan should consolidate in VHA the HR functions, responsibility, and authority required to hire, manage, develop, reward, and discipline staff and consider whether functions such as benefit management remain with HRA or move to VHA. Furthermore, the plan should address all of the following issues:

- need for a chief of talent management
- consistency with benchmark standards of private-sector health care systems
- key organizational structures and roles and responsibilities of VA and VHA in human capital management that are clearly defined and consistent with benchmark organizations
- the full life cycle of human capital management (i.e., planning, recruitment, hiring, retention, development, performance management, and discipline), which should be supported effectively by human capital management and fully meet the needs of managers and staff
- federal sharing authority and the ability to outsource human capital management functions to the private sector are addressed
- IT investments and analytical capability to provide meaningful, timely data to managing staffing, performance tracking, and accountability
- meaningful performance metrics and risk management indicators that are established for human capital management⁵⁷⁴
- funding and full-time equivalent employee staffing for human capital functions that meet private-sector benchmark standards for health care
- knowledge, skills, and ability required of human capital management professionals at each grade and within each series, which should be clearly defined, and a requirement to assess current staff, new hires, and promotions against this standard, which should include procedures for dismissal

⁵⁷⁴ U.S. General Accountability Office, *Human Capital: A Self-Assessment Checklist for Agency Leaders*, GAO/OCG-00-14G, version 1, September 2000, 34, accessed June 10, 2016, <http://www.gao.gov/assets/80/76520.pdf>.

Once completed, this analysis and draft plan must be shared widely within the department to gain feedback and input, and it must be shared with OPM, OMB, and Congress. After incorporating feedback and finalizing the plan, HRA should engage change management experts to fully implement the transformation agenda and new human capital management plan. Implementation will require funding contributions from VA and VHA that the SECVA must mandate.

HRA must develop and implement an effective progressive discipline process for all staffing authorities (i.e., Title 5, Title 38, Title 38 Hybrid, Title 38 7306, and SES). This process must include clear standards, guidelines, and training for supervisors and managers on how to implement the new progressive discipline process. All managers and supervisors and human capital management professionals must complete the training, and VA must establish a process for ensuring that new supervisors and managers complete the training on an ongoing basis. HRA must develop HR staff to be effective coaches so they can provide the coaching and support that managers need as they embark on disciplinary procedures to ensure timely and effective interventions.

VHA supervisors and managers must be held accountable for applying these procedures when poor performance or conduct occurs. To enable accountability, VHA must have a technology infrastructure to actively track and manage poor performance (annual ratings and disciplinary actions) that both human capital managers and supervisors can use to keep track of issues.

The Commission notes GAO is launching a comprehensive audit of human capital management functions in VA to be delivered to Congress in September 2016.⁵⁷⁵ The review and resulting recommendations will provide further insights to promote meaningful transformation of human capital management in VHA.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

The following administrative changes are a priority over the next 36 months. To assist VHA in implementing these actions and to promote accountability and oversight, the Commission has provided a detailed timeline and assigned responsibility for action in Appendix B.

- Employ HR and change management experts to undertake a review of its business processes, management structures, funding, technology, and the legal authority needed in HR to create a transformation agenda and human capital management plan.
- Require VHA to allocate budget to fully support the change plan and ongoing HR operations.

⁵⁷⁵ Ms. Frieda Stenzel, lead investigator, U.S. Government Accountability Office, during an initial meeting with VACO HR&A about a new study being undertaken by GAO, December 18, 2015. The study is intended to 1) assess VHAs capacity to perform its workforce planning and talent management, and 2) evaluate the effectiveness of VHAs human capital functions.

COMMISSION ON CARE FINAL REPORT

- Develop and implement an effective progressive discipline process for all staffing authorities.

Other Department and Agency Administrative Changes

- None required.

Eligibility

Recommendation #17: Provide a streamlined path to eligibility for health care for those with an other-than-honorable discharge who have substantial honorable service.

Problem

Addressing access issues is at the core of the Commission's charge. Veterans face a range of barriers to care, from geographic barriers to facility-specific problems, such as long wait times for an appointment or lack of evening or weekend hours. These barriers, which affect even those with service-incurred health conditions, can be overcome. Some former service members, however, have encountered a more fundamental barrier when applying for care. Because of the character of their discharge, they are not considered veterans, and thus are not eligible for VA care.

The Commission Recommends That . . .

- VA revise its regulations to provide tentative eligibility to receive health care to former service members with an other-than-honorable discharge who are likely to be deemed eligible because of their substantial favorable service or extenuating circumstances that mitigate a finding of disqualifying conduct.

In some cases, individuals have been dismissed from military service with an other-than-honorable (OTH) discharge because of actions that resulted from health conditions (such as traumatic brain injury, posttraumatic stress disorder [PTSD], or substance use) caused by, or exacerbated by, their service. Under VA regulations, these individuals do not meet the definition of a veteran, and are therefore ineligible for VHA medical care. This situation leaves a group of former service members who have service-incurred health issues (namely mental health issues) unable to receive the specialized care VHA provides.

Background

Veteran status is the basis for eligibility for all VA benefits,⁵⁷⁶ and under law a veteran is a person who has met three criteria: active-duty military service (subject to specified exceptions), 2 years of continuous service, and discharge or separation from the military under conditions other than dishonorable.⁵⁷⁷ The military characterizes discharges into one of five categories: honorable, general (under honorable conditions), OTH, bad conduct (adjudicated by a general court or special court-martial), and dishonorable.⁵⁷⁸

Congress has established specific bars to VA benefits. Those barred by statute include deserters, individuals sentenced by a general court-martial, and conscientious objectors who refused to perform military duty.⁵⁷⁹ VA regulations interpret the phrase "discharged or released . . . under conditions other than dishonorable" to mean that a discharge or release because of one of the following offenses is considered to have been issued under dishonorable conditions:

(1) acceptance of an OTH discharge to escape trial by general court-martial, (2) mutiny or

⁵⁷⁹ Certain Bars to Benefits, 38 U.S.C. § 5303(a).

COMMISSION ON CARE FINAL REPORT

spying, (3) an offense involving moral turpitude, (4) willful and persistent misconduct, and (5) certain homosexual acts involving aggravating circumstances.⁵⁸⁰

Limited exceptions to those statutory and regulatory bars permit VA to award of benefits. A claimant may be granted benefits if VA determines that the claimant was insane at the time of the offense leading up to discharge.⁵⁸¹ Benefits may be granted based on a prior period of other-than-dishonorable service for individuals with two or more periods of service.⁵⁸²

Former service members with an OTH discharge as a result of a regulatory (rather than a statutory) bar are eligible for VA care for service-incurred conditions.⁵⁸³ Former service members with OTH discharges are not recognized as veterans, so they will be routinely denied treatment unless they initiate, and prevail in, an adjudication conducted by the Veterans Benefits Administration as to the character of their discharge. No routine mechanism exists to trigger adjudication to determine if such a discharge is not dishonorable. In many instances, the character of an individual's discharge is predicated on behaviors that resulted from, or are linked to, behavioral health conditions that had their origin in service, yet VA regulation bars the individual from receiving benefits.⁵⁸⁴

Analysis

Veterans' benefits are understood to be earned. The principle has been described as follows: In harsh environments in which lives may be on the line, serious breaches of conduct that interfere with the military mission should rightfully brand the offender for life and should likewise prohibit them from being eligible for the special military benefits and entitlements reserved for honorable and meritorious service.⁵⁸⁵

Some argue the offender's mental state at the time of the misconduct must be taken into account when considering veteran status.⁵⁸⁶ For example, many service members have experienced combat and sustained psychological wounds of war that manifest behaviors that lead to military discipline.⁵⁸⁷ VA regulations not only fail to account for the role of those psychic wounds, but are themselves overbroad, weak discriminators as to what is truly dishonorable service. To illustrate, commentators have identified two regulatory bars as particularly problematic: those based on moral turpitude,⁵⁸⁸ and willful and persistent misconduct.⁵⁸⁹ Neither of those two regulatory terms, which originated in 1944,⁵⁹⁰ are defined; neither provides

criteria or examples of what is or is not covered. Both are ambiguous and susceptible to subjective judgment,⁵⁹¹ with great potential for different VA regional offices reaching different outcomes on the same facts.⁵⁹² VA officials have acknowledged that these terms are broad and imprecise,⁵⁹³ and advocates have documented the resultant disparities in VA adjudicative decisions.⁵⁹⁴

The only specific mental-health exception to the bar-to-benefits rules — that the person was insane at the time of the commission of offense⁵⁹⁵ — is very limited. VA regulations define the term *insane*, as follows:

*An insane person is one who, while not mentally defective or constitutionally psychopathic, except when a psychosis has been engrafted upon such basis condition, exhibits, due to disease, a more or less prolonged deviation from his normal method of behavior; or who interferes with the peace of society; or who has so departed (become antisocial) from the accepted standards of the community to which by birth and education he belongs as to lack the adaptability to make further adjustments to the social customs of the community in which he resides.*⁵⁹⁶

VA's Office of General Counsel (OGC), in a now almost 20-year old precedential opinion, has construed that regulation narrowly. Responding to a request for an opinion regarding the parameters for behavior that would constitute insanity under the regulation, the General Counsel advised, as follows:

*The question of insanity arises in numerous legal proceedings, and its meaning may vary according to the jurisdiction and the object or purpose of the proceeding. However, in all contexts, the term indicates a condition involving conduct which deviates severely from the social norm. Black's Law Dictionary, at 794, states that '[t]he term is more or less synonymous with . . . psychosis, which itself has been defined as "a mental disorder characterized by gross impairment in reality testing' or, in a more general sense, as a mental disorder in which 'mental functioning is sufficiently impaired as to interfere grossly with the . . . capacity to meet the ordinary demands of life.'"*⁵⁹⁷

VA-18-0457-A-001785

COMMISSION ON CARE FINAL REPORT

As understood by VA OGC at the time, *insanity*, with its emphasis on gross impairment, and as reflected in practice,⁵⁹⁸ is a highly restrictive standard. That narrow standard is also limiting with respect to the range of symptoms that could be considered under the *insanity* exception: gross cognitive impairment or gross impairment in capacity to function in daily life. That limited range effectively excludes behaviors associated with a widely prevalent service-related condition, PTSD. Those behaviors, which often lead to disciplinary actions, include aggressive behavior, substance-abuse,⁵⁹⁹ impulsivity, and risk-taking (including sensation seeking, aggressive driving, interpersonal violence, and self-injurious or suicide-related behavior).⁶⁰⁰ Research has shown that combat veterans with PTSD and other psychiatric diagnoses have a heightened risk of misconduct outcomes.⁶⁰¹ Other than its *insanity* rule, the regulations provide no specific opportunity to consider mental health as a likely cause of, or mitigating factor in, disciplinary issues leading to an individual's discharge.

The following are illustrative examples of how these regulations have worked in practice:

- John, a service member with multiple deployments to Iraq and Afghanistan and 7 years of service, received an OTH discharge after self-medicating with marijuana. He was denied VA treatment for PTSD.⁶⁰²
- Tim, a rifleman with two purple hearts and four campaign ribbons for service in Vietnam, was sent to combat while still 17 years old, and had a nervous breakdown and suicide attempt before his 18th birthday. He was sent back to Vietnam involuntarily for a second tour, and had a third nervous breakdown that led to an AWOL and OTH discharge. He was denied service connection for PTSD because the nature of his discharge.
- Tom, a combat infantryman in the first Gulf War, on his return, started experiencing symptoms of PTSD and attempted suicide. He was denied leave to be with his family,

⁶⁰² Swords to Plowshares, presentation to Commission on Care, January 21, 2016, accessed June 25, 2016, <https://commissiononcare.sites.usa.gov/files/2016/03/Presentation-on-OTH-Discharges.pdf>. Note, in the interest of privacy the paper has used fictitious names to identify the former service members.

but left anyway. After a 60-day absence, he returned and was given an OTH discharge. He was denied services for 20 years.⁶⁰³

In short, the VA regulation used to determine whether the character of a veteran's OTH discharge is disqualifying does not take into account behavioral health problems associated with military service. As a result, former service members who were discharged for disciplinary problems that cannot be disassociated from PTSD or other behavioral health disorders are routinely barred from VA treatment for those disorders.

Individuals with PTSD and traumatic exposure are at heightened risk of substance abuse,⁶⁰⁴ depression,⁶⁰⁵ homelessness,⁶⁰⁶ premature mortality,⁶⁰⁷ and suicide.⁶⁰⁸ Access to VA health care is vital to successful reintegration of combat-traumatized veterans into society because it provides "the only reservoir of combat PTSD expertise."⁶⁰⁹

The importance of early access to needed treatment for behavioral health conditions like PTSD cannot be overstated,⁶¹⁰ yet many former service members are reluctant to seek treatment for behavioral health problems.⁶¹¹ Those with unfavorable discharge records who finally come forward to seek medical care must not only initiate a request for a character of discharge adjudication, but be prepared to confront a lengthy process if they elect to do so.⁶¹²

COMMISSION ON CARE FINAL REPORT

Several generations of former service members were exposed to combat trauma and continue to live with the psychological wounds of war. Lack of access to treatment for those who sustained psychological wounds that went untreated and were manifest in undesirable behavior in service is concerning. Although Congress could address this concern, VA has the means to remedy the problem without congressional action by amending its own regulations. VA could afford former service members needed treatment for their conditions when they are able to establish that their health problems were incurred in service.⁶¹³ In other circumstances, when it is likely an individual could establish eligibility for VA care, current regulation permits the individual to receive the care on the basis of a tentative eligibility determination.⁶¹⁴ This regulation permits VA to provide treatment without prior adjudication of the character of discharge.

VA should revise its regulations to lift the immediate bar to health care for former service members who have an OTH discharge. VA should award tentative eligibility for health care to at least some former service members who have an OTH discharge. The criteria for awarding tentative eligibility for care could include service in a combat theater, more than a single enlistment, duration of service, or some combination thereof. This approach would allow VA to provide meaningful access to treatment without delay for those likely to be granted eligibility. For health care purposes, VA should also revise its regulations by recognizing that the severe punishment of characterizing a person's service as OTH is not justified when extenuating circumstances (to include behavioral health issues at the time) explain or mitigate that misconduct that resulted in the OTH discharge.

Implementation

Legislative Changes

- None required.

VA Administrative Changes

- Amend 38 C.F.R. 17.34 to provide for tentative eligibility determinations applicable to individuals with OTH discharges who have had substantial honorable service, including service in a combat theater.
- Amend of 38 C.F.R. 3.12(d) to provide for recognition of extenuating circumstances that show, for purposes of health care eligibility, that service was not OTH.

Other Departments and Agency Administrative Changes

- None required.

⁶¹³ Sec. 2, Pub. L. No. 95-126, 91 Stat. 1106 (1977).

⁶¹⁴ Tentative Eligibility Determinations, 38 C.F.R. 17.34.

Recommendation #18: Establish an expert body to develop recommendations for VA care eligibility and benefit design.

Problem

Although VHA continues to offer the promise of health care to all veterans, its capacity to meet that promise is constrained by appropriated funding.⁶¹⁵ Congress and VA leadership must work to identify who VHA will serve, and what services it will provide, yet eligibility criteria have not been examined in 20 years.⁶¹⁶

Background

VHA's core mission is to care for veterans who has borne the battle. But its secondary mission of caring for veterans' non-service-connected health care needs is longstanding, dating back to Civil War origins. Congress has included veterans without service-connected needs among those eligible as highlighted below:

The Commission Recommends That . . .

- The President or Congress task another body to examine the need for changes in eligibility for VA care and/or benefits design, which would include simplifying eligibility criteria, and may include pilots for expanded eligibility for nonveterans to use underutilized VHA providers and facilities, providing payment through private insurance.
- The SECVA revise VA regulations to provide that service-connected-disabled veterans be afforded priority access to care, subject only to a higher priority dictated by clinical care needs.

- In March 1865, Congress incorporated the National Home for Disabled Volunteer Soldiers and Sailors, originally intended for Union veterans who suffered economic distress from disabilities incurred during the Civil War. The National Home constructed the first hospitals for Civil War veterans in 1866, and after a series of acts of Congress, those hospitals were opened in 1887 to veterans suffering economic distress from disabilities not incurred in military service.⁶¹⁷
- The World War Veterans Act of 1924, which established the Veterans Bureau⁶¹⁸ (the predecessor to the Department of Veterans Affairs), authorized its director to provide hospitalization and related travel expenses to veterans whose services dated back as far as 1897, regardless of the type or cause of their disabilities, as long as those veterans who were unable to pay received preferential admission.⁶¹⁹
- Public Law 85-56 (1957), which codified prior VA laws and regulations, effectively expanded eligibility to veterans of future wars, providing needed hospital care for veterans with service-connected disability incurred or aggravated during war, or for any other disability if the veteran is unable to pay for hospital care.⁶²⁰

⁶¹⁸ The Veterans Bureau consolidated the National Home and other veterans-related functions housed in different government bureaucracies.

⁶¹⁹ World War Veterans Act, 1924, Pub. L. No. 68-242, (1924).

⁶²⁰ Veterans Benefits Act of 1957, Pub. L. No. 85-56, 71 Stat. 83 (1957). That law provided separate authority in section 512 for outpatient medical treatment, which was limited to treatment for a service-connected disability.

COMMISSION ON CARE FINAL REPORT

- In 1966, Congress expanded eligibility for hospital care to *peacetime* veterans (of service after January 1955).⁶²¹
- In 1970, Congress extended eligibility for hospital care to veterans 65 and older for a non-service-connected disability,⁶²² exempting that group of veterans from taking the then-required oath affirming their inability to defray the expense of care for non-service-connect ailments.⁶²³
- With the Veterans Health Care Expansion Act of 1973, Congress eliminated the distinction between wartime and peacetime veterans for purposes of eligibility for outpatient care, and further expanded eligibility to outpatient care. It granted veterans who are 80 percent or more service-connected disabled eligibility for treatment of any condition, and authorized others eligible for hospital care to receive outpatient care to prepare for or preclude a need for hospitalization or to complete treatment initiated during hospitalization.⁶²⁴
- Congress expanded eligibility again in 1976, authorizing hospital care for treating a non-service-connected condition of any veteran 65 or older (without regard to ability to pay), authorizing outpatient care for any disability to any veteran 50 percent or more service-connected disabled, and directing VA to ensure, by regulation, special treatment priority to service-connected veterans and others receiving benefits because of a need for aid and attendance, or being permanently housebound.⁶²⁵

Eligibility laws for veterans' health care have changed substantially during the past century, yet the commitment to serving service-connected veterans and veterans in financial need has remained constant.

Prior to enactment of the Veterans' Health Care Eligibility Reform Act of 1996,⁶²⁶ VHA was a hospital-based model with entirely different eligibility rules for hospital care than for outpatient care. The eligibility reform law was aimed at transforming access to VA care from a 1950s hospital-based model to one that erased distinctions between eligibility for hospital and outpatient care.⁶²⁷ It essentially provided that all veterans are eligible for VA hospital care and *medical services*.⁶²⁸

⁶²⁵ Veterans Omnibus Health Care Act of 1976, Pub. L. No. 94-581, 90 Stat. 2842 (1976). The patchwork of eligibility provisions resulting from a succession of incremental changes set the stage for development and enactment of the Veterans' Health Care Eligibility Reform Act of 1996, Pub. Law 104-262.

⁶²⁶ Veterans' Health Care Eligibility Reform Act of 1996, Pub. L. No. 104-262, 110 Stat. 3177 (1996).

⁶²⁷ *Ibid.*

⁶²⁸ The term "medical services" was broadly defined to include in addition to medical examination and treatment, preventive health services; surgical services; wheelchairs, artificial limbs, and similar appliances; optometric and podiatric services; noninstitutional extended care services; and rehabilitative services (including services to restore physical, mental, and psychological functioning. Hospital, Nursing Home, Domiciliary, and Medical Care; General, 38 U.S.C.

§ 1701(6),(8). VA regulations more fully set out the "medical benefits package" that VA is to provide patients, as needed; VA regulations detail that the benefits package includes services ranging from emergency care and prescription drugs to

Recognizing there could be circumstances in which VHA might lack capacity to provide timely care, Congress noted in the reform act that the requirement to provide care would be in effect only to the degree to which there were appropriated funds to pay for such care.⁶²⁹ This qualified availability of care clearly indicated veterans' health care is not an entitlement. Congress went further, though, and established a statutory patient enrollment mechanism for VA to manage access.⁶³⁰ The law specifically requires VA to establish and operate a patient enrollment system managed in accordance with statutory priorities and within any additional priority classifications established by VA. The eligibility reform act gave VA tools both to limit demand consistent with available funding and to discourage veterans from seeking VA care simply to fill an occasional need not met by a private health plan.⁶³¹ The act also requires the SECVA to manage the enrollment system such that care is timely and of acceptable quality.⁶³²

The enrollment system the department established is not being used today to calibrate supply and demand as envisioned.⁶³³ Although law and VA regulation require a system of annual patient enrollment,⁶³⁴ VHA last curtailed enrollment in 2003, and then only for veterans who were deemed eligible based on the category 8 criteria (see Table 8) that include those with higher-level incomes who lack any higher priority. In 2009, the Obama administration eased access for higher income veterans. Under that policy, veterans whose gross household income exceeds VA's current geographic income limit by 10 percent or less may enroll for VA care, subject to cost-sharing requirements.⁶³⁵ In 2014, Congress established the *Choice Program* to expand availability of care through contracts with community providers. Veterans' choice was limited by reference to distance and wait-time issues, but was otherwise broadly open to any enrolled veterans.⁶³⁶

⁶³⁰ Management of Health Care: Patient Enrollment System, 38 U.S.C. § 1705. As explained in the report of the House Committee on Veterans Affairs which developed the legislation, "[T]he Act would...provide the VA with an important tool, the authority to design and manage access to care through a system of patient enrollment...Enrollment...would help the VA plan more effectively, so that facilities can better calculate and dedicate the resources needed to provide the care its enrollees require. The Act would direct the Secretary...to establish and operate a system of annual patient enrollment and require that veterans be enrolled in a manner giving relative degrees of preference in accordance with specified priorities. At the same time, it would vest discretion in the Secretary to determine the manner in which such enrollment (or registration) system would operate. For example, the VA would be able to establish a system which simply registers patients throughout all or part of a fiscal year, or could employ a time-limited registration period. Significantly, the Act would permit the Secretary to set priorities within the specified priority classifications established in the Act. The Secretary could, for example, establish a policy which, within any priority classification, gives veterans who have previously been "enrolled" as VA patients priority over new applicants. However, the Committee expects any enrollment system to be designed and administered to assure that any veteran with a service-connected condition would receive priority treatment for that condition whether or not that veteran had enrolled for VA care." H. Rep. No.104-690, 6-7.

Analysis

Two decades have passed since Congress last reexamined VHA eligibility and benefits, and many far-reaching changes that affect veterans' health care have occurred in that time. In more than a decade of war, 2.75 million troops have deployed to Iraq and Afghanistan⁶³⁷ where many have faced long and repeated deployments; constant risk of injury and death; and high levels of psychological disorders, substance abuse issues, and physical health problems.⁶³⁸ Post-9/11-era veterans are enrolling for VA care at historically high levels.⁶³⁹

Under current law and VA policy, enrollment is open to a relatively broad spectrum of veterans, though some veterans with higher incomes are not eligible to enroll.⁶⁴⁰ As discussed above, the law draws distinctions between those whose health problems have been adjudicated as service-connected and those whose problems are deemed non-service-connected. If Congress substantially reduced funding for VA medical care, the distinction would be important because those with service-connected issues have higher priority for enrollment. Under VA's current enrollment policy, which bars only veterans with higher incomes from receiving care, the

Veterans with gross household income that do not exceed VA's means test threshold and a geographic means test by more than 10 percent may enroll for care, while those with higher income and no other special eligibility may not.

COMMISSION ON CARE FINAL REPORT

statutory service-connected enrollment priority has little practical significance.⁶⁴¹ Future budget constraints could result in more restrictive enrollment criteria⁶⁴² or recurrence of lengthy wait times that hinder service-connected, disabled veterans' ability to receive timely care.

Current eligibility law does afford special status to veterans who deployed to a combat theater. It grants a 5-year window of eligibility for care to those veterans who are not otherwise eligible.⁶⁴³ All combat veterans are also eligible for readjustment counseling services at VHA Vet Centers without needing to enroll in VHA care and without time limitation.⁶⁴⁴ It is questionable, however, if the 5-year time limit takes sufficient account of continued reluctance of some veterans to seek care for behavioral health problems⁶⁴⁵ or of the difficulties of establishing service-connection years later for conditions that may be linked to wartime exposures to toxic substances.⁶⁴⁶ It is challenging for veterans to establish service-connection for health conditions that may have been caused by or associated with a long-distant exposure for which there may be no documentation. Given emerging evidence that combat exposure should be considered a risk factor for coronary heart disease,⁶⁴⁷ it has been suggested that combat exposure may not only take a toll on psychological health, but may exert a physiologic toll as well.⁶⁴⁸

Congress has attempted to remedy the challenge of documenting toxic exposures and establishing that particular illnesses are linked to wartime or other service exposure. It has, for example, enacted statutes that provide certain veterans eligibility for health care on the presumption that they were exposed to particular toxic substances.⁶⁴⁹ Congress went a step further in the Honoring America's Veterans and Caring for Camp Lejeune Families Act of 2012 which provided eligibility for care for several types of cancer and other specified conditions for family members of veterans who had been exposed to drinking water contaminated with industrial solvents and other toxic chemicals at the Marine Corp base.⁶⁵⁰

Congress has made only limited provision for VA to cover care for family members of certain veterans,⁶⁵¹ but with research suggesting that long combat deployments can take a

⁶⁴¹ Prior to 1996, provisions of law required VA to ensure special priority to service-connected veterans in furnishing outpatient care. 38 U.S.C. § 1712(i), repealed by § 101(c), Pub. L. No. 104-262.

psychological toll on family members,⁶⁵² there may be circumstances under which it might be argued that VA should afford such family members behavioral health services. Studies indicate that longer deployments, deployment extensions, and posttraumatic stress disorder in military personnel are associated with psychological problems for the spouse.⁶⁵³ Long-term effects are unknown, yet studies suggest children may have heightened risk for psychosocial issues during a parent's deployment.⁶⁵⁴

The experience of the nation's longest war and increased options available under the Affordable Care Act (ACA), particularly to previously uninsured non-service-connected veterans, may raise new questions for policymakers.⁶⁵⁵ VHA's most recent survey of enrollees showed that 20 percent of enrollees reported that they were uninsured, down from 22 percent in 2014.⁶⁵⁶ Enrollment in VHA-provided care meets the ACA requirement for health care coverage, creating pressure to continue to provide care to those enrolled.⁶⁵⁷ Given that VHA serves large numbers who are poor or near poor and have chronic medical conditions and behavioral health problems,⁶⁵⁸ it is important to note that receiving care under an ACA plan would not necessarily be a substitute for the rich benefits afforded through VHA. In addition, adults in this population are only eligible for coverage under ACA through state expansion of Medicaid that 19 states have elected not to accept, making this option unavailable to poor or near poor veterans in many parts of the country.⁶⁵⁹

Over time Congress has expanded VA health care eligibility to increasingly more cohorts of non-service-connected veterans. There is wide variability among different cohorts in the extent to which veterans rely on VA care. Those at the higher-income levels (priority categories 7 and 8) who were generally not eligible for ambulatory care prior to 1996, for example, rely on VA for

COMMISSION ON CARE FINAL REPORT

less than 22 percent of their outpatient care-needs, based on VA's most recent survey of veteran enrollees' health and use of care.⁶⁶⁰

One consideration, as suggested by a few Commissioners, is the feasibility of allowing veterans' family members and currently ineligible veterans to purchase VHA care through their health plans in areas where VHA hospitals and other facilities might otherwise need to close. In many parts of the country, VHA currently maintains hospitals and other health care facilities that are underutilized or in danger of becoming so. A related challenge is maintaining safe volume of care when patient loads decline. As an extensive literature attests, surgeons and other health care professionals tend to lose proficiency when they treat too few patients.⁶⁶¹ Similarly, VHA may be unable to continue offer specialty care in certain areas if it forced to close facilities. Patients in a polytrauma unit for example, require a full spectrum of routine and nonroutine health care.

Closing a low-volume hospital may be the answer in some instances. But closing VHA facilities reduces the choices available to veterans. Increasing the volume of patients treated by VHA in areas where it currently has excess capacity may ameliorate these challenges. See Appendix C for a further discussion of the challenge of future VHA hospital closures and an outline of suggested pilot programs.

Substantial changes have occurred since Congress last comprehensively examined eligibility for VHA care. These changes merit a reexamination of VA health care eligibility.⁶⁶² The Commission did not, however, view its charge of examining veterans' access and how best to organize VHA, locate health care resources, and deliver care in the years ahead⁶⁶³ as calling for it to make recommendations on this fundamental policy issue, and recommends that the President or Congress consider tasking another body to develop recommendations for VA care eligibility and benefit design. The Commission's work, however, has illuminated the fact that nothing in law or regulation assures a service-connected, disabled veteran of priority for care. VA can and should amend its regulations to provide for such priority, subject to a necessarily higher priority for urgent and emergent care.

Implementation

Legislative Changes

- Task another body to examine the need for changing eligibility for VA care and benefits design, which would include simplifying eligibility criteria, and may include exploring

pilots for expanding eligibility for nonveterans to use underutilized providers and facilities when paid for through private insurance.

VA Administrative Changes

- SECVA should amend 38 C.F.R., chapter 17 to establish that veterans with service-connected disabilities shall be afforded priority for access to care, subject to the priority dictated by clinical care needs.

Other Departments and Agency Administrative Changes

- None required.

COMMISSION ON CARE FINAL REPORT

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDIX A: FINANCING THE VISION AND MODEL

Estimating the Cost of Alternative Policy Proposals

This chapter presents estimates of the costs of allowing veterans access to expanded community care through integrated networks, as well as a range of other options. In the *Recommended Option*, the one chosen by the Commission and described in Recommendation #1, veterans would be eligible to receive community care for primary and standard specialty care with a referral from any primary care doctor in the VHA Care System. Special emphasis care, care provided in a distinctive fashion by VHA, is not included in community networks.

In addition to the *Recommended Option*, we considered three alternatives that are based on a similar concept of integrated networks, but which have potential costs that could vary dramatically due to differences in the openness of access to community care and the breadth of services eligible. We also estimated the costs of three options that differ in focus from the integrated network options, including options that move selected services entirely to the community, set up a premium support model, and expand access to all Priority 8 veterans. Finally, we estimated costs for two additional policies: expanding nurse navigator/care coordinator staff to help guide and coordinate veterans' care in the integrated networks of expanded community care and granting temporary eligibility for VA health care to those with other-than-honorable discharges.

Baseline Projections

We used projections from the Enrollee Health Care Projection Model (EHCPM) produced by VHA and Milliman as the baseline upon which to build our estimates. However, with the exception of the options involving premium support and an expansion of Priority 8 enrollment, we use separate analyses and not the EHCPM to derive the estimates. Costs of VA care are modeled as the product of utilization and cost per unit of care (unit cost). Utilization is dependent on both enrollment in, and reliance on, the VA health care system, total demand for health care, and other factors. Enrollment measures how many people enroll to receive VA health care, and reliance is the percentage of their medical care that enrollees receive through VA or VA-financed community care. Unit costs measure the cost of each health care service. Unit costs can be calculated for care in VA facilities, for care outside of VA facilities, or for both, depending on the scenario being estimated.

Utilization

Utilization depends on enrollment, reliance, total demand for health care, and characteristics of the health care system, such as medical technology and practice patterns. We discuss enrollment and reliance in further detail below, but overall demand for health care is similarly important. Enrollment, reliance, and overall demand each have a multiplicative effect on

COMMISSION ON CARE FINAL REPORT

utilization and total costs. For example, if enrollment increases by 10 percent, costs will increase by 10 percent (assuming new enrollees have the same characteristics as existing enrollees). Thus, it is important to consider carefully the effect of any policy change on enrollment, reliance, and overall demand for health care. Each of these factors is subject to effects by policies that make care more convenient, less expensive, or less restricted.

Enrollment

Currently there are 22 million veterans, 9 million of whom have enrolled and 7 million of whom are eligible to enroll but have not done so. Even though the number of veterans is decreasing, projected numbers of enrollees and patients should remain relatively stable during the next 20 years. Younger veterans enroll at particularly high rates, and once enrolled, they remain continuously enrolled until death.

This enrollment trend is subject to change based on various inputs. Enrollment rates are projected based on current policy, and if policy changes, the number of enrollees and patients will change. For example, an increase in cost sharing would likely decrease enrollment and the number of patients, yet easing access to care would likely increase enrollment and the number of patients. Changes to other health insurance policies outside of VA can also affect enrollment and the number of patients (for example, changes to the Affordable Care Act).

Figure A-1. Changes in Number of Veterans, Enrollees over a 20-year Period

Veterans, Enrollees, and Patients FY 2014-2034

Reliance

On average, enrolled veterans receive 34 percent of their health care through VHA, and approximately 80 percent of enrollees have other health insurance in addition to VA health care. Many factors affect reliance rates including, age, income, service-connected disabilities, distance from VA facilities, cost-sharing levels, and characteristics of other insurance options. Any policy that affects the cost of receiving VA care, the convenience of receiving VA care, the cost or convenience of other health insurance held by enrollees, or demographic or health characteristics of enrollees, is likely to change reliance. Any increase in reliance will increase

VA-18-0457-A-001800

costs to VHA, and the effect can be very large. In the absence of a policy change, VHA predicts that reliance will decline slightly from 34 percent to 32 percent during the next 20 years.

Unit Cost

Unit cost measures how much a particular service, procedure, or drug costs to provide. Unit costs can measure the cost of the unit of care in the VHA system or in the community, depending on where veterans receive care. We used unit cost projections from the EHCPM for 78 Health Care Service Categories (HSCs). The unit of measurement depends on the service. Examples include office visits, pathology procedures, vision exams, and inpatient surgical days. Unit cost projections reflect anticipated changes in price inflation and health care practice patterns, as well as historical trends. EHCPM projects separate unit costs, depending on whether veterans receive a service in a VA facility, in the community at historic Care in the Community (CITC) rates, or in the community at Medicare allowable rates. Any policy that affects the quantity of care provided in VA facilities, as opposed to the community, will have an effect on the total cost of care. If veterans receive care in the community, the rate of provider reimbursement will also affect costs.

Baseline Cost Projections

The baseline cost projections, produced by the EHCPM, show how cost will change in the future. They incorporate projected changes in enrollment, reliance, unit costs, and other factors. The projections reflect current policy with regard to enrollment eligibility and VA health care benefits, with the exception of the *Choice Program*, which is assumed to continue for veterans living more than 40 miles away from a VA medical care facility.⁶⁶⁴

We based the projections on assumptions about inflation and anticipated effects of changes in health care practice on the cost of VA health care in the next 20 years. New military conflicts, policies, legislation, regulations, and external factors, such as economic recession, can occur and change projected demand for VA health care during this period. The projections do not include requirements for several activities/programs not projected by the VA EHCPM, including nonrecurring maintenance; readjustment counseling; state-based, long-term services and support programs; and some components of the CHAMPVA program.

In the absence of any policy changes, costs increase from \$53 billion in 2014 to \$125 billion in 2032. This growth is largely due to inflation and how health care practices are expected to change over time, which reflects factors that affect the cost of both VA and non-VA health care. These trends increase the cost of VA health care regardless of changes in enrollment growth and demographics. Within enrollment, the increasing number of enrollees adjudicated for service-connected disabilities by the Veterans Benefit Administration (VBA) is the most significant driver of cost increases. Enrollees will likely increase their reliance to reflect the substantially higher reliance of enrollees in the service-connected Priorities 1-3.

These baseline estimates, along with our scenario estimates presented below, carry some key limitations. First, the EHCPM does not track capacity at VA facilities. We assume health care

⁶⁶⁴ Veterans qualifying based on wait times or excessive travel burdens are not included.

COMMISSION ON CARE FINAL REPORT

utilization will increase or decrease at the average unit cost, when in fact it is the marginal cost that would be relevant for cost estimates. This marginal cost could be smaller or larger than the average cost, depending on existing capacity. Although we did make some assumptions about fixed and variable unit costs when care leaves VA facilities in our policy estimates below, precise estimates are not possible given data availability. Second, the EHCPM does not consider health care capacity in local communities. For these and other reasons, the EHCPM is best for the near future and for policy scenarios that do not stray dramatically from current policy. A 2008 RAND review of the EHCPM highlighted these limitations, which are particularly important for analyzing policy changes such as expanded community care.⁶⁶⁵ In light of the types of policy choices VHA is likely to consider in the future, it would be particularly beneficial for VHA to collect and incorporate the data necessary to mitigate these limitations. Due both to these limitations and to the general uncertainty regarding any long-term changes in the health care system, we suggest focusing attention on the 2019 estimates of the scenarios below, as 2019 is the first year to incorporate the fully phased-in effects of the scenarios.

Policy Estimates

In this section, we present results for the *Recommended Option* and three alternative options for expanding access to providers outside of VA through integrated networks. These options expand community care for different categories of care and vary by whether referrals are required to receive specialty care. We present estimates for several other scenarios we examined, each with a design or focus that differs from the integrated network options. Finally, we estimate costs for two other policies discussed in this report: (1) expanding the use of nurse navigators to help patients coordinate their care in VA and in the community, and (2) expanding eligibility to all veterans with an other-than-honorable (OTH) discharge until the adjudication process is complete to determine whether they will remain eligible.

Community-Delivered Services Networks

This section describes the *Recommended Option* and the first three alternative options. At least initially, all care currently provided by VA would continue to be provided by VA. In addition, expanded community care, also called Community-Delivered Services (CDS), will be provided by an integrated network consisting of providers (medical practitioners including physicians, midlevel practitioners and therapists, and hospitals and clinics) vetted by VA. CDS will focus on tertiary and quaternary care, and may include primary care and all standard specialty care, depending on the scenario considered. CDS will not include special-emphasis care and some types of specialty care provided in a distinctive fashion by VHA. The network of CDS providers that VA will coordinate varies by community. To make the flow of service both appropriate and smooth in operation, there will be navigators who will help guide veterans to the best and most appropriate providers inside and outside VA.

The Commission's recommendation to create the VHA Care System (see Recommendation 1) considers the ways in which health plans can vary the size and scope of networks as a means of managing costs. It highlights that broad, open networks offer greater choice, but narrow, well-

⁶⁶⁵ Katherine M. Harris, James P. Galasso, and Christine Eibner, "Review and Evaluation of the Enrollee Health Care Projection Model," RAND Corporation, Santa Monica, CA, 2008.

managed networks potentially result in lower costs. It discusses ways in which, after networks are designed, VHA could exercise additional cost controls by steering patients to different providers within the networks. Finally, the recommendation regarding the VHA Care System emphasizes that access and local needs are important considerations in setting up the integrated networks, and that governance of the networks should be a process of ongoing management and evaluation.

In the estimates that follow, we assume that networks are designed and governed in a way that gives major consideration to cost, choice, and access. We assume that management of the integrated networks would be an iterative process that involves continual evaluation of resulting outcomes, including cost outcomes, and that networks would be adjusted in light of those outcomes. We also assume that local communities and services with poor access would require more community providers and/or expanded capacity within VHA than those that already have adequate access. Finally, we assume that the networks will be integrated, relatively narrow, and well-managed with the aim of controlling costs effectively. One exception is that for the *Recommended Option*, we added an estimate that assumes less-managed, broader networks to illustrate that costs are sensitive to network size and management.

Technical Assumptions for Community-Delivered Services Options

We based our estimates on utilization and unit cost data and projections for 78 HSCs that we obtained from the VHA Office of Policy and Planning. Starting from a base year of 2014, we projected utilization and unit costs through 2034. For HSCs that are eligible for CDS networks, we assume a certain fraction of care, depending on the option, shifts from VA facilities to the networks. We assume traditional CITC will be offered and used at baseline levels.⁶⁶⁶ We assume that the *Choice Program* ends and that those formerly in the *Choice Program* will take advantage of the community care offered in the CDS networks. All effects are phased in during the first 5 years.

Both CDS networks and CITC are priced at Medicare allowable rates by matching Medicare fee schedule data to VA HSCs.⁶⁶⁷ A few benefits that are not covered by Medicare, such as dental, are priced at historic CITC unit costs. Cost sharing for CDS networks is assumed to be the same as that for care in VA facilities.

For care shifting into the CDS networks, we use data on the components of HSC unit costs that we obtained from the VA Allocation Resource Center. We assume VA is able to adjust resources such that only the equipment and national overhead portions of unit costs remain in VA facilities. These portions, which together averaged approximately 10 percent of care in 2014, form our proxy for the portion of unit costs that VA will not be able to shed in scenarios for which, on net, care leaves VA facilities for CDS networks. Note that unit costs do not include costs associated with the physical building or nonrecurring maintenance. These costs are not part of the EHCPM, and costs and/or savings associated with changes to facilities and nonrecurring maintenance are not included in our estimates.

⁶⁶⁶ CITC accounted for approximately 11 percent of modeled expenditures in the base year 2014.

⁶⁶⁷ Medicare Allowable rates were provided by Milliman at the request of VA. They were produced using repricing performed at the area-specific level for inpatient, outpatient, and professional care. For services that were not repriced within an HSC, Medicare amounts were estimated.

COMMISSION ON CARE FINAL REPORT

Improving access, choice, and/or quality of services is likely to induce greater reliance and enrollment in the VA system. Although reliance and enrollment increases result in greater budgetary costs for VA, it is important to note that these increases do not represent societal costs or costs to the government. The VA budgetary cost increases may be associated with reductions in out-of-pocket expenses and improved health care benefits for patients, as well as savings to Medicare, Medicaid, and other government programs. Our cost estimates are confined solely to the VA budget.

Approximately 52 percent of eligible veterans have enrolled in VA health care, and enrolled veterans receive 34 percent of health care through VA. There is little data from which to anticipate how reliance and enrollment might change under the scenarios, and our estimates use wide ranges of assumptions for these parameters. In forming our assumptions, we consider a variety of factors, such as insurance coverage and other characteristics of eligible veterans (both enrolled and unenrolled), survey responses of veterans (both enrolled and unenrolled) on use and reasons for lack of use of VA health care, and research on take-up of health insurance coverage.⁶⁶⁸ We are confident that enrollment and reliance would increase more with greater patient choice and access. For all options, we present low, middle, and high estimates.

In addition to increases in reliance and enrollment, reduced cost sharing, increased convenience of receiving community care, and the removal of a requirement to get a referral for specialty care can increase the total amount of medical care that a patient receives. Depending on the option considered, some health care is subject to reduced cost sharing from levels typical of private insurance coverage and Medicare to the very small levels of cost sharing found in the VA system. We assume utilization increases for health care subject to lower cost sharing and/or removal of a requirement to get a referral, with our estimates based in part on the literature examining how cost sharing affects health care demand.⁶⁶⁹

Caveats

There are a number of caveats associated with all of our estimates. These caveats are important, and to the extent that these assumptions do not hold, the estimates will be inaccurate. The estimates do not include savings and costs of reducing or repurposing infrastructure, or effects on VA's teaching, research, and emergency preparedness missions. Medicare allowable rates are assumed adequate to provide all veterans with robust CDS networks in their local areas. For care priced at historic CITC rates, national average rates are assumed to represent future rates. Shifting care into CDS networks does not affect the unit cost of care that remains in VA facilities. Reductions in the volume of care within VA facilities, and potentially adverse effects quality, are not addressed. Other than equipment and national overhead, the costs of care shifting out of VA facilities are phased out concurrently with other effects in the model. New enrollees are assumed to cost slightly less than existing enrollees for *CDS Alternative 3* and the

⁶⁶⁸ Examples of sources include: the 2014 American Community Survey; the 2010 National Survey of Veterans; the 2015 Survey of Veteran Enrollees' Health and Use of Health Care; Katherine Baicker, William J. Congdon and Sendhil Mullainathan, "Health Insurance Coverage and Take-Up: Lessons from Behavioral Economics," *The Milbank Quarterly*, 90(1) (2012), 107-134.

⁶⁶⁹ Congressional Budget Office, "Key Issues in Analyzing Major Health Insurance Proposals," Washington, DC, 2008. Willard G. Manning, Joseph P. Newhouse, Naihua Duan, Emmett B. Keeler, Arleen Leibowitz, and M. Susan Marquis, "Health Insurance and the Demand for Medical Care: Evidence from a Randomized Experiment," *American Economic Review* 77(3) (1987), 251-77.

same as existing enrollees in the *Recommended Option* and *CDS Alternatives 1 and 2*.⁶⁷⁰ Finally, we do not estimate any administrative costs associated with CDS networks other than the additional RN care managers hired to handle the increased clinical and administrative burden of expanded community care. These additional, nonmodeled administrative costs could be substantial.

Commission Recommended Option

The *Recommended Option* would expand community care. At least initially, all care currently provided by VA would continue to be available through VA. In addition, expanded community care, also called CDS, would be provided by an integrated network consisting of providers (medical practitioners including physicians, midlevel practitioners and therapists, and hospitals and clinics) vetted by VA or a third-party administrator. The CDS network would include all primary and standard specialty care; it would not include special-emphasis care (care that is provided in VA in a distinct fashion).⁶⁷¹ In 2014, 68 percent of care would have been eligible for CDS networks at current VA prices. A referral from a primary care provider would be required to receive specialty care. This referral could come from a provider either at VHA or from the community network. In this scenario, we assumed all other characteristics of the VHA Care System would remain the same as under current policy. We assume that the *Choice Program* ends and that those formerly in the *Choice Program* will take advantage of the community care offered in the CDS networks.

We expect that allowing enrollees to get primary and standard specialty care in the community will increase reliance for care provided in the community because many veterans would have a choice among a larger number of providers and would be more likely to have the option to receive care at a more convenient location. We also expect enrollment to increase because some eligible veterans would be induced to enroll by the prospect of having VA pay for them to see a doctor in the community. We assume that 60 percent of eligible care shifts from VA facilities to CDS networks. Currently reliance is 34 percent. Under this scenario, we model reliance levels of 40, 50, and 60 percent, which correspond to reliance rates increases of approximately 18, 47, and 76 percent, respectively. These reliance increases apply only to CDS care, not CDS-eligible care that is provided in VA facilities. Although the choice of providers is expanded and wait times are potentially reduced in VA, there continues to be a requirement for a referral to access specialty care, as there is in the current system. We modeled enrollment increases of 5, 15, and 20 percent for the low, middle and high estimates, which assume integrated, narrow, and well-managed networks that are designed and managed with cost as one of the major considerations. We also modeled an enrollment increase of 50 percent, more consistent with a less-managed, relatively broad network for which cost is a less important consideration. Finally, we assume that newly entering veterans who receive treatment in CDS networks because of this policy have a 20 percent utilization increase for new demand in CDS networks. Much of this care was

⁶⁷⁰ Assumptions based on previous analysis by VHA and Milliman.

⁶⁷¹ Special-emphasis care includes: prosthetics and orthotics, recreational therapy, rehabilitative care, pharmacy, home-based primary care, spinal cord injury and disorders, some categories of long-term services and supports, mental health and homeless care. We count all mental health as special-emphasis because mental health categories cannot easily be differentiated by care that is VA special-emphasis and care that is not.

COMMISSION ON CARE FINAL REPORT

formerly subject to sizable cost sharing with private insurance or Medicare, and now it would be subject to little if any cost sharing associated with VA-financed care.

Figure A-2 displays estimates for the *Recommended Option*. Estimates for well-managed, narrow networks range from \$65 billion to \$85 billion in 2019, with a middle estimate of \$76 billion. The middle estimate is moderately above the baseline projection of \$71 billion. Although reliance and enrollment increases push VA budgetary costs up, the switch from VA unit costs to the less costly Medicare allowable rates for CDS networks and CITC mitigate the increases. The estimate for the less-managed, broader network scenario is \$106 billion in 2019, illustrating that costs could increase markedly if governance of the network places less importance on cost or if VA were unsuccessful in tightly managing the network.

Figure A-2. Projected Costs of Recommended Option

APPENDIX A

FINANCING THE VISION AND MODEL

COST ESTIMATES Commission on Care Scenarios							
	Brief Description	Utilization Increase	Enrollment Increase (low, middle, high)	Reliance (low, middle, high)	Cost FY 2014 Actual (billions)	Cost FY 2019 Projected (billions)	Cost FY 2034 Projected (billions)
Baseline	2014 Actual		9,078,615	34%	\$53	\$ 71	\$ 138
Recommended (low)	Referral Based Care in VHCS (68% of current VHA care eligible as CDS)	+20% of new demand in CDS Care	5%	40%	\$	65	\$ 132
Recommended (middle)	same	same	15%	50%	\$	76	\$ 155
Recommended (high)	same	same	20%	60%	\$	85	\$ 173
Recommended (less-managed)	same	same	50%	60%	\$	106	\$ 213
Alternative 1 (low)	Similar to Recommended but primary care, inpatient med and surg and some standard specialty care not eligible for CDS remain in VHA (47% of care eligible for CDS)	+20% of new demand in CDS Care	0%	10%	\$	66	\$ 128
Alternative 1 (middle)	same	same	5%	35%	\$	73	\$ 140
Alternative 1 (high)	same	same	10%	50%	\$	78	\$ 151
Alternative 2 (low)	Similar to Alternative 1 but primary care coordinator must only be consulted; no referral required (47% of care eligible for CDS)	+20% CDS eligible Care	5%	60%	\$	97	\$ 191
Alternative 2 (middle)	same	same	10%	80%	\$	123	\$ 243
Alternative 2 (high)	same	same	20%	100%	\$	154	\$ 307
Alternative 3 (low)	Similar to Alternative 2 but primary care, inpatient med/surg and specialty care eligible for CDS and no consult required	+20% CDS eligible Care	75% (level)	80%	\$	167	\$ 320
Alternative 3 (middle)	same	same	85% (level)	90%	\$	206	\$ 395
Alternative 3 (high)	same	same	95% (level)	100%	\$	250	\$ 479
Keep Selected Services (low)	Move most standard ambulatory specialty care to community	+20% of new demand in CDS Care	0%	10%	\$	64	\$ 128
Keep Selected Services (middle)	same	same	4%	25%	\$	70	\$ 136
Keep Selected Services (high)	same	same	8%	40%	\$	75	\$ 145
Premium Support	Enrollees under age 65 can choose a subsidized insurance premium with cost sharing in lieu of VHA care	42% of enrollees <65 choose premium support	6%		\$	82	\$ 158
Eligibility Expansion	Allow all eligible veterans to enroll	increase to 30% market share among priority 8	5%		\$	72	\$ 140
Initiatives	Nurse navigators for CDS care				\$	71	\$ 138
	Make veterans with Other than Honorable Discharges Temporarily Eligible for VA Health Care While Claims are Adjudicated				\$	72	\$ 139

Additional Sample Cost Models

CDS Alternative 1

CDS Alternative 1 is similar to the Commission's *Recommended Option* above. The main difference is that a narrower subset of services is available in the CDS networks. Primary care, inpatient medical and surgical care, and some standard specialty care are not eligible for CDS networks and must be accessed within VA. The CDS network for *CDS Alternative 1* would focus on tertiary and quaternary care; it would not include primary care, some specialty care, inpatient medical and surgical care, and special-emphasis care (care that is provided in VA in a distinct fashion). In 2014, 47 percent of care would have been eligible for CDS networks.

Because less care is eligible for CDS networks than in the *Recommended Option*, less care will shift to CDS networks, reliance increases will be smaller, and enrollment increases will be smaller. We assumed that 50 percent of eligible care shifts from VA facilities to CDS networks. We modeled increases in reliance of 10, 35, and 50 percent, which correspond to reliance rates of approximately 37, 46, and 51 percent. These reliance increases pertain only to CDS care, not CDS-eligible care provided in VA facilities. We modeled enrollment increases of 0, 5, and 10 percent. As in the *Recommended Option*, we assume newly entering veterans who receive treatment in CDS networks because of this policy have a 20 percent utilization increase for new demand in CDS networks.

Figure A-3 displays estimates for CDS Alternative 1. Estimates range from \$66 billion to \$78 billion in 2019, with a middle estimate of \$73 billion. As in the *Recommended Option*, the middle estimate is close to the baseline projection of \$71 billion. Although reliance and enrollment increases push VA budgetary costs up, the switch from VA unit costs to Medicare allowable rates for CDS networks and CITC offsets these effects.

Figure A-3. Projected Costs of CDS Alternative 1

CDS Alternative 2

Like *CDS Alternative 1*, CDS care in *Alternative 2* would focus on tertiary and quaternary care. CDS networks would not include primary care, special-emphasis care, inpatient medical and surgical care, and some types of specialty care.

This option differs from the *Recommended Option* and *CDS Alternative 1* in that veterans must consult their VHA primary care provider in some way before seeking specialty care, but they *do not* need a referral to receive CDS eligible care whether they receive it in or out of VA. Some specialty care, all primary care, and all special-emphasis care are only provided in VA unless the veteran is eligible for traditional CITC. However, after the primary care consultation, the choice of whether to seek eligible care in CDS networks is entirely up to the veteran. As in *CDS Alternative 2*, the care eligible for CDS networks comprised 47 percent of total modeled expenditures in 2014.

We expect reliance increases to be relatively high, and we apply these reliance increases to CDS eligible care regardless of where veterans receive it because referrals are not required for any CDS eligible care. Further, we expect enrollment increases to be higher than the *Recommended Option* and *CDS Alternative 1* because the absence of a referral requirement makes this a more attractive policy for potential enrollees. We model reliance rates of 60, 80, and 100 percent for care eligible for CDS networks; enrollment increases of 5, 10, and 20 percent; 70 percent of VA facility care shifting into CDS networks; and a 20 percent utilization increase for CDS eligible care.

COMMISSION ON CARE FINAL REPORT

Estimates are displayed in Figure A-4. In 2019, the baseline projection is \$71 billion. *CDS Alternative 2* estimates range from \$97 billion to \$154 billion, with a middle estimate of \$123 billion. The potential for considerable reliance and enrollment increases could push costs substantially higher than the baseline.

Figure A-4. Projected Costs of CDS Alternative 2

CDS Alternative 3

CDS Alternative 3 differs from *Alternative 2* in two main ways. First, a broader array of care is eligible for CDS networks. CDS would include primary and standard specialty care, including inpatient medical and surgical care. It would not include special-emphasis care (care that is provided in VA in a distinct fashion). This array of eligible care is the same as that for the *Recommended Option*, and comprised 68 percent of total modeled expenditures in 2014. Second, enrollees do not need to consult with a primary care doctor in order to access CDS eligible care.

CDS Alternative 3 would offer an extremely generous benefits package for patients. With no referral or consultation, no premiums, and little if any copayments, patients would have access to a robust network of high-quality providers in their area. Although care within VA facilities would be available, no clinical contact would be necessary for those seeking care in CDS networks. Even within VA facilities, care is more attractive because patients would no longer need to consult their primary care doctors to receive specialty care. The benefits of this option contrast with the 10 to 30 percent cost sharing typical in Medicare and private coverage, the low

provider reimbursements, stigma and access barriers often associated with Medicaid,⁶⁷² and the requirements for referrals and/or prior authorizations that are widespread among health insurance plans. Few veterans would have reason to turn down such an attractive option.

Consequently, we model high ranges for reliance, enrollment, and care shifting into CDS networks. We model reliance rates of 80, 90, and 100 percent for all CDS eligible care; enrollment shares of 75, 85, and 95 percent; and a 70-percent rate of eligible care shifting from VA facilities to CDS networks. We apply the reliance increases to all care eligible for CDS networks, even if the care is provided in VA facilities or traditional CITC, because this option eliminates the need for consultations with primary care doctors for all CDS eligible care. Additionally, we assume that the total amount of CDS eligible care received by veterans from any provider and payer increases by 20 percent due to the lack of a referral requirement and/or reduced cost sharing.

Estimates are displayed in Figure A-5. In 2019, when effects are fully phased-in, estimated costs range from \$156 billion to \$237 billion, with a middle estimate of \$195 billion. This compares to a baseline projection of \$71 billion. Although estimates are highly uncertain, a key takeaway is that this option could result in very large cost increases relative to the baseline scenario, *Recommended Option*, and *CDS Alternatives 1 and 2*.

COMMISSION ON CARE FINAL REPORT

Keep Selected Services

The *Keep Selected Services (KSS)* scenario would move most standard ambulatory specialty care entirely into the community, yet keep the remainder of care entirely within VA facilities or traditional CITC. Although VA would no longer provide most standard ambulatory specialty care in VA facilities, it would continue to provide primary care, inpatient care, and special-emphasis care in VA facilities, including long term services and supports, prosthetics and orthotics services, inpatient and outpatient mental health and substance abuse, inpatient medical and surgical care, prescription drugs, medication management, recreational therapy, and immunizations. Under this scenario, approximately 35 percent of the cost of care currently provided in VA would be provided solely in the community. Providers in the community would receive Medicare rates.

We modeled increases in reliance of 10, 25, and 40 percent, which correspond to reliance rates of approximately 37, 43, and 48 percent. These reliance increases pertain only to care that moves into the community. We modeled enrollment increases of 0, 4, and 8 percent.

Estimates are displayed in Figure A-6. In 2019, when effects are fully phased-in, estimated costs range from \$64 billion to \$75 billion, with a middle estimate of \$70 billion. This estimate compares to a baseline projection of \$71 billion. Although estimates are highly uncertain, a key takeaway is that even with expanded community care, cost increases are constrained when veterans cannot choose whether they receive care in VA facilities or in the community.

Figure A-6. Projected Costs of Keep Selected Services Scenario

Premium Support⁶⁷³

Under the *Premium Support* (PS) scenario, all current and future enrollees younger than age 65 can choose a subsidized insurance premium with cost sharing (for some priorities) in lieu of their current VHA benefit. Enrollees electing the premium and cost sharing subsidy no longer have access to any VA services, including the special services VA offers. Under this scenario, there is an annual election period, and VA actively engages with enrollees to make a decision. Enrollees ages 65 and older receive no additional benefit options.

For those enrollees choosing the subsidized insurance program, the cost sharing varies by priority level: 10 percent for priorities 1 and 2; 20 percent for priorities 3 and 4; 30 percent for priorities 5 and 6; and 40 percent for priorities 7 and 8. Veterans would buy *Silver* policies on the state individual insurance exchanges, and VA would provide additional cost sharing assistance to meet the target subsidy. If enrollees purchased plans offered with lower cost sharing, such as *Gold* (20 percent cost sharing) or *Platinum* plans (10 percent cost sharing), the additional premium costs would likely exceed the cost of purchasing a Silver plan and subsidizing the cost sharing. The cost estimates did not consider the potential effect of adding a large number of veterans on exchange plans. Were VA to do this, considerations for veteran morbidity as well as the proposed cost sharing subsidies would need to be accounted for within the purchase of state exchange plans from commercial insurers.

To determine participation rates in the subsidized premium program, we summarized enrollees' FY 2014 baseline data into cost brackets by attaching 2015 EHCPM unit costs to workload and then summarizing the total cost of workload provided to each enrollee. Overall, 42 percent of enrollees younger than age 65 were assumed to select the subsidized premium option, but the model assigned different rates of participation depending on enrollees' priority level and historical VA utilization. Enrollees with little to no costs were assumed to participate in the program at a higher rate as compared to those who had larger levels of VA costs. Participation rates for priority 5 veterans were assumed to be half the rates set for other priority levels. This assumption was made because many of these lower-income enrollees already have the option of participating in a highly subsidized state exchange plan with low cost sharing. It is also assumed that offering this option will motivate additional nonenrolled veterans to enroll to receive the subsidized premium plan. To estimate this effect, we analyzed the proportion of veterans by priority level with either no insurance or individual insurance plans, as reported in recent years of data captured by the American Community Survey (ACS). We estimated that this potential subsidy would lead to an additional 577,000 enrollees over the projection period.

Finally, it is assumed that the subsidized premium plan serves as a primary payer and does not supplement other coverage available to the enrollee, such as Medicare or employer sponsored insurance.

⁶⁷³ Analysis developed by Milliman for VHA Office of the Assistant Deputy Undersecretary for Health (ADUSH) for Policy and Planning.

COMMISSION ON CARE FINAL REPORT

Figure A-7. Projected Costs of Premium Support Scenario

Eligibility Expansion⁶⁷⁴

Under the *Eligibility Expansion* (EE) scenario, the VA health care system expands to allow all veterans to enroll in VA health care. In 2014, half of veterans eligible under priorities 1-7, 8b,⁶⁷⁵ and 8d were enrolled, representing a 50 percent *market share*,⁶⁷⁶ with the highest market share among those with service-connected priorities. The market share among Priorities 8a and 8c was an estimated 21 percent, reflecting enrollment from before suspension began in January 2003 and from enrollees who initially enrolled in another priority and later transitioned to Priorities 8a and 8c. If the suspension of new priority 8 enrollment had never occurred, we estimate that the market share would be 28 percent in 2014 and 30 percent in 2021 under natural growth and priority transition rates.

Under a scenario of lifting priority 8 enrollment suspension beginning in FY 2017, we estimate that the market share would climb steadily during a 5-year phase-in period to reach 30 percent in 2021, which equates to 464,000 new priority 8 enrollees. The market share is not expected to reach the level observed among other priorities because Priority 8 veterans have higher incomes, are not service-connected disabled, are more likely to have employer-sponsored coverage and individually purchased health plans, and are less likely to be uninsured relative to other priorities. Further, regression analysis of market shares among veterans in census data demonstrated that higher income veterans, nondisabled veterans and veterans with employer-sponsored health insurance are all less likely to enroll. To develop the cost estimates, newly

⁶⁷⁴ Analysis developed by Milliman for VHA Office of the Assistant Deputy Undersecretary for Health (ADUSH) for Policy and Planning.

⁶⁷⁵ Priority 8b and 8d were enrolled on or after June 15, 2009 and have incomes that exceed the current VA or geographic income limits by 10 percent or less.

⁶⁷⁶ Market share is the percentage of veterans who are enrolled in VHA out of all veterans. This differs from the enrollment share, which is the percentage of eligible enrollees who are enrolled.

eligible priority 8 veterans are assumed to have the same morbidity and reliance as current priority 8 enrollees.

By 2032, based on the estimated market share, we project an additional 368,000 priority 8 enrollees with an additional \$1.8 billion in costs.

Figure A-8. Projected Costs of Eligibility Expansion Scenario

Additional Cost Factors

Nurse Navigators

VHA already has a robust care manager program that largely overlaps with the proposed nurse navigators in the CDS scenarios. VHA patient aligned care teams (PACTs) were created to coordinate care and maintain long-term relationships with patients. Most PACTs exist in a primary care setting, but there are also special-emphasis PACTs, such as those for spinal cord injury and disorders, geriatrics, and HIV care. All patients may choose to be assigned to a primary care PACT, and the vast majority do so: There are approximately 5.3 million unique patients in primary care PACTs out of a total of 5.8 million.

The primary care PACT typically consists of a provider, an RN care manager, a clinical associate, and a clerk. This team is assigned to a panel of approximately 1,200 patients. There are also expanded team members who are assigned to multiple panels, such as clinical pharmacy specialists, nutritionists, and behavioral health professionals. The RN care manager is the lynchpin of the primary care PACT.

One of the tasks of the care manager is to coordinate care received in VHA facilities with care received in the community. Because this coordination role would increase with the CDS scenarios, we provide a notional estimate for expanding the number of care managers to account for the additional administrative and clinical burden of an increase in community care.

VA-18-0457-A-001815

COMMISSION ON CARE FINAL REPORT

Based on discussions with VHA primary care operations and policy staff, we assume that one additional RN care manager per five panels would be necessary to handle a substantial increase in community care such as that associated with the CDS scenarios.⁶⁷⁷ Based on 2014 data on the number of patients in PACTs and the recommended panel size, we estimate that 882 RN care managers would need to be hired if the CDS scenarios were fully phased in. Incorporating the average total compensation of RN care managers (\$94.4 thousand in FY 2014) and inflating costs using the projected patient population and personnel inflation trend from the EHCPM, we generate the following cost estimates. These estimates are assumed to be fully phased in. The cost of this policy is \$100 million in 2019 and rises to \$158 million in 2034.

Figure A-9. Cost of Hiring Additional RN Care Managers

Other-than-Honorable Discharges

We also consider a policy for which those with an OTH discharge are made temporarily eligible for VA health care while their claims are adjudicated. The adjudication process would determine whether these individuals would remain eligible for care or would lose eligibility. Adjudication would be based on the reason for the discharge. For example, if the discharge were due to behavior associated with a mental health condition caused by serving in the military, that person would likely be positively adjudicated. However, the specific criteria for adjudicating cases still needs to be determined.

To model the cost of this proposal, we assume all people with an OTH discharge who would otherwise be eligible for VHA care are initially eligible. We assume that, consistent with the rest of the population, 73 percent of veterans with an OTH discharge are eligible for VA health care based on income and disability criteria. During a period of 5 years, their cases are examined, and 50 percent are positively adjudicated. Whether this number is actually higher or lower than 50 percent will depend on the exact details of the policy as well as the specific circumstances of veterans with an OTH discharge. In our model, the number of eligible veterans with an OTH discharge who enroll increases during the first 5 years as they become aware of the new rules. It

⁶⁷⁷ These estimates would differ depending on the CDS option pursued, but we provide a single notional estimate to give a sense of the magnitude of costs involved.

increases to 52 percent, which is the enrollment share of veterans who are currently eligible. In reality, this rate could be higher or lower for those with an OTH discharge if they are different from those who are already eligible. We assume costs per patient are similar to other veterans of the same age.

The cost of this policy increases from \$264 million in 2014 to \$1.23 billion in 2033. Fully phased-in, the cost is \$864 million in 2019. The shape of the cost curve reflects increasing enrollment during the first 5 years as veterans learn about the new rule and sign up. It also reflects adjudications as all enrolled veterans are initially eligible and then their eligibility is adjudicated during the 5 years. These calculations reflect estimates that the number of veterans with an OTH discharge for active duty military has fallen from a high of 8.8 percent in 2002 to 2.1 percent in 2015. We assume that the rate continues at 2.1 percent of discharges throughout the projection window.

Figure A-10. Projected Costs of Temporarily Covering Veterans with OTH Discharges

Conclusion

The estimated cost of allowing veterans to receive expanded community care through integrated networks varies dramatically depending on the specifics of the policy, including which categories of care are eligible for the community and whether referrals are required to access specialty care. We estimate that the *Recommended Option*, which provides increased community care that is reimbursed at Medicare allowable rates but maintains referrals for specialty care, increases costs modestly, assuming that networks are narrow and well-managed with cost as a major consideration. *CDS Alternative 1*, which offers a more restricted array of services eligible for CDS care, yet maintains a referral requirement, does not substantially increase costs. However, *CDS Alternative 3* and to a lesser degree *Alternative 2*, which eliminate the need for referrals for standard specialty care, potentially lead to very high costs. The estimated costs of the other scenarios range from small to substantial, though these costs would

COMMISSION ON CARE FINAL REPORT

ultimately depend on the details of the proposals (e.g., the premium support schedule). Finally, we find that the costs of introducing expanded nurse navigators/care coordinators and making those with OTH discharge temporarily eligible are comparatively modest.

APPENDIX B: LEADERSHIP IMPLEMENTATION

Table B-1. Organizational Health and Cultural Transformation

Action	Responsible	Timeline
That VHA create a comprehensive, coordinated, sustainable cultural transformation effort by aligning programs and activities around a single, benchmarked concept.		
Establish the charter for the cross-functional SE team responsible for cultural transformation.	SECVA/DEPSECVA or CVCS depending on level	Now (0-6 mos)
Assess cultural transformation models and decide on a single model.	Chartered SE team	Now (0-6 mos)
Create an execution strategy for cultural transformation.	Chartered SE team	Now (0-6 mos)
Develop communication strategy and materials and release.	Chartered SE team	Near (18 mos)
That VHA aligns leaders at all levels in support of the cultural transformation strategy.		
Establish a subcommittee under the SE team to drive leadership transformation.	Chartered SE team	Near (6 mos)
Establish leadership standards for behaviors and actions.	Chartered SE team Subcommittee	Near (6-9 mos)
Publicize the standard.	Chartered SE team Subcommittee/CVCS/HTM	Near (12 mos)
Develop assessment tools.	SE Subcommittee/NCOD, NCEHC, HTM	Near (12-24 mos)
Establish expectations (in policy) for use of leadership standards in IDPs, performance review, hiring, promotions.	HTM/CVCS	Near (12-36 mos)
Provide coaching to the standard.	(Current HCM office responsible)	Near (24 mos)
Collect standards, training, support materials into a living curriculum for leaders.	EES/HTM	Near (24 mos)
Modify VA Directive 5021 (Employee/Management Relations) to include unacceptable behavior and unacceptable performance standards related to organizational transformation responsibilities of leaders and update table of penalties to correspond.	HRA/HTM	Future (36 mos)
That VHA align frontline staff in support of the cultural transformation strategy.		
Establish subcommittee to support staff transformation.	Chartered SE team	Near (9 mos)
Establish behavioral expectations/requirements for staff.	Subcommittee	Near (9-18 mos)
Develop hiring tools against the staff standard.	Subcommittee	Near (18-36 mos)
Establish requirements (in policy) for use of the standard for IDP, performance reviews, advancement in grade/promotions.	HTM/HRA/nursing and similar/unions	Near (18-36 mos)

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Support leaders and supervisors at all levels of the organization to communicate and reinforce these standards with staff (see align leaders, above).	(Policy owner)	Near (18 mos)
Establish program office and VAMC standards and strategy for execution.		
Establish subcommittee to develop VAMC and PO execution standards.	Chartered SE team	Near (18 mos)
Establish execution strategy and policy requirements.	Chartered SE team Subcommittee/NCEHC/ NCOD	Near (18-36 mos)
Develop consolidated, meaningful metrics with input from experts and field users.		
Assign responsibility for metric development.	Chartered SE team/CVCS	Near (6 mos)
Develop and test metrics.	Organizational Excellence	Near (6-18 mos)
Deploy metrics.	Chartered SE team/CVCS/ (policy owner)	Near (18 mos)
Identify outliers and intervene.	SE team/CVCS/(policy owner)	Near (24 mos)

Table B-2. Recruitment, Retention, Development, and Advancement

Action	Responsible	Timeline
VHA executives are required to make the leadership system a top priority for funding, strategic planning, and investment of their own time and attention.		
Establish a VHA leadership management goal for inclusion in the 2018 budget with specific targets, including diversity targets.	VHA Human Capital Management/NLC leadership subcommittee of the HR committee	Now (3 mos)
Submit the leadership management goal to VA for inclusion in the budget submission for 2018.	VHA OPP and CVCS	Now (3 mos)
Adopt VHA leadership management goal and submit to OMB/White House.	VA OPP and SECVA	Now (3 mos)
Establish an operational plan and accountability mechanisms for meeting these goals.	VHA Human Capital Management/NLC leadership subcommittee of the HR committee	Now (4 mos)
Include yearly targets in the performance plan of the CVCS and SES members.	VHA NLC subcommittee on performance planning	Now (4 mos)
Schedule regular communication (at least quarterly) to the field that speaks to mission, vision, values, and expectations for ethical behavior.	CVCS	Now – ongoing
Schedule regular meetings with VHACO and field senior staff that allows for a discussion of mission, vision, values and expectations for ethical behavior.	CVCS	Now – ongoing
Develop opportunities for developing leaders to participate in the leadership and management decisions and processes of VHA.	CVCS /ask NLC executive committee to develop and implement a plan	Now (6 mos)
Adopt and implement a comprehensive system for leadership development and management.		
Convene a group to review ACHE and the National Center for Health Care Executives and devise a benchmarked model that meets the needs of health care executives in VHA as well as the private sector.	NCEHC with NCOD, & Human Capital Management; report to the NLC subcommittee for leadership development	Now (6 mos)
Create career tracks for key positions based on this new competency model.	HTM	Near (within 12 mos)
Fund and implement leadership assessments, training, coaching, and developmental opportunities based on the new leadership competency model.		
Develop assessment tools (360, 180, self-assessment, supervisory) to support the competency model.	HTM with support as required from other offices, e.g., NCOD, EES	Near (within 18 mos)
Assess existing training against the model and identify gaps.	EES	Near (18 mos)
Develop and implement a plan to fill these gaps.	EES/reporting to NLC to ensure funding	Near (plan 20 mos – fill gaps 36 mos depending on \$)

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Assess opportunities to share additional leadership training with DoD and create a plan to implement it.	HEC/JEC	Near (9 mos)
Develop and fund a face-to-face training to fulfill competencies for critical career positions.	EES	Near (24 mos)
Develop a masters level training program for clinical leaders in partnership with academic medicine.	EES/Academic Affiliations	Near (36 mos)
Establish sharing agreements with non-profit institutions to permit the exchange of executives for extended rotations.	EES/Academic Affiliations	Near (18 mos)
Create an experiential learning program to parallel the competency model.	EES, HTM reporting to the leadership development subcommittee of the NLC	Near (24 mos)
Establish a coaching program.	HTM/EES	Near (18 mos)
Incorporate tracking of competency assessment, training, coaching, and IDP completion into an appropriate IT platform (e.g., TMS).	HRA/EES/Workforce Management and Consulting	Near (18 mos)
VHA is required to aggressively manage leadership recruitment, retention, development and advancement using the new leadership competency model: all hires and promotions are required to demonstrate these competencies.		
Create functional statements for all key positions based on the competency model.	HTM	Near (18 mos)
Create interview questions incorporating competencies for all key positions.	HTM	Near (12 mos)
Establish a process for certifying internal candidates for advancement to the next position.	Human Capital Management	Near (18 mos)
Incorporate the tracking of competency achievement with performance ratings and create a tracking mechanisms and pool of high potential candidates.	Human Capital Management	Near (18 mos)
Create regulatory requirements for the use of the competency model in hiring, promotion, development opportunities, and discipline; and incorporate procedures for veterans preferences.	Human Capital Management in VHA	Near (36 mos)
Establish an IDIQ, PBA or similar contract for executive recruitment.	Human Capital Management	Now (6 mos)
Establish requirement in policy for all ECF, SES / SES equivalent to complete IDP.	Human Capital Management	Future (following regulatory change)
Create on-ramp for retiring MTF.	Human Capital Management / DoD Coordination	Now (6 mos)
Expand (GHATP) program.	EES	Now (6 mos)
Establish a plan for developing and managing the candidate pool.	NLC subcommittee for leadership	Now (6 mos)
Require a formal on boarding process for leaders at all levels that re-enforces the leadership competency model.		
Establish an onboarding curriculum and process.	Human Capital Management, EES, HTM	Now and Near (18 mos)

VA-18-0457-A-001822

APPENDIX B
LEADERSHIP IMPLEMENTATION

Action	Responsible	Timeline
VHA is required to take immediate steps to stabilize the continuity of leadership.		
Extend authority for length of details and ability to compete for the detail position.	Human Capital Management	Now (6 mos)
Establish and fund assistant level positions in all key career development tracks.	CVCS	Now (18 mos)

COMMISSION ON CARE FINAL REPORT

Table B-3. Organizational Structure and Function

Action	Responsible	Timeline
Eliminate duplication within VHA and consolidate program offices to create a flat structure.		
Eliminate the duplication of functions between VHA and VA by closing VHA offices.		
Create innovative organizational structures to support clinical delivery that are aligned to patient's needs rather than professional silos.		
Undertake a reduction-in-force (RIF) in VHACO that promotes delayering and efficiency in communication and decision making.		
Publish a new organizational chart consistent with Figure 9.	CVCS	Now (1 mos)
Prepare an initial RIF for offices eliminated.	VHA Human Capital Management	Now (3 mos)
Engage VERC (or other resources with expertise in business process reengineering) to re-design the processes and structures with remaining offices to ensure end-to-end support for field function and to further reduce duplication; including clinical function re-organization.	Transformation Office/ VERC	Near (3-12 mos)
Each program office in collaboration with VERC or other transformation resources identifies areas of "stop work" with staffing and budget savings.	Transformation Office/ PO/ CVCS	Near (3-12 mos)
Publish clear roles, responsibilities and expectations that apply to all VHACO offices.	Transformation Office/ CVCS	Now (1 mos)
Develop in-service training to orient existing VHACO staff to the new expectations for the role of VHACO.	Transformation Office/ EES	Now (1 mos)
Develop training curriculum to support VHACO staff in developing the skills and competencies required.	Transformation Office/ EES	Near (18 mos)
Develop an engagement strategy to inspire VHACO staff to embrace their new role and tie to in-service training roll out.	Transformation Office/ CVCS	Now (1 mos)
Modify in-service training and implement in on-boarding process for new VHACO employees.	Transformation Office/ EES	Now (6 mos)
Adopt customer service training in VHACO and roll it out; include as part of new employee on-boarding in VHACO.	Transformation Office/ EES	Near (12 mos)
Draft basic competencies for VHACO program staff (e.g., customer service, quality improvement, coaching, effective communication, change leadership, data analytics).	Transformation Office/ HCM	Near (12 mos)
Require the basic competencies in functional statements as a basis for hiring and promotion.	Transformation Office/ Each PO	Near (18 mos)
Acquire, configure, and train PO staff on data analytics infrastructure to support program office and field tracking of key performance metrics.	Office of Organizational Excellence/OIT	Near (18 mos)

APPENDIX B
LEADERSHIP IMPLEMENTATION

Action	Responsible	Timeline
Clarify and specifically define the roles and responsibilities of the VISNs and facilities, pushing decision making down to the lowest level.		
Publish clear roles, responsibilities and expectations that apply to the VISNs.	Transformation Office/ CVCS	Now (1 mos)
Develop in-service training to orient existing VISN staff to the new expectations for the role of VISN.	Transformation Office/ EES	Now (1 mos)
Develop an engagement strategy to inspire VISN staff to embrace their new role and tie to in-service training roll out.	VISN directors	Now (1 mos)
Modify in-service training and implement in on-boarding process for new VISN employees.	Transformation Office/ EES	Now (6 mos)
Draft basic competencies for VISN staff (e.g., quality improvement, coaching, effective communication, change leadership, data analytics).	Transformation Office/ HCM	Near (12 mos)
Require the basic competencies in functional statements as a basis for hiring and promotion.	Transformation Office/ each PO	Near (18 mos)
Gain agreement from Congress to institute three appropriation lines only: medical, major construction, research.	CVCS/SECVA/OMB	Near (12 mos)
Eliminate segregation of specific-purpose funds to the VISNs and facilities.	CVCS/Office of Finance	Now (6 mos)
Modernize financial management system (FMS) to permit effective cost accounting and tracking of priority spending.	OIT/Office of Finance	Future (36 mos)
Develop training to support effective use of FMS to permit effective account tracking and reporting and roll it out.	Finance/EES	TBD post procurement
Establish quarterly spend reports covering all priority areas (e.g., NRM, IT, facility minor, purchased care, mental health, women's health, administration) by facility and release to Congress and the public.	Finance Office	TBD post procurement
Delegate decisions in recruitment, retention and advancement (e.g., hiring bonus, retention bonus, market pay) for staffing to the facility.	CVCS/HCM	Now (1 mos)
Delegate training and travel decisions.	CVCS/EES/OAA	Now (1 mos)
The USH establishes leadership communication mechanisms within VHACO and between VHACO and the field to promote transparency, dialogue and collaboration.		
Improve communication with field leadership and frontline employees through the liberal use of social media, town halls and other direct engagement channels with a dedicated champion to help the USH and senior staff in this endeavor.	CVCS	Now (3 mos)
Reestablish in-person leadership conferences, at least semi-annually, to foster communication and relationship building between VHACO, VISN and facility leadership.	CVCS/EES/NLC	Now (6 mos)
Add behavioral competencies to performance plans that promote effective communication amongst leaders.	CVCS	Near (12 mos)

VA-18-0457-A-001825

COMMISSION ON CARE FINAL REPORT

Action	Responsible	Timeline
Establish expectations and requirements for program office leaders to communicate the USH leadership messages, coordinate PO communications with the USH and with one another.	CVCS	Now (3 mos)
Establish a transformation office with broad authority and a supporting budget to accomplish the change.		
Establish the new transformation office in the organizational chart, populate with expertise in business process re-engineering, and fund initially using savings from closure and consolidation of offices in VHACO and a budget reduction to all other VHACO offices.	CVCS	Now (6 mos)
Create a Transformation Office strategic plan to educate and provide guidance to the new initiatives and support the goals of VA and VHA.	Transformation Office	Near (3-6 mos)
Create a new initiative implementation plan to include follow-on priorities, tasks and milestones. The Transformation Office will support the operation and the plan moving forward.	Transformation Office	Near (3-6mos)
The Transformation Office will be responsible for evaluating all new initiatives and programs using the President's Management Agenda Scorecard or a model that emulates its rating standards of Green represents success; yellow for mixed results; and red for unsatisfactory. These ratings are indicative of standards of success or failure.	Transformation Office	Near (3-6mos)

Table B-4. Performance Metrics and Management

Action	Responsible	Timeline
Create a new performance management system for VHA leaders appropriate for health care executives.		
Establish a workgroup and engage outside experts to create the new performance management system that is benchmarked to private-sector models, is consistent with the new leadership competency model, and recognizes both leadership competencies and success in delivering strategic priorities. The model should include a new rating scale.	Transformation Office/Human Capital Management	Now (6 mos)
Develop and conduct training on the new performance management system for all participants to describe the system, rating process, and expectations.	Human Capital Management	Near (6-12 mos)
Establish a mechanism to capture performance assessment outcomes and track and manage high-potential staff.	Human Capital Management/HRA	Now (3 mos)
Establish a project plan to deliver annual guidance on performance plans at least a month in advance of the new fiscal year (i.e., at the start of the new rating period).	Human Capital Management/CVCS/Sec/OMB	Now (3 mos)
Hold raters accountable for creating meaningful distinctions between leaders.		
Provide training to raters on the application of the new performance management system and expectations for ratings.	Human Capital Management	Future (12 mos)
Require raters to establish plans for subordinates that are timely and meaningful; track and provide feedback on meeting this goal.	Human Capital Management/HRA	Now (3 mos)
By modeling the behavior and communicating the requirement, establish expectations that raters, and secondary-level raters, engage in continuous dialogue and coaching with subordinates about performance throughout the year, not just at mid-year and at the end of the rating period.	CVCS	Now (3 mos)
Establish oversight and feedback process for raters and incorporate this into the raters performance evaluation.	Human Capital Management/CVCS	Now (12 mos)
Provide coaching to raters and focused reviews if their rating profile doesn't provide meaningful distinctions in performance.	Supervisors	Near (12 mos)

COMMISSION ON CARE FINAL REPORT

Table B-5. Leadership Implementation: Human Capital Management

Action	Responsible	Timeline
VA re-align HR functions and processes to be consistent with best practice standards of high-performing health care systems.		
Charge HRA to undertake an HR transformation study and ensure budget and solicitation of customer requirements.	SECVA/DEPSECVA	Now (0-6 mos)
Engage HR and change management experts to develop a benchmark human capital management plan for VA.	HRA	Now (0-6 mos)
Circulate new human capital plan for feedback and finalize.	HRA with input from VHA, Congress, OPM, OMB, SECVA/DEPSECVA, CVCS	Now (6 mos)
That VA and VHA leaders make transformation of Human Capital management a priority, with adequate attention, funding and continuity of vision.		
Endorse human capital management plan and ensure alignment of budget, IT system funding, training resources, and accountability mechanisms to support it.	SECVA/DEPSECVA and CVCS, as applicable	Near (9 mos)
Employ HR and change management experts to fully implement the transformation agenda and the new human capital management plan.	HRA	Near (12-30 mos)
Create an HR IT technology plan.	HRA & OIT	Near (9 mos)
Establish meaningful measures and risk indicators for VA human capital management.	HRA	Future (24 mos)
Incorporate HR measures into systematic reporting to leadership; and as appropriate into performance plans for key subordinate leaders.	HRA, DEPSECVA, CVCS as appropriate	Near (18 mos)
VA develop and implement an effective progressive discipline process for all staffing authorities (i.e., Title 5, Title 38, Title 38 Hybrid, Title 38 7306, and SES).		
Develop clear standards, guidelines, and training on progressive discipline.	HRA (with support from OPM)	Now (6 mos)
Managers, supervisors and HR professionals complete training.	SECVA/ DEPSECVA and CVCS (HTM office)	Near (12 mos)
Train HR staff to be coaches in progressive discipline.	HRA	Now (6-12 mos)
Establish performance metrics for HR professionals and client feedback mechanisms to ensure effective coaching and support for progressive discipline process.	HRA	Near (12 mos)
Establish performance expectations for VA supervisors and managers to apply the progress discipline process.	SECVA/ DEPSECVA, CVCS	Near (12 mos)

APPENDIX C: PILOT PROJECTS FOR EVALUATING EXPANDED CARE

As discussed in Recommendation #18, some Commissioners support the idea of developing pilot programs to test the feasibility of avoiding VA hospital closures by allowing veterans' spouses and currently ineligible veterans to purchase VA care in selected areas.

Problem

In many parts of the country, VHA currently maintains hospitals and other health care facilities that are underutilized or in danger of becoming so. This trend is driven by four main factors: (a) the overall decline in the size of veterans population, (b) the migration of veterans away from some parts of the country, such as New England and the Upper-Midwest, (c) the general trend in health care toward less intensive use of acute-care hospital beds, and (d) increased use of purchased care, which now accounts for 27 percent of all appointments.

A related challenge is maintaining safe volume of care when patient loads decline. As extensive literature attests, surgeons and other health care professionals tend to lose proficiency when they treat too few patients.⁶⁷⁸

Simply closing a low-volume hospital is sometimes the answer. But closing a local VA hospital may mean that area veterans will have reduced access not only to routine, but also to specialty care related to their military service, such as for spinal cord or traumatic brain injuries. In many areas, such care is not available or is in short supply outside VHA.

At the same time, it may not be clinically feasible for VHA to engage in highly specialized care if it lacks the ability to offer other forms of care in the same setting. Patients in a polytrauma unit for example, require a full-spectrum of routine and nonroutine health care.

Increasing the volume of patients treated by VHA in areas where it currently has excess capacity may ameliorate these challenges. Toward that end, VHA could develop pilot programs to test the feasibility of enabling veterans' spouses and currently ineligible veterans in these areas to purchase VHA care through their health plans. These pilots could be tested in conjunction with the growth of the high-performance, integrated VHA networks recommended elsewhere in this report. These networks will allow VHA far more flexibility than in the past to expand or contract its local capacity in different markets as appropriate.

COMMISSION ON CARE FINAL REPORT

Background***Current Nonveteran Access to VHA Care***

VHA already treats many nonveterans. VHA estimates it treated 694,120 unique nonveteran patients at a total cost of \$1.9 billion in 2015,⁶⁷⁹ or 3.6 percent of total VHA obligations.⁶⁸⁰

By far the largest subgroup within the nonveteran patient population are participants in the Civilian Health and Medical Program of the Department of Veterans Affairs (CHAMPVA). CHAMPVA beneficiaries are the dependents of permanently and totally disabled veterans, survivors of veterans who died from service-connected conditions or while on active duty, or spouses of veterans who at the time of death were rated permanently and totally disabled from a service-connected condition.

Congress authorized CHAMPVA in 1973. The authorization specifies that VHA is the secondary payer for those with Medicare Part A and B coverage. In cases for which VA medical facilities are equipped to provide the care, VA may use facilities not being used for the care of veterans to provide services to the dependent or survivor.

Congress has also directed VHA to offer specific health care services to many other classes of nonveterans. These include mental health and counseling services for family caregivers of seriously injured veterans of post-9/11 service. Several provisions of law also authorize VA care for certain family members of veterans who were exposed to toxic substances. In the case of veterans with 50 percent or more service-connected disability, VHA must provide by law “consultation, professional counseling, marriage and family counseling, training and mental health services as are necessary in connection with” the veteran’s treatment.⁶⁸¹

Analysis

Others who have developed strategic plans for the long-term future of VA health care have recommended expanding upon these precedents, specifically by allowing currently ineligible veterans and the spouses of veterans to purchase VHA care.⁶⁸² In effect, providing such care would allow VHA to operate as an accountable care organization, capable of receiving reimbursement from patients covered by Medicare, Medicaid, as well as by private insurance plans. Among the potential benefits envisioned are the following:

- optimizing patient safety, productivity, and cost-effectiveness by ensuring sufficient patient volumes in currently under-utilized facilities
- preserving mission critical veterans’ programs that would otherwise need to be terminated in many parts of the country
- optimizing the integration of VHA and non-VHA care within communities

APPENDIX C
PILOT PROJECTS FOR EVALUATING EXPANDED CARE

- providing a *public option* for health care to a wider range of veterans as well as nonveterans in communities where health care choices are currently limited
- bringing in new sources of revenue to contribute to the funding for veterans' healthcare

The pilot projects described below would specifically evaluate whether such a strategy will allow VHA to optimize the quality and cost-effectiveness of its health care system by avoiding low volumes of routine and specialty care in certain sections of the country. These pilot projects would also allow VHA to evaluate whether such a strategy could provide new revenues for sustaining the VA health system while providing other benefits to veterans and the public at large.

The chart below sketches six possible pilot projects designed to test different specific policy configurations. The configurations include projects in which VA care is marketed to health care plans on fee-for-service (FFS) basis, and plans in which VA facilities are markets to health care plans as Accountable Care Organizations that provide integrated health services to a fixed population of insured patients for a fixed cost.

*Demonstration Projects to Assess VHA's Capability to Treat
Nonveteran Spouses and Ineligible Priority 8 Veterans*

	Eligibility	Capitation/Fee For Service	Timing
Demonstration 1: FFS plan covering spouses	Non-veteran spouses of veterans (not CHAMPVA eligible) With Private Insurance	FFS	Years 2-7
Demonstration 2: FFS plan covering veterans currently ineligible for VA care	Priority 8 veterans now ineligible for enrollment with private insurance	FFS	Years 2-7
Demonstration 3: FFS plan covering spouses	Non-veteran spouses of veterans (not CHAMPVA eligible) with private insurance	FFS	Years 3-8
Demonstration 4: FSS plan covering veterans currently ineligible for VA care	Priority 8 veterans now ineligible for enrollment with private insurance and/or Medicare	FFS	Years 3-8
Demonstrations 5 and 6: Accountable health care organization plans for spouses and currently ineligible veterans	Ineligible Priority 8 and non-veteran spouses	Enrollment: May choose higher cost plan with more coverage and less copayment; lower cost option with less coverage and higher copayments.	Years 4-9

COMMISSION ON CARE FINAL REPORT

	Eligibility	Capitation/Fee For Service	Timing
Demonstrations 7 and 8: Accountable health care organization plans for spouses and currently ineligible veterans	Ineligible Priority 8 and non-veteran spouses with private insurance and/or Medicare	Enrollment: May choose higher cost plan with more coverage and less copayment; or lower cost option with less coverage and higher copayments. Pilot sites would be deemed Accountable Health Care Organizations for Medicare Advantage plans.	Years 5-10

Certification of Access: Any participating VHA facility must certify that its waiting times for primary care, specialty care and behavioral health are less than 30 days.

Site selection: Sites should include facilities in different regions with various population densities (urban, suburban, rural) and levels of service complexity. VHA may also consider such factors as stability of medical center leadership, and whether local markets are underserved or subject to high degrees of market concentration among either providers or payers.

Assumptions

- Many provisions are subject to Congressional authorization.
- Participating VHA facilities will be able to retain any “profit” associated with treatment of new users without offset;
- Congress will (preferably) waive the current prohibition on Medicare funding federal health care programs,
- VHA will not be subject to proving “level of effort” in order to receive Medicare funds

Assessment

After the first year of operations, VHA will assess these projects according the following criteria:

- Was access to care or patient satisfaction among veterans already enrolled in the system affected by the demonstration?
- What was the level of patient satisfaction among new users purchasing VA care?
- Did VHA cover the costs of delivering care to its patients purchasing care? If so, what were its net revenues and how were they used?
- If VHA collected Medicare funds, did funding cover costs of delivering care?

VA-18-0457-A-001832

APPENDIX C
PILOT PROJECTS FOR EVALUATING EXPANDED CARE

- Were there administrative challenges in opening the VHA to new users? If so, what lessons were learned?
- How did VHA promote the demonstration project to those eligible?
- What are the recommended strategies for further implementation?
- Were there non-financial benefits to treatment of new users, such as diversifying case mix, providing sufficient volume to allow certain VHA services to remain available, or keeping scarce health professionals employed in an area that is medically underserved?
- How did the demonstrations affect the overall quality of care, market structure, pricing, and range of health care options available to both veterans and nonveterans in the surrounding community?

APPENDIX D: HISTORY AS A CONTEXT FOR SYSTEMIC TRANSFORMATION

History provides opportunities to see the problems and challenges facing VHA today through the lens of recurring themes from the past. Veterans' health care has, over the course of its history, been marked by periods of both progress and problems. Understanding the challenges of the past and the solutions used to address them provides context for building a plan for reforming veterans' health care in a manner that is flexible and sustainable.

Challenges and Growth

The federal government's role as a care provider for veterans has evolved, paralleling, to some extent, medicine's evolution. Prior to World War I, the only benefits afforded then-eligible veterans were pensions and domiciliary care (which involved only incidental medical treatment), provided under the National Home for Disabled Volunteer Soldiers and Sailors established after the Civil War.⁶⁸³

World War I brought real change. At the time, no single agency was responsible for the anticipated deluge of sick and wounded soldiers. The more than 200,000 wounded who returned home from battle quickly exceeded capacity of the U.S. Public Health Service (PHS), the National Home, and other agencies. According to one account of the period, "[c]haos and confusion reigned for more than two years . . . [n]ew hospital construction languished," and "[b]y 1921, veterans' care had become a national embarrassment."⁶⁸⁴ At the recommendation of a presidential committee, Congress passed legislation in 1921 to consolidate the several veterans-related bureaucracies into a single Veterans Bureau, to which the President Warren Harding transferred 57 PHS hospitals. A new administrator, Frank T. Hines, proposed care and treatment of veterans' non-service-connected ailments when facilities and bed space were available. Congress adopted the proposal in the World War Veterans Act of 1924.⁶⁸⁵

Under Hines' tenure, VA grew from 64 to 91 hospitals, nearly doubling bed capacity. Civil Service Commission personnel rules and low pay led to generally poor quality VA physicians, yet Congress rebuffed VA proposals to set up a VA Medical Corps.⁶⁸⁶ With many physicians having left VA to serve in World War II or for more lucrative practice, the VA health care system was left critically understaffed.⁶⁸⁷

COMMISSION ON CARE FINAL REPORT

World War II and the need to care for millions of service members, including 671,000 wounded, highlighted the problems facing VA. Scathing reports of shoddy veterans' care, including an exposé characterizing veterans' hospitals as backwaters of medicine, magnified the problems.⁶⁸⁸

Congressional hearings led to a shakeup in leadership and General Omar Bradley was appointed to head the agency, with its network of 97 hospitals, and a need for more.⁶⁸⁹ Dr. Paul Magnuson, who served as VA's chief medical director (CMD) from 1948 to 1951, later described the conditions at the time:

The majority of Veterans Administration hospitals were stuck in far off places, some of them on Indian reservations, others as much as fifty miles from the nearest through-line railway stop. The doctors were all full-time Civil Service employees, hemmed in by regulations and practically forbidden to do any research, attend any medical meetings or otherwise keep in touch with scientific progress. Operating rooms closed at noon so everybody could spend the afternoon happily doing required paperwork, while patients waited days and weeks for surgery.⁶⁹⁰

With President Harry Truman's statement that "the Veterans Administration will be modernized," new VA leadership worked with Congress to pass far-reaching legislation, Public Law 293, which created a VA Department of Medicine and Surgery (DM&S), and freed VA physicians, dentists, and nurses from the Civil Service Commission and its rules.⁶⁹¹ Within weeks, the chief medical director of the new DM&S issued a policy memorandum that outlined a cooperative affiliation agreement between VA and medical schools under which deans' committees would recommend consultants and attending physicians for appointment to VA, and residency-training programs would be established at VA hospitals. The law, and Policy Memorandum #2, broke a recruitment logjam and enabled the short-staffed department to hire medical professionals needed for the dozens of new VA hospitals being built. Soon after, medical students and residents began working in 32 VA hospitals. The reforms instituted under Bradley and his team were palpable,⁶⁹² with the physician staff at VA hospitals increasing from 2,300 (1,700 of whom were detailed by the military) in June 1945 to 4,000 full-time staff a year later.⁶⁹³ By 1948, VA had 125 hospitals in operation with 60 medical school affiliations and 2,000 residents.⁶⁹⁴

After this turn-around, Bradley left to become Army Chief of Staff, and under his successor, "who did not enjoy the same level of prestige and support that Bradley did . . . VA quickly

reverted to its pre-Bradley ways and remained that way for the next forty years,”⁶⁹⁵ according to one account.

By the early 1950s, the veteran population had grown to more than 20 million.⁶⁹⁶ VA was operating 162 hospitals, with an average census of more than 104,000 patients.⁶⁹⁷ A VA historian observed that “waiting lists contained 22,613 applicants awaiting admission, none of whom were service-connected, although some of the latter were hospitalized in other than VA hospitals.”⁶⁹⁸ At the time, non-service-connected veterans seeking care had to state under oath that they could not afford to pay for hospitalization, and admission was granted only when beds were available in VA or other federal hospitals.⁶⁹⁹ Critics called for reducing free medical care of non-service-connected veterans, and questioned whether some were getting care that they could afford. This issue led VA to institute a policy of formal counseling under which hospitals would supply the veterans with an estimated cost of care to assist them in determining their ability to pay.⁷⁰⁰

In contrast to the generous Bradley-era funding, the 1950s funding cuts necessitated layoffs, bed-closures, and moth-balling of newly constructed hospital wards.⁷⁰¹ During this period, annual debates over the DM&S budget centered on the number of beds VA should operate. VA leaders contended that the number should be 125,000, yet the director of the Bureau of the Budget (the predecessor to the Office of Management and Budget [OMB]) asserted 87,000 was sufficient.⁷⁰²

The expiration of the incumbent CMD’s term led to the appointment in 1955 of medical educator Dr. William Middleton, dean of the Wisconsin Medical School, and a long-time member of a VA special medical advisory group. One of his first acts as CMD was to champion medical research in VA and broaden its scope to include geriatric research. Soon after, Congress began earmarking funds for VA research, and expanded DM&S’ statutory role to include medical research.⁷⁰³ During Middleton’s tenure, from 1955 to 1963, VA research funding grew from some \$6 million to more than \$30 million.⁷⁰⁴ Middleton’s work laid the foundation for a research program long recognized for pioneering important medical technologies, including medical use of radioisotopes, dialysis, cardiac pacemakers, liver transplantation, as well as seminal studies that documented the benefits of coronary artery bypass surgery and drug treatment of hypertension.⁷⁰⁵ The program also stood out for its capacity to design and rapidly implement large-scale cooperative trials, first mounted in the 1950s with successful evaluation

COMMISSION ON CARE FINAL REPORT

of chemotherapy for tuberculosis.⁷⁰⁶ Working on issues relevant to veterans, VA researchers developed functional electrical stimulation systems to allow patients to move paralyzed limbs, helped develop the first ankle-foot prosthesis, and launched the largest-ever trial of psychotherapy to treat posttraumatic stress disorder.⁷⁰⁷

Middleton expanded the VA educational program. In addition to growing the number of medical residents it helped train, VA provided training to a large share of clinical psychologists, graduate dentists, student nurses, occupational and physical therapists, social work students, and dietetic interns. Middleton instituted numerous advances in VA care such as introducing outpatient care for preadmission workups and post-hospital treatment that allowed earlier release from inpatient stays. He moved VA away from operating hospitals for specific diseases (as had been done for tuberculosis and mental illness).⁷⁰⁸

The enactment of Medicare in 1965 raised questions about the effect that program would have on the VA health care system. The House Veterans Affairs Committee sent a questionnaire to a group of 10,000 veterans explaining the new program and asking the veteran to if they preferred VA care or treatment in a community hospital under Medicare.⁷⁰⁹ Some 59 percent responded, and nearly two-thirds of respondents preferred VA.⁷¹⁰ At the time, the policy governing those eligible for VA care based on financial need was that Medicare benefits were to be considered in determining an individual's ability to pay for needed care.⁷¹¹

The enactment of Medicare and other changes in health care in 1977, led to a commission being established by the National Academy of Sciences (NAS) which issued a report pursuant to a congressional directive to evaluate the VA health care system. Among its findings, the commission reported that VA had a surplus of acute beds and recommended that new facilities be constructed only after examining bed availability in the community. It also recommended that underutilized VA hospitals be closed or converted to long-term care facilities, and resources redistributed to permit a shift from inpatient to outpatient care. The NAS commission also recommended that VA experiment with models for community-based integrated care.⁷¹² The commission's recommendation for integrating the VA system into the nation's civilian health care program⁷¹³ provoked objection, particularly in Congress.⁷¹⁴ Hearings produced sharp rejections of the NAS commission findings and its call to end VA's role in providing health care to veterans.

⁷¹⁴ *Hearings before the Subcommittee on Medical Facilities and Benefits of the Committee on Veterans Affairs*, 95th Cong., 1st Sess. (July 21, 1977), Statement of Dr. Saul Farber.

The VA of the 1970s and 1980s is remembered as bureaucratic, reliant on paper health care records, and driven by patient admissions (on which budgets were based).⁷¹⁵ The quality of VA care was also an issue. Complaints from Vietnam veterans and critical media accounts fueled outrage, and led to the view that the system was broken. The question, how to fix it, reopened an earlier dialogue around making VA a cabinet-level department, a view strongly supported by veterans service organizations (VSOs) and veterans' leaders in the House of Representatives. In 1988, after years of debate, and opposition from administration offices and advisors, President Reagan signed legislation creating a Department of Veterans Affairs.⁷¹⁶ The new department, with DM&S now renamed the Veterans Health Services and Research Administration (to emphasize its research legacy in such fields as infectious disease, pacemaker technology, and prosthetics), employed some 194,000 people with a \$12 billion budget.⁷¹⁷

Facing an aging veteran population⁷¹⁸ expected to overwhelm the system by 2010, the new secretary, Edward Derwinski, in 1989 requested Congress establish an independent commission to review the alignment and mission structure of VA's hospitals. Congress rebuffed the request after VSOs, suspecting a plan to close hospitals, lobbied against it.⁷¹⁹ Derwinski created his own "Commission on the Future Structure of Veterans Health Care" that was to review all VA hospitals and recommend needed mission changes. Instead, the so-called Mission Commission called for expanding eligibility law to enable veterans to obtain the full continuum of VA health care services. Although the commission identified the need for fundamental restructuring of the VA health care system, the subject was soon overtaken by national health reform proposals, and what role VA might have under a universal coverage system.⁷²⁰

Dr. James Holsinger, a new under secretary for health (USH), made care quality a top goal and issued a Blueprint for Quality tool in 1992, setting the stage for more far-reaching changes instituted by his successor, Dr. Kenneth Kizer. Care quality, a perennial topic, had led to the previous under secretary's resignation following reports of multiple veterans' deaths under questionable circumstances at VA's North Chicago medical center.⁷²¹ Two years later, Derwinski lost his job after creating ire among veterans' organizations in response to his proposed pilot program to open two VA hospitals to poor, rural nonveterans.⁷²²

COMMISSION ON CARE FINAL REPORT

Transformational Leadership

VA's second secretary, Jesse Brown, brought his passion as a veterans advocate to the department's leadership.⁷²³ Among Brown's most important early acts was selecting Dr. Kenneth Kizer, a prominent California physician-administrator and educator, from among 90 candidates identified by a search committee for the USH post.⁷²⁴ With experience heading the California department of public health, Kizer saw health care as a system, and data as a tool to improve it.⁷²⁵

Kizer, in essence, launched a major reengineering of the VA health care system through better use of information technology, measurement and reporting of performance, integration of services, and realigned payment policies.⁷²⁶ His vision was large and bold, underscored by his belief that "we have to be able to demonstrate that we have an equal or better value than the private sector, or frankly we should not exist."⁷²⁷ At VA, Kizer found a workforce trapped in a micro-managerial, command-and-control system in which there was little accountability.⁷²⁸ He set the tone for what was to come at a meeting with senior managers at which he stated,

*The old culture must give way to a new culture . . . that is based on innovation and creativity; a culture based on personal initiative and individual and collective accountability; a culture that is based on outcomes and heightened productivity; and a culture that is committed to change.*⁷²⁹

Among his first steps was the development of what was to become a Vision for Change, a new organizational model to restructure both field operations and central office management. At its core was the creation of 22 veterans integrated service networks, or VISNs, (replacing four regions which had been responsible for overseeing 40 to 45 hospitals each), with decision making shifted away from VA Central Office (VACO) to the new VISN directors. VISNs were to be the basic budgetary and planning unit, and to have staffs of no more than 7 to 10 employees.⁷³⁰ Each VISN was in charge of all the care provided to veterans in that network, and each was funded on a capitated basis rather than based on historical costs.⁷³¹ The VACO structure would be marked by its *flatness*, foregoing a tiered hierarchy.⁷³²

The system Kizer and his team inherited was characterized by a multitude of problems.⁷³³ Kizer and his team literally reengineered the veterans' health care system based on a set of transformation strategies: to create management accountability, integrate and coordinate services, improve the quality of care, align system finances with desired outcomes, and modernize information management.⁷³⁴

Kizer also launched a technological revolution in VHA with deployment of a powerful electronic medical record,⁷³⁵ and development of systems such as medication bar-coding to tackle medical errors and ensure patient safety.⁷³⁶

Some of Kizer's successes involved winning support within the administration and from Congress for bold initiatives. He won a critical concession from OMB that VA savings could be reinvested into VA, permitting his transformation efforts to be funded through internal cost-savings rather than new funding,⁷³⁷ and garnered support from Congress for a dramatic reduction of acute care beds and for closing massive regional offices.⁷³⁸ These steps and congressional passage of legislation to reform health care eligibility laws paved the way for establishing universal primary care in VA and developing community-based clinics across the country.⁷³⁹

Sweeping Reform

During a 5-year period, Kizer dramatically changed almost every major VHA management system and improved operational performance through the use of performance measures and contracts. He closed nearly 29,000 acute care beds, merged 52 medical centers into 25 multi-campus facilities, reduced staffing by almost 26,000, opened more than 300 community-based outpatient clinics, and treated 24 percent more patients. In addition to bringing measurable quality into VA health care, Kizer achieved marked reductions in waiting times and medical errors.⁷⁴⁰

Kizer's tenure brought dramatically improved quality, service, and operational efficiency to VHA yet threatened powerful interests. As he noted, "...places like Florida, Arizona, and the

COMMISSION ON CARE FINAL REPORT

Sun Belt States were not getting their fair share [of funds] and their elected officials were unhappy about it. People from Pennsylvania and Illinois and New York were not about to give their money away, so there was this big disconnect.”⁷⁴¹ Kizer’s team developed a capitation system to more equitably allocate funds across the system. Aware of the political ramifications, he implemented incremental changes during a 2- to 3-year period to make them as painless as possible. But the congressional goodwill he had enjoyed unraveled when Kizer and his VISN directors began cutting and consolidating facilities to accommodate VISN funding cuts. The threat of hospital mergers and consolidations ultimately led several senators to block his confirmation to a second term.⁷⁴²

Under new eligibility reform law, all veterans became *eligible* for VA health care, though its authors did not envision that the system could or would serve all eligible individuals, or even all who might someday seek VA care. The law’s priority-based enrollment system was intended to give VA a tool to align demand for care with its funding level.⁷⁴³ The law instead unleashed political pressure to expand enrollment, opening the door to an influx of veterans who historically had not been VA health care users and many of whom were already covered under military retirement benefits, private insurance, or Medicare.⁷⁴⁴ That expansion led to a tremendous demand for prescription drug benefits by new enrollees and in 2003, Secretary Tony Principi ended enrollment for higher income (category 8) veterans “to keep the system solvent.”⁷⁴⁵ At about the same time, other related pressures led Principi to establish an advisory body, the Capital Asset Realignment for Enhanced Services (CARES) Commission, to develop a comprehensive capital asset plan. Principi cited the age of VA facilities and the changes in medical practice, but also reminded a congressional oversight committee of a 1999 Government Accountability Office finding that “maintaining obsolete or duplicative structures diverts \$1 million a day, every day, every year, away from the care of veterans.” Principi did not want to repeat Kizer’s experience and hoped to avoid political backlash.⁷⁴⁶

The CARES Commission released a final report in February 2004 that recommended relatively few actual facility closures, though it proposed substantial facility mission changes at a number of facilities.⁷⁴⁷ As the then USH later recounted, “CARES, like so many things in Washington, was well-intended, but it was derailed politically once it began moving toward actual targeted action within specific congressional districts.”⁷⁴⁸

Despite such defeats, Principi and VA under secretaries following Kizer met formidable challenges, left legacies, and saw the veterans’ health care system continue to be heralded for several years.⁷⁴⁹ A cascade of other events muddled, and even blackened, VHA’s reputation:

accounts of veterans' suicides (and an alleged cover-up); incompetent surgeries and patient deaths at a high-visibility VA medical center (VAMC); failed software acquisitions;⁷⁵⁰ hard-hitting inspector general audit reports on issues such as system flaws, quality of care issues, and lack of timely care that fueled congressional oversight and other constraints. The 2014 scandal that erupted at the Phoenix VAMC represented a decisive turning point and set the stage once again for transforming veterans' health care.

Among initial steps on that long road to transforming the system, the Senate in July 2014 unanimously confirmed Robert A. McDonald, former chief executive officer of Proctor & Gamble, as secretary of veterans affairs. With a business career of delivering better results, McDonald, along with DEPSECVA Sloan Gibson and USH Dr. David Shulkin, has been working to improve VA's health care system and service delivery, and to set a framework for long-term reform. Days after McDonald's confirmation, Congress passed the Veterans Access, Choice, and Accountability Act of 2014, omnibus legislation to improve veterans' access to care. This legislation established the *Choice Program*, mandated an independent assessment of VHA, and established the Commission on Care.

COMMISSION ON CARE FINAL REPORT

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDIX E: THE EVOLVING HEALTH CARE INDUSTRY

Health care has evolved in major ways since the federal government began providing care to veterans after the Civil War, and it will continue to evolve substantially in the future. There are a number of factors that drive evolution in health care, such as population and lifestyle changes, changes within the various health care professions, medical and information systems technology, and systems changes in management and operations.⁷⁵¹ IBM Center for Applied Insight reports that there are 18 trends to watch in health care.⁷⁵² These trends closely encompass those highlighted below. The categories in which the trends fall mirror key topic addressed in the Commission's report to include data system interoperability (10 trends), consumer technology (two trends), health care providers (two trends), government regulations (two trends), and human resources and leadership (two trends). With health care changing so rapidly, and in so many different ways, it is imperative that veterans' health care continually evolve to remain aligned with current and future trends. This section highlights key trends that, based on past experience and current practice, will likely shape health care in the future, were considerations in formulating the Commission's recommendations, and will likely affect transformation of veterans' health care.

Emergence of Large Health Care Systems

The health care industry is moving away from stand-alone community hospitals that serve the needs of a local constituency to large, multiple-campus health care systems.⁷⁵³ The industry will see more high profile mergers and acquisitions in the second half of 2016.⁷⁵⁴ The December 2015 Health Research Institute's report indicates that well-known health care systems may have a market advantage as Americans are willing to travel further for care from a well-known system. This may explain the development and affiliation for Mayo Clinic in Arizona and Florida, and Cleveland Clinic opening in Florida. The report also states that although people are willing to drive for care they are not willing to pay prices higher than the local market. Because of increasing use of outpatient services and same-day surgery, facilities within these health care systems require fewer inpatient beds.⁷⁵⁵ With the advancement of psychotropic drugs, the perceived need for large mental hospitals has declined.⁷⁵⁶ Because of shorter recovery stays, increased outpatient services, telemetry and other monitoring programs, and new medical inventions, hospitals are now built as smaller facilities with parts or sections that can be quickly

COMMISSION ON CARE FINAL REPORT

modified for future changes and medical advances.⁷⁵⁷ VHA will need to consider this trend in evaluating its current physical plant and planning for future facility needs.

Management Changes

As health care systems become increasingly complex, there is a need to manage these institutions using current management theories and models.⁷⁵⁸ During the past few decades, hospital and health care management changed from being managed by a traditional top-down model to continuous quality improvement models that respond to issues such as staff satisfaction, medication errors, safety matters, and wasteful use of supplies. To address errors, hospitals have implemented Six Sigma principles. To address waste, hospitals have implemented LEAN principles. Embracing these changes in management approach and implementing Six Sigma and LEAN principles will support VHA's transformational process.

Health Care Payment

The health care industry is in the midst of transforming its payment model away from a fee-for-service model to value-based payments, a system that drives improved health outcomes.⁷⁵⁹ This transformation is tied to the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), which health care experts expect to shape care delivery and payment reform across the U.S. health care system over the coming decades. Congress created MACRA as a transformative law to fast track the health care system's transition from a traditional fee-for-service payment model to new risk-bearing, coordinated care models.⁷⁶⁰ Because this legislation is still in rulemaking, it is premature for the Commission to weigh in on its potential effect on VA. The MACRA legislation expands the trend toward creation of accountable care organizations (ACOs) and bundled payments for care. ACO models have been reported to drive reduced hospitalization and generate cost savings.⁷⁶¹

Specialty Care Facilities

With changes in the federal payment for hospitals, some high-cost and longer-stay care treatments have been moving out of community hospitals to specialty hospitals. For example, long-term acute care hospitals primarily treat patients on ventilators; rehabilitation facilities treat short-term, post-acute patients who need primarily physical and occupational therapy services for orthopedic or stroke incidences; and cancer hospitals provide innovative treatments for Stage 4 cancer. As a result, community hospitals may no longer need beds to take care of these special patients. VHA will need to consider this trend in planning integrated care networks and evaluating its facility needs in conjunction with these networks.

Outpatient Care and Lifestyle-oriented Venues for Care

With improvements in surgical procedures, many surgeries that required post-surgery hospital stays are now routinely performed in outpatient settings.⁷⁶² Many nonsurgical procedures are being performed in outpatient clinics as well, such as medical imaging, cardiac catheterization, substance abuse treatment, gastrointestinal screening and cancer treatment.⁷⁶³ As care that was once provided only in hospitals is now provided in specialized medical clinics, care that was once provided only in physicians' offices is now being provided in alternative settings. As reported in Health Affairs, "another health care trend consumers are using to save both time and money is that rather than making appointments with their doctors, they are choosing to use walk-in clinics."⁷⁶⁴ Many of these clinics are located in pharmacies, retail chains, or supermarkets, allowing consumers quick, convenient, less-costly care.⁷⁶⁵ Do-it-yourself health care is also a trend, with increasingly more people taking responsibility for their health care. Consumers are using smart phone apps to monitor vital signs, medication adherence, and even urinalysis.⁷⁶⁶ As part of a commitment to continuous improvement, VHA will need to consider alternative venues as it creates integrated health care networks.

Medical Technology

Medical technology companies create life-changing innovation, and "advanced medical devices and diagnostics allow people to live longer, healthier and more productive lives."⁷⁶⁷ In fact, during the past 30 years, medical advancements helped add five years to U.S. life expectancy and reduce fatalities from heart disease, stroke, and breast cancer by more than half.⁷⁶⁸ These advancements also yield savings across the health care system by replacing more expensive procedures, reducing hospital stays, and allowing people to return to work more quickly.⁷⁶⁹ Ensuring veterans receive care that employs cutting-edge technology will be an important part of establishing integrated care networks.

Telemedicine

According to the American Telemedicine Association, "telemedicine is the use of medical information exchanged from one site to another via electronic communications to improve a patient's clinical health status."⁷⁷⁰ Telemedicine includes a growing variety of applications and

COMMISSION ON CARE FINAL REPORT

services using two-way video, email, smart phones, wireless tools, and other forms of telecommunications technology. The use of telemedicine has spread rapidly and is now becoming integrated into hospitals, specialty departments, home health agencies, private physician offices, as well as consumers' homes and workplaces. The following are examples of how telehealth is being used:

- A specialist assisting the primary care physician in rendering a diagnosis might use interactive video or store-and-forward transmission of diagnostic images or information.
- Home-use devices might be used to remotely collect information such as vital signs, blood glucose, or heart electrocardiogram data and transfer it in real time to a home health agency or a remote diagnostic testing facility for interpretation.
- Consumers' internet and wireless devices might be used to obtain specialized health information or participate in online peer-to-peer support groups.

VHA already excels in the use of telehealth and should expand upon its work in this area.

Midlevel Practitioners

During the past few decades, new categories of health care professionals have become increasingly commonplace in hospital settings. For example, hospitalists, physicians who specialize in the practice of hospital medicine, take over when the community-based physician admits his/her patient to the hospital.⁷⁷¹ The hospitalist does not perform the surgery but rather takes on the monitoring of the hospital services needed by the patient. Another example is medical technicians, who monitor the specialized medical equipment and devices that previously were under the purview of nurses in specialty units such as intensive care units. The growing physician shortage has led to reliance on mid-level health care providers. According to the Centers for Medicare and Medicaid Services' National Provider Identifier dataset, there were approximately 106,000 practicing nurse practitioners and 70,000 practicing physician assistants in 2010.⁷⁷² Provider trends may play into ways VHA can address its current staffing shortage.

Electronic Patient Health Information

Health records have undergone transformation from free-form physician notes of the 17th century to electronic health records (EHRs) of the 21st century. Today, providers are using clinical applications such as computerized physician order entry systems; EHRs; and radiology, pharmacy, and laboratory systems to track patient care and progress. Health plans are providing access to claims and care management, as well as member self-service applications.⁷⁷³ These advances allow the medical workforce to be more mobile and efficient (i.e., physicians can check patient records and test results from wherever they are). Though their use comes with

inherent potential security and privacy risks, they will surely play a substantial role in shaping future health care.⁷⁷⁴ Interoperability of these sources of patient information will be a continuing key issue in private-sector, military, and veterans' healthcare organizations.

Population Health

Population health refers to considering incidence and prevalence of diseases in a given area to determine if the area or the environment is contributing to the illness. Physicians and other health care providers may look at a region's demographics to determine what types of care are needed within the population. For example, if 65 percent of the region is older than age 65, then a series of wellness programs that address the chronic care concerns of this population may be needed. From a population health perspective, communities and their respective populations are as important as the individual patients who comprise them when it comes to keeping residents healthy. For VHA, population health issues may revolve around populations of veterans who served in particular wars and operations and the respective injuries and illnesses associated with them.

Geriatric Care

In the United States and Western Europe the birth rate has slowed⁷⁷⁵ and people are living longer.⁷⁷⁶ Demographic researchers report that if an American makes it to age 65, he/she should have about 17 to 20 additional years of life.⁷⁷⁷ Nursing homes and assisted living facilities are now seeing increasingly more of residents' first-time admissions occurring at age 80 or older. Some congregate care retirement facilities report that even with admission in the 80s, the average life expectancy is another 12 or 13 years.⁷⁷⁸ The aging population accounts for increasingly more hospital admissions, and as a result, hospitals rely on more revenue from Medicare.⁷⁷⁹ The VHA beneficiary population mirrors the general U.S. population, and older veterans receiving care through VHA may be sicker than their private-sector counterparts.

Chronic Disease Care

Chronic conditions now account for more than 50 percent of the death rate. Acute problems had previously been the primary causes of death.⁷⁸⁰ Even HIV/AIDS has moved away from being considered an immediate death sentence, and now, with proper treatment, is considered by

COMMISSION ON CARE FINAL REPORT

most to be a chronic disease.⁷⁸¹ The Centers for Disease Control reports that since 2014, more Americans are dying as a result of chronic conditions and diseases than from acute diseases. Most chronic diseases result from lifestyle choices. Lifestyle diseases result from choices that individuals make.⁷⁸² Health care systems invest resources in addressing lifestyle-related issues caused by behaviors such as smoking, using opiates, and overeating.⁷⁸³ Lifestyle diseases such as cancer caused by smoking, addiction caused by drug use, and diabetes caused by obesity, are costly to treat.⁷⁸⁴ Because lifestyle diseases change over time, they are important to consider in thinking about the future of veterans' healthcare. Treating chronic diseases can be costly because care is ongoing, and assuming this trend continues to become more prominent, it will affect the cost of care and how it is provided.⁷⁸⁵

Needs-based Health Care

The Affordable Care Act requires all not-for-profit hospitals to complete a survey of the community (community health needs assessment, or CHNA) to show what entities in the community will address identified needs (asset mapping) and then report on how the hospital will address these needs in a community health care implementation program (CHIP).⁷⁸⁶ Starting in 2016, hospitals must post these reports on their websites and conduct these evaluations every 3 years thereafter. Monitoring community health needs can lead to preventing or stopping the spread of disease. For example, scarcity of quality food has been documented to result in poor school attendance and increased illness.⁷⁸⁷ Some Americans simply have not been exposed to how to prepare vegetables and fruits because they live in areas that are called *food deserts*, where healthy foods are not readily available. Identifying such needs and how they will be addressed can help improve health for specific populations.⁷⁸⁸ In Washington, DC, such a health assessment led to new treatments and protocols for addressing the appearance of a rare strain of tuberculosis brought in by a group of legal immigrants.⁷⁸⁹ Using CHNA and CHIP could be part of VHA's ongoing planning process.

Behavioral Health

Treatment for mental health, now more commonly referred to as behavioral health, has changed dramatically since a 1968 federal law required individuals be cared for in the least restrictive environment.⁷⁹⁰ This law led to an expectation that most patients would receive care in out-patient facilities. Recently legislation was passed that requires insurance companies to increase the amount of payment for behavioral health, which could add more patients to the health care system.⁷⁹¹ VHA is a leader in mental health treatment and should continue to be a trendsetter in this regard.

Preventive Medicine

Traditionally, physicians were trained to cure illness and to restore the sick to health. The trend, however, is changing, and physicians are now trained in prevention and are more active participants in the prevention of illness.⁷⁹² Additionally, insurance and Medicare now cover preventive care and annual physicals, further supporting prevention.⁷⁹³ Preventive medicine is a key component of integrated health care and will need to be considered as VHA works to transform veterans' healthcare.

Pharmacy Changes

Health Affairs reports that "in 2015 . . . an alarming trend of new high-cost specialty pharmaceuticals entered the market. . . . Overall drug spending increased 12.2 percent last year, the highest rate of increase in more than a decade."⁷⁹⁴ Escalating drug prices account for some of this increase, including more than 3,500 generic drugs that at least doubled in price from 2008–2015 and about 400 drugs that increased in cost 1000 percent.⁷⁹⁵ Newly emerging and very expensive developments in the area of genomic medication also contribute to the increase. "One way to combat skyrocketing prices will be biosimilar drugs. These drugs are near substitutes for original brand drugs and could bring significant price discounts."⁷⁹⁶ Because many of VHA's beneficiaries seek only prescription benefits, prescription drug trends will be important to consider in the transformation process.

Commission Workgroups

The Commission on Care organized itself into workgroups in order to complete an analysis of relevant issues, consider options, and suggest recommendations to the full Commission for debate. The Commission formed five workgroups with each responsible for sections of the Independent Assessment or other topics taken on by the group. In establishing each workgroup an effort was made to balance perspectives and expertise, although Commissioners expressed interests were also taken into account in forming the membership of each group. The membership of each workgroup and the topics taken on by each is summarized in Table F-1.

Table F-1. Workgroup Structure and Topics

WORKGROUP NAME	TOPICS	MEMBERSHIP	
Health Care Alignment	<ul style="list-style-type: none"> ▪ Demographics ▪ Health care Capabilities ▪ Care Authorities ▪ Access Standards ▪ Governance 	<ul style="list-style-type: none"> ▪ Blecker ▪ Johnson ▪ Longman ▪ Selnick 	<ul style="list-style-type: none"> ▪ Gorman ▪ Khan ▪ McClenney

Health Care Trends	<ul style="list-style-type: none"> ▪ Market Trends ▪ Technology ▪ Financing ▪ Vision 	<ul style="list-style-type: none"> ▪ Blom ▪ Johnson ▪ Schlichting 	<ul style="list-style-type: none"> ▪ Cosgrove ▪ Khan ▪ Webster

Each workgroup, together with any staff assigned to it, reviewed the findings and recommendations of the Independent Assessment and the Integrated Report; investigated external benchmarks and best practice models; heard testimony in public meetings (with the full Commission); met in workgroup session with VA employees, leaders, former staff and external experts to gather additional insights and explore relevant questions. Commissioners reviewed white papers and strawman proposals prepared by staff and by one another. Based on the assessments and group deliberations, each workgroup developed recommendations for consideration by the full Commission. Details of the process and outputs from each workgroup are described in the following sections.

COMMISSION ON CARE FINAL REPORT

Health Care Alignment Workgroup

The alignment workgroup organized its work around six main topics: governance, realignment of facilities and services, medical sharing, eligibility, other than honorable discharges, and the organization of provider networks. The workgroup met in a face-to-face session on October 7, 2015 to review the charge of the workgroup, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each topic was introduced through a summary paper or summary points which then were used as the basis for a conference call or a face-to-face discussion. For most topics, subsequent calls were held to discuss more detailed papers or to re-visit outstanding issues not yet resolved.

Commissioners also reviewed draft papers and provided additional feedback, revisions, and comments through written comments. The papers were finalized for inclusion in the draft Commission report for discussion on April 19. A summary of the work completed on each topic is provided in the table below.

Health Care Operations Workgroup

The health care operations workgroup was organized around five main topics: access standards, scheduling, clinical workflow, staffing (HR), and productivity. The workgroup (select Commissioners and support staff) first met face-to-face on October 7, 2015 to: introduce the staff, review guiding principles and business rules, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each of the main topics was discussed. During the larger public sessions the Commissioners and staff heard directly from Veterans Affairs staff or outside experts to inform future deliberations. In follow-on meetings the workgroup continued to present research on the four main topics; and cover other issues that may have come up during sessions (i.e., Best Practices) or from questions posed by Commissioners. To supplement the Commission conferences, the workgroup held teleconferences to cover additional research or present information from subject matter experts or emailed informational briefs and write-ups for review before a workgroup teleconference. Feedback from the Commissioners was addressed and the potential recommendations were refined. These papers were finalized and readied for presentation to the full Commission for deliberation and feedback. A summary of the work completed on each topic is provided in the table below.

Health Care Data, Tools & Infrastructure Workgroup

The Health Care Data, Tools & Infrastructure (DTI) workgroup organized its work around four main topics: Health Information Technology, Business Processes, Supplies and Facilities. DTI first met face to face on October 7, 2015 to: introduce the staff, review the charge of DTI, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each of the main topics were discussed. During the larger public sessions the Commissioners and staff heard directly from Veterans Affairs staff or outside experts to inform future deliberations. In follow-on meetings the workgroup continued to present research via white papers on the four main topics; and cover other issues that may have come up during sessions or from questions posed by Commissioners. To supplement the Commission face-to-face meetings, the workgroup held teleconferences to cover additional research or present information from subject matter experts. Feedback from the Commissioners was incorporated into the white papers and the potential recommendations were refined. Commissioners then reviewed the draft papers derived from this process and provided additional feedback, revisions, and comments through meetings and written comments. These papers were finalized and readied for presentation to the full Commission for deliberation and feedback. A summary of the work completed on each topic is provided in the table below.

Health Care Leadership Workgroup

The leadership workgroup organized its work around five main topics: organizational health and cultural transformation and four leadership system issues: recruitment, retention, development and advancement; organizational structure and function; performance management and performance measurement; and human capital management. The workgroup met in a face-to-face session on October 7, 2015 to review the charge of the workgroup, orient one another to the task envisioned for the group, and decide how the workgroup would function to complete its work. In general, each topic received an evidence review and summary which was the basis for a conference call or a face-to-face discussion. On a few topics, Commissioners or staff heard directly from VA staff or outside experts to inform the deliberation. Then, in a second meeting on the topic, the Commissioners debated a strawman proposal and alternative recommendations based on the evidence review and the prior Commission discussion. Feedback from the Commissioners was incorporated into the strawman and the potential recommendations were refined. Commissioners then reviewed the draft papers derived from this process and provided additional feedback, revisions, and comments through meetings and written comments. The papers were finalized and presented to the full Commission for deliberation and feedback on March 22, 2016. A summary of the work completed on each topic is provided in the table below.

Site Visits

Background

In the coming decades there will be increased demand for accountability in health care and increased emphasis on health care outcomes and measurements, and VHA will need to rise to meet these expectations to survive and remain competitive in the demanding and turbulent health care environment.⁷⁹⁷ The changing nature of health care organizations, including pressure to reduce costs, improve the quality of care, and meet stringent guidelines, has forced health care professionals to reexamine how they evaluate performance.⁷⁹⁸ Although many health care organizations have long recognized the need to look beyond financial measures when evaluating performance, many still struggle with what measures to select and how to use the results of those measures.⁷⁹⁹

As the nation's largest health care system in 2016, VHA employs more than 305,000 health care professionals and support staff at more than 1,000 sites of care, including hospitals, community-based outpatient clinics (CBOCs), nursing homes, domiciliaries, and 300 Vet Centers.⁸⁰⁰ Given the scope of this health care system, the Commission recognized the importance of direct lines of communication and interaction with VHA leaders, staff, and patients, to include conducting facility site visits. Commissioners conducted facility site visits to their local VA facilities to assist in the evaluation of the findings identified by the *Independent Assessment Report*, to contribute to an environmental scan of the VHA, and to inform the development of recommendations.⁸⁰¹

Scope of Site Visits

In January and February 2016, most of the 15 Commissioners conducted site visits to the VA medical centers (VAMCs) and CBOCs proximal to their respective residences. The Commissioners approached these site visits with a collaborative and information-seeking tone with the purpose of having open discussions with VAMC leadership, staff, and patients.

Individual Commissioners visited 12 VAMC facilities or CBOCs in 7 out of 19 Veteran Integrated Service Networks (VISNs). Additionally, all the Commissioners who attended the February 29, 2016, meeting in Dallas, TX, toured the Dallas VAMC.

COMMISSION ON CARE FINAL REPORT

Table F-6. VA Facility Site Visit Locations

VISN	VISN Name	VA Facility
2	VISN 2	VA Hudson Valley Health Care System (Montrose, NY)
6	VA Mid-Atlantic Health Care Network	Fredericksburg Community-based Outpatient Center, (Fredericksburg, VA)- part of Hunter Holmes McGuire VA Medical Center, Richmond, VA
7	VA Southeast Network	Ralph H. Johnson VA Medical Center (Charleston, NC) Wm. Jennings Bryan Dorn VA Medical Center (Columbia, SC)
10	VA Health Care System	VA Ann Arbor Health care System (Ann Arbor, MI) John D. Dingell VA Medical Center (Detroit, MI)
17	VA Heart of Texas Health Care System	Dallas VA Medical Center (Dallas, TX)
21	Sierra Pacific Network	Southern Nevada Health care System (Las Vegas, NV) VA Northern California Health Care System (Mather, CA) VA Palo Alto Health Care System (Palo Alto, CA)
22	Desert Pacific Health Care Network	Greater Los Angeles Health care System (Los Angeles, CA) VA San Diego Health care System (San Diego, CA)

The Commissioners were provided with a generic basic agenda as guidance, though they had the latitude to determine their own agendas as appropriate for the locations they visited. The model agenda included the following activities: a welcome and overview of the VA health care facility; tour of the facility; veteran discussion session (informal or formal); VHA employee session (e.g., informal or small group discussion); a discussion with the facility leadership, and were provided the recommended questions listed below:

- What does the medical center do well?
- What unique resources can the medical center draw on?
- What do others see as the strengths of the medical center?
- What could the medical center improve?
- Where does the medical center have fewer resources than others?
- What are others likely to see as weaknesses of medical center?
- What opportunities are open to the medical center?
- What trends could the medical center take advantage of?
- How can the medical center turn its strengths into opportunities?
- What threats could harm the medical center?
- What obstacles does the medical center face?
- What threats do the medical center's weaknesses expose it to?

VA-18-0457-A-001868

- What is the impact of MyVA?
- How do employees view working at VA compared to two or three years ago? If there is a change, what is driving it?
- In your view, what is the most important factor affecting patient satisfaction with the care you provide?
- In your view, has there been a change in the perception of the quality of care provided by the medical center? If so, what might be driving this different perception?

Once the Commissioners completed their visits, they provided the data they gathered to Commission staff to be organized in a strengths-weaknesses-opportunities-threats (SWOT) analysis framework. A SWOT analysis is a simple but useful framework for analyzing the four factors as they are faced by an organization. It helps organizations develop strengths, minimize threats, and take the greatest advantage of available opportunities.⁸⁰²

Findings

VHA leadership and staff enthusiastically shared their time, insights, perspective, and data on organizational and operational processes with the Commissioners. The site visits provided insight and reinforced the findings of the *Independent Assessment Report*.

Confirming what the *Independent Assessment Report* stated, the Commissioners found VHA facilities' staff members exhibit a deep commitment to serving veterans, but that VHA's health care facilities deliver strikingly different patient experiences, apply inconsistent business processes, and differ widely on key measures of performance and efficiency.⁸⁰³ Based on Commissioners' observations of weaknesses, challenges, and threats related to daily operations, VAMC staff members appear to be searching for suitable solutions. Anecdotal responses provided to the Commissioners illuminated the following systemic problem areas at the VAMCs:

- Care authorities: health care capabilities (i.e., purchased care)
- Staffing: productivity (i.e., human resources), health care capabilities, access standards, clinical workflow
- Leadership: staffing, productivity (i.e., human resources)
- Facilities: health care authorities (i.e., patient-centered community care)

Data from Commissioners' observation notes were organized into a SWOT analysis chart based on the common themes of the Commissioners' facility site visits. The purpose of this exercise was to gather information to inform the Commission's recommendations and to confirm or

COMMISSION ON CARE FINAL REPORT

dispute the findings of the *Independent Assessment Report*. The Commissioner site visit inputs are summarized in the table below.

Table F-7. SWOT Analysis of Commissioner Site Visit Observations

Strengths	Weaknesses	Opportunities	Threats
<ul style="list-style-type: none"> ▪ VA medical center workforce customer service and dedication ▪ Research and national databases ▪ Veterans service – connected services and programs ▪ Partnerships with medical schools and training programs 	<ul style="list-style-type: none"> ▪ Inefficient/ineffective HR policies ▪ High levels of staffing vacancies ▪ Lack of clinical space; inefficient configurations of clinical space ▪ Poor access to VA care for rural veterans ▪ Lack of an effective financial system to provide real-time payment process to veterans Choice and Purchased Care Programs ▪ Lack of effective VHA leadership workforce ▪ Lack of capacity/access to appointments in VHA ▪ Insufficient federal government health care appropriation rules 	<ul style="list-style-type: none"> ▪ Modernization of VA IT ▪ Customer service training/standards ▪ Strategic focus on VHA core mission ▪ Local funding flexibility from Congress ▪ New vision and mission for VHA health care ▪ Process/systems reengineering ▪ Recruitment of outside leader candidates and retention of high-performing VHA leaders 	<ul style="list-style-type: none"> ▪ Misalignment between Congress's health care operational plans for veterans and VHA strategic health care plans ▪ Competing stakeholders health care interests ▪ Office of Personnel Management outdated standards/policies ▪ Insufficient VHA leadership development ▪ Insufficient IT funding ▪ The physician shortages around the nation has severely impacted the care of patients

Conclusions

Fundamental transformation of VHA is needed to ensure optimal delivery of veteran-centered, high-quality care. Essential to laying the path to excellence and strategic planning is a comprehensive understanding of the current state as well as the opportunities and threats facing the system. A robust connection between leaders in VHA Central Office and leaders in the field is critical to meet the needs of the veteran population served.

As part of the strategic planning process, VA/VHA leadership should make recurring site visits to VHA facilities, including VAMCs, VISN headquarters, and CBOCs to obtain current insight of the following critical areas: health care trends, health care operations, facility management and renovation/replacement, business processes and contracting, and other trends or issues affecting VAMCs. VA/VHA leaders should use performance management tools and activities to ensure the strategic goals are being met in an effective and efficient manner. It is a constant challenge to continuously and reliably measure the pulse of the organization. Site visits promote a healthy culture of sharing and building an understanding of organizational mission.

APPENDIX G: VETERAN FEEDBACK

In addition to the more than 4,000-page *Independent Assessment Report*, the Commission examined dozens of other reports, studies, and presentations as cited in the hundreds of footnotes dispersed throughout this Final Report. Collectively, these many sources provide a wealth of information on the challenges VHA confronts in realizing a vision for veterans' healthcare that leverages the strengths of VA and capitalizes on the potential non-VA providers offer.

A key source the Commission considered was the views of veterans themselves. Given the Commission's brief tenure, it was not possible to conduct a survey representative of the views of millions of veterans receiving health care from VHA. Instead, the Commission encouraged veterans to offer feedback on their health care experiences and the work of the Commission through its website. Many veterans service organizations (VSOs) also provided views representing their members in open sessions with the Commission and in formal letters and position statements directly to the Commission.

The feedback offered by veterans through the Commission's web site covered a range of health care topics, such as whether and to what extent care should be privatized, how much choice veterans should have in deciding on their care, and their assessment of the quality of care received. Not surprisingly, veterans (including a few who were also VA employees) are quite passionate about their views on health care. For the most part, veterans' feedback from the web site expressed opposition to efforts to *privatize* VHA, although a few did want more access to non-VA providers. The *Choice Program* was frequently criticized for long delays in appointments, convoluted or misapplied eligibility criteria, and issues with how providers should be reimbursed for treatment and how much the veteran should pay. When the quality of care was noted, on balance veterans praised the care received from VHA, with a few disappointed, especially when care was outsourced to non-VA providers. Because the feedback was unstructured, veterans could offer any observations they found pertinent.

The Disabled American Veterans (DAV) shared with the Commission a compendium of more than 4,000 verbatim comments on veterans' health care experiences gathered from their members during April 2016. The DAV reviewed the comments and categorized 82 percent of the comments as "overall positive experiences."⁸⁰⁴ The Commission staff reviewed the comments from DAV, with findings consistent to DAV's.

⁸⁰⁴ Comments from veterans about their experiences as users of the VA health care system, printout provided to Commission on Care by Disabled American Veterans, April 2016.

COMMISSION ON CARE FINAL REPORT

VA Efforts to Gather Input on Veterans Views on Health Care

Like most institutions that provide products and services to customers, VA/VHA solicits input from veterans on their health care needs and their views on specific services VA/VHA provides. Surveys, focus groups, and in-depth interviews are the more typical means for gathering input from veterans. On occasion, VA, like most agencies, encourages veterans and others to submit comments on a particular aspect of VA services and benefits.⁸⁰⁵

The following sections describe the more typical methods employed by VA/VHA to gather input from veterans.

VHA Survey of Veterans' Health and Use of VHA

Conducted by the assistant deputy undersecretary for policy and planning, the survey of veteran enrollees' health and use of health care (Survey of Enrollees) is an annual survey of more than 40,000 veterans who are enrolled in VA's health care system. The Survey of Enrollees was initially designed to give VHA the information it needed to predict the demand for services in the future. The data are used to develop health care budgets and to assist VA with its annual enrollment decisions. Over the years, the data have also been used to analyze policy decisions, provide insights into specific populations and their perspectives, and inform management decisions affecting delivery of care. In addition to collecting basic demographic information, the survey explores insurance coverage, use of health care inside and outside of VA, pharmaceutical use, attitudes and perceptions about VHA services, perceived health status, and trends in smoking among veterans enrolled in the VHA system.⁸⁰⁶

Survey of Healthcare Experiences of Patients⁸⁰⁷

The Survey of Healthcare Experiences of Patients (SHEP) program was initiated in 2002 in an effort to create standardized survey instruments administered monthly to assess ambulatory and inpatient care. In an effort to standardize its survey instruments with other health care providers, SHEP now employs the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey methodology for VHA's primary care and inpatient medical and surgical services. These surveys are supported in the public domain by the CAHPS Consortium, Agency for Healthcare Research and Quality, Centers for Medicare and Medicaid Services, and National Committee for Quality Assurance. Although SHEP deployed the standardized CAHPS surveys,

⁸⁰⁵ "Quality of Care Feedback Form," Department of Veterans Affairs, accessed June 20, 2016, <http://www.va.gov/QUALITYOFCARE/apps/contact.asp>. As an example, the VA web site provides a Quality of Care feedback page for veterans and others to enter comments on the care a veteran received.

⁸⁰⁶ Westat, 2015 Survey of Veteran Enrollees' Health and Use of Health Care, accessed June 6, 2016, http://www.va.gov/healthpolicyplanning/SoE2015/2015_VHA_SoE_Full_Findings_Report.pdf.

⁸⁰⁷ For more details on SHEP and VHA's recent initiatives to expand the scope of the program, see "Health Services Research & Development, Commentary: Listening to Veterans about Access to Care," Steven M. Wright, VHA Office of Analytics and Business Intelligence, U.S. Department of Veterans Affairs, accessed June 20, 2016, <http://www.hsrd.research.va.gov/publications/forum/nov15/default.cfm?ForumMenu=nov15-1>.

the access questions were limited and did not evaluate the full scope of services used by veterans.

VHA intends to expand the SHEP program with additional surveys in 2016 and beyond. These surveys will focus on satisfaction with various specialty care services and experience with community care available through the Veterans Access, Choice, and Accountability Act of 2014. VHA has also launched a survey that focuses on new veteran enrollments and their experience with first clinic appointments.

Veteran Insights Panel

VHA also established a Veteran Insights Panel, comprising more than 3,200 veterans that are representative of users of VA health care.⁸⁰⁸ VHA interacts with the panel through email notification and a special access website (mobile device enabled). This approach provides VHA an opportunity to engage panel members in direct discussions, including real time feedback via live chat, about important themes and issues, and survey development and testing. The panel can be engaged collaboratively with operational program offices and researchers to prompt direct discussions with our veterans.

Voices of Veterans: On-going Research

Initiated in the spring of 2014, the VA Center for Innovation (VACI) sponsors an on-going effort to employ human-centered design (HCD)⁸⁰⁹ concepts in a pilot to explore veterans' experience with VA through the eyes of 40 veterans across a range of demographics and locations.⁸¹⁰ The pilot had two goals:

- To test the usefulness and application of an HCD methodology within the context of VA.
- To better understand veterans' experiences interacting with VA, identify pain points in the present day service delivery model, and explore opportunities to transform these interactions into a more veteran-centered experience.

Developing Veteran Personas

As a part of this pilot, VACI set out to identify high-level trends in ways veterans seek out assistance, use technology, take advantage of services, and react to challenging interactions. Based on these patterns, VACI created a set of four profiles, or personas, that represent the

⁸⁰⁸ Ibid.

⁸⁰⁹ Human-centered design (HCD) is a discipline in which the needs, behaviors and experiences of an organization's customers (or users) drive product, service, or technology design processes. It is a practice used heavily across the private sector to build a strong understanding of users, generate ideas for new products and services, test concepts with real people, and ultimately deliver easy-to-use products and positive customer experiences. HCD is a multi-disciplinary methodology which draws from the practices of ethnography, cognitive psychology, interaction and user experience design, service design, and design thinking. It is closely tied to "user-centered design," which applies parallel processes to technology projects, and "service design" which address the service specific experiences.

⁸¹⁰ U.S. Department of Veterans Affairs, Center for Innovation, *Toward a Veteran-Centered VA: Piloting Tools of Human-Centered Design for America's Vets, Findings Report, July 2014*, accessed June 20, 2016, http://www.innovation.va.gov/docs/Toward_A_Veteran_Centered_VA_JULY2014.pdf.

COMMISSION ON CARE FINAL REPORT

kinds of users within the set of 40 veterans engaged in the pilot (see Table G-1). Each persona is an archetype based on commonalities observed among veterans who exhibited similar behaviors and approaches to accessing VA services. They are not categorized by positive or negative experiences, but by shared expectations and needs. These personas were designed to help VHA begin to understand that it is serving users who are seeking not just different services, but also varied degrees of contact, support, information, and so forth. For this exercise, VACI assessed veterans' modes of communication, channels, frequency, stated and observed needs, reactions to service experiences, military service, and analyzed observed behavior and service experiences.

*Table G-1. Veteran Profiles Developed by the VA Center for Innovation*⁸¹¹

THE LIFER	THE TRANSACTIONAL
<p>Frequently use VA services and plans to continue doing so. Look to VA to play a supporting, community-building role in life. Grateful for VA benefits, but get frustrated when problems arise which break up the continuity of care—like when doctors change too frequently and when they cannot get transportation to VA facilities. Generally, try to speak highly of VA and wants to contribute to making it work better for fellow veterans.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA cares and takes the time to understand veteran's needs and story ▪ That cost of VA services won't rise ▪ That veteran can reach someone at VA anytime <p>Needs</p> <ul style="list-style-type: none"> ▪ Does not want to tell story over and over, especially after using VA for so long ▪ Wants to know what is going on with services and especially benefits ▪ Likes patient, nurturing health care 	<p>Joined the military largely based on the promise of the opportunities it would provide in life. Plan to use VA services to "get life on track" post-service. Tend to be in the younger generation of veterans (OEF, OIF, OND). Often engaged in the veteran community, see other veterans as allies, and advocates in helping folks understand and use their benefits. Will share frustrations if feels like VA is not helping as promised.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA will deliver on its promises and help veteran access the benefits earned ▪ That VA has benefits available to veterans families ▪ That it will be a headache, and veterans will have to figure it out on their own with the help of network <p>Needs</p> <ul style="list-style-type: none"> ▪ Accurate expectations ▪ Financial support at times, especially for family ▪ To feel a part of a community

⁸¹¹ Ibid.

THE JUST-IN-CASE	THE INFREQUENT
<p>Proud of service, but does not need VA and plans on using it only as a backup. Mature and organized by nature, has all papers in order with VA and have a good idea of services for which they are eligible. Grateful for the benefits available, but see working with VA as a tradeoff for time and will likely only lean on VA as a backup plan.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That will likely never need VA benefits ▪ That VA will be there if needed ▪ That there are benefits available to family ▪ That private benefits are of higher quality and greater ease <p>Needs</p> <ul style="list-style-type: none"> ▪ Peace of mind ▪ To be assured that all documents are in order ▪ To easily get in touch with one person about one question 	<p>Does not think very much about VA. Have used VA benefits in lifetime, yet often years will go by between those interactions. This might be because these veterans live in places where it is difficult to access VA services, because veterans are financially comfortable, or because it seems like too much hassle. Tend to prefer quick interaction—a short phone call or a few clicks on a website.</p> <p>Expectations</p> <ul style="list-style-type: none"> ▪ That VA is slow—like any bureaucracy ▪ That VA is for “other, injured veterans who need it more” ▪ That someone will tell veterans when and if they are eligible for something <p>Needs</p> <ul style="list-style-type: none"> ▪ To be able to quickly navigate processes ▪ To be reminded every few years of how VA might be able to help

Vantage Point: VA’s Official Blog

In addition to surveys, focus groups, and town-hall sessions, VA instituted a blog on its website and invites veterans and others interested in veterans matters to submit guest posts of potential interest to others in the community. Like most blogs, the content offered is vetted by the VA. Since 2010, Vantage Point includes hundreds of contributors with articles on various health care topics.⁸¹²

Veterans’ Views Gathered by VSOs

Like VHA, the VSOs solicit input from their membership and other stakeholders on a variety of topics and issues relevant to veterans. Occasionally surveys and polls are undertaken, but most VSO efforts to gather input take place at the grassroots level during town halls, chapter meetings and other gatherings. While these venues often suffer from self-selection bias and non- or under-represented participant samples, these are nevertheless an important source of timely information on topics of interest and concern to veterans. What follows is a selection of VSO efforts to gather input on issues important to veterans.

⁸¹² “Vantage Point: Official Blog of the U.S. Department of Veterans Affairs,” Department of Veterans Affairs, accessed June 20, 2016, <http://www.blogs.va.gov/VAntage/>.

COMMISSION ON CARE FINAL REPORT

The DAV Veterans Pulse Survey (2015)

In mid-2015 the DAV surveyed a nationally representative sample of veterans to solicit their views on issues important to veterans.⁸¹³ The survey includes questions on various aspects of veterans' healthcare. The survey consists of a national probability sample of 1,701 veterans intended to represent the veteran population in the United States. Oversampling occurred in certain subgroups, such as female veterans and veterans age 18-40 to allow for more precision in the response estimates for these subgroups.

Veterans of Foreign Wars Our Care Veterans Survey (2015)

In the fall of 2015, the Veterans of Foreign Wars of the U.S. (VFW) published a report on its veterans 2015 Health Care Options, Preferences and Expectations Survey.⁸¹⁴ In response to the intensified debate over reform of veterans' healthcare, the VFW launched a survey in the summer of 2015 designed to evaluate veterans' options, expectations, and preferences when seeking health care. The survey did not just focus on VA services, but sought to paint a picture of how the veterans' community at large interacts within the American health care infrastructure, and the choices they make in today's health care marketplace. According to the VFW report, 1,847 veterans responded to the survey, with 92 percent eligible for care and 83 percent of those eligible reporting that they utilize VA health care.⁸¹⁵ Respondents' average age was 65, with about two-thirds Vietnam War veterans.

VFW Survey of Women Veterans (2016)

In an effort to identify barriers women veterans face when accessing their earned veterans' benefits and services, the VFW has commissioned a survey of women veterans that will guide the VFW's policy priority goals for women veterans.⁸¹⁶ Though the survey data collection phase is completed, results have not been published prior to release of the Commission's Final Report.

The American Legion Survey of Patient Health Care Experiences (2014)

This survey of 3,116 opt-in, self-reported veterans focuses on satisfaction and levels of perceived benefits with VA's posttraumatic stress disorder/traumatic brain injury (PTSD/TBI) programs, including alternative and complementary treatments.⁸¹⁷

Survey questions include veteran status; gender; era of service; number of times deployed; diagnosis of TBI and/or PTSD; availability of appointments; time and distance to care facilities; treatment type (therapy, medication and complementary and alternative medicine); reported symptoms; efficacy of treatment; and side effects.

The American Legion Women Veterans Survey Report (2011)

This survey of 3,012 women veterans, and the resulting report, was prepared by ProSidian Consulting, LLC on behalf of The American Legion. The survey assessed the perceptions of and satisfaction with women veterans' health care and other benefits delivered to women veterans through the VA system. Additionally, the survey sought to determine the factors driving women veterans' decision to use the VA system as opposed to other private or public health care systems.⁸¹⁸

Iraq and Afghanistan Veterans of America Member Survey (2015)

During the first half of 2015, 1,501 Iraq and Afghanistan Veterans of America members completed a wide-ranging on-line survey covering such issues as employment, education, GI Bill usage, health (including mental health), VA utilization, VA benefits, reintegration and more. The survey was composed of approximately 300 questions, with respondents answering only questions relevant to their experiences. Health care topics included percent enrollment in and reliance on VA care; health insurance coverage by type; and experience rating for VA care. Usage percent and experiencing rating for the VA *Choice Program* was also covered separately.⁸¹⁹

The 2015 Wounded Warrior Project® Alumni Survey

This web-enabled, opt-in survey of 23,200 Wounded Warrior Project (WWP) members measures a series of outcome domains within the following general topics about WWP Alumni: background information (military experiences and demographic data), physical and mental well-being, and economic empowerment.⁸²⁰ This WWP membership survey has been conducted annually since 2010. As it has done in prior years, Westat conducts the survey and population-

COMMISSION ON CARE FINAL REPORT

weights the reported results, to include adjustments for potential non-response bias, to be representative of the WWP membership base (approximately 59,000).

Right to Care: Voices of Swords to Plowshares' Veteran Community (2015)

The Swords to Plowshares, Institute for Veteran Policy interviewed in-person or by phone 22 veterans.⁸²¹ Although the topics were established in advance, Swords to Plowshares characterized these interviews as individual “conversations” with a preselected group of veterans. The veterans were chosen to represent a cross-section of combat eras and VHA usage levels. The topics covered included: navigating VA care, reliance on VA and non-VA care, comprehensiveness of care, and rating quality of care. The study includes extensive verbatim comments from veterans on these topics.

Comments from Veterans About Their Experiences as Users of VHA (DAV, 2016)

During April 2016, DAV reached out to veterans around the United States and asked them to share their experiences with the VA health care system. As a result, DAV received (as of April 2016) more than 4,000 responses from veterans sharing their own stories about the care they received from VHA.⁸²² The Commission’s review of the material showed that a majority of the veterans’ comments were positive in nature. DAV’s own analysis concluded that 82 percent of the comments could be categorized as “overall positive experiences.”

Other Surveys on Veterans Issues

In addition to efforts by VA and VSOs to gather feedback from veterans on their health care, other organizations have also addressed veterans’ health care issues.

Concerned Veterans for America Survey of Veterans' Healthcare (November, 2014)

The Concerned Veterans for America commissioned The Tarrance Group to conduct a national survey of 1,000 veterans during November 2014.⁸²³ This survey used a random, demographically representative sample of veterans. Four survey items addressed health care, including: knowledge of any problems at VA; need for reform of veterans’ healthcare; importance of more choice (or options) in health care for veterans; and importance of best possible veterans care, even if outside VA.

Vet Voice Foundation Survey of Veterans (October, 2015)

Chesapeake Beach Consulting and Lake Research Partners conducted 800 phone (landline and cell) interviews of veterans during October 2015. The results were population weighted by demographics. Topics included rating the job VA hospitals are doing in their area and the extent they favor/oppose privatizing some of VA's health care.

COMMISSION ON CARE FINAL REPORT

APPENDIX H: ADDITIONAL RESOURCES

The VHA health care system is immense and complex. This report provides background for the areas for which the Commission has made recommendations, yet this information is but a glimpse at the intricacies of veterans' health care. The resources below may serve as a starting point for those who would like to develop a deeper understanding of the topic than the Commission could address in this report.

Veteran Health Competency Resources

American Nurses Foundation

The American Nurses Foundation, the philanthropic arm of the American Nurses Association, is launching an innovative web-based PTSD Toolkit for registered nurses. The toolkit provides easy to access information and simulation based on gaming techniques on how to identify, assess and refer veterans suffering from PTSD. www.nurseptsdtoolkit.org

American Osteopathic Association

The American Osteopathic Association (AOA) represents osteopathic physicians, many of whom are in primary care practice, and essentially all of whom treat America's veterans and their families. The AOA is raising awareness in the osteopathic community about the importance of having a comprehensive understanding of the unique physical and mental health care needs of our service members, veterans, and their families. The AOA is committed to ensuring that medical students, physicians, and other health care providers understand that an individual's physical and/or mental health condition may be linked to his or her military experience.

VA-18-0457-A-001882

Center for Deployment Psychology

The Center for Deployment Psychology of the Uniformed Services University of the Health Sciences, Department of Medical and Clinical Psychology offer a wide variety of on-line courses and other resources to help uniformed clinical providers, VHA providers, and community clinicians provide care consistent with the needs and experience of military service members, veterans and their families.

<http://deploymentpsych.org/online-courses>

<http://deploymentpsych.org/military-culture-course-modules>

Rural Clergy Training Program

The Rural Clergy Training Program, an initiative of the VHA National Chaplain Center and the Office of Rural Health, offers training and information to clergy providing pastoral services to veterans and their families.

http://www.ruralhealth.va.gov/docs/ruralclergytraining/The_Clergy_Connection_December_2015.pdf

Swords to Plowshares Combat to Community Training

Swords to Plowshares is nationally recognized for its expertise in providing comprehensive services and promoting and protecting the rights of veterans. Swords to Plowshares' *Combat to Community*® training is a series of accredited cultural competency curricula developed by its Institute for Veteran Policy team with the purpose of educating the community to address the reintegration challenges veterans face and the unique skill sets they acquire in service. The training was developed for law enforcement, first responder, mental health, and service professionals to teach:

- Commonly shared attitudes, values, goals, and practice that often characterize service in the military
- Recruitment and retention strategies for veteran employment
- How deployment, combat experience, service related injuries, and disability can impact veterans
- How veteran or military family status can inform interactions and services
- Potential resources to refer veterans and families to for supportive services

The training incorporates knowledge developed by experts in the fields of veteran culture and direct services with practical tools and resources to increase understanding and improve interactions with veterans.

COMMISSION ON CARE FINAL REPORT

VA Military Culture Training Courses on TMS

The resources below are available to VA employees and contractors. Versions of these courses should be made available to community providers through an alternative to TMS that allows outside providers to access the training.

- **Military Culture Training for Health Care Professionals – Organization and Roles (VA 19332)**

The first module of this online course provides an overview of the differences between the explicit and implicit features of military culture and describes the characteristics of implicit military culture. The next module identifies four sources of information about implicit military culture and describes six defining characteristics of warrior ethos. The learner is provided information about the influence of military guiding ideals and values on the lives of service members and veterans. The final module offers an overview regarding the connotations of implicit military culture on the health care professional.

- **Military Culture Training for Health Care Professionals: Self-Awareness and Military Ethos (VA 19333)**

This online course, sponsored by the Department of Veterans Affairs and Department of Defense, helps health care professionals understand the role that military culture plays in the lives of those they serve. The course is comprised of four modules: 1) Self-Assessment and Introduction to Military Ethos, 2) Military Organization and Roles, 3) Stressors and Their Impact, and 4) Treatment Resources and Tools.

- **Military Culture Training for Health Care Professionals: Stressors & Resources (VA 19334)**

This online course offers the learner an explanation of how stress can be either helpful or harmful depending on the nature of the provoking stressor and the availability of resources. The four phases of modern operational deployment cycles is presented in great detail in module 3. The next two modules describe the characteristic operational stressors and the spectrum of operational stress states and outcomes experienced by service members and their families during each deployment cycle phase.

- **Military Culture Training for Health Care Professionals: Treatment Resources, Prevention & Treatment (VA 19335)**

This online course in the military culture curriculum outlines the military culture impact on patient care and the health care professional's role and explains the range of DoD and VA psychological health services. The course also provides information on interpreting military culture knowledge into patient assessment and treatment. Finally, the learner is exposed to the military culture implications of VA/DoD clinical practice guidelines relevant to the care of service members and veterans and the strategies for identifying current military culture relevant patient and health care professional resources.

- **Military Cultural Awareness (NFED 1341520)**

This military cultural awareness online course provides a common foundation for all VA employees. This course offers an overview of common military culture and courtesies, roles and ranks within the military, differences between the branches of the armed services, some of the conflicts in which veterans have served, and why this information

VA-18-0457-A-001884

is important in helping VA employees better serve the needs of veterans and their families. After taking this course, participants will understand the perspective of the veterans they serve by having a greater awareness of the military experience, and the customs and courtesies that are common in the military environment.

- **PTSD 101: Understanding Military Culture When Treating PTSD (VA 9494)**
This online web-based course is part of the PTSD 101 education series which is presented by subject-matter experts to increase provider knowledge related to the assessment and treatment issues of PTSD. Each course specifically addresses trauma events, treatments, or special population issues, not normally addressed in general therapy protocols. This course is specifically designed to familiarize clinicians with military culture, terminology, demographics, and stressors. It also provides an overview of programs offered by DoD for managing combat or operational stress, as well as implications for assessment and treatment.
- **Why Military Culture Matters (Mobile Accessible) (VA 16353)**
This independent online study activity is designed to help the learner better connect with veterans and understand how veterans' military experiences influence their health. This course is formatted to be accessible using a VA networked mobile device.

APPENDIX I: ENABLING DOCUMENTS

Veterans Access, Choice, and Accountability Act of 2014

TITLE II—HEALTH CARE ADMINISTRATIVE MATTERS

SEC. 201. INDEPENDENT ASSESSMENT OF THE HEALTH CARE DELIVERY SYSTEMS AND MANAGEMENT PROCESSES OF THE DEPARTMENT OF VETERANS AFFAIRS.

(a) INDEPENDENT ASSESSMENT. —

(1) ASSESSMENT. — Not later than 90 days after the date of the enactment of this Act, the Secretary of Veterans Affairs shall enter into one or more contracts with a private sector entity or entities described in subsection (b) to conduct an independent assessment of the hospital care, medical services, and other health care furnished in medical facilities of the Department. Such assessment shall address each of the following:

(A) Current and projected demographics and unique health care needs of the patient population served by the Department.

(B) Current and projected health care capabilities and resources of the Department, including hospital care, medical services, and other health care furnished by non-Department facilities under contract with the Department, to provide timely and accessible care to veterans.

(C) The authorities and mechanisms under which the Secretary may furnish hospital care, medical services, and other health care at non-Department facilities, including whether the Secretary should have the authority to furnish such care and services at such facilities through the completion of episodes of care.

(D) The appropriate system-wide access standard applicable to hospital care, medical services, and other health care furnished by and through the Department, including an identification of appropriate access standards for each individual specialty and post-care rehabilitation.

(E) The workflow process at each medical facility of the Department for scheduling appointments for veterans to receive hospital care, medical services, or other health care from the Department.

(F) The organization, workflow processes, and tools used by the Department to support clinical staffing, access to care, effective length-of-stay management and care transitions, positive patient experience, accurate documentation, and subsequent coding of inpatient services.

VA-18-0457-A-001889

COMMISSION ON CARE FINAL REPORT

(G) The staffing level at each medical facility of the Department and the productivity of each health care provider at such medical facility, compared with health care industry performance metrics, which may include an assessment of any of the following:

(i) The case load of, and number of patients treated by, each health care provider at such medical facility during an average week.

(ii) The time spent by such health care provider on matters other than the case load of such health care provider, including time spent by such health care provider as follows:

(I) At a medical facility that is affiliated with the Department.

(II) Conducting research.

(III) Training or supervising other health care professionals of the Department.

(H) The information technology strategies of the Department with respect to furnishing and managing health care, including an identification of any weaknesses and opportunities with respect to the technology used by Department, especially those strategies with respect to clinical documentation of episodes of hospital care, medical services, and other health care, including any clinical images and associated textual reports, furnished by the Department in Department or non-Department facilities.

(I) Business processes of the Veterans Health Administration, including processes relating to furnishing non-Department health care, insurance identification, third- party revenue collection, and vendor reimbursement, including an identification of mechanisms as follows:

(i) To avoid the payment of penalties to vendors.

(ii) To increase the collection of amounts owed to the Department for hospital care, medical services, or other health care provided by the Department for which reimbursement from a third party is authorized and to ensure that such amounts collected are accurate.

(iii) To increase the collection of any other amounts owed to the Department with respect to hospital care, medical services, and other health care and to ensure that such amounts collected are accurate.

(iv) To increase the accuracy and timeliness of Department payments to vendors and providers.

(J) The purchasing, distribution, and use of pharmaceuticals, medical and surgical supplies, medical devices, and health care related services by the Department, including the following:

(i) The prices paid for, standardization of, and use by the Department of the following:

(I) Pharmaceuticals.

(II) Medical and surgical supplies.

(III) Medical devices.

(ii) The use by the Department of group purchasing arrangements to purchase pharmaceuticals, medical and surgical supplies, medical devices, and health care related services.

(iii) The strategy and systems used by the Department to distribute pharmaceuticals, medical and surgical supplies, medical devices, and health care related services to Veterans Integrated Service Networks and medical facilities of the Department.

(K) The process of the Department for carrying out construction and maintenance projects at medical facilities of the Department and the medical facility leasing program of the Department.

(L) The competency of leadership with respect to culture, accountability, reform readiness, leadership development, physician alignment, employee engagement, succession planning, and performance management.

(2) PARTICULAR ELEMENTS OF CERTAIN ASSESSMENTS. —

(A) SCHEDULING ASSESSMENT. — In carrying out the assessment required by paragraph (1)I, the private sector entity or entities shall do the following:

(i) Review all training materials pertaining to scheduling of appointments at each medical facility of the Department.

(ii) Assess whether all employees of the Department conducting tasks related to scheduling are properly trained for conducting such tasks.

(iii) Assess whether changes in the technology or system used in scheduling appointments are necessary to limit access to the system to only those employees that have been properly trained in conducting such tasks.

(iv) Assess whether health care providers of the Department are making changes to their schedules that hinder the ability of employees conducting such tasks to perform such tasks.

(v) Assess whether the establishment of a centralized call center throughout the Department for scheduling appointments at medical facilities of the Department would improve the process of scheduling such appointments.

(vi) Assess whether booking templates for each medical facility or clinic of the Department would improve the process of scheduling such appointments.

(vii) Assess any interim technology changes or attempts by Department to internally develop a long-term scheduling solutions with respect to the feasibility and cost effectiveness of such internally developed solutions compared to commercially available solutions.

(viii) Recommend actions, if any, to be taken by the Department to improve the process for scheduling such appointments, including the following:

COMMISSION ON CARE FINAL REPORT

(1) Changes in training materials provided to employees of the Department with respect to conducting tasks related to scheduling such appointments.

(II) Changes in monitoring and assessment conducted by the Department of wait times of veterans for such appointments.

(III) Changes in the system used to schedule such appointments, including changes to improve how the Department –

(aa) measures wait times of veterans for such appointments;

(bb) monitors the availability of health care providers of the Department; and

(cc) provides veterans the ability to schedule such appointments.

(IV) Such other actions as the private sector entity or entities considers appropriate.

(B) MEDICAL CONSTRUCTION AND MAINTENANCE PROJECT AND LEASING PROGRAM ASSESSMENT. – In carrying out the assessment required by paragraph (1)(K), the private sector entity or entities shall do the following:

(i) Review the process of the Department for identifying and designing proposals for construction and maintenance projects at medical facilities of the Department and leases for medical facilities of the Department.

(ii) Assess the process through which the Department determines the following:

(1) That a construction or maintenance project or lease is necessary with respect to a medical facility or proposed medical facility of the Department.

(II) The proper size of such medical facility or proposed medical facility with respect to treating veterans in the catchment area of such medical facility or proposed medical facility.

(iii) Assess the management processes of the Department with respect to the capital management programs of the department, including processes relating to the methodology for construction and design of medical facilities of the Department, the management of projects relating to the construction and design of such facilities, and the activation of such facilities.

(iv) Assess the medical facility leasing program of the Department.

(3) TIMING. – The private sector entity or entities carrying out the assessment required by paragraph (1) shall complete such assessment not later than 240 days after entering into the contract described in such paragraph.

(b) PRIVATE SECTOR ENTITIES DESCRIBED. – A private entity described in this subsection is a private entity that –

(1) has experience and proven outcomes in optimizing the performance of the health care delivery systems of the Veterans Health Administration and the private sector and in health care management; and

(2) specializes in implementing large-scale organizational and cultural transformations, especially with respect to health care delivery systems.

(c) PROGRAM INTEGRATOR. —

(1) IN GENERAL. — If the Secretary enters into contracts with more than one private sector entity under subsection (a), the Secretary shall designate one such entity that is predominately a health care organization as the program integrator.

(2) RESPONSIBILITIES. — The program integrator designated pursuant to paragraph (1) shall be responsible for coordinating the outcomes of the assessments conducted by the private entities pursuant to such contracts.

(d) REPORT ON ASSESSMENT. —

(1) IN GENERAL. — Not later than 60 days after completing the assessment required by subsection (a), the private sector entity or entities carrying out such assessment shall submit to the Secretary of Veterans Affairs, the Committee on Veterans' Affairs of the Senate, the Committee on Veterans' Affairs of the House of Representatives, and the Commission on Care established under section 202 a report on the findings and recommendations of the private sector entity or entities with respect to such assessment.

(2) PUBLICATION. — Not later than 30 days after receiving the report under paragraph (1), the Secretary shall publish such report in the Federal Register and on an Internet website of the Department of Veterans Affairs that is accessible to the public.

(e) NON-DEPARTMENT FACILITIES DEFINED. — In this section, the term “non-Department facilities” has the meaning given that term in section 1701 of title 38, United States Code.

SEC. 202. COMMISSION ON CARE.

(a) ESTABLISHMENT OF COMMISSION. —

(1) IN GENERAL. — There is established a commission, to be known as the “Commission on Care” (in this section referred to as the “Commission”), to examine the access of veterans to health care from the Department of Veterans Affairs and strategically examine how best to organize the Veterans Health Administration, locate health care resources, and deliver health care to veterans during the 20-year period beginning on the date of the enactment of this Act.

(2) MEMBERSHIP. —

(A) VOTING MEMBERS. — The Commission shall be composed of 15 voting members who are appointed as follows:

(i) Three members appointed by the Speaker of the House of Representatives, at least one of whom shall be a veteran.

COMMISSION ON CARE FINAL REPORT

(ii) Three members appointed by the Minority Leader of the House of Representatives, at least one of whom shall be a veteran.

(iii) Three members appointed by the Majority Leader of the Senate, at least one of whom shall be a veteran.

(iv) Three members appointed by the Minority Leader of the Senate, at least one of whom shall be a veteran.

(v) Three members appointed by the President, at least two of whom shall be veterans.

(B) QUALIFICATIONS. — Of the members appointed under subparagraph (A) —

(i) at least one member shall represent an organization recognized by the Secretary of Veterans Affairs for the representation of veterans under section 5902 of title 38, United States Code;

(ii) at least one member shall have experience as senior management for a private integrated health care system with an annual gross revenue of more than \$50,000,000;

(iii) at least one member shall be familiar with government health care systems, including those systems of the Department of Defense, the Indian Health Service, and Federally-qualified health centers (as defined in section 1905(l)(2)(B) of the Social Security Act (42 U.S.C. 1396d(l)(2)(B)));

(iv) at least one member shall be familiar with the Veterans Health Administration but shall not be currently employed by the Veterans Health Administration; and

(v) at least one member shall be familiar with medical facility construction and leasing projects carried out by government entities and have experience in the building trades, including construction, engineering, and architecture.

I DATE. — The appointments of members of the Commission shall be made not later than 1 year after the date of the enactment of this Act.

(3) PERIOD OF APPOINTMENT. —

(A) IN GENERAL. — Members shall be appointed for the life of the Commission.

(B) VACANCIES. — Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner as the original appointment.

(4) INITIAL MEETING. — Not later than 15 days after the date on which eight voting members of the Commission have been appointed, the Commission shall hold its first meeting.

(5) MEETINGS. — The Commission shall meet at the call of the Chairperson.

(6) QUORUM. — A majority of the members of the Commission shall constitute a quorum, but a lesser number of members may hold hearings.

(7) CHAIRPERSON AND VICE CHAIRPERSON. — The President shall designate a member of the commission to serve as Chairperson of the Commission. The Commission shall select a Vice Chairperson from among its members.

(b) DUTIES OF COMMISSION. —

(1) EVALUATION AND ASSESSMENT. — The Commission shall undertake a comprehensive evaluation and assessment of access to health care at the Department of Veterans Affairs.

(2) MATTERS EVALUATED AND ASSESSED. — In undertaking the comprehensive evaluation and assessment required by paragraph (1), the Commission shall evaluate and assess the results of the assessment conducted by the private sector entity or entities under section 201, including any findings, data, or recommendations included in such assessment.

(3) REPORTS. — The Commission shall submit to the President, through the Secretary of Veterans Affairs, reports as follows:

(A) Not later than 90 days after the date of the initial meeting of the Commission, an interim report on—

(i) the findings of the Commission with respect to the evaluation and assessment required by this subsection; and

(ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through the Veterans Health Administration.

(B) Not later than 180 days after the date of the initial meeting of the Commission, a final report on—

(i) the findings of the Commission with respect to the evaluation and assessment required by this subsection; and

(ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through the Veterans Health Administration.

(c) POWERS OF THE COMMISSION. —

(1) HEARINGS. — The Commission may hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Commission considers advisable to carry out this section.

(2) INFORMATION FROM FEDERAL AGENCIES. — The Commission may secure directly from any Federal agency such information as the Commission considers necessary to carry out this section. Upon request of the Chairperson of the Commission, the head of such agency shall furnish such information to the Commission.

(d) COMMISSION PERSONNEL MATTERS. —

(1) COMPENSATION OF MEMBERS. —

(A) IN GENERAL. — Each member of the Commission who is not an officer or employee of the Federal Government shall be compensated at a rate equal to the daily

COMMISSION ON CARE FINAL REPORT

equivalent of the annual rate of basic pay prescribed for level IV of the Executive Schedule under section 5315 of title 5, United States Code, for each day (including travel time) during which such member is engaged in the performance of the duties of the Commission.

(B) OFFICERS OR EMPLOYEES OF THE UNITED STATES. — All members of the Commission who are officers or employees of the United States shall serve without compensation in addition to that received for their services as officers or employees of the United States.

(2) TRAVEL EXPENSES. — The members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence, at rates authorized for employees of agencies under subchapter I of chapter 57 of title 5, United States Code, while away from their homes or regular places of business in the performance of services for the Commission.

(3) STAFF. —

(A) IN GENERAL. — The Chairperson of the Commission may, without regard to the civil service laws and regulations, appoint and terminate an executive director and such other additional personnel as may be necessary to enable the Commission to perform its duties. The employment of an executive director shall be subject to confirmation by the Commission.

(B) COMPENSATION. — The Chairperson of the Commission may fix the compensation of the executive director and other personnel without regard to chapter 51 and subchapter III of chapter 53 of title 5, United States Code, relating to classification of positions and General Schedule pay rates, except that the rate of pay for the executive director and other personnel may not exceed the rate payable for level V of the Executive Schedule under section 5316 of such title.

(4) DETAIL OF GOVERNMENT EMPLOYEES. — Any Federal Government employee may be detailed to the Commission without reimbursement, and such detail shall be without interruption or loss of civil service status or privilege.

(5) PROCUREMENT OF TEMPORARY AND INTERMITTENT SERVICES. — The Chairperson of the Commission may procure temporary and intermittent services under section 3109(b) of title 5, United States Code, at rates for individuals that do not exceed the daily equivalent of the annual rate of basic pay prescribed for level V of the Executive Schedule under section 5316 of such title.

(e) TERMINATION OF THE COMMISSION. — The Commission shall terminate 30 days after the date on which the Commission submits the report under subsection (b)(3)(B).

(f) FUNDING. — The Secretary of Veterans Affairs shall make available to the Commission from amounts appropriated or otherwise made available to the Secretary such amounts as the Secretary and the Chairperson of the Commission jointly consider appropriate for the Commission to perform its duties under this section.

(g) EXECUTIVE ACTION. —

(1) ACTION ON RECOMMENDATIONS. — The President shall require the Secretary of Veterans Affairs and such other heads of relevant Federal departments and agencies to

VA-18-0457-A-001896

implement each recommendation set forth in a report submitted under subsection (b)(3) that the President —

(A) considers feasible and advisable; and

(B) determines can be implemented without further legislative action.

(2) REPORTS. — Not later than 60 days after the date on which the President receives a report under subsection (b)(3), the President shall submit to the Committee on Veterans' Affairs of the Senate and the Committee on Veterans' Affairs of the House of Representatives and such other committees of Congress as the President considers appropriate a report setting forth the following:

(A) an assessment of the feasibility and advisability of each recommendation contained in the report received by the President.

(B) For each recommendation assessed as feasible and advisable under subparagraph (A) the following:

(i) Whether such recommendation requires legislative action.

(ii) If such recommendation requires legislative action, a recommendation concerning such legislative action.

(iii) A description of any administrative action already taken to carry out such recommendation.

(iv) A description of any administrative action the President intends to be taken to carry out such recommendation and by whom.

H.R. 4437: Extension of Deadline for Submittal of Final Report by Commission on Care

[114th Congress Public Law 131]

[[Page 130 STAT. 292]]

Public Law 114-131

114th Congress

An Act

To extend the deadline for the submittal of the final report required by the Commission on Care.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. 38 USC 1701; EXTENSION OF DEADLINE FOR SUBMITTAL OF FINAL REPORT BY COMMISSION ON CARE.

COMMISSION ON CARE FINAL REPORT

Section 202(b)(3)(B) of the Veterans Access, Choice, and Accountability Act of 2014, 128 Stat. 1775 (Public Law 113-146; 128 Stat. 1773) is amended by striking “Not later than 180 days after the date of the initial meeting of the Commission” and inserting “Not later than June 30, 2016”.

Approved February 29, 2016.

DEPARTMENT OF VETERANS AFFAIRS
CHARTER OF THE
COMMISSION ON CARE

1. OFFICIAL DESIGNATION: Commission on Care
2. AUTHORITY: The Commission on Care established as required by section 202 of the Veterans Access, Choice, and Accountability Act of 2014 (VACAA), Public Law 113-146, and operates under the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. App. 2.
3. OBJECTIVES AND SCOPE OF ACTIVITIES: The Commission on Care (the "Commission") is established to examine the access of Veterans to health care from the Department of Veterans Affairs (VA) and strategically examine how best to organize the Veterans Health Administration (VHA), locate health care resources, and deliver health care to Veterans during the 20-year period beginning on the date of the enactment of VACAA, August 7, 2014.
4. DUTIES OF THE COMMISSION:
 - A. Evaluation and Assessment: In accordance with section 202(b)(1), the Commission shall undertake a comprehensive evaluation and assessment of access to health care at VA.
 - B. Matters Evaluated and Assessed: In undertaking the comprehensive evaluation and assessment required by section 202(b)(1) of VACAA and paragraph (4)(A) above, the Commission shall evaluate and assess the results of the assessment conducted by the private sector entity or entities under section 201 of VACAA, including any findings, data, or recommendations included in such assessment.
 - C. Reports: In accordance with section 202(b)(3) of VACAA, submit an interim report not later than 90 days after the initial meeting of the Commission to the President, through the Secretary of Veterans Affairs, and a final report not later than 180 days after the initial meeting of the Commission. The reports shall include (i) the findings of the Commission with respect to the evaluation and assessment required by section 202(b)(1); and (ii) such recommendations as the Commission may have for legislative or administrative action to improve access to health care through VHA.
5. OFFICIAL TO WHOM THE COMMISSION REPORTS: The Commission reports to the President, through the Secretary of Veterans Affairs.

VA is responsible for ensuring the reporting requirements of Section 6(b) of the FACA are fulfilled.

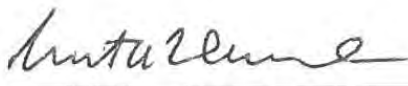

COMMISSION ON CARE FINAL REPORT

6. OFFICE RESPONSIBLE FOR PROVIDING THE NECESSARY SUPPORT FOR THE COMMISSION: VHA is responsible for providing support to the Commission.
7. ESTIMATED ANNUAL OPERATING COSTS AND STAFF-YEARS: Annual operating cost for the Commission is estimated at \$3,600,000 per year, including compensation of members and staff, in accordance with section 202(d) of VACAA. All members will receive travel expenses and a per diem allowance in accordance with the Federal Travel Regulations for any travel made in connection with their duties as members of the Commission. Approximately 15 FTE are anticipated.
8. DESIGNATED FEDERAL OFFICER: The Designated Federal Officer (DFO) or an Alternate DFO, full-time or permanent part-time VA employees, will be present at all meetings, including subcommittee meetings. The DFO will work with the Commission Chair to schedule the meetings and develop meeting agendas. The DFO is authorized to adjourn any meeting when he or she determines it is in the public interest to do so.
9. ESTIMATED NUMBER AND FREQUENCY OF MEETINGS: The Commission will meet at the call of the Chair for the duration of the Commission. The Commission may hold such hearings, sit and act at such times and places, and take such testimony, and receive such evidence as the Commission considers advisable to carry out its duties under section 202 of VACAA. A majority of the members of the Commission shall constitute a quorum, but a lesser number of members may hold hearings.
10. DURATION: The Commission is subject to the termination date as specified below in section 11.
11. TERMINATION: The Commission shall terminate 30 days after the date on which the Commission submits the final report required by section 202(b)(3)(B) of VACAA.
12. MEMBERSHIP: The Commission shall be composed of 15 voting members who are appointed as Special Government Employees and described in paragraph (A) below for the life of the Commission and have the qualifications described in paragraph (B) below:
 - A. APPOINTMENT AUTHORITY:
 - i. Three members appointed by the Speaker of the House of Representatives, at least one of whom shall be a Veteran.
 - ii. Three members appointed by the Minority Leader of the House of Representatives, at least one of whom shall be a Veteran.

- iii. Three members appointed by the Majority Leader of the Senate, at least one of whom shall be a Veteran.
 - iv. Three members appointed by the Minority Leader of the Senate, at least one of whom shall be a Veteran.
 - v. Three members appointed by the President, at least two of whom shall be Veterans.
- B. QUALIFICATIONS: Of the members appointed under 12(A) –
- i. At least one member shall represent an organization recognized by the Secretary of Veterans Affairs for the representation of Veterans under 38 U.S.C. 5902;
 - ii. At least one member shall have experience as senior management for a private integrated health care system with an annual gross revenue of more than \$50,000,000;
 - iii. At least one member shall be familiar with government health care systems, including those systems of the Department of Defense, the Indian Health Service, and Federally-qualified health centers (as defined by in section 1905(1)(2)(B) of the Social Security Act (42 U.S.C. 1396d(1)(2)(B));
 - iv. At least one member shall be familiar with VHA but shall not be currently employed by VHA; and
 - v. At least one member shall be familiar with medical facility construction and leasing projects carried out by government entities and have experience in the building trades, including construction, engineering, and architecture.
- C. CHAIRPERSON AND VICE CHAIRPERSON: The President shall designate a member of the Commission to serve as Chairperson of the Commission. The Commission shall select a Vice Chairperson from among its members.
- D. VACANCIES: If a vacancy occurs, it shall be filled in the same manner as the original appointment.
13. SUBCOMMITTEES: The Commission is authorized to establish subcommittees, with DFO approval, to perform specific projects or assignments as necessary and consistent with its mission. The Commission Chair shall notify the Secretary, through the DFO, of the establishment of any subcommittee, including its function, membership, and estimated duration. Subcommittees will report back to the Commission.
14. RECORDKEEPING: Records of the Committee shall be handled in accordance with General Records Schedule 26 or other approved agency records disposition schedules. Those records shall be available for public inspection and copying, subject to the Freedom of Information Act 5, U.S.C. 552.

COMMISSION ON CARE FINAL REPORT

15. DATE CHARTER IS FILED:

Approved:  Date 7/14/15
Robert A. McDonald
Secretary of Veterans Affairs

APPENDIX J:

COMPOSITION OF THE COMMISSION

Nancy M. Schlichting, Chairperson

Appointed by President Barack Obama

Nancy M. Schlichting is Chief Executive Officer of Henry Ford Health System (HFHS), a nationally recognized \$5 billion health care organization with 27,000 employees and recipient of the 2011 Malcolm Baldrige National Quality Award, 2011 John M. Eisenberg Patient Safety Quality Award, and 2004 Foster G. McGaw Award. She is credited with leading the health system through a dramatic financial turnaround and for award-winning patient safety, customer service and diversity initiatives.

Schlichting joined HFHS in 1998 as its Senior Vice President and Chief Administrative Officer, served as Executive Vice President and Chief Operating Officer, President and CEO of Henry Ford Hospital and was named President and CEO of the System in 2003. Her career in health care administration spans over 35 years of experience in senior level executive positions.

Schlichting serves on several national and community boards including The Kresge Foundation, Walgreens Boots Alliance, the Federal Reserve Bank of Chicago – Detroit Branch, the Detroit Regional Chamber, the Detroit Economic Club, and the Downtown Detroit Partnership. Nancy is also a Fellow of the American College of Healthcare Executives.

In 2015, Schlichting was honored as one of the 100 Most Influential People in Healthcare by Modern Healthcare magazine, the eighth time she received this recognition. She was also named to the Top 25 Women in Healthcare by Modern Healthcare, the fourth time she received this recognition and the only Michigander named to the list. Her other awards include: NCHL Gail L. Warden Leadership Excellence award, ACHE Senior-Level Healthcare Executive Regent's Award, AHA/HRET 2014 TRUST Award, Becker's Hospital Review "40 of the Smartest People in Healthcare-2014," Crain's Detroit Business "2012 Newsmaker of the Year," HealthLeaders Media "20 People Who Make Healthcare Better-2012," and most recently was named one of "Crain's 100 Most Influential Women in Michigan."

Author of the acclaimed book, *Unconventional Leadership*, Schlichting is a highly regarded expert and accomplished speaker on strategic leadership, quality, patient/family-centered care, and diversity.

Schlichting received her A.B. in Public Policy Studies, Magna Cum Laude from Duke University and her M.B.A. from Cornell University. She has also been the recipient of honorary doctoral degrees from Walsh College, Eastern Michigan University and Central Michigan University.

COMMISSION ON CARE FINAL REPORT

Delos M. (Toby) Cosgrove, MD, Vice Chairperson*Appointed by Speaker of the House John Boehner*

Toby Cosgrove, CEO of Cleveland Clinic, presides over a \$6.2 billion health care system comprising Cleveland Clinic, eight community hospitals, 16 family health and ambulatory surgery centers, Cleveland Clinic Florida, the Lou Ruvo Center for Brain Health in Las Vegas, Cleveland Clinic Toronto, and Cleveland Clinic Abu Dhabi. His leadership has emphasized patient care and patient experience, including the reorganization of clinical services into patient-centered, organ- and disease-based institutes. He launched major wellness initiatives for patients, employees, and communities. Under his leadership, Cleveland Clinic has consistently been named among America's top four hospitals by U.S. News & World Report and is one of only two hospitals named among America's 99 Most Ethical Companies by the Ethisphere Institute.

Cosgrove was a surgeon in the U.S. Air Force and served in Da Nang, Republic of Vietnam, as the chief of U.S. Air Force casualty staging flight. He received the Bronze Star and the Republic of Vietnam Commendation Medal.

He has published nearly 450 journal articles, book chapters, one book, and 17 training and continuing medical education films. He performed more than 22,000 operations and earned an international reputation for expertise in all areas of cardiac surgery, especially valve repair. As an innovator, Cosgrove has 30 patents filed for developing medical and clinical products used in surgical environments.

Cosgrove received his medical degree from the University of Virginia School of Medicine in Charlottesville, VA, and completed his clinical training at Massachusetts General Hospital, Boston Children's Hospital, and Brook General Hospital in London. He received a BA in biology from Williams College in Williamstown, MA.

Michael A. Blecker*Appointed by House Minority Leader Nancy Pelosi*

Michael Blecker has been associated with Swords to Plowshares since 1976 and has served as Executive Director since 1982. The agency was started in 1974 by returning Vietnam veterans and VISTA volunteers assigned to the VA regional office in San Francisco.

In the 1980s, when homelessness exploded, Swords to Plowshares started a transitional housing program with funding support from VA and the city and county of San Francisco. Swords to Plowshares continues to provide housing, employment, case management, and benefits advocacy for veterans from offices in San Francisco and Oakland. In 2005, the Iraq Vet Project (IVP) was established to help veterans of those wars and to shape policies affecting them. Recognizing Swords to Plowshares' long and effective history of challenging and shaping public policy with regard to veterans, in 2011, the IVP became known as the Institute for Veterans Policy.

Under Blecker's leadership, Swords to Plowshares' annual budget has grown from \$75,000 to nearly \$16 million. He has a nationwide reputation for dedicated service and as an authority on

VA-18-0457-A-001904

veterans' services and veterans' rights. He served on the Advisory Committee on Homeless Veterans (2002-2007), which advises the Secretary of Veterans Affairs. He is cofounder of both the National Coalition for Homeless Veterans and the California Association of Veterans' Service Agencies. He has served on the Congressional Commission on Service Members and Veterans Transition Assistance, the California Senate Commission on Homeless Veterans, the San Francisco Mayor's Homeless Planning Committee, the National Agent Orange Settlement Advisory Board, The Agent Orange Information Center, and the Veterans Speakers Alliance.

Blecker served in the U.S. Army as a combat infantryman in Vietnam in 1968-69 with the 101st Airborne Division, achieving the rank of E-5. He received an AB degree in criminology from University of California, Berkeley and a JD degree from New College of California Law School.

David P. Blom

Appointed by Speaker of the House John Boehner

David Blom has been instrumental in the development and growth of the OhioHealth system. He has served as president of OhioHealth's central Ohio hospitals – Grant Medical Center, Riverside Methodist Hospital, and Doctors Hospital – while also serving as executive vice president and chief operating officer of OhioHealth. He was named president and CEO of OhioHealth in March 2002. He has a track record of achievement with a solid understanding of complex issues facing health care delivery. He has expertise in leading strategic initiatives, managing and developing human capital, improving profitability, and improving quality of care and customer experience.

Blom maintains many professional and community affiliations, currently serving as a board member of the Voluntary Hospitals of America (VHA), a member and treasurer of Columbus' Downtown Development Corporation (CDDC), member of the Columbus Partnership, and member of the local World President's Organization (WPO). In 2001, he was named a Top 100 Business Leader by Smart Business and in 2012 CEO of the Year by Columbus CEO Magazine.

He received a BA from Ohio State University and an MA in health care administration from The George Washington University.

David W. Gorman

Appointed by President Barack Obama

David Gorman is a retired, combat-disabled veteran of the Vietnam War, who was appointed executive director of the Disabled American Veterans (DAV) National Service and Legislative Headquarters in Washington, DC in 1995. His responsibilities include oversight of the DAV National Service, Legislative, and Voluntary Service Programs. He is the organization's principal spokesperson before Congress, the White House, and the U.S. Department of Veterans Affairs.

Gorman entered the U.S. Army in 1969 and served with the 173rd Airborne Brigade, the famed "Sky Soldiers" of the Vietnam War. During a campaign to secure an area in Central Vietnam

COMMISSION ON CARE FINAL REPORT

where U.S. forces suffered extremely high casualties, Mr. Gorman was severely wounded. His wounds required amputation of both legs.

Discharged from the Army in 1970, he immediately joined the DAV and is currently a life member of the DAV's National Amputation Chapter and DAV Chapter 39 in Greer, SC.

Gorman retired from his post executive director at the Washington Headquarters for Disabled American Veterans and now resides in Simpsonville, SC. Gorman attended Cape Cod Community College.

The Honorable Thomas E. Harvey, Esq.

Appointed by Senate Majority Leader Mitch McConnell

Thomas Harvey is a Vietnam combat veteran whose decorations include the Silver Star, the Purple Heart and 12 others for valor and service. In Vietnam, he spent a year as a company commander with the 173rd Airborne brigade and a year and a half as an advisor with the Vietnamese Airborne Division.

A lawyer by training, Harvey has spent much of his professional career working with veterans and issues of concern to them. He has served as Chief Counsel and Staff Director of the Senate Veterans Affairs Committee, Deputy Administrator of the Veterans Administration, and Assistant Secretary for Congressional Affairs of the Department of Veterans Affairs. Following 5 years with a major Wall Street law firm, Harvey came to Washington, DC, in 1977 as a White House fellow, serving as an assistant to ADM Stansfield Turner, then director of the Central Intelligence Agency. He has also served in the Department of Defense and as General Counsel and Congressional Liaison of the United States Information Agency. For 5 years, he was Senior Counselor of the Institute of International Education, which administers the Fulbright Program on behalf of the U.S. Department of State, as well as a number of other international educational exchange programs.

He currently serves on the boards of the Milbank Memorial Fund, the focus of which is public health policy, and of the Art Students League of New York, where he studies watercolor painting. He holds both BA and JD degrees from the University of Notre Dame and a LLM degree from the New York University School of Law.

Maj. Stewart M. Hickey, USMC (ret.)

Appointed by Senate Majority Leader Mitch McConnell

Since 2011, Stewart Hickey has served as American Veterans (AMVETS) National Executive Director, operating the nation's fourth largest congressionally chartered veterans service organization and its subordinate organizations, and the daily advocacy of issues affecting veterans, national security, foreign affairs, and the economy.

Previously, Hickey was chief executive officer for the Hyndman (Pennsylvania) Area Health Center, a multisite community health center providing medical and dental services to several counties of Pennsylvania, West Virginia, and Maryland. His health care administration experience includes serving as chief human resources officer and chief operating officer of

VA-18-0457-A-001906

Western Maryland Hospital Center in Hagerstown, Maryland, a 123-bed Joint Commission on Accreditation of Healthcare Organizations accredited, long-term care and sub-acute hospital with rehabilitation, occupational therapy, physical therapy, and respiratory care.

Hickey enlisted in the U.S. Marine Corps Reserve in February 1977, in Cumberland, MD, as an infantryman, and transferred to platoon leaders class in the summer of 1978. He served in Operation Desert Storm and Desert Shield and was awarded a Bronze Star Medal with Combat "V" for his achievements as commanding officer, Company D, Third Tank Battalion, Task Force RIPPER, 1st Marine Division, I Marine Expeditionary Force, Saudi Arabia from September 1990 to February 1991. His military education includes the Basic School, Armor Officer Basic, Amphibious Warfare School, Armor Officer Advanced Course, and Marine Corps Command and Staff College.

Hickey resides on his family farm in Cumberland Valley Township in McConnellsburg, PA. He and his wife, Ellen, have five children: Monroe, Ali, Charles, Andrew, and Bryce. Three of his sons, Andrew, Monroe, and Charles, followed their father's path and currently serve in the U.S. military.

Hickey received a BA in history from Penn State University and an MA in management from Webster University.

Rear Adm. Joyce M. Johnson, DO, US PHS (ret.)

Appointed by President Barack Obama

Joyce Johnson is a physician with senior public health leadership experience in civilian and military sectors.

Johnson served in the U.S. Public Health Service (Rear Admiral, Upper Half). Her last active-duty assignment was with the U.S. Coast Guard as Director, Health and Safety ("surgeon general"). She managed the Coast Guard's health care system, including 150 sickbays and clinics, and coordinated both medical and behavioral health care for the beneficiary population. She also had responsibility for the Coast Guard's safety and work-life programs. She held a Top Secret security clearance.

Other government assignments included senior scientific and management positions with the Food and Drug Administration (pharmaceutical safety and post-market surveillance) and the Substance Abuse and Mental Health Services Administration. She has held clinical positions at the National Institute of Mental Health and the Department of Veterans Affairs. At the Centers for Disease Control and Prevention, she was an Epidemiologic Intelligence Service (EIS) Officer and staff epidemiologist in the Center for Infectious Disease.

In the private sector, Johnson served as vice president, health sciences and chief medical officer for a large research organization, where she managed a portfolio of government contracts, including laboratory and social sciences research, and held a top secret security clearance.

Johnson is an osteopathic physician board certified in psychiatry and public health/preventive medicine. She is also a certified clinical pharmacologist and certified addiction specialist. In

COMMISSION ON CARE FINAL REPORT

addition to her medical degree, she earned a master's degree in hospital and health administration. She has been conferred six honorary doctoral degrees. She is a Distinguished Life Fellow of the American Psychiatric Association.

Johnson has extensive international health experience on all seven continents. She has particular interests in global mental health, health systems development, infectious disease, and disaster relief. She has led five Flag Expeditions with the Explorers Club. For more than a decade she has been a consultant to the National Science Foundation on the health care system in Antarctica.

Johnson recently coauthored the book, *Lizard Bites and Street Riots, Travel Emergencies and Your Health, Safety and Security*, and writes a monthly medical column. She is a Clinical Professor and Adjunct Professor at Georgetown University. She has served on expert committees including the Committee on Substance Abuse in the Military, National Academy of Medicine. She is active in numerous professional associations including the American Psychiatric Association, serving on the Committee on Psychiatric Dimensions of Disasters; the American Osteopathic Association, serving on the Bureau of International Osteopathic Medicine; and the Explorers Club, serving on the Medical Committee.

The Honorable Ikram U. Khan, MD

Appointed by Senate Minority Leader Harry Reid

Ikram Khan currently, he is president and 50-percent partner of Quality Care Consultants, LLC, founded in March 1992. The company provides consultant services in health care strategy and policy development for employers and other health care organizations. The company assists clients in development and implementation of wellness and disease-management programs. The company also develops quality improvement initiatives and techniques and assists in development and implementation of programs for cost-effective utilization of medical resources. Major emphasis is on clinical outcomes and data monitoring analysis.

Khan is a member the United States Institute of Peace (USIP) Board of Directors; he was nominated by President George Bush, and confirmed by the U.S. Senate on June 5, 2008. He is also currently a member of the Nevada Homeland Security Commission, having been appointed by the Governor of Nevada.

He was nominated by President Clinton and confirmed by the U.S. Senate to serve as member of The Board of Regents Uniformed Services University of Health Sciences, an advisory board to U.S. Secretary of Defense (1999-2006).

Khan also served as Special Advisor on Healthcare to Former Nevada Governor Gibbons, was a member of the Nevada Academy of Health (appointed by Nevada Governor Gibbons), and is a past member of the Nevada Academy of Health Sciences (appointed by Nevada Governor Kenny Guinn). He is past member of Nevada Governor's Commission for Medical Education, Research and Training and was a member of the Nevada State Board of Medical Examiners for eight years. Dr. Khan received "Special Congressional Recognition" for invaluable community service in 1994 and a Congressional citation—"U.S. Senate - Honoring Dr. Ikram Khan"—on April 25, 1994.

VA-18-0457-A-001908

Khan currently serves as member on the board of trustees at Sunrise Hospital Las Vegas-a 600 bed hospital. He has received recognition as “Most Influential Man in Southern Nevada” in 2000. He is also a recipient of a Las Vegas Chamber of Commerce community achievement award (October 1999), and a “Distinguished Community Service Award” from Anti-defamation League of B’nai B’rith (1994).

November 30, 1999 was declared “Dr. Ikram U. Khan Day” by the Governor of the State of Nevada, Mayor of Las Vegas, and the Board of Commissioners of Clark County.

During the course of his practice as General Surgeon, Khan has served in multiple leadership positions at various hospitals in Las Vegas.

Ikram Khan is president of quality Care Consultants LLC in Las Vegas Nevada. He received a doctor of medicine and surgery (MBBS) degree from University of Karachi, Pakistan.

Khan received a Doctor of Medicine and Surgery (MB, BS) in August 1972 from the University of Karachi, Pakistan. He completed post-graduate surgical residency in General Surgery in New York from 1974 through 1978, and practiced as a General Surgeon in Las Vegas through 2005.

Phillip J. Longman

Appointed by Senate Minority Leader Harry Reid

Phil Longman is a director at New America, a public policy institute. He is also a senior editor at the Washington Monthly and a lecturer at Johns Hopkins University, where he teaches a course in health care policy.

Longman has written extensively on issues related to health care delivery system reform, including in his book *Best Care Anywhere* (currently in its third edition). The book chronicles the quality transformation of the Veterans Health Administration during the 1990s and applies its lessons to the broader U.S. health care system.

Longman received a BA in philosophy from Oberlin College.

Col. Lucretia M. McClenney, USA (ret.)

Appointed by House Minority Leader Nancy Pelosi

Lucretia McClenney is a consultant with the Department of Defense Vietnam War Commemoration Office and Executive Coach with the Brookings Institute Executive Education Program. Previously she served as director of the Department of Veterans Affairs Center for Minority Veterans. As director, she served as the principal advisor to the Secretary of Veterans Affairs on policies and programs affecting minority veterans. Prior to her appointment, she served as special assistant to the assistant secretary for policy, planning, and preparedness, Department of Veterans Affairs (VA). She led the department’s emergency exercise planning, training, and evaluation program, and served as liaison to other government agencies. She has served on numerous working groups to include the congressionally mandated National Commission on VA Nursing, Task Force on Employment of Women at VA, and as the Secretary

COMMISSION ON CARE FINAL REPORT

of Veterans Affairs' representative on the American Red Cross Board of Governors and Disaster and Chapter Services Committee.

Serving 30 years in the Army, McClenney retired as a colonel in November 2001. She served in various medical treatment facilities and on staffs worldwide serving as director, population health integration team, TRICARE management activity; chief nurse, European regional medical command and deputy commander for nursing, Landstuhl Regional Medical Command; deputy commander for nursing, Moncrief Army Community Hospital, Fort Jackson, South Carolina; assistant deputy for human resources, Office Of The Assistant Secretary Of The Army for Manpower and Reserve Affairs, the Pentagon; chief ambulatory nursing, Walter Reed Army Medical Center; senior policy analyst, Office of the Secretary of Defense (Health Affairs), The Pentagon; and member of the President's National Health Care Reform Task Force.

McClenney's military and civilian awards/decorations include the Legion of Merit (two oak leaf clusters), Defense Meritorious Service Medal, Meritorious Service Medal (seven oak leaf clusters), Army Commendation Medal (two oak leaf clusters), Navy Commendation Medal, Army Achievement Medal, Army Good Conduct Medal, the Army Staff Identification Badge, Office of the Secretary of Defense Staff Identification Badge, the coveted "9A" designator, in recognition of numerous achievements at the pinnacle of nursing excellence, and The Outstanding Civilian Service Medal for her significant contribution to the mission of the United States Army and Department of Defense in assisting with the production of the book, *For Children of Valor – Arlington National Cemetery*. Her professional affiliations include the Association of Military Surgeons of the United States, Sigma Theta Tau, National Nursing Honor Society, Alpha Kappa Alpha Sorority, Inc., Top Ladies of Distinction, Inc., The ROCKS, Inc., the Order of Military Medical Merit, Past President, Federal Health Care Executives Interagency Institute Alumni Association, and former Board Member of the Bon Secours Health Care System and Chair, Quality Committee.

She is a graduate of the Command and General Staff College and the United States Army War College Fellowship Program at George Washington University, Washington, DC. She is also a graduate of the Johnson & Johnson-Wharton's Fellows Program in Management for Nurse Executives, Wharton School of Business, University of Pennsylvania; Federal Health Care Executives Interagency Institute at George Washington University, Washington, DC; Leadership VA 2004; and Brookings Institute Executive Fellowship Program. She received a BSN from Murray State University and an MS in psychiatric/mental health nursing from Catholic University.

Capt. Darin S. Selnick, USAF (ret.)

Appointed by Speaker of the House John Boehner

Darin Selnick is an independent consultant who provides a variety of services to organizations in the areas of government and community relations, business development, and veterans' issues. He is currently the senior veterans affairs advisor for Concerned Veterans for America and served as executive director of the Fixing Veterans Health Care Bipartisan Taskforce. He also volunteers his time as Chairman of the West Los Angeles Veterans Home Support Foundation and as the Vice President of Development for the GI Film Festival.

VA-18-0457-A-001910

From 2001–2009, Selnick was an appointee at the Department of Veteran Affairs. From 2004–2009 he served as the director of the center for faith-based and community initiatives. In this role he was responsible for the management and operations of the Center and was the VA liaison to the White House Office of faith-based and community initiatives. From 2001–2004 he served as Special Assistant to the Secretary and Associate Dean, VA Learning University. In this role he was responsible for providing program and operational oversight of VA Learning University.

Selnick is a retired Air Force officer who attained the rank of Captain. He has been very active in veterans' issues and joined the Jewish War Veterans in 1994. Since that time he has taken various leadership positions and is the past department commander of the Department of California. Mr. Selnick is also a member of the American Legion, AMVETS, Air Force Association, and National Association of Uniformed Services.

Darin Selnick currently serves as senior veterans' affairs advisor for Concerned Veterans for America and served as executive director of the Fixing Veterans Health Care Bipartisan Taskforce. He lives in Oceanside, CA. Selnick is retired from the U.S. Air Force. He received a BS in health science from California State University, Northridge and an MA in political science/public management from Midwestern State University.

Lt. Gen. Martin Steele, USMC (ret.)

Appointed by Senate Majority Leader Mitch McConnell

Martin Steele enlisted in the Marine Corps in January 1965 and rose from private to three-star general, culminating his military career in August 1999 as the deputy chief of staff for plans, policies, and operations at Headquarters, U.S. Marine Corps, in Washington, DC. A decorated combat veteran with 34½ years of service, he is a recognized expert in the integration of all elements of national power (diplomatic, economic, informational, and military) with strategic military war plans and has served as an executive strategic planner/policy director in multiple theaters across Asia. His extraordinary career was chronicled as one of three principals in the award winning military biography, *Boys of '67*, by Charles Jones.

Upon his retirement from active duty in 1999, he served as president and CEO of the Intrepid Sea-Air-Space Museum in New York City. Currently, Steele serves as The Associate Vice President for Veterans Partnerships, the Executive Director, Military Partnerships, and Co-chair of the Veterans Reintegration Steering Committee at the University of South Florida in Tampa, Florida. Additionally, Steele is the chairman and CEO of Steele Partners, Inc., a strategic advisory and leadership consulting company. He has led a philanthropic transition program assisting exiting Marines into private-sector jobs throughout the country, at no cost to the Marine participants, the Marine Corps, or the companies that provide employment opportunities.

Steele serves proudly on several boards across the country. He is currently the Chairman of the Board, Marine Corps Scholarship Foundation. He was appointed to the Board of Directors of Florida is for Veterans, Inc., a not for profit, state legislated organization designed to assist both Veterans and businesses throughout Florida in not only hiring Veterans but also developing entrepreneurship programs designed for veterans. He is a member of Fisher House Foundation;

VA-18-0457-A-001911

COMMISSION ON CARE FINAL REPORT

chairman of the advisory committee, Stability Institute; advisory committee member, Call of Duty Endowment; advisory board member, Stay in Step Foundation; advisory council member, Operation Helping Hand; member, Veterans Advantage; board member, University of Arkansas Veterans Resource and Information Center; and advisory committee member, Jesse Lewis Choose Love Movement.

Steele is a graduate of the University of Arkansas where he obtained a bachelor's degree in history and was recognized as a distinguished graduate of the Fulbright College of Arts and Sciences. He is a recipient of the 2013 Arkansas Alumni Award Citation of Distinguished Alumni, which recognizes exceptional professional and personal achievement and extraordinary distinction in a chosen field. He also holds master's degrees from Central Michigan University, Salve Regina College, and Naval War College.

Charlene M. Taylor

Appointed by House Minority Leader Nancy Pelosi

Charlene Taylor joined Kaiser Permanente in 1997 as the director of specialty services for the Permanente Medical Group at South Sacramento. In 2002 she became the service director for Kaiser Foundation Hospitals, responsible for perioperative and perinatal services at South Sacramento. In 2008, she was promoted to chief nursing officer at the Sacramento Medical Center where she was responsible for a 287-bed tertiary acute care hospital that conducted more than 11,000 operations per year. There, she oversaw 800 full-time employees and a budget of \$150 million. Taylor was promoted to chief operating officer in 2010 and retired from Kaiser Permanente in 2013.

Before working for Kaiser Permanente, Taylor served as assistant hospital administrator for Sutter Health at the Sutter Amador Hospital from 1988 to 1997. She is a member of the Veterans of Foreign Wars, Reserve Officers Association, and the Society of Air Force Nurses.

Taylor's patriotic and adventurous nature led her to join the Air Force as a reserve officer at the age of 40, rising to the rank of Lieutenant Colonel. She was commissioned as a Captain in the United States Air Force (Reserve Command) in October 1993, earning her flight nurse wings in 1994. She subsequently was selected to be a flight nurse instructor followed by a promotion to evaluator status. Her last squadron assignment was that of chief nurse at the 349 AMDS, Travis Air Force Base.

In addition to years of experience conducting aeromedical evacuation missions throughout the world, Taylor was activated in support of Operation Enduring Freedom from March 2003 to March 2004. In January 2005 she was selected to be the chief nurse of the 379th Expeditionary Aeromedical Squadron in support of Operation Iraqi Freedom. While transporting the injured out of Mosul, Iraq in a C-130, the aircraft took enemy fire, landing without casualties. Due to the demands of her civilian position, Taylor transferred to inactive status in the Air Force Reserve Command. Taylor is the recipient of two Meritorious Service medals, Expert Marksmanship (2), and multiple other medals.

Taylor currently serves on the Veterans Board. In 2012 she was appointed to the Board by Gov. Jerry Brown and approved by the Senate. She became chair in 2014 and continues to serve

VA-18-0457-A-001912

in that role. The California Veterans Board serves as an advocate for veterans affairs, identifying needs and working to ensure and enhance the rights and benefits of California veterans and their dependents.

Taylor is a diploma nurse graduate from the Kaiser Foundation School of Nursing. She continued her education receiving a BSN from the State University of New York in Albany, New York. She earned a master's degree in nursing administration from the University of California, San Francisco.

Taylor lives in Elk Grove, CA.

Marshall W. Webster, MD

Appointed by Senate Minority Leader Harry Reid

Marshall Webster is a senior vice president of the University of Pittsburgh Medical Center (UPMC), and a distinguished service professor of surgery at the University of Pittsburgh. A graduate of Penn State University and the Johns Hopkins Medical School, he trained in surgery at the University of Pittsburgh, and subsequently served 2 years as a surgeon on active duty in the U.S. Navy.

Webster returned to the University of Pittsburgh as a faculty vascular surgeon, including initially, a part-time attending staff position at the Pittsburgh VA Medical Center for 3 years. He has held the Mark M. Ravitch Chair in Surgery, and has had a long academic career of clinical practice, research, and service in varied administrative leadership roles. From 2002–2012, he was an executive vice president of UPMC, president of UPMC's physician services division, and president of the University of Pittsburgh Physicians, the clinical practice plan of the university faculty.

His current focus is primarily strategic development: building clinical relationships and care models throughout the region with a large number of community hospitals and providers. Webster has oversight of UPMC's graduate medical education program, which sponsors a substantial number of resident rotations at the Pittsburgh VA Medical Center. He recently served for 2 years as the interim chair of the Department of Anesthesiology at UPMC. He has had a long-standing interest in patient safety and quality initiatives, and recently completed a 6-year term on the board of the Pennsylvania Patient Safety Authority.

QUESTIONS ABOUT LICENSED PROFESSIONAL COUNSELORS IN THE VA

1. How many Licensed Professional Counselors have been hired by the VA since the development of the qualification standards in 2010?
2. Of those hired, please provide the total number by GS rank.
3. How many LPMHC hold Supervisory positions in the VA?
4. How many stations have included LPMHC on their Leadership Boards?
5. How many LPMHC currently sit on the Professional Standards Board? How many have been on this board in the past?
6. Why is the LPMHC and LMFT PSB led by a Psychologist, and explain why neither board has ever met standards for PSB as described in VHA Handbook 5005?
7. Why does the LPMHC series have to hold a Supervisory position in order to be promoted to GS-12. Why aren't LPMHC allowed to promote to GS-12 by specialties as is done with Social Workers.
8. How many LPC's were in the VA, doing clinical work under different titles (Readjustment Counseling Therapist, Addictions Therapist) prior to the implementation of the qualification standards? (There was an action item about this...so they know.. I have the action item)
9. How many of these LPC's remain in clinical positions, performing clinical duties as Title 5 employees under the same titles held prior to the implementation of the qualification standards?
10. The VA has admitted to hire of LPC's prior to the development of the qualification standards, simply under other job titles. These hires were made with position vacancies requesting Licensure preferred.
11. How do you explain the VA billing for, verifying licensure of, requiring NPI's and VETPRO for these providers that were hired prior to the development of the qualification standards?
12. How do you justify the continued use of Licensed providers in clinical positions, with Position Descriptions that match the duties of the LPMHC performing these duties under Title 5 (Non-Clinical) positions (Readjustment Counseling Therapist, Addiction Therapist etc)? Title 5 positions are not clinical.
13. How do you justify the decision of the VA to implement an overly restrictive qualification standard (CACREP) and not offer any grandfathering to clinicians who were already employed by the VA (as DoD and Tricare did)? Psychology and Social Work were grandfathered.
14. How do you justify the decision of the VA to implement overly restrictive qualification standard (CACREP), without grandfathering, knowing that this restriction would disqualify a large majority of Professional Counselors, a lot of them Veterans, myself included.
15. How do you justify the decision of the VA to implement an overly restrictive qualification standard (CACREP), without grandfathering, while knowing that the CACREP degree required (60 hour Clinical Mental Health Counseling) was not available in most States, and specifically was not available near military installations for those people who are older. (16 programs nationwide in 1998 that would qualify you for LPC Licensure, some States had a couple CACREP Programs, most States did not have any).
16. How do you justify the continued lack of vacancy position openings in the VA for LPMHCs?
17. How do you justify leadership positions excluding LPMHC and LMFT from position vacancies?
18. Who was on the Board that determined the overly restrictive qualification standard?
19. What empirical data was used to come to the decision to use CACREP as the ONLY qualification without grandfather?
20. Please explain why LPC's who are under other job titles have been denied request to join the list serve for LPMHC's?
21. Please explain why CACREP was provided a \$500,000 contract, under full and open competition after exclusion of sources: Number of offers received ONE. To write standards for the "Counselor

National Emergency Preparedness Language” that was later used to justify the restrictive qualification standard within the VA, DoD and Tricare? (Notice this contract was awarded in September 2006...just before the passage of the bill recognizing LPC’s in December 2006. Also, note...EXTENT COMPETED:

“Full and Open Competition after Exclusion of Sources

This contract was commissioned to write the standards for “Counselor National Emergency Preparedness Language

22. Please explain why the PSB for LPMHC utilized Non-CACREP LPC’s to Board the few LPMHCs that qualified into the VA, then told them that they did not qualify to Board?

23. Please explain why programs for LPMHC internships have not been established or offered at VA’s?

24. Please explain how the VA justifies this negatively impacting Veterans who received their education in and around the military bases at which they were stationed?

25. Please explain why open positions for LPMHC also state that Social Workers and Psychologists are qualified for the position? However, the reverse is not true.

26. How many organic LPMHC’s (not dually licensed) sit on Leadership Boards to include National Representation?

27. Of those, how many are Veterans?

Re: Licensed Professional Mental Health Counselors at Veterans Affairs

Dear Dr. Shulkin:

I recently attended the American Federation of Government Employees (AFGE) legislative conference. I was able to briefly discuss my concerns with you regarding the problems Licensed Professional Mental Health Counselors (LPMHC) experience while working for Veterans Affairs.

Public Law 109-461, which was enacted December 22, 2006, explicitly recognized both "licensed professional mental health counselors" and "marriage and family therapists" as mental health providers within Veterans Affairs. On September 28, 2010, the Department of Veterans Affairs (VA) released a set of qualification standards for licensed professional mental health counselor (LPMHC) positions, as well as for marriage and family therapist positions. Prior to the adoption of the new standards, counselors were typically eligible only for "rehabilitation counseling therapist" positions, at a maximum General Service (GS) level of 11. At this level, counselors were not allowed to work in supervisory positions. Although LPMHC's have qualification standards, there are still limited opportunities for advancement, training, transferability, or promotion. Although hundreds of employees with these credentials have been working in the VA under different position descriptions, they have not been transitioned into an LPMHC position. This may be because the VA has made it a local decision to transition the employee. Or, the National standards still do not recognize these employees because they may not have attended a school that was accredited. The accreditation was not available to many of these employees when they went to school. The accreditation is anecdotal according to the Council for Accreditation of Counseling & Related Educational Programs (CACREP) own website. The Department of Defense and TRICARE have recognized these providers and grandfathered them into a provider status. The VA is the only employer that does not recognize LPMHC's that did not attend a CACREP accredited school. The VA has also grandfathered Social Workers and Psychologists prior to having accreditation in their professions. We are asking for a grandfather clause for any provider that is State licensed or eligible. We are asking that the VA transition any employee that is eligible to work in that position automatically that chooses to do so.

Many of the providers that do not qualify for the LPMHC position are working as Addiction Therapists, Readjustment Counselors, or Psychology Technicians to name a few. These are Title 5 positions and are considered "non-clinical". These are direct line staff that have clinical duties within these professions to provide specialized care to Veterans. We ask that if the VA is unwilling to grandfather LPMHC's, they instead bring these positions to a Hybrid 38 status and GS-11 pay scale to reflect their knowledge, skills, and abilities.

The Commission on Care report recommendation #2 stated that the VA should "enhance clinical operations through more effective use of providers and other health professions, and improved data collection and management". This would be an effective way to utilize the providers already in place and at their disposal, increase Veterans access to care, and decrease workload on higher level providers. The RAND report which is a survey of 522 psychiatrists, psychologists, and licensed clinical social workers found that 13% met the study's criteria for "cultural competency" in the military, only 6% had ever served in the military. According to the RAND report, LPMHC's scored the highest for familiarity of evidenced-based practices for PTSD and combat-related mental health issues. Many of the LPMHC's attended their schooling on military installations where CACREP was not available, therefore excluding them from LPMHC positions.

VA-18-0457-A-001927

I would like to have the opportunity to discuss this matter in more detail. I have attached 25 questions I would like to have answered by the Veterans Affairs. I have tried to get the answers to these questions, but I was met with hostility. This is a brief synopsis of a larger systemic problem that negatively impacts Veteran care and employee morale. Please contact me through my personal information listed below. I appreciate any assistance you can provide.

Regards,

OVERVIEW

Addressing the mental health needs of military service members, veterans, and their families is a national priority and the focus of many efforts at the federal, state, and local levels.¹ Over the past decade, several studies have documented the extent of the need for mental health treatment among this population, and billions of dollars have been invested to expand the capacity of the systems designed to support veterans and their families at multiple levels and across sectors.² The White House and Congress have been working directly with the Department of Defense (DoD) and the Department of Veterans Affairs (VA) to ensure that mental health providers are hired and programs are disseminated to address mental health needs within the veteran community,³ but concerns remain about whether the capacity of these systems is sufficient to meet the demand.⁴ Recently, new federal legislation was enacted to increase VA beneficiary access to private, civilian-sector care.⁵ Although the opportunity to receive care in the community existed in the past, the new law will likely greatly expand the rate at which eligible veterans seek care outside of the VA. This raises a new concern about the capacity of the civilian mental health service sector to meet the needs of veterans and their families.

While many veterans already receive care from private providers and community-based organizations,⁶ little is known about the extent to which veterans and their families receiving such care are getting high-quality care, are benefiting from that care, and are satisfied with their providers. There have been multiple efforts at the national, state, and community levels to promote awareness of military and veteran-related issues among community-based mental health providers, including the development of specialized training curricula and certification programs. With the intent of improving providers' understanding of and skills for addressing needs in the population, these training opportunities vary from short webinars to weeklong courses to intense, certificate- or degree-awarding programs.⁷

In addition, nongovernmental organizations have pursued the formation of specialized networks, such as Give An Hour and the Star Behavioral Health Provider network,⁸ and the opening of new community-based clinics dedicated to treating military service members, veterans, and their families.⁹ To date, however, little is known about the capacity and performance of these networks and specialized clinics.

Monitoring access to and quality of mental health care for service members, veterans, and their families is important for ensuring that their needs are met effectively. A recent Institute of Medicine (IOM) study highlighted the challenges that both DoD and the VA face in monitoring such issues within their own systems—including the facilities they own and operate—and noted that their visibility into the “outside” systems where the population also receives care is even more limited.¹⁰

RAND's study was designed to assess the potential performance of the system of care for service members, veterans, and their families, with a particular focus on community-based, civilian providers. This study specifically addresses the potential readiness of mental health providers working in community settings to deliver culturally competent, high-quality care to service members, veterans, and their families. This study builds upon previous studies examining similar issues for providers working within VA and DoD settings, as well as two studies of civilian providers.¹¹ We explore provider capabilities, attitudes, and behaviors as they relate to providing high-quality and culturally appropriate care, and we examine what factors may predict their readiness to deliver such care. Understanding the skills and training of mental health providers from non-DoD and non-VA settings who are potentially delivering care to service members, veterans, and families will help inform expectations about what types of care these beneficiaries may experience within civilian settings and the extent to which that care is of a high quality. Such information can also help direct future training efforts designed to ensure that providers are ready, capable, and willing to address the mental health needs of our nations' veterans and their families. The following sections provide additional information about our approach, findings, and the implications from this research.

VA-18-0457-A-001932

SURVEY OF MENTAL HEALTH PROVIDERS

Improving mental health outcomes for veterans and their families requires both *access to care* and receipt of *high-quality care*.¹² The overall goal of this study was to understand the readiness of community-based providers to deliver high-quality mental health care to veterans and their families once they access such care. The IOM has defined *high-quality care* as care that has been demonstrated as effective (i.e., evidence-based), safe, patient-centered, timely, efficient, and equitable.¹³ Using this definition as a reference point for our study, we conceptualize the readiness of providers to deliver veteran-friendly, high-quality mental health care as having two main components (see Figure 1). The first is *cultural competency*, or the degree to which providers are sensitive to the unique needs and relevant issues of concern within the veteran population. This cultural sensitivity and competency can facilitate providers' ability to deliver patient-centered care and develop an effective therapeutic rapport.¹⁴ The second main component of our provider readiness definition is the degree to which community-based providers have the *capacity and inclination to deliver clinically appropriate, evidence-based care*. In particular, the survey focused on evidence-based care related to major depressive disorder (MDD) and posttraumatic stress disorder (PTSD). These conditions were highlighted because of their prevalence among the recently returned veteran population and their association with experiences common to military deployments. Each concept is defined in further detail in subsequent sections.

To assess provider readiness to deliver high-quality, culturally competent care to service members, veterans, and their families, we employed a web-based survey of mental health providers. The sections below outline the methods used to sample providers and describe the survey measures used to assess the relevant components of readiness. We also gathered data on the characteristics of responding providers, their clinical caseloads, and their practice settings to explore how these factors relate to overall readiness.

Sampling

To identify and survey mental health providers working in community-based settings, we relied upon existing panels of health care providers maintained through GfK Custom Research and two of their vendors. Practicing mental health

professionals in the panels were sent emails inviting them to participate, and participants were provided with tokens of appreciation through the traditional means of providing incentives in their host panels (i.e., awarded points based on the anticipated respondent burden). Specifically, psychiatrists were recruited from an existing GfK provider panel originally drawn from the American Medical Association membership list and later augmented to refresh and expand the panel. Psychologists were recruited from an existing allied health care provider panel maintained by Research Now. Social workers and licensed professional counselors were recruited from existing panels maintained by Research Now and a separate panel maintained by EMI. The demographic and practice characteristics of all mental health providers within these panels were not available and the degree to which their panel membership is representative of each provider population is unknown. GfK emailed potentially eligible participants a standard recruitment email asking for their participation in a 30-minute survey about their mental health practice.

The web-based survey was fielded only for the period of time required to reach the target numbers of each provider

Figure 1: Readiness for Veteran-Friendly, High-Quality Mental Health Care

type (target goal was 125 respondents in each provider group, to ensure sufficient sample size for detecting differences between provider groups). All target numbers were reached within three weeks. Responding providers were screened to ensure that they were

- trained and licensed as a professional provider of mental health services in their state
- working directly with patients/clients as part of their professional responsibilities
- one of the four provider types of interest
 - psychiatrist—doctor of medicine (MD) or doctor of osteopathic medicine (DO)
 - clinical psychologist—doctor of philosophy (PhD) or doctor of psychology (PsyD)
 - licensed clinical social worker (LCSW) or master's in clinical social work (MCSW)
 - master's-level licensed professional counselor (LPC) or licensed mental health counselor (LMHC).

Participants who indicated later in the survey that they were fully retired or not currently in practice were excluded. The study was determined to be exempt from human subjects review by the RAND Human Subjects Protection Committee. The topics of military and veteran mental health care, cultural competency, and evidence-based practice were not specifically identified in the recruitment email sent by GfK or in the introductory page of the survey; thus, the topic was not likely to influence the choice to participate or complete the full survey. As with all surveys conducted among convenience samples, it is difficult to understand the potential bias introduced by those choosing to participate in such panels and surveys compared to the full population of providers.

Measures

RAND researchers designed a web-based survey to collect information from mental health providers across several domains. For each of the two components of our

VA-18-0457-A-001934

readiness concept, providers were asked about their knowledge, attitudes, and behaviors relevant to the concept. Where possible, survey items come from or were adapted from prior surveys of mental health professionals. Where necessary, RAND researchers developed new items for domains without published survey instruments. Table 1 provides an overview of the survey domains, their corresponding items, and information about how the items were used to characterize providers and inform the analysis. The following section briefly describes the measures used across the domains of interest. Readers interested in additional details about specific items, including psychometric properties and scoring criteria, where available, can reference the Appendix at http://www.rand.org/pubs/research_reports/RR806.html.

Provider Characteristics

In addition to asking respondents to indicate their provider type (e.g., social worker, psychologist), we gathered information on provider gender, years since most recent degree, whether they ever served in the armed forces,¹⁵ whether they had any close family members who served in the military, and if they ever worked in a military setting or in the VA (including training or fellowships).¹⁶ We also asked how providers spent their time across a series of activities, including conducting assessments, providing direct patient care (psychotherapy and medication management), receiving supervision or consultation from others, providing supervision to others, and other professional or administrative responsibilities such as research or teaching.¹⁷ In addition, we asked a series of questions about enrollment in provider networks that typically serve military and veteran populations, including TRICARE (the DoD insurance program for active component service members and their families, retirees and their families, as well as some eligible Guard and Reserve Component personnel and their families), Military OneSource (an Employee Assistance Program [EAP]–like program that employs some mental health providers to support DoD beneficiaries), and the new VA Patient Centered Community Care Contract (established for specialty providers).

Practice and Clinical Caseload Characteristics

To understand the context in which respondents practice, we assessed a number of features of their practice settings and their clinical caseloads. All questions in this section were structured

to assess caseloads, hours, and setting characteristics of the most recent typical work week.

We asked providers to report the size of their patient caseload in the most recent typical week, including patients seen in individual or family format as well as those seen in group settings. We gathered information about the proportion of patients by the locus of care, by age group, and by current diagnosis using categories from the Diagnostic and Statistical Manual—Version 5. We also asked respondents to estimate the proportion of their current caseload that: were current members of the military, were former members of the military (veterans), or were family members of current or former members of the military.

To understand the types of settings and facilities our respondents were working within, we assessed the percentage of patient care hours that were spent in different physical locations (e.g., solo office practice, VA facility). Using responses to the setting and insurance items, we classified providers into one of three groups: DoD/VA providers (those providers spending any patient care time in a DoD or VA health care setting), non-DoD/VA providers who accept TRICARE, and all other providers (i.e., those that do not spend any time in a DoD or VA facility or accept TRICARE).

We also gathered the ZIP code of the facility in which the provider saw the greatest number of patients in the most recent typical work week. Using the ZIP code information for the provider's setting, we calculated the distance between their setting and the nearest DoD or VA health care facility to create a proximity to DoD/VA variable. With this continuous variable, we also created a categorical variable for analyses: within ten miles or 11 or more miles away.¹⁸ Similarly, we used the ZIP code of the provider's setting to determine if they worked in an urban or rural setting.¹⁹

Assessment Behaviors

To understand the frequency of routine screening practices employed by respondents, we asked providers to report how often, using a 5-point scale (never, seldom, occasionally, often, and always), they screened patients: (1) to determine if they are current or former members of the Armed Forces or a family member of such a person; (2) for history of any traumatic events, including those experienced during military service, and (3) about stressors related to military life or being a veteran.

Table 1: Overview of Mental Health Provider Survey Domains

Domain	Types of Items	Source and Use
Provider characteristics	<ul style="list-style-type: none"> • Training (MD, DO, PhD, LCSW, MCSW, LMHC, LPC) • Gender • Years in practice/experience • Primary therapeutic orientation • DoD or VA work experience • Relationships with current/former members of Armed Forces 	These items were adapted from prior VA, U.S. Army, and American Psychiatric Association studies. They are used to characterize the respondents and examine predictors of practice behaviors and provider attitudes.
Practice and caseload characteristics	<ul style="list-style-type: none"> • Caseload size • Distribution of caseload by age, diagnosis, insurance type, and military status • Setting (outpatient/inpatient/partial, solo/group, public/private) • Participation in networks that serve military members and veterans 	These items were adapted from prior American Psychiatric Association and U.S. Army surveys of mental health providers. They are included to help describe the practice setting and typical patient caseload served by respondents. The data are used to characterize the respondents and examine predictors of high-quality mental health care.
Assessment behaviors	<ul style="list-style-type: none"> • Employment of routine screening approaches, including taking a military history and assessing suicide risk and comorbid problems such as pain and sleep disturbances • Use of validated screening or interview instruments • Frequency of engaging other clinicians and family members 	These items were adapted from prior surveys used by the Center for Deployment Psychology and the U.S. Army. The data are used to understand provider assessment practices.
Military cultural competency	<ul style="list-style-type: none"> • Knowledge of military and veteran culture • Comfort working with military service members and veterans • Self-reported proficiency in treating military service members and veterans • Participation in military/veteran culture training 	These items were adapted from prior surveys used by the Center for Deployment Psychology and the VA. The data will describe respondents' knowledge of military and veteran culture. The data are also used to define analytic groups of providers with respect to their military cultural competency.
Training to deliver evidence-based care	<ul style="list-style-type: none"> • Training and supervision in evidence-based psychotherapies (EBPs) 	These items were adapted from other surveys used by the U.S. Army and assess receipt of training and supervision in EBPs for PTSD and MDD.
Comfort with treatment approaches and military/veteran populations	<ul style="list-style-type: none"> • Comfort treating depression • Comfort treating PTSD • Comfort treating military members and veterans • Comfort addressing war-related stress • Comfort treating military family members 	These items were developed by RAND researchers for this study. The items provide descriptive information about the level of "comfort" among respondents in these areas. Some items are also used in the derivation of the military cultural competency variable.
Use of guideline-concordant care for PTSD and MDD	<ul style="list-style-type: none"> • Self-reported proportion of caseload treated with EBPs • Use of psychotherapeutic techniques consistent with EBPs 	These items were adapted from other surveys used by the U.S. Army, U.S. Air Force and RAND and assess use of EBPs recommended in civilian and DoD/VA practice guidelines.
Attitudes toward practice guidelines	<ul style="list-style-type: none"> • Attitudes toward clinical practice guidelines (CPGs) and evidence-based medicine 	These items were adapted from an instrument developed for the New York State Psychiatric Association. The items ask providers to rate their attitudes toward using clinical guidelines and may help explain variation observed in use of guideline-concordant care for PTSD and MDD.
Prescribing practices	<ul style="list-style-type: none"> • Most common medications prescribed for PTSD and MDD 	This item was adapted from an Army study titled "Steps Up" and is a measure of guideline-concordant pharmacological treatment for PTSD and MDD. We examine the percentage of providers who prescribe appropriate medications for PTSD and MDD.

SOURCES: We used several instruments as references in developing this survey. All of these prior surveys were developed for other purposes, but provided relevant information and suggestions for items that would help us to assess use of guideline-concordant care, evidenced-based approaches, and routine practice behaviors. We also drew on items in other surveys used to assess the impact of military and veteran cultural awareness training on participants through the Center for Deployment Psychology (for example, the Star Behavioral Health Providers) programs to inform our items on knowledge/attitudes/awareness of military and veteran culture. It should be noted that the overwhelming majority of the items have been modified in some manner from our original references; that is, we changed scales, reference points (all patients versus "this" patient), and response items in an effort to tailor this survey to the specific issues and population for this study. More information about the surveys reviewed can be found in the Appendix.

Military Cultural Competency

To understand the degree to which providers were sensitive to military and veteran culture, we asked a series of questions designed to assess providers' knowledge and awareness of, and attitudes toward, military culture. We also assessed their perceived proficiency in working with military and veteran populations and exposure to prior training in military cultural competency. Figure 2 provides an overview of the concepts we used to define cultural competency for this study.

To assess knowledge and awareness of military and veteran culture, we asked providers to rate their level of familiarity (on a 5-point Likert scale) with U.S. military culture and practices. Similarly, we asked providers to indicate their level of comfort with respect to working with military service members and veterans, working with patients/clients with military or war-related stress, and working with family members of military service members or veterans.

Respondent proficiency in military and veteran culture was assessed via ten items that tapped self-reported perceptions of cultural competency in three different domains, cultural knowledge (three items), cultural sensitivity (one item), and cultural skill (six items). These items, modified from items on the Nurse Cultural Competence Scale,²⁰ asked respondents to read statements and agree or disagree on a 5-point scale. Training in military culture was assessed via one yes/no item that asked about receipt of formal training in military and veteran culture.

Using all of these items described above, we derived a military cultural competency score by scoring each item as described in Table 2. This overall measure of military cultural competency summed the continuous variables for a range of 0–22, and a cut-score of 15 or more points was defined as “high military cultural competency.”

Capacity to Deliver Evidence-Based Care

As highlighted earlier, provider capacity to deliver evidence-based care to patients may depend on several factors. For example, prior training in the delivery of evidence-based approaches may be one indicator that a provider has capacity to deliver high-quality care; however, it is also important to understand the degree to which they have or will use these techniques to address the mental health needs of veterans and their families when they access providers. Other factors, such as their beliefs or attitudes about such approaches, may affect their willingness to use the techniques. Thus, to understand provider capacity to deliver evidence-based care, we assessed several domains:

Figure 2: Concepts Related to Provider Military Cultural Competency

training in evidence-based approaches, use of such treatment in routine practice, attitudes toward practice guidelines, and other routine behaviors. These are described in Figure 3 and in the following sections.

Training in Evidence-Based Psychotherapies for PTSD and MDD

To assess provider capacity to deliver evidence-based psychotherapies (EBPs) for PTSD and MDD, we assessed whether providers: (a) held formal certification or intensive/advanced training and (b) had supervised professional practice in any of five psychotherapies specified as first-line therapies for PTSD and depression in VA/DoD CPGs (2009, 2010).²¹ Providers who had received training and supervision in at least one type of EBP were classified as “capable” of delivering evidence-based treatment for the given condition.

Use of Evidence-Based Treatment Approaches

A dichotomous variable was used to summarize providers' reliance on evidence-based treatment modalities. Each provider estimated the percentage of patients that they treated in the most recent typical work week with 16 different treatment approaches. Treatments ranged from well-validated approaches for treating PTSD (e.g., Prolonged Exposure Therapy [PE]) to general therapeutic techniques without strong efficacy find-

VA-18-0457-A-001937

Table 2: Measures of Military Cultural Competency

Concept	Measure	Response Scale	# of Items	Operationalization
Knowledge and awareness	Level of familiarity with military and veteran culture	1–5 Likert scale (<i>Completely unfamiliar–Extremely familiar</i>)	8	1= <i>Very familiar</i> or <i>Extremely familiar</i> ; 0 otherwise (0–8 range)
Comfort	Comfort level working with military veterans and their families	1–5 Likert scale (<i>Not at all comfortable–Extremely comfortable</i>)	3	1= <i>Mostly comfortable</i> or <i>Extremely comfortable</i> ; 0 otherwise (0–3 range)
Skills	Self-reported proficiency	1–5 Likert scale (<i>Strongly disagree–Strongly agree</i>)	10	1= <i>Agree</i> or <i>Strongly agree</i> ; 0 otherwise (0–10 range)
	Prior training in military culture	Yes/No	1	1=Yes; 0=No (0–1 range)

ings (e.g., supportive psychotherapy). Approaches categorized as evidence-based treatments included those for PTSD (PE, Cognitive Processing Therapy [CPT], Eye Movement Desensitization and Reprocessing [EMDR], and Stress Inoculation Training [SIT]), depression treatments (Cognitive Behavioral Therapy [CBT], Interpersonal Therapy [IPT], and Acceptance and Commitment Therapy), and two additional treatments with support for use with patients who had substance use disorders or borderline personality disorder (i.e., Motivational Interviewing, Dialectical Behavioral Therapy).²² Past-week evidence-based practice was dichotomized between providers who reported treating 75 percent or more of their patients with EBP and those who did not meet this threshold. This threshold creates an easily summarized estimate of the proportion of providers from which patients are reasonably certain to receive an evidence-based treatment.

Practice Behaviors Related to Use of Psychotherapy for PTSD

To assess providers' adherence to therapeutic techniques associated with three validated PTSD psychotherapies (PE, EMDR, CPT), we used a modified version of a session behavior scale used in a Walter Reed Army Institute for Research (WRAIR) study in 2013.²³ Two items assessed treatment techniques representative of PE, two items assessed techniques associated with CPT, and one item assessed a technique unique to EMDR. For this report, we summarize the proportion of providers who reported that they “often” or “always” use therapeutic techniques associated with at least one EBP approach for PTSD. Note that providers who do not see patients with PTSD reported instead on their likelihood of using each technique if they “were to treat patients with PTSD.”

Practice Behaviors Related to Use of Psychotherapy for Depression

We used a modified version of the Psychotherapy Practice Scale to assess providers' adherence to the therapeutic techniques associated with two evidence-based approaches to depression treatment (CBT and IPT). The original scale prompted providers to consider a specific, randomly selected patient from their caseload with MDD. For ease of administration, these instructions were modified to ask providers who treat patients with depression to estimate the frequency with which they use nine distinct therapeutic techniques. Providers who do not see depressed patients were asked to estimate the likelihood that they would use each technique if they were to treat a patient with depression. Three items assessed treatment techniques representative of CBT, three assessed techniques associated with IPT, and three assessed common, but less well-supported, psychodynamic techniques. For this study, the full, 16-item Psychotherapy Practice Scale was reduced to nine items to reduce respondent burden.²⁴ For this report, we summarize the proportion of providers who reported that they “often” or “always” use the therapeutic techniques associated with either CBT or IPT with depressed patients. Note that providers who do not see patients with depression reported instead on their likelihood of using each technique if they “were to treat patients with depression.”

Medication Management for PTSD and Depression

To assess adherence to evidence-based guidelines for psychopharmacologic treatment of PTSD and MDD,²⁵ prescribing providers listed the “two most common first-line psychopharmacologic treatments” they prescribe for patients with each condition. A list of 90 common psychoactive medications—including antidepressants, anxiolytics, sedative-hypnotics, psychostimulants, and opioid analgesics—was provided for

Figure 3: Concepts Related to Provider Capacity to Deliver Evidence-Based Care

respondents to select from. To meet our criteria for “evidence-based prescriptive practice,” respondents had to select at least one antidepressant from the list for depression *and* one selective serotonin reuptake inhibitor or prazosin for PTSD.

Attitudes Toward CPGs

CPGs provide recommendations designed to improve patient care. They are developed after a systematic review of the evidence and consideration of the harm and benefit associated with a given approach.²⁶ Although the intent is to ease provider burden by succinctly recommending best practices for a given condition, some providers see CPGs as overly rigid, oversimplified, and as a threat to their clinical independence. For this study, we included the 11-item CPG Attitudes Scale from a New York State Psychiatric Association study as a proxy for provider attitudes toward evidence-based medicine and validated treatments for PTSD and MDD.²⁷ In the descriptive analyses below, scale scores are dichotomized into those who, on average, “agree” or “strongly agree” with CPG supportive statements (labeled “above threshold”) and those who fall below this threshold. Attitudes toward CPGs are entered as a continuous variable in the regression analysis, that is, the mean of all 11 items.

Analysis

We performed analyses to describe the provider sample that generally fall into three types: (1) basic univariate analyses,

(2) bivariate comparisons across pairs of variables, and (3) logistic or linear regressions to assess the contribution of sets of predictors to key dependent variables. First, univariate statistics were calculated to provide an introductory understanding of the pattern responses. For instance, the mean and standard deviation of the CPG Attitude Scale were calculated.

To assess relationships across pairs of dichotomous and continuous variables, we used independent-sample t-tests. To assess relationships across pairs of categorical variables, we used chi-square analyses. Finally, logistic and linear regressions were used to assess the relationship between a binary outcome and multiple predictor variables simultaneously. These regressions identify which predictors (if any) are most influential with respect to a specific outcome variable after controlling for the effect of all other predictor variables in the model.

RESPONDENT CHARACTERISTICS

We recruited a total of 522 mental health care professionals to participate in the survey (Table 3). Respondents included roughly equal groups (by design) of psychiatrists ($n=128$), psychologists ($n=127$), social workers ($n=132$), and licensed counselors ($n=135$). The majority of participants across professions were female (60 percent) with some variation by profession (the majority of psychiatrists—77 percent—were male).²⁸ Respondents generally worked full time. In addition, participants reported seeing the majority of their patients (77 percent on average) in outpatient settings in the most recent typical work week, and smaller percentages of patients (17 percent on average) were seen in inpatient and other settings (5 percent), such as schools, correctional facilities, or partial day programs. On average, providers reported spending the majority of their professional hours (19 percent) in a solo office setting, followed by a group office setting (15 percent). The percentage of professional hours spent by setting did vary by provider type.
